THE MODERN FARMER

Vol I. CHICAGO, ILL. AND NASHVILE, TENN., FRIDAY, MARCH 1, 1929. No. 1.

TEN TONS OF PORK

AN ARTICLE BY. E. L. QUAIFE OF MUCH INTEREST

Who is the champion hog raiser and where does he live, are the questions the Iowa pork production contest attempts to answer each succeeding year. Decatur county of southern Iowa produced him this year in the person of C. Verwers, who turned in the exceptional record of 2,151 pounds of pork produced from each one of ten sows, in the 180-day period. His sows saved an average of 8.8 pigs each and these pigs averaged 244.4 pounds. The next high record was 2,105 pounds made by each sow in a herd of ten high-grade Duroc sows owned by George Bycroft and Son of Adams county, Iowa.

The amounts of pork produced per sow in 180 days by the various contestants who finished the project ranged from 2,151 down to 734. The highest number of sows kept by one individual was 31 and he reported 1,130 pounds at the 180-day mark.

Such a record as Verwers made is exceptional and its value lies in the demonstration of su ressful methods of swine production. First of all, these pigs were a cross-bred lot, resulting from mating purebred unregistered Chester sows to a purebred yearling Spotted Poland boar. There were three old sows in the group and seven gilts. Thirty-two pigs were saved by the three tried sows and 56 from the seven gilts, an average of 11 from the sows and 8 from the gilts. One of the old sows saved 12 pigs. This particular litter weighed 3,050 pounds at the weighing time.

The pigs in this lot were all white, and in type were rather rangy. On the market they were not considered lean enough to be put in the packers' bacon class, neither were they fat enough to

(Continued on Page 3.)

STRAWBERRY KING

Member of Race Leads the Nation In Production

Matt Gross of Castleburry, Alabama, box 84, is one of the largest producers of strawberries in the state, and the largest grower among the colored farmers in the United States. He is the owner of a hundred acre farm and has from 40 to 50 acres in strawberries each season. He produces both the Aroma and Klondyke varieties and at harvest time these berries are carefully gathered and graded them, packed in new crates and shipped to the large markets for special hotel trade.

Last season Mr. Gross was able to produce something over three hundred crates per acre.

Besides berries, he has large acreage in early vegetables, such as beans, tomatoes, peas and white potatoes.

He is a believer in rotation of crops.

VETERINARY SCIENCE COLUMN

Beginning with our March issue we will hove a Veterinary Science column, to be edited by Mrs. Katherine L. Gowdy, of Springfield, Ky. She is both able and her past experiences fit her for this work. Any farmer who has livestock problems of this nature please send in your questions, which will be answered through this column.

DR. MOTON TALKS

Dr. Moton in his address to the Farmers' Conference last month told of the unusual opportunities offered to Negroes to own farm lands in the South.

A wealthy New York business man who recently purchased some farm lands in the South has been so well satisfied with the returns from his investment that he tells the readers of Manufacturers' Record that "land buying in the South today is more attractive than it ever was in the West."

Today's invitation to the Negro to buy land may, if neglected, become tomorrow's "another wasted opportunity."

FLORIDA'S WOMAN SUPERVISOR

MISS JULIA A. MILLER OF ARKANSAS GETS APPOINTMENT

Miss Julia A. Miller of Arkansas has been recently appointed Local District Home Demonstration Agent among the Negro women of Florida, with headquarters at the Florida A. and M. College, Tallahassee. Miss Miller is a graduate of Tuskegee Institute, Ala., and was for three years engaged as Local Agent in the State of Alabama and recommended by Mr. T. M. Campbell, Field Agent of Tuskegee to the position that she has been recently appointed. In the appointment of Miss Miller, the Negro Extension Work in Florida was made complete from an organization standpoint.

There are seven women agents employed in the Home Demonstration Division for Negroes in the State who make direct contact with rural women and girls, carrying to them, helpful suggestions and practical ideas on their work in the home. Signs of their work can be seen in the homes and about the premises throughout the territory worked by the women, as is seen about the farms where the men work.

Supplementary Work for Women

While the Extension Work among Negroes in Florida was started in 1915, there were no women agents appointed until 1918. A. A. Turner, Local District Agent, in charge of the Negro work in the State, with headquarters at the Florida A. and M. College, supervised the work of men until the demands for subject matter assistance and overhead supervision of the women agents required supplementary services for the women agents in 1925.

Mrs. S. L. Turner, wife of the Local District Agent, served the department advantageously during the supplementary period when funds were inadequate for a full time worker. Special arrangements to avoid conflict with the State's policy against employing members of the same family were made in this instance.

Mrs. Turner's contact and fundamental experience in the work since its beginning, has enabled her to lay a good foundation for the Home Demonstration Work among the Negroes in Florida and the club women and girls of the State will have her continued support in the Home Makers' Program to be carried out by Miss Miller. Miss Miller is now making her initial trip into the several counties worked by the women agents and will from time to time give subject matter assistance to volunteer club leaders in counties worked by men agents.

DESTINY OF FARMERS DEPENDS ON "CO-OPS", ENGLISH UNION HEARS

"The farmers must band together and form large cooperative syndicates as have the industries if they are to withstand the encroaching interests of the cities and control their own economic destinies," Prof. C. Ryle Fay of the University of Toronto old members of he English speaking union at a luncheon in the Palmer House today.

"Modern industrialization has destroyed the old balance between the farm and the city," Prof. Fay said. "The cities are devouring not only all of the farm's produce, but are absorbing its population, too. Now, although contemporary science makes possible a larger production in spite of population issues, the farm is falling in the social level.

"The farmers must centralize to maintain a balance between their lives and those of the city dwellers. The wheat farmers of the northwest and the fruit growers of the California are examples of the success of this centralization."

TENNESSEE LAD'S TWO BALES

COTTON ACREAGE INCREASED TWO TO ONE SAYS ARTICLE

Memphis, Tenn.,—To a Shelby county, Tenn., farm boy goes the honor of producing 1,003 pounds of lint cotton on one acre of land. Alvertis Malone, a student in the vocational agriculture department of the Collierville Industrial school, did this very thing. This young boy entered the Chilean Nitrate of Soda educational bureau's contest for colored folks and as a result of his efforts he has won $25 offered as first prize. His good yield makes him the colored junior cotton champion of the state.

This boy began his project on January 1, 1928, by selecting an acre of sandy loam land that had been in cultivation so long that no one could remember when it had not. This level acre had been in corn the year before.

Picking began October 5, and when it was over on November 27, this boy had to his credit one bale of line cotton that weighed 477 pounds and another that weighed 526 pounds. He sold the two bales for $130.79 and 2,000 pounds of seed for $40. His total income on the acre was $220.79. His expenses were: Rent of land $5; seed, $2; fertilizer $8.75; hired labor, $28; horse labor $5.90; a total cost of $49.65. His labor income was $171. 14. This is a good labor income for 181 hours.

INDIANA FARMER'S NOTES

Hoosier State Soil Tillers Information Bureau

The [illegible] Brothers are reputed to be the wealthiest colored family in Vigo County. Their farm of over 200 acres is located just twelve miles south of Terre Haute. They specialize in big type Poland China hogs, and a few years ago one of their annual sales netted them over $13,000.00. This farm has been in possession of the Underwood family for nearly one hundred years. It is called the "show farm" of southern Indiana.

* * *

Harry Cooksey is manager of a 400 acre farm near Terre Haute. This farm has been under his personal supervision and management for a number of years, and the owner has had several propositions from different prospective purchasers for his farm, but has refused to sell. Mr. Cooksey employs a large number of people and the farm is conducted on a business basis. Mr. Cooksey has had several flattering offers from other large land owners, but prefers to remain where he has made a success.

* * *

Joe Batton of Vigo County is one of farming and high grade live stock. He the oldest farmers in the state. Years ago he started in a very small way and through hard work and patience he has one of the most model farms in the state.

Mr. Batton believes in diversified employs a large number of people, and always a believer in the Golden Rule.

* * *

John Cottee of near Washington, Indiana, has one of the largest orchards in the southern part of the state. His apples and peaches always bring a premium on the market and long before time for harvest his crop is sold at fancy prices.

It would pay any farmer who specializes in the growing of fruit to visit this farm and talk with Mr. Cottee relative to his method of handling an orchard.

* * *

M. M. Curry of For Wayne, Indiana, is one of our wealthiest citizens. He has two large modern farms in Michigan produces some of the finest potatoes and fruit of any farms in that state. He has no trouble in finding buyers for his products, which always bring satisfactory prices. Mr. Curry believes in the grading of his fruit and vegetables before placing them for sale.

* * *

Mrs. Estelle M. Carter of Richmond, Indiana, is the owner of a very fine farm in southwestern Kansas. This farm has been in the possession of her family for over fifty years. Her father was one of the early settlers in Kansas.

Riley Rogers is one of the leading farmers in Kansas. His farm is located near Lawrence. He specializes in vegetables. A part of his farm is under irrigation. His net income is estimated to be over $6,000 per year.

MISSISSIPPIAN DIES WEALTHY

Farmer From Delta State Leaves A Fortune

Phil Price, 104 years old, died at his home in Coldwater Sunday. Born in Alabama in 1824, Price was 38 years old when freed from slavery.

He became one of the largest land owners in Tate County, at the time of his death, owning more than a thousand acres of fine farm lands. Price was here when the first railroad train ran, when the first steamboat plied the Mississippi river, and lived to see airships fly across his farms. He resided in Missisippi for more than ninety years.

Price was the largest holder of war savings stamps and liberty bonds in the county, and his entire cash savings for years was invested in bonds and stamps from a purely patriotic standpoint. He died in the housse in which he had lived for seventy-five years.

PROSPERS WITH TULIPS IN NORTH CAROLINA

Terra Cela, N. C.—A bit of tulip-growing Holland is seen in North Carolina as the result of the work of H. Van Dorp, a Dutch settler. Van Dorp has found the formation of the earth at this section similar to that of Holland both from a soil standpoint and because it is in many sections below sea level. In three years he has built up a prosperous tulip gardening business.

There are 80,966 colored farmers in the state of North Carolina, handling over three million acres. This should open a new avenue. The growing of tulip bulbs is very profitable.

PROMISED $3,000.00

Colored Boy Finds Fifty Thousand in Jewels

Fredericksburg, Va.—Clifton Tyler, eight year old farm boy of Spottsylvania County found a purse filled with valuable gems lost on the highway between Richmond and Fredericksburg by Mrs. J. M. Ansell of Bridgeport, Conn.

Tyler discovered the purse hanging from a bush beside the road about 15 miles from Fredericksburg while he was on his way to school. Not knowing the value of the jewelry, he made a division of the gems, Tyler keeping only a diamond ring and the purse. The other pieces of platinum jewelry, liberally set with diamonds and emeralds estimated to be worth more than fifty thousand dollars, were distributed among the neighbors. Police learned of the find and visited the boy's home. The neighbors surrendered the jewelry to the officers, and Mrs. Ansell instructed the officers to notify Tyler of his reward of $3,000 that was in store for him.

Thousands of persons had passed the spot where the purse had fallen from Mrs. Ansell's car.

SOME FACTS AND FIGURES

DEPARTMENT OF COMMERCE BUREAU OF CENSUS MATTER

The Department of Commerce, Bureau of Census shows that in 1920 there were 218,612 colored farmers in the United States operating their own farms with a total value of $2,257,645,328.00, and there are 705,070 colored farmers as tenants and managers.

In St. Frances County, Arkansas, there are 1,313 white farmers and 4,009 colored farmers. This county had 3,965 acres in rice that produced 138,900 bushels. This same county also produced 38,820 bushels sweet potatoes and 26,423 bales cotton.

In Harris County, Georgia, there are 202 white farmers and 1,050 colored farmers. This county produced 55,332 bushels sweet potatoes, 46,000 watermelons and 6,885 bales of cotton. Total value of all crops with production reported in 1924 was $1,168,095.00.

Peach County, Georgia, has 300 white farmers and 325 colored farmers who produced 3,120 acres of watermelons and 1,549,898 bushels of peaches in 1924. The total value of all crops grown in the county in 1924 reached the sum of $2,467,268.00.

Still Another Illustration

Macon County, Ga.—729 white farmers and 1,114 colored farmers producing 25,436 bushels sweet potatoes, 14,535 bales cotton, 929,831 bushels peaches, and 1,500 carloads watermelons.

Bolivar County, Miss., has 1,559 white farmers and 4,140 colored farmer mers, producing 86,592 bales cotton and 776,952 gallons milk. This is also as of 1924.

Brunswick County, Virginia—1,337 white farmers and 1,570 colored farmers, who produced in 1924 four million three hundred forty-eight thousand and [illegible] hundred seventeen pounds tobacco, and 8,974 bushels white potatoes, and 11,946 bushels sweet potatoes. This county also produced 5,014 bales of cotton.

Harrison County, Texas, has 1,615 white farmers and 4,140 colored farmers. This county produced 17,185 bales cotton, 22,890 bushels sweet potatoes, and 24,710 bushels peaches. They also produced 1,634,290 gallons milk.

Other States

Louisiana, Caddo County—866 white farmers and 4,670 colored farmers, producing 133,176 bushels grain, 37,072 bales cotton, 9,995 bushels sweet potatoes. Value of crops in this county in 1924 amounted to $4,453,255.00.

Edgecomb County, North Carolina—1,514 white farmers and 2,439 colored farmers, who in 1924 produced 357,344 bushels peanuts, 7,037,860 pounds of tobacco, 32,496 bushels sweet potatoes, and 14,463 bushels apples. Value of all crops in this county, $6373,853.00.

Robeson County, North Carolina—2,946 white farmers and 4,102 colored farmers, producing 26,871 bales cotton, 5,662,474 pounds tobacco, 121,805 bushels sweet potatoes and 300 cars watermelons. Also 86,067 bushels peaches.

South Carolina:

Charleston County—612 white farmers and 3,002 colored farmers that produced in 1924 2,604 acres in cabbage, 501 acres watermelons, 104,666 bushels sweet potatoes, 1,093,798 bushels white potatoes. The total value of all crops in this county amounted to nearly three millions of dollars.

Orangeburg County—White farmers, 2,758, and colored farmers, 4,345. Total value of all crops in 1924, $6,207,354.00; producing 141,675 bushels sweet potatoes, 40,156 bales cotton, 35,729 bushels peanuts and 1,022,019 bushels grain.

Florida:

Gadsden County—White farmers, 785; colored farmers, 873. Tobacco, 2,970,915 pounds; sweet potatoes, 84,448 bushels.

Jefferson County—359 white farmers, and 1,249 colored farmers. 56,676 bushels sweet potatoes and 24,949 bushels white potatoes.

THE MODERN FARMER

Official Organ of the National Federation of Colored Farmers

ames P. Davis - - President
Cornelius R. Richardson - Secretary
eon R. Harris - - Editor

Published Monthly by The Modern Farmer at Chicago, Illinois and Nashville, Tennessee.

Chicago, Ill., Office: Vincennes Hotel, 36th and Vincennes Avenue.
Nashville, Tenn., Office: 447 Fourth Avenue, North.

Devoted to the interest of the farmer, Truck Gardener, Live Stock, Poultry, the Home and the People.

Application for entry as Second-Class made.

All matter for publication to the Modern Farmer should be addressed to The Modern Farmer, 447 Fourth Ave., N., Nashville, Tenn.

No libelous matter will be used or published. Communications with no names signed or letters written on both sides of paper will not be used.

Subscription price $1.00 per year, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

A Message To a Million

By LEON R. HARRIS

Editor of the Modern Farmer

We are writing this foreword to the wo hundred and twenty thousand colored farmers of America who own their arms,—the total acreage of which is nore than forty-three millions,—and he value of which is not less than two nd one-half billion dollars. This oreword is also addressed to the more han seven hundred thousand colored armers of America who are tenants nd managers of farms. It is addressed hen, to more than one million men of ur racial group,—to more than one illion substantial, sensible, industri- us American citizens,—to you who are ngaged in the biggest business in merica carried on by Negroes.

But although it is the biggest business carried on by our racial group,—t is not an organized business. In act, probably seventy-five per cent of hose who farm have never looked on arming as being a business at all. To many it has simply meant a livelihood, —to many it has simply meant hard work,—even drudgery. Hard working colored farmers are plentiful,—happy colored farmers are few and far scattered.

You farmers are producers. As such, you are consantly adding to the wealth of the Nation. You are making America a better country,—a richer country, —a happier country. You are giving much,—nearly your all, to America. What are you getting?

As a body of useful, producing American citizens you are getting from your living and from your labor very little. In plain words, —you are getting nowhere. There is a reason.

You are good producers but you are individual producers. You are individual producers living in an age of organization and co-operation. You are producers who are out of step with the times. You are out of step with life all about you,—out of harmony,—and therefore, out of luck. An individual producer is all right if he is able to do big business in a big way like Henry Ford. But who ever heard of a "Henry Ford" colored farmer?

Most of the big business in America and all over the world is carried on by organizations of business men and women. These organizations are called "corporations" or "companies." What are they? Simply a number of producers banded together in an effort to produce a certain thing. It may be a kind of automobile. It may be a baby's rattle. But whatever it is, many minds are thinking about it,—many hands are making it, and many pocketbooks are receiving the profit from it. As a general rule, the individual producer works hard and earns little. Organized producers work hard and earn much.

So this foreword is addressed to you, —more than a million colored farmers of America,—because we want you to become an organized body of producers. You are more than a million in number, but you are without influence. You have an invested capital of more than two and one-half billion dollars, but you are unable to protect your investment. You market millions of dollars worth of products every year but you are absolutely unable to control the marketing of your products. You are unorganized and, unless you do organize, you will continue to receive the crumbs from the table. You will continue to be the Lazarus of American farmers.

The National Federation of Colored Farmers

Allow me to introduce to you a pioneer organization of colored farmers and producers which offers you the biggest opportunity that has ever come your way. The National Federation of Colored Farmers has been organized by those who believe that the time has arrived when the colored farmers of the United States should form a national organization devoted to diversified production, grading, packing, shipping and marketing of farm products, and to the purchasing of needed farm supplies through co-operative methods, to the end that a more prosperous financial condition may result from their efforts as producers.

As we have stated before, you farmers are the only men of our racial group who are doing business on invested capital exceeding two and one-half billion dollars. This is real capital,—every dollar is a "sure enough dollar," and every colored farmer has a share in the business. But you are not a partner in the business. The business is not organized. No two, or three, or three hundred of us are able to work together in a way that will result in our receiving a joint profit from the business. The National Federation of Colored Farmers will bring us together and in a union of this kind there will be strength and also profit.

Aims of the Federation

One of the aims of the National Federation of Colored Farmers is to establish branches in conveniently located cities where shipment of farm produce can be received and marketed at the highest prices for the members of the Federation.

Another Aim is to purchase supplies needed by our farmers in quantities that will effect a considerable saving in cost prices to the members of the Federation.

It is our plan to have the members of the Federation meet each year in NATIONAL CONVENTION for the purpose of discussing the problems that are peculiar to our colored farmers, particularly such subjects as financial credits, grading, and marketing farm products, and the purchasing of farm supplies.

An effort will be made at our headquarters to keep in touch with all matters of National legislation affecting Agricultural interests and to keep the members of the FEDERATION informed.

When a member of the Federation desires to purchase a farm in another state he will be given, upon request, such information as is available at headquarters, concerning the locality and the land in question.

It will be one of the main purposes of the FEDERATION to see that better cattle, hogs, sheep and poultry are raised by the members of the FEDERATION, because the best grades bring the best prices. Money will be advanced to the members for the purchase of improved breeds of live stock, and to secure for them thoroughbred breeding stock.

The use of improved machinery will be encouraged among the members of the FEDERATION, because machinery SAVES MAN LABOR and increases production, and the amount of a farmer's income, in normal times, depends upon the quantity production.

The problems of the farmer's wife will not be overlooked. Her time and strength may be saved by making use of labor saving household equipment. This may easily make the difference between a tired, overworked wife, mother and housekeeper, and one who has some time and energy left for reading and recreation after the day's work is done. The FEDERATION will encourage household conveniences.

A good water supply, a complete sewage disposal plant, and effective heating and lighting systems constitute the four prime utilities of the farm home, the foundations of safe, comfortable living. The NATIONAL FEDERATION OF COLORED FARMERS will emphasize comfortable living because it believes that this is one of the reasons why the sons and daughters of farmers leave home in such large numbers.

It is an absolute necessity that Colored Farmers should have the benefit of the financial assistance afforded to all other farmers of the country and which is in a large part now denied them. The FEDERATION will endeavor to secure this aid to the Colored Farmers.

The individual producer is unable to undertake many of the endeavors which are of vital importance to better and more economical marketing. He does not have an opportunity to become intimately acquainted with the demands of the trade, and his production is too limited to attract much attention. Intelligent marketing is impossible without information concerning crop and market conditions. The average producer, however, lacks both the facilities and the time needed to obtain the most complete and reliable information of this nature. On that account he is placed at a disadvantage in marketing his products individually because the persons with whom he deals usually have more complete information than he has.

On the FEDERATION'S staff are experts who keep posted on all the prices of farm products handled by the produce markets of America. This information will be at the disposal of all members.

In other words it is the hope of the founders of the NATIONAL FEDERATION OF COLORED FARMERS to make life on the farm more attractive and more profitable, and to build up in this Nation a colored group of ORGANIZED, INFLUENTIAL AND SATISFIED PRODUCERS

These are the primary aims of the Federation.

The Federation and You

You are a colored farmer and one of the million who can make the Federation prosper. You are one of the million whom the Federation will aid. You are one of the million whom the Federation will protect. No American farmers have been so sadly neglected or more exploited than have the American colored farmers. No group of American farmers would be more benefited if organized. Let us mention some more advantages of organization and co-operative marketing.

You are a cotton producer. You know that when the average colored farmer takes a sample of his cotton to the home buyers they grade it as they please,—often grading the good middling as "low." Should you market your cotton through your own co-operative organization you would get correct grading and full value.

You produce cowpeas. Hundreds of cars are shipped out of the South every year. They are usually shipped out in used sacks,—they are not properly cleaned or graded. You would get a premium of from five to ten cents per bushel on all varieties if they were cleaned, graded, and packed in clean, white, new cotton bags.

You produce sweet potatoes. The colored farmer cannot be excelled in raising this crop and no varieties on earth equal the southern kinds. The southern sweet potato is coming into favor in all the larger markets and thousands of cars could be sold if they were properly selected and packed in even weight, bushel hampers or crates.

You produce peaches or melons. Where any group of farmers in a community would make up pooled cars they would get the benefits of larger profits.

You purchase fertilizer, fencing, paints, oils, seeds, bagging, machinery and implements. Purchases could be pooled and bought at much lower prices than those prevailing in your local community.

To gain these advantages organization is essential. Also our own organization is essential. No matter in which state of the union you reside, you should join and support the National Federation of Colored Farmers. It is your organization.

We are big enough and numerous enough to support an organization of this character. Fifteen per cent of America's farmers are men of our racial group. Fifteen per cent! But we are not represented on any agricultural committee, board, or in any department of the government. Not one public servant, from President to postmaster, has ever suggested, advocated, or sponsored a single movement or activity for the benefit of the colored farmers of America. We have never been felt in the life of the Nation because we have never been together. We have never figured in anything because we have never been a figure. We have simply been separate units, like cornstalks scattered about over a field. We have never been shocked.

Let us get together. Let us mass our strength. Let us pool our resources. Let us show each other and our fellow citizens that we can get together. Let us advertise ourselves and be proud of the fact that we are able to advertise ourselves.

If we, the colored citizens of America, ever get anywhere, we must organize on an economic basis. We have tried all others,—and we have found them wanting. It is high time we should be establishing a few "get" organizations. We need them. Our posterity will need them. The economic foundation,— the "dollar and cents" foundation must be laid. That is your job, you colored farmers of America.

Farming is scientific work,—it is common sense work,—it is a character builder. Farm life is not artificial. The farmer really lives. Farming must be developed so it will attract and hold our young people as a calling. The future leaders of our racial group in America will be the sons and daughters of farmers. The "work" of farming is not very encouraging but the "business" of farming will strengthen family ties, will bring us the money to support better churches, better schools and better homes, and will produce leaders who will not be ashamed to look into the faces of any group of men.

To you, the million, and to you, one of the million, we preach organization. The National Federation of Colored Farmers is your organization. Here it is. It is your big opportunity. Grab it.

A Farm Editorial

Management Is a Key To Successful Farmer

Although 1928 was another year when farm incomes as a whole were low some farmers made good profits and good management was largely the determining factor in making profits, according to E. C Young, of the Purdue University Farm Management department. Farm account records summarized recently in Northern Indiana showed a labor income of approximately $1300 on one farm and the second minus $300. In other words the first man had $1,300 to pay him for his year's labor after allowing for all operating expenses and 5 per cent interest on his capital, while the second farmer lacked $300 of making 5 per cent interest and got no pay for his work during the year.

This difference in income between the two farms in the same community, operated under similar conditions, is rather typical. Records of a large number of farms in Indiana show that during recent years the variations in incomes in any community is approximately twice as great as it was before the war. What this means is that good management now brings a greater premium than it formerly did, and that poor management suffers a greater penalty. Never before has exceptional ability in farming been rewarded as much as it is now. In most localities can be found some men who have successfully met the challenge of the changed economic situation that 1928 and the years immediately preceding it were among the most profitable in their farming experience, in spite of the fact that agriculture as a whole has been in a state of depression during that time.

What have these farmers done to secure their good incomes? Proper interpretation of price variations is one reason for the comparatively high incomes made by some farmers. It is true that no prophet has arisen or will likely arise who can foretell price changes accurately, yet these changes are due in large part to recognized laws of supply and demand, and farmers who take the trouble to secure the best information available on the probable supply and the probable demand for different products are most likely to produce an abundance of products that sell at high prices.

This does not tell the whole story, however. There is a wide difference in the incomes of different farmers who follow the same general type of farming. Over an eight year period one farmer in central Indiana who might be called a corn, hog and beef cattle farmer made an average labor income of $2356, while near him another corn, hog and beef cattle farmer failed to make 5 per cent on his capital by average of $802 a year. The difference in incomes between those men with the same general type of farming is due to a difference in the organization of the farms and in the methods used. Farmers who get 35 bushels of corn to the acre cannot compete successfully with farmers who get 50 to 60 bushels on the same quality of land. It makes a difference in the year's profits whether each brood sow raises 5 pigs during the year or 9; whether the dairy cows produce 200 pounds of butterfat or 300; whether the hens lay 80 eggs apiece or 125; whether the lamb crop is 90 per cent or 125 per cent of the number of ewes; whether 100 pounds of pork takes 6 bushels of corn or 12 busels of corn; whether each horse takes care of 15 acres or 30 acres of crops; whether man labor and equipment are used efficiently, whether roughages and by-products such as corn stalks, straw and hay are utilized to advantage, and whether the volume of business is large enough. There is a great difference between farms in respect to those and other factors that effect profits.

SPRAYING RING REDUCES COST OF EQUIPMENT FOR SMALL GROWERS

Where a number of men in a community have small groves or a few acres of truck crops or are growing any other crop on a limited scale and need to spray but do not feel justified in investing in spraying machines individually, the spray ring will be a help. A spray ring is simply a group of neighbors who have banded together and bought a spraying outfit, dividing the expenses, and made arrangements to have the spraying done for all members with the same outfit.

In this way each member gets the benefit of expensive spraying machinery without going to the full expense of buying a machine. He pays only part of the cost of the machine.

It is probably best to have a constitution and by-laws drawn up to avoid confusion, but verbal agreements by responsible people will do. However, written agreements will obviate any future misunderstanding.

The spraying outfit should be in charge of some particular person, who is paid for the work done for each member. Each member generally furnishes the materials to be used on his place also. The spray ring does not reduce the cost of materials or labor, but simply reduces the cost on the original investment in equipment.

One great advantage of a spray ring is that through it a grower will often spray who would not do so if he had to stand the total expense of purchasing equipment. This tends to prevent small groves or acreage of crops left unsprayed and acting as infection centers for the community.

We have had a spray ring in our community for two years, and are certainly well pleased with its workings.

GROWING COTTON IN ILLINOIS

A yield of 1,260 bales of cotton, valued at $113,400, was obtained from 3,000 acres of Illinois land that were planted with this crop in 1928.

TEN TONS OF PORK

(Continued from Page 1).

be classed as fat hogs. In fact, they could have carried considerable more weight before they might have been classed as fat hogs. When the hogs reached the Chicago market they were such an attractive lot that Swift & Company paid 10 cents above the top, or $12.85 in order to get the pigs for a killing test. In regard to belly, ham, and loin cuts the pigs yielded approximately 1 per cent above the average and the carcasses were considered very good from the packers' point of view.

Verwers lives on an 80-acre farm. He has this divided into small fields and small pasture lots. He buys considerable feed, as he turns off about two carloads of hogs every year. He raises both spring and fall litters. His practice is to have his spring pigs on the early fall market, and his fall pigs on the April and May market.

While the Verwers farm is well drained, he practices the sanitation plan of raising pigs. He scrubbed his movable houses with hot water and lye, he washed the sows' udders, and had the pigs farrowed out on reasonably clean ground. The sows during the pregnancy period were fed corn, oats, tankage and linseed oilmeal.

The pigs were allowed to remain with the sows for 84 days, and on weaning at this time weighed 79½ pounds each. He rebred the sows when the pigs were about 5 weeks of age. To get the sows in heat, he kept the pigs away a few nights in succession.

After weaning, the pigs had access to only two acres of alfalfa pasture. They were self-fed, the ration consisting of corn, tankage, "Big Ten" mixture, some powdered buttermilk, and some mixed feed. On the basis of prices paid for his feeds, and figuring, in the pasture at $25 per acre, the cost per pound of pork for feed alone was slightly above 9 cents.

Another exceptional record was made by George Bycroft and Son of Adams county. Their ten sows averaged 9.1 pigs marketed per sow, the pigs averaged 231 and one-third at 6 months, so that each sow had to her credit 2,105 pounds of pork.

These pigs were farrowed the last of February and first week of March. They were raised on clean ground and never set foot in the old lots. They had access to a 20-acre red clover field and were fed corn, tankage, linseed and skimmilk.

This contest has for its object the location of the outstanding market hog. They were raised on clean ground, and producers of the state. For the individual farmer it gives him information upon which to go ahead and make wise selections as far as breeding stock is concerned. It gives him the data on individual sows in his herd so that he were raised on clean ground and ran select gilts from the sows that have done the best job from a producing standpoint.

These records kept by the hog producer are comparable to the records kept by dairymen and should be of as much value to the hogman in increasing the efficiency of the brood sow, as the dairy records have helped increase the production of dairy herds.

Ewe Flock Pays

Giving proper attention to his flock of sheep is proving to be a profitable way for F. M. Quisenberry of Boone county, Missouri, to put in part of his time. From 20 ewes he raised 27 lambs last spring and sold 9 of them on June 12 weighing 76 pounds for $16.50 a hundred or $12.54 a head. One other lamb on the same day brought $15.50 a hundred. The 9 lambs sold with a cooperative shipment of show lambs at $1.25 a hundred higher than any other lambs on the St. Louis market that day. In addition to the lambs Quisenberry sold 160 pounds of wool at 48 1-2 cents a pound.

Thruout the winter the ewe flock runs in blue grass pasture in good weather but is kept in the barn during stormy weather. The sheep are fed clover hay and just before lambing time Quisenberry gives them a small amount of corn and bran. The lamb crop last spring came from February 15 to March 16. It is important, Quisenberry finds to watch ewes and lambs carefully at this time. He milks the udders out when the lambs are unable to take care of them.

As soon as the lambs would eat they were started on alfalfa and corn in a creep. The last two months of the feeding period they were fed straight corn chop on pasture.

SOME FACTS AND FIGURES

(Continued from Page 1).

Leon County—White farmers, 351. Colored farmers, 1,363. Sweet potatoes, 78,252 bushels, and 196 carloads watermelons.

Conecuh County, Alabama, has 1,335 colored farmers which is almost half the farm population.

In 1924 this county produced 532,851 bushels grain, 43,184 bushels peanuts, 11,262 bales cotton, 38,482 bushels white potatoes, 83, 877 bushels sweet potatoes and 1,037 acres in strawberries. This is about the largest strawberry county in the state.

This county also produced 790,704 gallons milk during that year. The farmers in Conecuh county own 3,444 mules and 644 horses, and 3,630 sows. The total value of all farm property in this county as per statistics of 1925, amounted to $6,564,859.00, and the total value of all machinery and implements amounted to $280,549.00. They paid out for fertilizer (including lime) $184,700.

A very small percentage of the products grown in this county were sold through co-operative organizations.

Copiah County, Miss., has the largest acreage in tomatoes. There are 1,949 colored farmers and 2,037 white farmers. 9,291 acres in tomatoes, 7,188 acres in cotton. The farmers in this county also had 2,637 acres in cabbage and their vegetables are shipped to all of the larger terminal markets, and yet they have no co-operative marketing system, which would enable them to get better prices and quicker returns.

The farmers purchased $63,567 worth of fertilizer and lime. The farm population being about one-half colored, figures over thirty thousand dollars spent by our group. If this amount of fertilizer had been purchased on the co-operative plan direct from first hands, they would have saved quite a neat sum. Total value of all land and buildings, $5,731,055.00, with $430,390.00 invested in implements.

Shelby County, Tennessee:

Number white farmers, 2,523; colored farmers, 4,608.

Bushels grain, 606,081; bales cotton, 19,753, white potatoes, 23,263 bushels, sweet potatoes, 168,769 bushels, watermelons, 500 carloads, peaches 18,227 bushels.

$53,731.00 was spent by the farmers for fertilizer and lime in one season, and the colored farmers outnumber the whites by almost two to one. Based on average prices for the past five years the prices quoted for a car of good 28 to 30 pound melons—counting about 8 to 9 hundred per car, will bring the farmer $150 to $200 when marketed through a co-operative marketing association.

Chicago is one of the largest consumers of sweet potatoes and the market is rarely glutted. If properly graded and packed according to he rules of the Department of Agriculture there is one buyer who would gladly take the entire output of the farmers of Shelby County.

Let the farmers of Shelby try the co-operative marketing plan for one season and compare with their present method of disposing of their crops.

What Georgia Did in 1925

Harvested 39,776,457 bushels grain.

Harvested 25,694 bushels rice.

Harvested 8,545,695 bushels peanuts.

Harvested 1,036,741 bales cotton.

Harvested 27,807,967 pounds tobacco.

Harvested 741,793 bushels white potatoes.

Harvested 6,016,916 bushels sweet potatoes.

Harvested 88,511 acres in watermelons

Harvested 6,638 acres in tomatoes.

Harvested 7,852,520 bushels peaches.

Total number farmers in the state, 249,085. White farmers, 165,018; and 84,077 colored farmers. Forty-five counties in the state having larger population of colored farmers than white farmers. The white farmers have co-operative method of selling their fruits and vegetables.

RECOLLECTIONS OF FLORIDA

By M. M. Lewey, Founder
The Florida Sentinel

COOPERATIVE EXTENSION WORK IN AGRICULTURE AND HOME ECONOMICS

AMONG NEGROES IN FLORIDA

From Its Beginning to Date

The National Congress in March, 1913, passed the Smith-Lover Act providing for the appropriation of Federal funds to be matched with State Funds for the purpose of carrying-out a program of systematic teaching of the Farm Youth, as well as adults, known as Cooperative Extension Work in Agriculture and Home Economics under direct supervision of the State Land Grant Colleges.

Florida Started 1915

After the State Legislature of the various Southern States acclaimed their amount of the Federal Funds due them, in proportion to their percentage of rural inhabitants, the next question was of what proportion of the total funds to be spent by each State would be allotted to the Extension Service among its Negro Inhabitants.

Thru the efforts of Dr. N. B. Young, former President of the Fla. A. & M. College at Tallahassee, the Fla. State Legislature appropriated $1,500.00 at its 1915 session for the initial beginning of the Cooperative Extension Work in Agriculture and Home Economics among Negroes in Florida, and upon the recommendation of Dr. Young, the State Board of Control appointed Mr. A. A. Turner of Wilberforce, Ohio, to head the Negro Division of the Extension Work in Florida, who started the work at zero on October 1st, 1915.

First Negro Farm Demonstrator

The States relation Service being already in existence in several States, prior to the advent of the Cooperative Extension Work in Agriculture and Home Economics, offered systematic training to the adults only throngh the various Farm Demonstartion Agents sent out from the Land Grant Colleges. Mr. F. C. Robinson, a graduate of Fla. A. & M. College at Tallahassee, was appointed in 1912 in Leon County in cooperation with the College, and the U. S. Department of Agriculture. The passing of the States Relation Service at the close of the war left the Extension Field entirely open to the Cooperative Extension Work in Agriculture and Home Economics.

Expansion of Work in Florida

From the $1500.00 appropriated for the Florida work in 1915, covering Leon, Jackson, Gadsden and Jefferson Counties, the funds have increased to approximately $20,000.00. Annually covering the following counties: Leon, Duval, St. Johns, Columbia, Suwannee, Madison, Jefferson, Jackson, Alachua, Marion, Bradford, Orange, Sumter, with local agents in charge and Volusia Hillsboro, Gadsden, Washington, and Palm Beach Counties with Volunteer Local Leadership cooperating.

A. A. Turner, State Supervisor of the work and who pioneered it had previously been engaged in Dairy and Live Stock Farming on a large scale in Ohio and was employed for five years at the Tuskegee Institute Dairy Division, which enabled him to expand the work under his supervision in proportions that Florida enjoy a comfortable position in the front ranks among the rest of the Southern States as to its general development.

The residence headquarters are at Fla. A. & M. College for Negroes at Tallahasse, while the subject matter and supervision is under authority of the State Agricultural College at Gainesville.

An office space is supplied by the Fla. A. & M. College whicr has been equipped with the necessary conveniences for carrying on the work by the Department.

An Extension Secretary is furnished by the Department and this year, funds became available for a full time Home Demonstration Agent, who will give subject matter assistance to the Local Home Demonstration Agents and make contact with them and the local District Agent and the State Home Demonstration Agent. This act on the part of the State to provide the state with a supervisor for women completed the organization for Negro work in Florida.

The period of service of Local Workers has been increased from four months in the year to ten months and the average salary paid is more than double the salary during the existence of the work in its early stages.

Outstanding Achievements

Aside from the official program arranged each year, enabling the Agents to attack the deal with vital Farm and Home problems affecting Rural Inhabitants, as will be given more in detail when our weekly series are completed for compilation subject. The Cooperative Extension Work in Agriculture and Home Economics in Florida (Officially known as Farm And Home Makers' Clubs) is responsible for the organization and development of eight Cooperative Marketing Association chartered under the laws of the State of Florida, and most of which have functioned for the benefit of growers by buying their supplies or selling products cooperatively.

The County and State Fair Associations in several instances have put very creditable exhibits on, under the direct supervision of race members adequately housed and otherwise managed under favorable circumstances, to show the progress of the race each year and this is shown very largely in most instances by the samples of articles made and products of the Club Members and Patrons, in the various lines of pursuits attempted throughout the State.

Federal, State and County officials and the public as well, get a bird's-eye view of the kind and character of work done under supervision of the Agents by tre exhibits displayed. The Negro Departments of the various fairs throughout the state have proven a great aid in contributing its bit toward "Better Race Relations," for the community in which this work is carried on and where these fairs are held, as the occasions offer equal competition between Negro and white citizens alike in their own Exhiibt Halls which are inspected by the entire public, therefore a closer observation and a better understanding of the races results through this medium and each year better circumstances for all exist.

RECIPES

DATE COOKIES

1 Cupful of shortening
1½ cupfuls of sugar
½ cupful of sour milk
1 teaspoonful of soda
2 cupfuls of flour
½ teaspoonful of salt
1 teaspoonful of vanilla
3 cups of oatmeal

Cream the sugar and shortening together. Add the sour milk into which the soda has been dissolved. Stir in the sifted flour, salt and vanilla. Gradually add the oatmeal until all of it is used. Divide the dough and roll half of it at one time on a well-floured board. Roll very thin and bake in a hot oven. When the cookies are cool put together with the following filling:

Filling

1 pound of dates seeded
½ cupful of water
¾ cupful of sugar

Combine the ingredients and cook until thick and smooth, stirring occasionally. Cool and spread between two of the cookies, sandwich fashion.—Mrs. B. R. V., Iowa.

FRUIT MUFFINS

1 cupful of shortening
2 cupfuls of sugar
2 eggs
1 cupful of strong coffee
½ cupful of molasses
½ teaspoonful of soda
1 tablespoonful of grated lemon rind
1 tablespoonful of grated orange rind
4 cupfuls of flour
1 teaspoonful of baking powder
1 teaspoonful of cinnomon
1 teaspoonful of allspice
1 teaspoonful of cloves
½ teaspoonful of salt
1 cupful of broken nutmeats
1 cupful of seeded raisins

Cream the shortening and sugar together. Add the eggs and beat well. Stir in the lemon and orange rind, the molasses, and the soda dissolved in the coffee. Sift together the flour, baking powder, spices, and salt, and add to the mixture. Lastly add the raisins and nuts lightly floured. Fill well-greased and floured muffin pans three-fourths full and bake in a slow oven for 40 minutts.—Mrs. E. S., Texas.

SPANISH MEAT RING

1 pound of ground beef
1 pound of ground pork
2 cupfuls of unsweetened applesauce
2 beaten eggs
2 teaspoonfuls of salt
3 cupfuls of cracker crumbs
One-third cupful of chopped pimento
Pepper

Combine the ingredients in the order named, adding milk or water if more moisture is needed. Pack into a greased ring mold and bake in a moderate oven for 50 minutes.—Mrs. G. W. B., Ill.

FILLED BREAKFAST ROLLS

Try this delicacy the next time you bake light rolls. Use your own favorite recipe and when the dough is ready to be made into rolls, take a portion of it and roll it to one-half an inch thickness. With a cooky or biscuit cutter cut 2 rounds of different sizes. On the small one place a lump of conserve, jelly, raisins and nuts mixed together, or pieces of stewed fruit.

Lay the larger round over the mixture and work under as you would a biscuit. Place in a greased pan allowing plenty of room, brush with thick sour cream and sprinkle with sugar and cinnamon. Let rise until light in a warm place and bake in a moderately hot oven for 20 minutes.—Mrs. G. M., Wis.

ESCALLOPED CABBAGE

3 tablespoonfuls of butter
2 tablespoonfuls of flour
2 cupfuls of milk
1 teaspoonful of salt
Pepper
1 small head of cabbage
1 cupful of buttered crumbs
4 slices of bacon fried and minced
¼ cupful of diced cooked ham
½ cupful of diced cheese
One-third cupful of diced green pepper

Melt the butter in a double boiler, add the flour and smooth to a paste. Stir in the milk and cook until thickened and creamy. Season with salt and pepper and remove from the fire. Cut the cabbage into quarters or finer if desired and cook in salted boiling water for 8 minutes. Drain and place alternate layers of the cabbage, ham, minced bacon, green pepper, cheese, and white sauce, in a greased baking dish. Cover with the buttered crumbs and bake 30 minutes in a moderate oven. The crumbs are buttered by placing crumbs and butter in a frying pan and as the butter melts it is blended into the crumbs by stirring.—J. B., Ore.

HAM AND EGG SCALLOP

3 tablespoonfuls of butter
1½ tablespoonfuls of flour
1 cupful of milk
¼ teaspoonful of salt
Pepper
1½ cupfuls of diced cooked ham
3 hard boiled eggs
2-3 cupfuls of bread crumbs
Butter and paprika

Melt the butter in the upper part of a double boiler or in a saucepan over a low fire. Add the flour and smooth to a paste. Stir in the milk and cook until smooth and creamy. Season with salt and pepper. In a greased baking dish place alternate layers of crumbs, ham, chopped boiled eggs and white sauce until all ingredients are used. Cover with crumbs, bits of butter, and dashes of paprika. Bake in a moderate oven for 30 minutes.—Mrs. H. R., Wash.

HAM ROLLS WITH BEANS

Spread medium thick slices of cold boiled or baked ham with a thin coating of prepared mustard, then cover with a layer of cooked navy beans (canned beans may be used). Roll the meat in jelly-roll fashion and fasten with a tooth pick. Place the rolls in a baking dish and bake in a moderate oven for 15 or 20 minutes.—Mrs. G. W. B., Ill.

QUICK COFFEE CAKE

1½ cupfuls of sifted flour
2 teaspoonfuls of baking powder
½ teaspoonful of salt
¼ teaspoonful of nutmeg
6 tablespoonfuls of sugar
2 tablespoonfuls of shortening
1 egg
½ cupful of milk

Siit the dry ingredients together, work in the shortening and add the beaten egg with the milk. Pour into a greased and floured layer cake pan and cover with the following:

¼ cupful of sugar
½ teaspoonful of cinnamon
2 tablespoonfuls of flour
1 teaspoonful of butter

Mix the dry ingredients and with the finger tips work in the butter. Spread over the cake batter and bake 40 minutes in a moderate oven. Serve warm. —Mrs. E. V. S. M., Ill.

SPINACH SALAD

2 cupfuls of cooked or canned spinach
1 teaspoonful of salt
¼ teaspoonful of paprika
2 tablespoonfuls of lemon juice
3 tablespoonfuls of French Dressing
3 hard boiled eggs
2 tablespoonfuls of chopped pimento
Lettuee

Drain hte juice from the spinach. Add the salt, paprika, lemon juice, and French dressing and toss lightly together. Arrange portions of the mixture on lettuce leaves and top with the grated egg yolk, rings of egg white, and chopped pimento.—Mrs. G. W. B., Ill.

WAFFLE STRAWBERRY SHORTCAKE

¼ cupful of shortening
2 tablespoonfuls of sugar
1 egg
½ teaspoonful of salt
1 cupful of milk (more may be added)
2 cupfuls of flour
4 teaspoonfuls of baking powder

Cream the shortening and sugar together, add the egg and beat well. Add the salt and milk, then the flour sifted with the baking powder. If the mixture seems too thick, add a small amount of milk. Pour onto a hot waffle iron and bake a golden brown. To serve, spread with butter and break half in two. Put together with sweetened crushed strawberries, pile berries over the top, and serve with whipped cream. Canned fruit with the juice thickened slightly is appetizing when strawberries are out of season.—R. B., Wis.

DELICIOUS WHOLEWHEAT FLOUR PANCAKE

2 well-beaten eggs
2 cupfuls of sour or butter milk
1 teaspoonful of soda
1 teaspoonful of salt
1 teaspoonful of sugar
1 to 1½ cupfuls of wholewheat or graham flour

Beat the eggs in a mixing bowl. Add the sour milk into which the soda has been dissolved. Beat in the flour, sugar, and salt until a thin, smooth batter is obtained. Pour on a hot greased pancake griddle and brown on each side. Serve hot.—Mrs. M. M., Wis.

CARROT-POTATO DISH

6 medium sized potatoes
4 medium sized carrots
¾ cupful of hot thin cream
3 tablespoonfuls of butter
½ teaspoonful of salt
Pepper

Pare the potatoes and leave whole. Scrape the earrots and slice. Cover with boiling salted water and cook until very tender. Drain and mash well. Add the eream and butter and beat vigorously until fluffy and light. Season with salt and pepper.

Send your favorite recipe which has not been published. One dollar will be paid for those which are printed.

BAKED POTATOES

The baked potato is fine food. It is high in food value and rich in mineral. It forms an alkaline ash which makes it suitable for use with meats. It is not so rich in some vitamines, but it is commonly eaten with foods which make up any defieiency that might exist in that direetion. Containing more moisture than flour or bread, potato is more suitable than the latter for those who tend to fatten and diabetics have a little more liberty with it.

And baking is the best way to cook a potato. In baking none of the minerals are leached out and the peeling is made tasty and edible. Let us interject a word in favor of eating some, if not all, of the potato peel.

Another advantage in baked potatoes is that there is a greater chance to escape grease and condiments. The best way to eat a baked potato is without salt, pepper; or even butter. Most people can be persuaded not to use pepper. Potato contains enough mineral to make the use of salt unnecessary. It will be digested more easily if it is free from fat.

HERE'S THE WAY TO COOK ONIONS

If you boil onions, start in bubbling hot water and cook rapidly with the cover off. They will be much less fragrant if cooked in that way.

Boil Brussel sprouts until tender, drain, then dip in egg, roll in fine dry crumbs and fry in deep fat.

"My favorite kitchen convenience is a fireless cooker. Mine has two compartments, gray steel body with heavy one-piece aluminum lining. All vessels —a set of triple cookers, a four and a six quart kettle—are aluminum. Other equipment consists of four soapstone radiators, four racks, tongs and thermometer.

"My cooker is a fuel saver. Foods requiring long cooking have only to be placed on the stove a few minutes and finished in the fireless; or the food placed in raw, with two heated radiators. It is always tender, warm, and never burned, even tho the meal is delayed.

"I never worry over the toughness of meat knowing it will be juicy and tender. It bakes delicious fruit cakes and cooks perfect soup by the slow heat.

"In canning I cold pack fruit or vegetables, boil 15 minutes on the stove, and place in the fireless for three hours. Result, perfect canned goods.

"I can also make frozen deserts in it without the usual cranking. It keeps bread and cake more perfectly than any cake box. On cold nights I store perishable goods in its compartments and its perfect insulation keeps them from freezing.

"The most valuable thing in its favor is its power to run without attention. After my food is placed in the cooker, I have hours of spare time for duty or pleasure. No other eooker operates automatically. I shouldn't keep house without a fireless."

The space available does not permit the use of more letters but they all stress the eonvenienee of various types of cookers. Thus, women are constantly finding easier and better ways to do their daily tasks.

SIDE STREETS

Eating is still one of Chicago's main oecupations. The big town's food bill is $564,000,000 every year. Fueling the human engine is usually enjoyable. The process has been ritualized and made happy, but, unlike other engines, it often fuels too mueh. If locomotives could enjoy being stoked with coal, they would become bulgy no doubt and too heavy in the boilers. They would puff slowly down the track, or have heart trouble. Beef, 133,000,000 pounds; Irish potatoes, 539,000,000 pounds; tomatoes, 77,000,000 pounds; lettuce, 22,000,000 pounds; Chicago eats them all and likes the process. That, and other things, is what living is.

Golf for profit is developing rapidly in Chicago. The board of education has leased 127 acres of its land for a fee golf course on the south side. A la earte golf courses of this kind have become common with the democratization of the game. Golf courses and small parks scattered through the eity supply Chicago's greatest present need for recreation. The great park systems and the forest preserves would be the pride of any city in the world. A corresponding development of small parks is now needed. A west side dump on Grand Avenue will be converted into greenery and playgrounds. A green Chicago will be a clean and safe Chicago.

The bridges were raised more than 100,000 times in Chicago last year. Millions of hours were lost by citizens and several million tempers. The bridges were opened 100,000 times for three sand scows in great part, though other vessels ask an opening now and then. The three sand scows that have made our bridges famous deserve a medal. The time, temper, and money wasted on their account would pay interest on all the sand banks of Lake Michigan.

Thirty new air lines will sail out of Chicago when spring comes. They will be colored planes with a hue for every mood, and the passengers, each with 25 pounds of baggage, will soar like pigeons for ports in all directions. Slowly the town turns skyward, but there is still much room above. When the small boys of the nation, now playing with their gliders, come to their own, Chicago will leap upward. The small boy's hobby is tomorrow's big business.

The above was taken from a recent edition of the Chicago Daily Tribune.

The colored farmers supply a great amount of this volume, and if they were only organized whereby they could market their products cooperatively, their pockets would bulge.

BROOD THEM CAREFULLY

Brooding baby chicks we find to be quite as important as feeding. Personally we prefer coal brooders, and we find coke more satisfactory than coal for fuel. It makes a dependable heat and saves lots of stovepipe and ash-pan cleaning. We use movable brooder houses. Ours are 12X14 feet. To save steps, we keep them near the house until the chicks are several weeks old.

Last year we kept our chicks in these houses until they were two months old, with good results. Our brooder hovers are 1,000-chick capacity. We put only 300 to 400 chicks under them, as we like to give them plenty of room. We have the house prepared for use and have a fire in the stove a day or so before the chicks are ready for it.

Chieks need lots of fresh air. If your house does not have a good ventilating system, muslin covered openings on the south are good. Also some of the openings should be covered with glass cloth to let in sunshine. Don't keep the chicks too warm; if they crowd around the stove they are not warm enough, but if they are content to stay around the edge of hover and sleep there at night they are.

On the floor under and around the hover for a couple of feet we place heavy corrugated pasteboard for extra warmth. Over this, to keep the chicks from slipping, also for ease in cleaning, we spread gunny sacks. Of course under and near the stove itself we place tin on the floor, for protection from fire.

Around the hover we use an adjustable movable fence, made of pasteboard, or better still, two-foot chicken wire covered with sacks. This fence is to keep the chieks near the heat until they learn its source, also to protect them from any drafts on the floor. We make it long enough to reaeh all the way around, three feet or more from the hover, but draw it up closer at first. Do not have it too close if chieks crowd out to the fence they are too warm.

Gradually widen the circle as the chicks learn where the heat is, and in a few days open it and give them the run of the house. We keep this fence handy for a few weeks and on cold or windy nights stretch it around at a safe distance for protection from drafts.

Dip each ehick's bill in warm sour milk as we put it under the brooder. We like to introduee the chicks to their new home in the evening giving full feed if they are 72 hours old. If not, a little sand and milk or water is all, until morning. Do not give the chicks access to a lot of sand at first.

Our first feeds are fine scratch grain mixed with a little sand. We feed little and often, on paper, at first. We prefer to sprinkle a little mash along with their grain; it keeps them contented longer. Mash in hoppers is not kept before them until they are a few days old, but we have milk or water before them all the time, and grit and green stuff after the first few days. For a niee, evenly developed bunch of chicks plenty of fountain and hopper room is essential.

If the brooder house is large enough to keep them confined for six or eight weeks, it pays, but to do their best they must have plenty of room and grit and green stuff. Then if all openings are screened to keep out flies, and the house is kept reasonably clean, they will have missed getting a lot of worms and germs. But do not keep them up and make the mistake of carrying them a lot of dirt filled with germs in which to scratch and wallow. They don't need it.

Clean straw or alfalfa hay is good, and they do enjoy a pan of ashes! When we are ready to turn out the ehicks we haul the houses to new ground where eld birds do not run, preferably ground that has been plowed and seeded to some green stuff. It is best to make a temporary pen around the house for a few days or so, or there will be trouble getting the chicks in at night. Chickens have to be accustomed to all changes gradually.

If low roosts are provided and the chicks taught to roost before the heat is taken away, it will save losses from crowding afterwards. After we have discontinued keeping fire for them, we leave the stove up a while and start it again if there should be a sudden decided change to cooler weather. "Better be safe than sorry," is a good motto in raising baby chicks. Just a few hours' neglect, the fire goes out, and they crowd or chill, and you might as well tell them good-bye. If they are worth hatching or buying, they are worth brooding well.—Mrs. R. F., Kans.

Guinea Hens and Hawks

It is authoritatively stated that at least some varieties of hawks are frightened away by guinea hens. However, there are many varieties of hawks so there may be an exception to this. It is stated that chickens are relatively safe when king-birds or purple martins breed about the farmyard, since these birds drive the hawks away. I have often seen martins in considerable numbers attacking hawks and driving them hither and thither. This is one of the best arguments that can be presented for a good martin house with an abundance of room for a large colony in the yard. The martins also will be most enjoyable company in addition to their value in protecting poultry from the hawk.

Long Distance Laying

Which is the most valuable, the hen that wears herself out with a big record the first year or the one that continues with a reasonably good production over a long period of years, is the question raised by the performance of six White Leghorn hens at the Missouri College of Agriculture. All six have laid more than 1,000 eggs. The average first year production has been 206 eggs, which is not a bad reeord, while the average of the six hens for the fifth year is 132 eggs. The fifth year record is equal to the first year production in some real good flocks. There are probably more hens in Missouri that lay less than 100 eggs the first year than there are that lay more than 100.

Four of the six hens have laid over 1,100 eggs. The sixth hen to pass the thousand-egg mark is known as No. 9. Hatched in 1922, she laid her 1,100th egg at the age of 6 years 109 days. Two other hens promise to lay 800 eggs in four years. They have records of 742 and 760 eggs respectively.

Reduces Chick Loss

Clean ground reduces chick losses more than any other thing that ean be done. This conclusion is drawn from a study of 188 farms in Illinois. The investigation was made by poultrymen at the University of Illinois. Twice as many chicks were lost on those farms where young birds were kept on old ground as when they were kept on clean ground.

A total of 88,820 ehicks was raised on clean ground with a mortality of 21.4 per cent. In eontrast there was a mortality of 42.4 per cent among the 16,387 chicks on old ground.

A loss of 466.8 per cent was suffered even among chicks. from hens blood-tested for bacillary white diarrhea when the chicks ran on old ground. Clean ground has not had chickens on it for at least a year and in the meantime has been cultivated.

Farmers Can Bank By Mail

Tennessee Institution Offers Splendid Chance

Banking by mail was instituted by tre president of the Citizen's Savings Bank and Trust Company of Nashville, Tennessee. He has sent the following letter for publication in the Modern Farmer, calling upon the farmer to save his money and to deposit regularly in this bank by mail. In the letter he said:

"Dear Christian Friend:

We are admonished in Holy Writ that we should teach by precept and example, etc. This letter is merely to ask that you aceept an invitation from the Citizens Savings Bank and Trust Company to use its service. As President of the bank, I am renewing the invitation, as it is the oldest institution of its kind in the United States, and as a leader, you, like the rest of them who are forced in the lead, know that it is our duty to lead out and the others will follow. I have always felt that the ministers of the gospel, teachers and ehurch folks with fraternal workers and the farmer should show the people the way to go, how to act, how to live, how to save. The Citizens Savings. The bank also has the regu-features not enjoyed by any other bank in our group. For instance, it has a Banking By Mail Department. Anyone in the United States can open an account with the bank by mail; you can do the same. You can write a letter to me, inclosing a check, and I will open your account, mailing your check book back to you; I mean, if you want to transfer money from some other bank to the Citizens. Then we pay 4 per cent on savings accounts, and credit the interest semi-annually. In addition, there is a Women's Department, combined with the Christmas Savings. The bank also ras the regular savings accounts, commercial and cheeking aecounts, a Safe Deposit and Vault Department and a Personal Service Department, where we give information on stocks, bonds and seeurities, if any of our patrons need it. The last feature is the One Thousand Dollar Membership Savings Club, whieh provides that if you will deposit $3.50 per week or an average of $3.50 per week every month for five years, we will add enough to this, interest and compound interest, to place to your credit $1000.00 in the five years. You can figure it out for yourself. We are inclosing a copy of our statement of November, 1928. Would you favor me with a letter saying whether you would like to accept the bank's service? Is there anything we can assist you in doing? We can protect your papers, your Insurance policies, your wills from fire and theft, giving you a safe deposit box, with a private key, for less than one cent a day for the year. May I have the courtesy of a prompt reply also a money order or a check from you to open an account by mail?

Yours truly,
HENRY A. BOYD,
President Citizens Savings Bank & Trust Company, 4th Avenue, North and Cedar Street, Nashville, Tenn.

SPECIAL NOTICE

Mr. A. M. Patterson, of Como, Miss., one of the largest land owners in the south, has openings for five or six good reliable families to come and locate on his farms. He has families that have been tenants for the past 25 years—residing on the same farms at present.

Mr. Patterson has a fair proposition seven large tracts of land adjoining his present holdings, and is now needing this additional help. Some of his land is eapable of producing a bale to the aere, as it is located in the rich Delta section of Mississippi.

Mr. Patterson has a fair propsition for any one that desires to help themselves, and will settle promptly and fairly with tenants.

Any farmers who have not succeeded in the past year or two and wishes to get a good opportunity to get on top, write Mr. Patterson at once for his liberal proposition.

THE MODERN FARMER

NO. 1. Chicago, Ill., and Nashville, Tenn., Monday, April 1, 1929 NO. 2.

COLORED FARMER AND THE SOUTH

J. W. Nelson of Keeling, Tennessee Contributes

Keeling, Tenn. (Special to Modern Farmer)—So much has been said by the press, both for and against the colored farmer, and so many gross exaggerations have been made by the people of both races who are in no position to know the true condition of the colored farmer, that I am taking this means of informing all concerned of our true condition. Some would have you believe that for the most part we are simply working under a peonage system. Others claim that we are greatly persecuted. Still others say that we are not given a chance to accumulate property. To all of such belief, allow me to say that as far as I have been able to ascertain personally, as for peonage, all of us are slaves to our obligations,—whether on the farm or elsewhere. We cannot make promises,—or use either a white or a colored man's money, and then not be obligated to that party.

We have some thriftless people who want to enjoy the luxuries of life at the expense of their white friends. Then when the time comes to settle, they often say that they have been mistreated. Such people are putting themselves in the way of our advancement.

I defy any other class of colored people to show the advancement we colored farmers can show, financially or educationally. Take a census of the colored men in America who are really worthwhile and they will tell you that they are products of the farms.

We often criticise the white people of the south for the part they play in our little drama but when we look back on the stage as it was set before the Civil War, we cannot help but admire the leaders among the southern white people for the help they have been to us,—in helping us to shape our destinies as citizens. They were not compelled to sell us land on easy terms. They were not forced to finance the building of our many palatial residences. But, whenever one of us showed himself to be a real man they showed their willingness to help him in every way to be better condition. The result is,—we have delivered the goods. I remember reading a poem a short time ago entitled, "This Beautiful Southland of Ours,' and I could not help but ask myself did it ever occur to the writer of that poem who is was who made the south so beautiful. It was really the Negro farmer. It was he who walked out into the dense forest with a song on his lips and waved his ax as though it was a wand in the hand of a fairy, and cause the forest to disappear. It was he who yoked the oxen and carted the huge logs to the mills to be made into lumber. It was he who built the fine old colonial residences. It was he who planted flower gardens and tended the flowers. It was he who built the [illegible] highways.

And it is yet the colored farmer who is contributing steadily to the growth and expansion of the New South. And why? This is our home If the press does not give us credit for what we do and are doing, we have sense enough to know without any telling. As to our educational facilities, and likewise our social conditions, much could be said, which I hope to say at some future time. But I must reiterate this statement,—The Colored Farmer is making good.

There are colored farmers owning their farms located in every state in the union.

In 45 counties in Georgia the colored farmers outnumber the white farmers.

Buxton, Iowa, a little village of 5,000 has 4,000 colored.

RACE INCREASING HOLDINGS

Journal and Guide Shows The Negro Purchasing Farms

When President Binford of the Agricultural and Technical College at Greensboro, N. C., in setting forth the claims of his institution before the appropriations committee of the North Carolina Legislature, remarked: "More and more the farming in the State is being done by Negroes," and cited the fact that in the ten years between 1910 and 1920 census figures show Negro farm ownership increasing by 16.2 per cent in comparison with a white ownership increase of 2.8 per cent, he gave a bit of information that is neither generally known or appreciated. As a further revelation, he pointed out that in Wilson county, North Carolina, Negro farm land holdings had increased 59.7 per cent. while in numerous other counties the increase was almost equally as large.

While President Binford's remarks come as really worthwhile information, it is as an inspiration they strike us best. The Journal and Guide will not be moved from its rural interests, sympathies and hopes. While we have no reason whatever to subscribe to any such notion that all Negroes would be best off farming any more than all white people would be, we insist that modern agriculture offers splendid and practically virgin opportunities for thrifty and industrious colored youth the same as it offers to white youth. But we even go a step further, for we believe that opportunities for the trained Negro youth in the field of agriculture are more inviting, assured and less subject to the accommodation of race prejudice which retard his progress in more competitive industry. Neither is this saying that our youth need to recoil from the competition of industry; rather, they should contend for openings wherever they can possibly do so, but future years will see the soil, coaxed by trained hands and minds, yielding independence and wealth in proportions double and treble what they were in the days passed.

We believe that it would be to the great economic advantage of our race to take a stand upon the soil now, while agriculture is reshaping itself for the prosperity that is bound to come as sure as the people are bound to eat and wear clothes.

North Carolina is a state whose people are predominately rural. In spite of the northward migration its colored population is rapidly increasing its farm holdings. Whatever influence that is operating there to encourage the Negroes to develop their rural heritage and adaptation, it is something reassuring for the future prosperity and happiness of the State.

—Journal and Guide, Norfolk, Va.

HENS WILL YIELD A BIG PROFIT

Clarksdale, Miss.,—The White Leghorn poultry flock owned by Dr. and Mrs. O. A. Davis of near Clarksdale, increased the income of the farm with a profit of $24,491.93 without any reduction in the farm acreage.

The record kept by this couple covers a 12-month period and was kept by the state extension department. It includes all activities in the business, covering sales of hatching eggs, broilers and culls. A gross income of $4,124.23 was received from the flock. The chickens were made to feed themselves, build $553 worth of equipment and house this year and after deducting these expenses netted over $2,000.

This farm took third place in the Mississippi state demonstration on profit per hen, netting $4.55 each, with an average production of 165 eggs. Records show that 90,338 eggs were produced during the year from the flock which at the present time, numbers 547 hens.

Their poultry plant covers about five acres and consists of two big laying houses, yards for green feed, 13 breeding pens, where trap nesting was started last year. A well arranged outlay has been added as the business increased.

ONE HUNDRED SEVENTY-SIX BU.

Ira Marshall of Dola, Ohio Sets New Record In Corn

Ira Marshall, of Dola, Ohio, produced 176.2 bushels shelled corn per acre on ten acres of his land last year.

The fertilizer treatment was as follows:

Four hundred pounds of 0;14;4 plus fifty pounds of nitrate of soda (mixed together) dropped near the hill at planting time; 150 pounds of nitrate of soda used as a side dressing when the corn was about a foot high.

This same treatment was given to ten acres which produced something over 164 bushels for a relative of Mr. Marshall, and also ten acres, which produced 151.5 bushels per acre for a daughter.

EATING MORE GREENS IN CHICAGO

A representative of the Modern Farmer has been watching the stocks of greens in the many stores on the south side section of Chicago.

Early mustard greens, shippped in from southern states, is a good seller at ten cents per pound or 30 cents per peck. Dandelion greens is another favorite. These, we understand, are being improved and the earliest arrivals are from cold frames.

Another big seller in the southern collard, which is a very heavy seller at ten cents per small bunch.

A variety of turnip which grows almost entirely to tops and does not form the usual root is meeting favor with consumers and producers. Top prices are received for this green when it is young and tender. It is packed in bushel hampers.

A visit to the South Water Market revealed the fact that an average of 10 cars of greens are shipped into Chicago from the southern states every week during the early spring months.

(Continued on Page 3)

A HINT FOR MORTGAGES

Federal Land Bank was Established To Help Farmers

The Federal Land Banks, as nearly everybody knows, were established for just one purpose—to reduce rapacious interest rate and unfair terms on farm mortgages.

They aim to give the farm borrower a loan at a rate which is the irreducible minimum—the lowest rate for which money can be borrowed from anybody, anywhere. They do it, too.

But what we started to say is this: interest rates are up, and are likely to stay there. Yet the Land Banks still have some money to lend at 5 per cent—an extraordinary rate for these days.

Therefore, if you are paying a higher rate on a mortgage, or are thinking of borrowing for needed farm improvement, **now is the time.** Make up your mind quickly, for it will almost certainly cost you more later.

The Modern Farmer will gladly give any information relative to Federal Land Bank loans.

FACTS AND FIGURES

Department of Commerce Bureau of Census Matter

IOWA

Total farm population 10 years of age and over (colored) 476.

Total land owners 74, with a valuation of 1,330,600.00.

Total acreage owned by colored 8,847 acres.

E. J. Baldwin of Creston, Iowa, owns and operates a farm of 746 acres acres.

Joe Wilson of Osceola, Rural route 4, owns and operates 240 acres.

MISSISSIPPI

Total number of farms in state 1925, 257,228.

SPRING LAMB MARKET OUTLOOK

Shipping Season Likely To Begin Earlier This Year

The Tennessee Division of Markets of the State Department of Agriculture in a recent news release states that present conditions indicate a good market for the 1929 crop of Tennessee spring lambs provided the movement to market is properly regulated.

During the past few years there has been a rather heavy upward trend in the demand for lamb with a fairly steady upward trend in prices.

According to the U. S. Department of Agriculture the demand has been very good so far this season, partially due to the fact that last year a campaign was conducted to educate retailers to best ways to cut and trim various portions of lamb carcasses in order to make them attractive to consumers. Housewives were also taught the best ways of preparing lamb for the table. Demand has been further strengthened this season because lambs are averaging about two pounds lighter than last year and consumers prefer the medium finished lambs to those that are too large or too fat.

During January about 10 per cent more lambs were sold at public stockyards than during the same period last year and 15 per cent more than the 5-year average. Chicago prices have ranged from $1.12 to $1.25 per 100 pounds above the same period last year, and prices on dressed lamb at New York have been about $3.00 higher this season.

Although the demand is expected to be strong this spring it is possible that shipments from California, Kentucky, Virginia and Tennessee may come nearer together than usual, since the season is reported late in California and early in Kentucky, Virginia and Tennessee. Increases in numbers over last year are reported to be 6 to 7 per cent, in Kentucky, 5 to 10 per cent in California, 12 per cent in Virginia and about 5 per cent in Tennessee .

Shippers should keep in close touch with conditions in these sections and try to spread shipments to secure a steady movement to market if they wish to avoid fluctuations in prices.

Homer Handcock, State Commissioner of Agriculture, who is also a successful sheep breeder, suggests that Tennessee producers would profit by continuing to feed some grain in order to produce highest quality lambs.

MONEY-MAKING MENU

The wife of a Missouri famer says, "Most winters I'd been making around 20.00 per week profit off 250 hens, then low prices, working hard, breaking even. My partner and I put our heads together and devised this feeding ration:

30 pounds ground oats.
30 pounds ground corn.
30 pounds bran.
9 1-2 pounds tankage
1-2 pound salt.

We fed a gallon of clabber milk per hundred hens and scattered plenty of osyter shell about.

We increased our egg production from 25 per cent to a steady 45 per cent and cut our expenses in half. We made a profit of 8.00 per week and better at time when most folks were not paying.

The annual crop of rice in Arkansas is over 7,000 bushels, and there are 63,283 colored farmers in the state.

SIX MILLION DOLLARS FOR THE SOUTH

State's Woodland Farms Cover Much Land

Farmers in South Carolina own as much forest land as all the lumbermen and other private owners put together. Unfortunately, few farmers realize the possibilities of their wood lands or give them sufficient care. Haphazard cutting without plan or thought for the future, letting the woods burn or intentionally burning it over and too much grazing in the woods result in deterioration in the quantity and valne of the timber. To grow any crop weeds must be kept out, and to grow a paying crop of trees requires the removal of the dead, dying and scrubby trees which are the "weeds" of the forest. Unfortunately, most South Carolina farmers pay no attention to what kind of trees they are taking out and usually leave a lot of good material in extremely high stumps. When cutting fuel wood, and farm timber do not use the best trees when poorer ones will do. Well managed, the wood land increases the farm income. Farm forestry or proper management of the woods looks to growing more and better timber, and keeping the land constantly at work doing it.

Lewis E. Statley, State Forester—Exchange.

The colored farmers in Georgia harvest over two million bushels sweet potatoes every year.

JOINT RESOLUTION BEFORE THE PRESENT CONGRESS

To Provide Funds For Florida, Georgia, and South Carolina.

Washington Tribune, Feb. 15, 1929. —A joint resolution before the present Congress for a fund of $6,000,000 to be available to the Secretary of Agriculture, to loan to the farmers of Florida, Georgia, and South Carolina, who suffered from floods in those states last fall. It provides $8 per acre to the cotton farmer, and $3 per acre to others, with $2,000 as the maxium amount to be loaned to any one farmer.

The loan will be made for the purpose of seed of cotton, corn, legumes, nursery stock and vegetables, feed for stock and fertilizer.

This is a very fine proposition for the southern farmers. But, will the Negro who suffered along with his white neighbor across the road, share in this new loan in proportion to his losses with the white farmer?

We know that the millions already lent to farmers through the Farm Loan Banks have failed to reach the Negro farmer. Yet we are told that southern farming is based on the Negro. And the farm census reports give the Negro more than a million farms. Such being the case, why has the Republican adminlstrations left the Negro out of this farm relief which he really needed more than his white neighbor? And will this new sum of $6,000,000 go the way of all the rest?

There are really more Negroes in South Carolina than white people and will they get anything like a just proportion? Or will they even hear of this fund of relief for their crop this spring?

The above editorial is taken from the Washington (D. C.) Tribune. It is timely.

There is but one solution and that is, in organization. You can do your bit by becoming a member of the National Federation of Colored Farmers. Have you applied for membership?

The Modern Farmer

Official Organ of the National Federation of Colored Farmers

James P. Davis - - President
Cornelius R. Richardson - Secretary
Leon R. Harris - - Editor

Published Monthly by the Modern Farmer at Chicago, Illinois and Nashville, Tennessee.

Chicago, Ill., Office: Vincennes Hotel, 36th and Vincennes Avenue.

Nashville, Tenn., Office: 447 Fourth Avenue, North.

Devoted to the interests of the farmer, truck Gardner, live sock and poultry breeder, the Home and the People.

Application made for entry as second-class mail matter, under Act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 447 4th Avenue, North, Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

Some of Many Letters Being Received

Wm. Farman of Renfroe, Ala.,

I have read your paper the Modern Farmer and like it fine. We farmers in Talladega county are cotton raisers. Some renters and some owning their farms, but 90 per cent of them under mortgage. We can raise anything here, but have no market but cotton, and then we are forced to sell that for what we can get.

From Arthur Bradshaw, Elsberry, Mo., R. F. D. 3:—

We are very much in deed of some aid and enlightenment ,for most all the farms are being given up and we have almost lost hope. The white farmers are organized and the colored farmer and laborer have nothing. to do, for they are alone, unorganized and unable to get financial aid.

Jno. J. Jenkins, Elkmont, Ala.:—

We think your plans are fruitful of permanent good.

From Prof. C. H. S. Lyons, Principal Union Baptist Institute, Athens, Ga.:—

We had our Farmers' Conference and Meat show. It was a success. We beg to send you names and addresses of the farmers in our section who we believe will be interested in the National Federation Colored Farmers and the Modern Farmer.

Every farmer of our group in the United States should at once become members of this organization, and we wish you much success.

The Modern Farmer will fill a long felt want .

From J. W. Nelson, Keeling, Tenn.:—

I must express my surprise that we the colored farmers have such an organization as the National Federation of Colored Farmers. I find in your brief outline so many things that I have been fighting for in our community. We have an organization known as the "Better Farming Club of which I am the President, and I am putting forth my best efforts to educate our people to the advantage of cooperative buying and selling.

I must also acknowledge receipt of the latest issue of the Modern Farmer. I found it very interesting indeed.

Please allow me to tell you something about this community.

One half of the farmers own their land and homes and about 7-8ths of the rest are tenants owning their livestock, implements and etc. The only merchant in this town is a colored woman. No white man has been able to run any business here because he cannot get any business. This community is dominated by our group.

We have two schools a grammar and high, that are well patronized. We need your co-operation in serving these people.

I am now attempting to arrange with the truckers to take advantage of your plans in shipping truck and am sending you the names of all the farmers in this section.

I hope you will help me put this program over.

From N. C. Perlote, Merchant, 1041 West 14th Street, Chicago:—

I was born and reared on a farm in Georgia. I own two farms in Oglethorpe county, and heartily endorse your movement.

I wish to subscribe for membership in the organization and also to the Modern Farmer, the only periodical that we have that is devoted to the interests of the farmers of our group.

I have insructed the manager of my farms to plant sweet potatoes this year, and when ready for the market will have your Federation secure buyers for same.

Please send blank for application.

From Dr. William Henry Huff, Prop. Pythian Temple Pharmacy 37th and State Streets, Chicago.

Congratulations to the National Federation of Colored Farmers and the Modern Farmer. You fill a great need.

The magazine is wonderful.

The colored pharmacists made no headway until they organized and I now predict for the farmers of our group financial success if they will back up your Federation by becoming members.

I am today writing my relatives in the south who are farmers and urging them to send in their application for membership at once.

I am also subscribing for the Modern Farmer.

THE ORGANIZATION FOR A MILLION

An Editorial By Leon R. Harris, Editor of The Modern Farmer

The National Federation of Colored Farmers agrees in principle, with all other major American farm organizations, to three remedies which must be applied to American agriculture before there can be any hope that it will recover from the many ills that now afflict it, and arise to the truly recognized as the prime industry of life Nation. The three remedies are these:

First, Farmers must ORGANIZE to market their products.

Second, Farm surpluses must be handled by a STRONG ORGANIZATION in the interest of farmers.

Third, ORGANIZATION must be on an ECONOMIC rather than on a political basis.

To these three remedies, and for the particular benefit of colored farmers, a fourth must be added. The fourth remedy is:

COLORED FARMERS MUST FORM A STRONG GROUP ORGANIZATION FOR THEIR OWN PROTECTION.

We are glad that we can say that the interest and enthusiasm shown by colored farmers in the organization and aims of the National Federation of Colored Farmers,— which is the organization for a million of us, proves without a doubt that most of us know that a strong group organization is essential. It is so necessary to our success and welfare that the time has come when we cannot possibly do without it. It MUST EXIST and it MUST FUNCTION. Every American colored farmer must join it and support it, and it, in turn, will give to every American colored farmer the very advice,—the very assistance,—and the very protection he needs and must have.

There are in America more than one million colored farmers and approximately twenty-five per cent of them own their own farms. The National Federation of Colored Farmers is the organization for these farmers. It provides the medium for them, through which the first remedy mentioned in this article for the benefit of sick agriculture may be applied. It is here to market their products. YOUR ORGANIZATION then, colored farmers, is in existence now. You should join it, and join it NOW.

Your membership and your support of it is bound to make it a STRONG ORGANIZATION. We said that the second remedy for sick agriculture is "that farm surpluses must be handled by a STRONG ORGANIZATION in YOUR interests."

We are not one bit egotistical or big-headed when we proclaim, honestly and proudly, that you have right now, a STRONG ORGANIZATION. Its only weakness is its small membership. You farmers who have not as yet joined and paid your annual dues are responsible for this. But, in every other way, we proclaim that it is strong. Its leaders are men of experience,—men of faith,—men of vision. Its leaders are men who will not recognize the existence of such a bugbear as "failure.' Recently, a prominent Negro educator remarked to the president of YOUR ORGANIZATION, "Brother, you have tackled a mighty hard job." The president replied ,—"I am used to hard jobs. The harder my job the better I have learned to love it." Such men have founded YOUR ORGANIZATION. Plain, strong men.

No colored farmer who is acquainted with the aims of his organization can accuse its organization and leaders of a lack of the knowledge necessary to establish it upon an unshakable foundation. The stated purpose and reasons for the establishment of YOUR ORGNIZATION read like a Negro Farmer' Magna Charta, —like a Negro Farmers' Decaration of Independence. We say that "the time" for such an organization "has arrived." It has. Who doubts it? Certainly not the poor colored farmer who has been toiling and struggling for a mere existence for himself and family all of his life. Certainly not the colored farmer who has never known a day when he was out of debt. Certainly not the colored farmer who has never known what it was to receive fair price for his products. This farmer SURELY KNOWS that the time is ripe and rotten-ripe for some kind of a change. and we believe he will receive, with open arms, an organization that promises relief and assistance.

So we say that the time has come when colored farmers should form a National Organization devoted to scientific farming (which is only sensible, successful farming),—to the right way to prepare farm products for marketing,—devoted to the purchasing of needed farm supplies through co-operative methods and to the co-operative marketing of farm products. When we say this, we say in substance that the time has come for us to wake up—for us to consider our vocation as being a business, not simply work-for-a-aliving. We say that the time has come for us to have some faith and confidence in our fellow-men. We say that we believe there is strength in unity and that two heads are better than one. We say that we want more money for our crops—for our labor more comfortable homes—better education for our children— better churches—happier neighborhoods— a chance to live like all honest, intelligent American citizens want to live. And then, when we JOIN the Federation, we are doing our part and making a big effort to satisfy these wants. Can any of the million American colored farmers neglect to join the National Federation of Colored Farmers—the organization for the million?

We say too, that it is the purpose of OUR ORGANIZATION to work "to the end that a more prosperous financial condition may result from our efforts as producers." White farmers of America have organized—are organizing, and eventually they are going to be financially independent. Colored Farmers, do you want to continue to be the beggar—the Lazarus of American farmers? Do you want the assertion, "As poor as a Negro Farmer." to succeed the expression, "As poor as a church mouse?" If you don't come on in with us now.

We also say that it is one of our aims to establish branches in conveniently located marketing centers to which members can ship their produce. This will help you. It will put you, the producer close to your friend, the consumer. It will decrease the cost of marketing your products. Some of the money you are now paying for freight and storage (for YOU PAY IT,—don't forget that) will fall back into your own money-sack. It will minimize decay and waste and the consumer will get your products fresher and in better condition. This will make him love you all he more.

We also say that it is the aim of OUR ORGANIZATION to keep in touch with all matters of National Legislation affecting agriculture and to keep you, the members, informed. Ignorance is not bliss here in America. It is not bliss either. Legislation already enacted by Congress and by various state legislatures for the benefit of farmers has done colored farmers little good, simply because they knew nothing about it, or because they did not know the right way to take advantage of it. It may have been that the enactors of it were sharp enough and shrewd enough to so word the bill or resolution that the colored brother was excluded from its proposed benefits. White farmers all over the country have borrowed millions of dollars from the government, at low interest, through farm loan banks. Colored farmehs have needed loans just as badly but they could not get them. A way could always be found to turn down the colored applicant. YOUR ORGANIZATION aims to help you get help from legislation enacted as much for your benefit as the benefit of any other American farmers.

We also say that the "problems of the farmer's wife will not be overlooked." Were it not for her religion, for her supreme faith in Almighty God, and for her unselfish love for her husband and children, the wife of the average colored farmer would be the most miserable feminine creature on the face of the earth. She is hogtied to an existence that promises little indeed and no woman on earth is more deserving of all the happiness life can afford. YOUR ORGANIZATION promises much for her and certainly you will want YOUR ORGANIZATION to make good this promise.

We also say that "on the Federation's staff are marketing experts." These experienced men will be able to tell you how you can get the most money for what you have labored to produce. You will soon discover that this advice alone will be worth many times over the small membership dues.

Briefly, we have told you some of the purposes and aims of the founders of the Federation and now ,we tell you again:—"It is the HOPE of the founders of the National Federation of Colored Farmers to make life on the farm more attractive and profitable, and to build up in this Nation a colored group of organized, influential and satisfied producers." It takes faith and courage for men to hold within their breasts such a HOPE as that. With prophetic eyes they gaze into the future and they see this great Race of ours liberated from economic slavery—taking its rightful place in the sun—standing on a level wih all the races and nations of the earth. An organization, founded by such men as these, is bound to grow and prosper. So again we say, YOU HAVE A STRONG ORGANIZATION RIGHT NOW.

We have said that the third remedy for sick America agriculture is that "organization of farmers must be on an ECONOMIC rather than on a political basis." This does not mean that YOUR ORGANIZATION is going to stay out of politics. We couldn't do it. It does not mean that we are afraid of politics. We are not. But it does mean that we are not going to depend on politiics,—on political parties—nor on the government for our success. Such dependance has caused the downfall of more than one farm organization in this country already. YOUR ORGANIZATION will ask for a fair chance and a square deal from all political parties and from the government, but it will never expect to get that fair chance and square deal by handling over the votes of its members to some shrewd and scheming promiser. The founders of YOUR ORGANIZATION know that something cannot be gotten for nothing. YOUR ORGANIZATION will succeed because YOU will put yourself and your money into it. You will market your products and purchase your supplies co-operatively. You will think and plan and work together for the benefit of all, like men who are running an organized business should do. Then, your buying power will increase—your wealth will increase, and no politician nor political party will dare withhold from you the recognition you deserve You will have influence—you will be felt—because you will have the brains, the organization and the money to back you.

For our own protection and for our own welfare, this strong GROUP ORGANIZATION of ours must function. This is he remedy for the ills of American agriculture which we Negro farmers must apply. We must get out of the bushes. We must hold up our heads and keep our chins up. We must stop being mealy-mouthed. We have brains enough to talk sense and business so lets talk it. Farming is a business, and there is something wrong somewhere when our business shows a loss. Lets discover the trouble. YOUR ORGANIZATION will discover it. YOUR ORGANIZATION will correct it. Get into YOUR ORGANIZATION and stay there. Talk for it. Work for it. Pray for it. And, if you don't join it, and join it, now, then sing for it the old song, "The Fault's In Me, My Lord." That will be the most mournful, the most melancholy, the most miserable song a colored farmer can sing. Let it be your dismal dirge, for economically and progressively, you will indeed be a dead one.

But live, man live! Here is YOUR ORGANIZATION shining as brightly as the noon-day sun. Get in the sunlight. Start with it and grow with it. JOIN THE NATIONAL FEDERATION OF COLORED FRAMERS AND JOIN TODAY!

Plow, Plant and Prosper

We all read about the much talked of Farm Bill that was passed by U. S. Senate in Washington for an appropriation of about 2 millions of dollars for the agricultural development and relief of the farmers.

If the colored farmer and land owner, as well as the toiler and tenauts will grasp the enthusiasm of the situation and will plow, plant prosper, happiness, success and contentment is just around the corner.

With practically every member of the U. S. Senate, and every Congressman ready and willing to vote for the complete passage of this bill —backed by the first colored Congressman we have had in 25 years, to see that we get recognition, there is no doubt but that the colored farmers can win with a smile.

Congress is also ready to act on the Navy Bill of three hundred and forty seven millions of dollars and the great Mississippi levee appropriation bill is going through. The working man and common laborer will find employment.

Federal Funds for Negro Education

The percentage of Federal funds expended in vocational agricultural schools for Negroes in 1927 ranged from seven-tenths per cent in Missouri to 26 per cent in Louisiana, while the percentage of Negro rural population, according to the last census ran from 2.4 per cent in Missouri to 54 per cent in Mississippi, according to a table showing percentage of Federal money expended for salaries of teachers of vocational agricultural in colored schools.

Under the new appropriation for Vocational Education available July 1st of this year it is proposed to appoint four new supervisors . Although one will in all probability be assigned to the supervision of work

in Colored schools, it is predicted that the entire four supervisors are scheduled to be white.

Let every reader of this article write a letter to Congressman Oscar DePriest, our only colored member, urging that he use his influence to have at least one colored supervisor appointed.

WHEN TO MARKET DUCKS

Time To Make More Money Ably Stated

Green ducks at eight weeks of age should weigh 9 pounds to the pair, and at ten weeks ought to reach 10 to 11 pounds. They command best prices about the first of May, and from then on until July the price gradually drops. From July 1 to September prices remain unchanged, but by September to November they are up again.

The general laying season starts about February and continues until the last of August. The first eggs of the season are rarely fertile. Fertility and vitality are the keynotes of success to duck culture.

One way to make money out of ducks is to be ready with a good supply at the opening of the season, writes Michael K. Boyer in the Farm and Ranch. Another important item is the value of the manure, that of duck ranking second to hog for growing vegetables.

The trade for ducks is largely found in the restaurants and mountain and shore resorts, where they are served in quarters—the carcass being cut into four pieces. Consequently, a duck weighing 4 or 5 pounds, served in that way, will command just as much money as one weighing 2 pounds more.

In all large cities, where there is a large Jewish population, live ducks are in demand. In Chinese sections there is also a heavy call for this favorite fowl.

—Exchange

TO THE PUBLIC

Yielding to the necessity and demand for a constructive magazine devoted to the interests of the Colored farmers of the United States, the Modern Farmer makes its bow to the public. It will be a monthly publication and non-political. Due to the fact that statistic show that there are 218,000 Colored farmers and 727,000 managers tenants and croppers, there is every reason to believe that such an organ should be a valuable mouthpiece to the farmers of our Race.

The aim of the Modern Farmer is to stimulate, to versificate, standardize in the co-operating of farm products and also to the purchase of needed farm supplies through co-operation methods, to the end that a more prosperous financial condition may result from their efforts as producers.

How to increase the farmers' production and to give the prevailing prices for farm products at the consuming terminal markets, will be the object of its policy and further to give encouragement and advice to the readers of the magazine. There are over 700 white farmer magazines and these never, except on a rare occasion, find one of our farmers who are making success and whose work and deeds published would be an inspiration to other farmers.

Meager information is known about the buying, selling and leasing of farmers among us. This magazine will give publicity to all matters pertaining to the farmer and especially that which will benefit him financially.

Farmers of our group are missing too much by not being familiar with the things that are going on in his state or at Washington, D. C., that should interest him but lacks the medium through which he should be informed. This magazine will advocate such national legislation as will make it possible to give our group an opportunity to secure loans through the Federal Land Banks on a 30 year lease.

The Modern Farmer asks the support of every farmer in the United States and the co-operation of good will of the public. It hopes to be a mighty lever to the "man with the hoe." Its desire is to bring sunshine and happiness to the fireside of the farmer by its interesting and instructive articles.

The price is $1.00 per year in advance.

NATIONAL FEDERATION OF COLORED FARMERS

1. CO-OPERATION. This movement has for its main objective the bringing about of a more co-operative effort on the part of Negro Farmers.

2. SIGNS OF THE TIMES. The signs of the times point to co-operative effort in all directions, whether in production or distribution. The springing up of numerous chain stores is a splendid example of co-operative buying and selling exemplified in every community.

3. AMERICAN FARM FEDERATION. A splendid example of this is the magnificent piece of co-operative work being demonstrated by the American Farm Bureau Federation (white) This organization is ten years old with a membership of 303,000 in forty-five states They have led the way.

4. URGENT NECESSITY. The colored farmers position, with the vast majority living in southern states make the necessity for co-operative organization all the more urgent in order that economic life might be protected, and that the Negro Farmers might build for themselves a fuller and more satisfying social life.

5. SELF HELP. Not for charity, but the desire of helping himself, the Negro Farmer must take his place beside his white brother in the present economic struggle, and thereby reap the magnificent harvest that comes from a united co-operative effort.

6. THE MODERN FARMER. Our periodical the Modern Farmer will from time to time not only serve to promote the best interest of its thousands of readers, but will fill in a bigger way, a long felt need for further advancing the great horde of colored citizens, who are justly extracting from the farm much of her bounteous riches.

7. BETTER TIMES. A new day of hope looms brightly before the Negro Race with splendid organization and the necessary co-operation, which can come only from the intelligent activities, as will be demonstrated through the National Federation of Colored Farmers.

8. FUTURE OUTLOOK. The future outlook for the Negro, not only on the farm, but in every walk of life, will grow brighter and better. In union there is strength. Modern methods of production and distribution as exemplified by this organization, will do much to bring about the desired conditions for thousands.

9. CONTINUAL GROWTH. The National Federation of Colored Farmers has not come about spontaneously, but with the great mass of her people still on the farm, either as land owners or tenants, produces a splendid opportunity for continual growth as espoused by our organization.

10. ULTIMATE GOAL. With the Negro Farmers fully organized, they will be in position to bargain collectively. Not only in buying supplies and marketing their purchases, but this organization will be a great source of strength to our Race in many other movements that might be begun for the improvement of conditions among Negro Farmers everywhere.

Commission is Named by Governor to Help Pull Farms out of the Mud

Trenton,—How to pull more than one-third of New Jersey's farms out of the mud is the problem to be solved by a commission proposed by Governor Morgan F. Larson.

To carry out a pledge made in the Governor's inaugural address to aid the farmer in all ways possible, Assemblyman William B. Knight, of Camden, majority leader, introduced a joint resolution creating a commission to study the question of rural roads. The development of a program of secondary road improvement and methods of financing such improvements are among the leading subjects which would be considered.

A study of the rural road problem by the State Department of Agriculture disclosed that of the 11,853 miles of unimproved highways, 8,576 miles were township roads. Many of these were impassible for motor vehicles during certain seasons of the year.

"In a large majority of townships the roads under the supervision of the local committee are being given the same treatment that they received when horses comprised the motive power for both passengers and farm products," William B. D. Duryee, State Secretary of Agriculture, said in his annual report.

"It is now recognized that these methods are antiquated and that there is an insistent demand for some better method of township road maintenance so that these may serve as feeders to the main highway system."

The Secretary said that the department's survey showed about $4,000,000 in twonship funds was spent annually, adding "that with this heavy expenditure and the general dissatisfaction existing in regard to their condition, it is evident that present methods of maintenance are inadequate."

The total improved mileage of township roads was placed at 3,021 by the department, of which 2,022 miles were gravel. On January 1, 1927, there were 143 miles of concrete township roads, fifteen of stone block, forty-eight of sheet asphalt or macadam on a concrete base, twenty-eight of bituminus concrete, 152 of bituminus penetration, 270 of surface treated macadam, 191 of water bound macadam, 150 of cinders and twelve of miscellaneous surface.

Hunterdon County had the greatest number of farms on unimproved highways. Of the country's 2,605 farms, 1,720 were on dirt roads. Union County had three of its 525 farms on unimproved highways. Cumberland, with 3,340 farms, the largest number of any county, had 756 on dirt roads. Monmouth county has 2,672 farms, 528 being on the poor roads.

Atlantic had 268 of its 1,674 farms on unimproved roads; Bergen, 225 of 1,190; Burlington, 700 of 2,132; Camden, 215 of 758; Cape May, 125 of 682; Essex, 27 of 686; Gloucester, 798 of 2,324; Hudson, six of forty-eight; Mercer, Morris, 319 of 944; Ocean, 101 of 665; Passaic, eighty-seven of 505; Salem, 302 of 1,909; Somerset, 592 of 1,246; Sussex, 910 of 1,397; and Warren, 958 of 1,573.

FARMING TIME

The farmers are busily engaged in their work which is indeed the back bone of the nation. When the farmers fail prosperity diminishes. It is human nature to feel that the other man has the better job and that his sailing is one of ease and comfort, but we must bear in mind that every job has connected with it some little things that may or may not tickle our fancy, and it takes the intrepid and tenacious man to overcome them.

The farmer who plays with Mother Earth has the great vocation and the most interesting study of all positions. Out in the open air and fresh aroma of the blossoms and the tempting honey suckle, he works unaware of the responsibility and honor bestowed upon him. The doctor, the lawyer and the teacher depend entirely upon him for food. If he fails on his farm the doctor and lawyer must stay up later at nights, must seek new clients in order to pay the fabulous price for the flour and meal of which he must have for sustenance.

As the farmer sharpens the point of his plow, so the busy world must sharpen its point of intellect to appreciate the needs and the great part the conscientious farmer is playing in helping to push forward better health and greater prosperity for all.

ONE HUNDRED SEVENTY-SIX BUSHELS

(Continued from Page 1)

Our members could get together and pool their products and the Federation could easily find buyers.

FOUR HUNDRED DOLLARS PER ACRE

Last year C. H. McCaslin, of McDuffie county Georgia, grew 404 dollars worth of vegetables on one acre of his land.

He first planted cucumbers, which were followed by a late crop of corn and cowpeas. The land was rich, sandy soil. Before plowing he broadcasted about 200 pounds of lime. After plowing, he gave it a good harrowing. This was three weeks before planting. The cucumbers were planted the last of March. The fertilizer consisted of a small application of cow manure at planting time.

Just as the vines began to run, a side dressing of 75 pounds of 10;4;4 and 25 pounds nitrate of soda was applied with the hands. The cucumber crop netted him 362 dollars. By the last of June this crop was cleared off and the land planted in corn, using a hundred pounds of 12;4;4. Between rows of corn, cowpeas were planted in rows. These crops weer cultivated only onec. The yield was 30 bushels corn estimated at 1 dollar per bushel 300 bundles fodder at $1.50 per hundred and five bushels cowpeas at $1.50 per bushel.

Our members might try this out on one acre.

EARLY SWEET POTATOES

The Southern sweet potato is a moist flesh type, commonly called a yam, and has not been appreciated in the North and East. Usually the crop is harvested just prior to frost, and by that season the dry sweets from Jersey and other such sections are on the market. Within the past few years, however, a number of growers have come into he production of early sweet potatoes for this Eastern trade. Some of them have planted the Porto Rico, a yam type, harvested it during July or August and shipped it profitably to the large centers of population.

Others in favored localities have turned to the Big Stem Jersey, a dry variety adapted to boiling, and quite popular. As this variety comes to maturity in the South well ahead of other sections, it has found a ready sale. Two counties of Georgia during August, 1928, moved thirty-nine cars of the Jerseys at $27,320, or an average of $700 an acre. The harvest was a little late or the prices would have been better.

For the early crop the slips should be in the field as soon as frost danger is past, not later than the middle of April. To obtain plants, bedding should be done in February.

Use a light, mellow soil, with sufficient fertility to give a good growth. From three to five hundred pounds of a fertilizer not too high in nitrogen should be applied just before planting. Push the crop to maturity for July or early August.

—T. H. McHatton

(Mr. McHatton is head of the horticultural department, Georgia State College of Agriculture.)

There are 13 colored farmers in the state of Maine owning their farms, valued ot $54,400.

There are 19 colored farmers in Utah owning their farms valued at $651,045.00.

A HINT FOR MORTGAGE

(Continued from Page 1)

Total number white farmers 107,086.

Total number colored farmers 150,142.

Total white farm population including all ages, 479,281.

Total colored farm population including all ages, 649,826.

Total valuation of all crops with production reported as of 1924 amounted to 177,006,377 dollars.

Total value of farm products sold through co-operative marketing amounted to eight million one hundred one thousand dollars. The farmers of Bolivar county which is practically all colored, purchased fertilizer and lime in 1924 to the extent of 173,047 dollars. Suppose this amount had been purchased co-operatively, how much would be saved each farmer. This county produced over eighty-six thousand bales of cotton in 1924.

Some of the large land owning farmers in Mississippi are:

J. H. Teers, Rural route 4 Holly Springs, 3,000 acres.

A. D. Sims, Rural route 6, Holly Springs 1,200 acres.

E. P. Booze, Mound Bayou.

Allen Bros. Magnolia.

Jno. D. Taylor, R. F. D. 3, Como.

Kelly Bros., Marks.

MARYLAND

Total colored farmers, 6,721.

Total colored farmers owning their farms 3,548 with an average of 217,651 acres valued at 21,651,121.00.

In 1924 Calvert county produced and sold 3,846,150 pounds of tobacco. In this county there are 690 white farmers and 566 colored farmers.

In Dorchester county there are 1483 white farmers and 471 colored farmers. This county produced the largest tonage in tomatoes of any country in the state.

The acerage in 1924 was over eight thousand acres. Somerset county has 1491 white farmers and 685 colored farmers. This county had 4,145 acres in strawberries in 1924. The agerage yield is from 250 to 300 crates per acre.

Mr. James E. Herndon of 2527 Madison Ave., has one of the largest produce stands in the city market of Baltimore.

He handles almost the entire production of several of the large colored farmers in that state.

Mr. Herndon has been in the produce business for over 20 years.

OHIO

Total number of colored farmers 1,616.

Total owning their farms 1,053 with an average of 100,412 acres valued at $9,126,482.00.

Longtown, Xenia and Yellow Springs are farming towns heavily populated with colored.

Some of the larger land owning farmers:

Bishop J. H. Jones, Wilberforce.
Mrs. J. M. D. Russell,
Will Ecton, Harvesburg.
Mose Dawson, New Burlington.
Jackson Bros. Xenia.
C. P. Ellis, Waynesville.
Jno Epps, Longtown.
Ed. Young, Clarksville.

TO SPEED FRUITS NORTHWARD

Washington, D. C.—Express refrigeration service for the transportation of perishable fruits was ordered today by the interstate commerce commission. The move is designed to expedite the movement of products from Florida, North and South Carolina and Alabama to points in the north, the present freight service being held inadequate for this purpose.

The colored farmers of the south, according to statistics from the Department of Commerce at Washington, produce 40 per cent of the early vegetables, and with this improved freight service will mean better prices and larger profits.

There are over fifty thousand colored farmers in the state of Virginia, which is over one-fourth of the total farm population.

NATIONAL FEDERATION OF COLORED FARMERS

J. P. DAVIS,
President.

C. R. RICHARDSON,
Chm. Board of Directors

TEN REASONS WHY YOU SHOULD BECOME A MEMBER

1. CO-OPERATION. This movement has for its main objective the bringing about of a more co-operative effort on the part of Negro farmers.

2. SIGNS OF THE TIMES. The signs of the times point co-operative efforts in all directions, whether in production or distribution. The springing up of numerous chain stores is a splendid example of co-operative buying and selling exemplified in every community.

3. AMERICAN FARM FEDERATION. A splendid example of co-operation is the great work being accomplished by the American Farm Bureau Federation. (White). This organization is ten years old and has a membership of 303,000 in forty-five states. They have led the way.

4. URGENT NECESSITY. The colored farmer's position, with the vast majority living in southern states, makes the necessity for co-operative organization all the more urgent in order that economic life may be protected, and that Negro Farmers may build for themselves a fuller and more satisfying social life.

5. SELF HELP. Not for charity, but because he desires to help himself, is the reason why the Negro farmer must take his place beside his white brother in the present economic struggle, and thereby reap the bountiful harvest that will come from a united co-operative effort.

6. THE MODERN FARMER. Our periodical, The Modern Farmer, will from time to time not only serve to promote the best interests of its thousands of readers, but will also, in a bigger way, supply a long felt need for further advancing the great host of colored citizens who are industriously extracting from America's soil much of her bountiful riches.

7. BETTER TIMES. A new day of hope looms brightly before the Negro Race, with splendid organization and the necessary co-operation. This will come from the origination and performance of intelligent activities, as will be demonstrated through the National Federation of Colored Farmers.

8. FUTURE OUTLOOK. The future outlook for the Negro, not only on the farm, but in every walk of life, will grow brighter and better. In union there is strength. Modern methods of production and distribution as exemplified by this organization, will do much to bring about the desired conditions for thousands.

9. CONTINUAL GROWTH. The National Federation of Colored Farmers has not come about spontaneously, but with the great mass of her people still on the farm, either as land owners or as tenants, produces a splendid opportunity for continual growth as espoused by this organization.

10. ULTIMATE GOAL. With the Negro Farmers fully organized, they will be in a position to bargain collectively. Not only in buying supplies and in marketing products will this organization be a great source of strength to our Race, but it will also provide encouragement and support for many other movements that might be initiated for the improvement of conditions among Negro Farmers everywhere.

THE MODERN FARMER

Vol. 1. Chicago, Ill., and Nashville, Tenn., Wednesday, May 15, 1929. No. 3.

"RACE FARMERS MUST ORGANIZE TO ENJOY FARM RELIEF LEGISLATION"

FIFTY-TWO PRODUCTS FROM CORN COB

Many Factors Combine However In Curtailment

Washington, D. C., No fewer than fifty-two products which can be made from corncobs are listed in a preliminary report on the utilization of certain agricultural wastes and by products, issued by the Chamber of Commerce of the United States.

Some of the fifty-two are acetic acid, acetone, alcohol anaesthetics and antiseptics, buttons, cellulose, cellulith, gunpowder, charcoal, pipes, wallboard, curing for concrete floors diabetic food, dyes, face powder, glue, hard rubber substitute, incense, linoleum, methanol, maple flavor, motor fuel, oxalic acid, paper, pitch, plastics proxyln rayon, resin, tar, vicos and xylose.

Limitations of Marketing.

Extensive use ofcorncobs for many of these purposes still is far from commercial practicability.

"It is apparent," the report continues, "that while practically all of the products that can be made from corncobbs are being obtained from sources less plentiful in some cases, less suitable, yet there are other factors which make their use more economical under existing conditions.

Other Products Are Competitors

"The availability of these other products in large quanities, thus eliminating the factor of assembling costs, which in the case of corncobs is a large one, is the principal reason why cobs are not first choice, and therefore serve their best purpose as fuel on the farm. The fuel value of corncobs per ton is more than half that of coal."

Dr. W. W. Skinner of the federal bureau of chemistry is a soils expert who has done much work toward the development of by-products from the corncob.

225 PIGS FROM 34 SOWS

A HOG-LOT VISIT WITH JNO. B. RICE FROM THE FARM AND FIRESIDE

Things I learned during the eight years I spent as research man at the University of Illinois helped me in a recent year to raise for market 225 spring pigs from 34 sows.

The year I came to this 600-acre farm the owner had selected 90 sows and gilts for breeding. I culled out all but fourteen of them in two years, going chiefly on type. I picked the most type, stretchy animals with good bone and fairly well off the ground, my final selection, however, resting on production records.

Any sow that didn't raise seven pigs to weaning age in the previous farrow was discarded and a gilt out of a sow that had made the grade was put in the herd. Sows that were three years old I fattened for market unless they were unusually good mothers.

That is a big factor—the kind of a mother a sow make. I would just as soon have a dam farrow a fair-sized litter and raise it than I would one that dropped 15 to 16 pigs, only to lose around half of them. Our college records showed fully one-third of the litter crushed by the sows.

Feeding the pregnant gilt is most important to healty, strong litters. I self-feed whole oats, with three to, four ears of corn and about one-quarter pound of tankage per day. I also force a little alfalfa into them, mixing the leaves with the meat meal. The alfalfa supplies additional lime for bone-making and does much to prevent rickets and othe pig ailments. A mineral mixture comprised of two parts limestone, two parts bone meal

(Continued on page 2.)

FARMER MILKS COW TO FREE SELF

Red River, Tex.—A "cow and cotton combination" of farming established last spring has given H. L. Pender, of Red River County, Tex. a "feeling of prosperity never enjoyed in years of straight cotton farming on his 75-acre farm."

The cattle-fever tick was the "bug aboo" that kept Mr. Pender from success with cows for so many years. Early attempts to supplement his cotton farming by raising a few cows were unsuccessful and with no cattle he was forced to borrow money each fall to pay his debts and to make his cotton crop. Then he made his pasture tick free and tried again, but a stray tick-infested animal got into his pasture and in a short time his herd died. He quit raising cattle.

When tick-eradication work started in Red River County last spring under the direction of the United States Department of Agriculture a banker offered to loan him money to buy four milk cows and a cream separator. He arranged to sell the cream at a community store, and soon had enough cash to buy some pigs and chickens to consume the skim milk. All through the year the cream brought him $5.50 to 7.50 cash each week enough to enable him to make his crop this year without borrowing money.

Mr. Pender, according to a report received by the Department of Agriculturt states that with the aid of income returned directly and indirectly by his four cows he has paid all his debts, has sufficient cash left to join a purebred bull association, and can make his crops next year without borrowing any money for that purpose.

SPECIAL STAFF TO VISIT, STUDY LAND GRANT SCHOOLS

Washington, D. C.—A special field staff has been organized by the Department of the Interior to visit and study the 17 Negro Land Grant College of the United States, this being a part of a large program or survey which is now being conducted by the Bureau of Education.

Dr. John M. Gandy, of the Virginia State College, Petersburg, Va., who has recently been selected as one of the receivers of the Harmon Awards, was appointed as one of the members of the field staff. There are five other members of this committee who will be associated with Dr. Gandy

During the month of December these leading educators who composed the field staff visited Washington, to inquire into the specific functions, services, and organizations of the Negro Land Grant Colleges. Each of these leaders have been assigned one or two institutions to investigate. This indeed is a timely step on the part of our national government There is no question that practical results will be derived from the investigation.

Tubby.

CRIPPLED MAINE MAN OPERATES BIG FARM

East Livermore, Me.,—Although an accident in the woods eight years ago cost Stanley H. Morison one leg and rendered the other useless, he stills runs a 180-acre farm and has devised enterprising methods of merchandising.

Mr. Morison uses a wheel chair which carries him about the house and on which he can descend to his piazza on the ground.

The coming of his disaster was at first a severe setback to this active men who had already transformed the farm, his family homestead, into a vastly improved place.

He cast about for new ideas. The canning business appeared to be an opening. He installed equipment which he has expanded. Last year his jelly amounted to eighteen tons. In addition, he puts up mince meat from his own recipe, apples for apple pies, tomatoes, mustard pickles, sweet and sour pickles and other farm products.

PITTSBURGH COURIER ON BIG LOAN FUND

Publication Says "Not For Them" Unless Properly Organized

Washington, D. C., April 18.—Negro farmers will have to organize co-operative farm associations if they wish to obtain the direct benefits of new farm relief legislation which will be enacted during the extra session of Congress which began Monday.

According to the 1920 census, there are in the United States 949, 889 colored farmers including 16,680 Indians, 6,892 Japanese and 603 Chinese. Their failure to organize farm loan associations, it is pointed out, is the cause of their not reaping the benefits of the Federal farm loan act.

The new farm relief bill introduced in the Senate by Senator Charles L. McNary, Republican, of Oregon, chairman of the Senate committee on agriculture and forestry, provides for the establishment of a Federal farm board and the creation of a revolving fund of at least $3,000,000,000.

In order to prevent undue fluctuations in price and to bring abuot an orderly movement of farm products to markets, stabilization corporations will be created to which the board will be authorized to make loans out of the revolving fund, at 4 per cent, up to 85 per cent of the value of the crops to be purchased by the stabilization corporation.

The stabilization corporations are to be controlled by the agricultural co-operatives, subject to conditions to be prescribed by the Federal farm board, but losses or gains from from the operations of the corporations are to be charged or credited to the revolving fund. There is some discussion of the possibility of allowing the co-operative to share to some extent in the possible profits from such operations.

On the question as to what inducements would exist to persuade up to 85 per cent, he says, while at present it is necessary to pay 8 per cent and even at that rate loans cannot be negotiated for more than 60 per cent of the crop.

President Hoover's message to farmers to join the agricultural co operatives, Senator McNary points out, that such co-operatives would enjoy advantageous credit facilities as compared with non-members. The co-operatives, like the stabilization corporations, will be able to borrow Congress covering generally his views on a farm relief program was sent to the House and Senate Tuesday.

Upon his return to Washington, Wednesday of last week, Representative John Q. Tilson, Republican of Connecticut, majority leader in the the House, stated there would be no change in the program of the House, which is to confine the extra session to farm relief, tariff, revision and possibly census and reappointment legislation. He predicted adjournment, by July, 1—Pittsburgh Courier.

CROSS-BRED PIGS GAIN FASTER

Surpass Purebreds, Says Fred E. Ferguson

From Farm Journal

When you take a bunch of purebred sows of one breed and cross them with a purebred boar of another breed, you are likely to get pigs which will gain faster and require less feed per unit of gain than will purebred pigs of either parent breed.

This is the conclusion one must draw from three years of experiments carried on at the Iowa Station by John M. Evvard and his co-workers.

In these crossing experiments at Ames, Poland-China and Duroc-Jersey have been used. In the three years, the cross-bred pigs have gained an average of 1.41 lbs. per pig daily, as compared with 1.32 for their purebred half-brothers and sisters, both groups being fed side by side on the same ration and handled in exactly the same manner.

In other words the cross-breds have gained about a tenth faster than the purebred. In going from an average weaning weight of 75 pounds to a good marketable weight of 225 pounds the cross-breds would get to market from ten days to two weeks sooner than the purebreds. This is important in the fall, when hog prices normally take a rapid downward trend.

Better Use of Feed

In addition to the more rapid gains, the cross-breds use their feed to better advantage. In the Iowa tests, the cross-breds have required an average of only 349 pounds of feed for each 100 pounds of gain, while the purebreds have taken 365. This means that for every 100 pounds of gain made, the cross-breds would require about 16 pounds less feed.

Still other advantages have been noted for the cross-breds. They have developed more uniformly, have shown greater vigor and more healthy appearance. This may juustify the claims made by some farmers, that cross-breds are more disease-resistant than purebreds, though Evvard is not yet prepared to say to just what extent this is true or how important this difference may be.

The cross-bred pigs in the three experiments have averaged nearly five pounds each heavier at weaning time than the purebreds, even though both had the same mothers. That is, in the Iowa tests the sows each year have been boudle-mated, or bred to two boars—to one of their own breed and to a boar of the second breed used in the crossing work. By this system, both purebred and cross-bred pigs have been obtained in the same litter.

The plan has been to breed the sow to one boar and then to other within a few minutes. With two breeds of distinctly different color—red and black in this instance—the cross-bred pigs have been readily distinguishable from the purebreds. This system of breeding to two boars eliminated the differences in the gaining ability of the pigs due to breeding, as far as possible. It makes more certain that the difference in gains and economy of gains are due to crossing.

The ration used in all three years

(Continued on page 2.)

FAT MEAT AND HOE CAKE

Graphic pictures of miserable rural life of the race in the South where families with seven and eight children live in one-room cabins under a deplorable moral condition were given by Dr. W. A. C. Hughes, speaking at the Women's Missionary Society at the conference, Thursday afternoon.

The revelations, Dr. Hughes said, were the discoveries of an extensive tour of his through the South.

Eight in One Room

"I came upon homes where mother father and seven and eight children eat, sleep and are brought into the world in the one room without any partition to separate them or to give them any privacy.

"What will be the social cultural and moral ideals of children reared in such an environment?

"There are 7,000,000 of the race in the South a larger percentage of which is living in this condition. Do you wonder at the laxity of their morals?

Molasses and Hoe-Cake

"I visited homes on the cotton farms, where the cotton grows up to the door, leaving no yard or space around the house. The mother works in the field until about fifteen minutes before the father and children stop, rushes to the cabin and prepares a little fat meat, molasses and hoe-cake.

"This is the field of the Women's Missionary Society in the South to teach and train the girls of these homes, to give them some conception of decency and refinement, and to enable them to live above such a sordid level.

"The society is making some progress in this direction but they need your help."

Dr. Hughes reviewed the work of a similar character that the Women's Missionary Society is doing in the North for the migrants from the South who find themselves unfitted for the new environment.

He urged the conference to contribute more to the society so that the work might be furthered.

—Afro American.

94 COUNTIES, 7 STATES ENTER LAMB CONTEST

Farmers to Make Juicy Chops

Juicier and more palatable lamb chops is the goal of the national lamb improvement contest for 1929. Ninety four counties and seven states are listed among the entrants, according to the National Live Stock Producers' Association.

The national committee says that this project includes the sheep extension force of the various state agricultural colleges, the county agents working with the department of agriculture, the packers, the railroads and the sheep growers in the native lamb states.

Lamb producers hope to make their product so good that instead of a per capita consumption of 5.6 pounds per year there will soon be consumed 8 or 10 pounds, which would still be less than half what some old world people consume. By joining in a concerted drive to send only wether lambs and docked lambs to market the sheep men believe that better lamb means more lamb on the consumer's table, according to J. D. Harper of the national association.

The contest will be judged this fall ing tests is as follows: Shelled corn, from weaning to market in the crosswhen the lamb crop is marketed.

The contest is bing sponsored by the United Statos department of agriculture, railroads, agricultural departments of different states, state agricultural colleges, the national live stock and meat board, the institute of American meat packers and the National Live Stock Producers' Association.

The Modern Farmer

Official Organ of the National Federation of Colored Farmers

James P. Davis - - President
Cornelius R. Richardson - Secretary
Leon R. Harris - - Editor

Published Monthly by the Modern Farmer at Chicago, Illinois and Nashville, Tennessee.

Chicago, Ill., Office: Vincennes Hotel, 36th and Vincennes Avenue.

Nashville, Tenn., Office: 447 Fourth Avenue, North.

Devoted to the interests of the Farmer, Truck Gardener, Livestock and Poultry Breeder, the Home and the People.

Application made for entry as second-class mail matter, under Act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 447 4th Avenue, North, Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

EDITORIALS

Some of these days the National Federation of Colored Farmers will have more than one million members. This is not a pipe dream. It is not an unreasonahle assertion. From the very beginning it has been the purpose of the founders and organizers of the Federation to build up an ORGANIZATION FOR A MILLION. The main question has not been, "Can we get a million members" but, "How soon can we get a million members?" The National Federation of Colored Farmers is destined to become the biggest economic organization of Negroes in the world.

Solomon tells us that "where there is no vision the people perish." It is as much a duty for progressive people to have visions as it is for them to have ideas,—or to have faith,—or hope,—or love. A vision,—a sight of what should be, and therefore, of what CAN be, is the beginning of progress in any line of work. We can never tell just how to do the work perfectly until we begin working.

We see today in our homeland,—in the United States of America,—more than one million colored men,—most of them heads of families,—who are extracting their living from America's soil. Some of these men may be illiterate but very few of them are ignorant. More than a quarter of a million of them own the soil they cultivate.

The Condition of the Million

The seven hundred andd fifty thousand tenant farmers of our race produce most of the cotton grown in America. They eat simple fare,—they work long hours,—they have little time for recreation and social enjoyment. Thousands of them live in the middle of their cotton patches, in vermin an insect infested hovels. They never read a book or newspaper—never see a movie—and have never known what it was to posses a dollar that was not owed to somebody else They are poor, they are discouraged, and immigration figures tell us that they are restless. The latter is a good sign. They are not responsible for their conditon and those who are responsible are unable, and often, unwilling, to aid them in any way. They are American citizens and alas, their condition is the most pitable of any American citizens.

The condition of the two hundred and fifty thousand farmers of our race who own their farms is much better. Some of them are wealthy and prosperous. Many of them live in favored sections of our Nation and enjoy all the rights and privileges of American citizens. Their indepen dence has made them thoughtful, progressive and useful. These landowning, home—loving American Negro farmers are the very cream of our race. We would sooner take off our hats to them than to any other class in America. They deserve recognition and honor and it is largely their own fault if they fail to get it.

The Organization is For You

We have analyzed, briefly, the condition of the million who should become members of the National Federation of Colored Farmers. There are two big reasons why everyone of you should become members of this organization

First,—You should join it to improve your condition.

Second, You should join it that you might be better able to help your brethren.

We have received some remarkable letters during the past few weeks. Some of them have made us want to weep. Some of them have made us want to fight. All of them have made us want to work for the National Federation of Colored Farmers until Gabriel blows his trumpet. We have before us as we write the following letter. We thank the writer for it. It is plain and honest and sensible. Here it is:

Dear Sirs:

I have just read with interest your April MODERN FARMER. I am heartily in accord with your movement and please enter me for membership. I will send you five dollars on or about the second day of May. Times are tight in this section.

The white farm agent had a meeting of the white farmers at the Court House here this week, and told them to organize at once. Not one colored farmer was invited to the meeting nor were there any present.

Last year I had a carload of very fine Dixie Belle melons and the white merchant here told me that forty dollars was all they were worth. The weather was hot and I had no way to sell them. He gave me forty dollars and shipped the car to Cincinnati, Ohio, and got one hundred and ninty dollars for my melons.

Our salvation is in organizing.

Please do not use this letter in any way that will cause us trouble in this section. The white merchant here does everything he can to keep us down.".....

That letter speaks volumes, doesn't it.

"OUR SALVATION IS IN ORGANIZING"

The National Federation of Colored Farmers appeals to you for support because we want to change the conditions that make such letters as this one possible. Why should any citizens of the United States labor for nothing? Why should they work and work and work and hardly be able to get enough to eat? This may sound unreasonable, but another letter that lies here on our desk, from a farmer who resides near Paducah, Ky., informs us that the farmers of his community are boarding up the windows and doors of their homes and are moving to the cities. Why? Because they cannot get a living from their farms. They cannot get enough from what they produce to pay for the cost of production.

We want you to join this organization,—your organization. We want you to get together in your respective neighhorhoods,—pool your products,—grade or pack them according to our instructions,—and sell them through your own organization. The officers of your organization will not beat you out of $150 on a car of watermelons. You will get the market price, probably a little better than the market price,—if you follow instructions as to grading and packing. We want you to use all the facilities of your organization that you may get more, save more, and be more. It's up to you "OUR SALVATION IS IN ORGANIZING!"

THE VISION

We want to see the colored farmers of America prosperous, contented and happy. We want them to remain on their farms. A real farmer is never satisfied off a farm. We want more tenant farmers to become landowners. Possession makes a farmer feel like a man indeed. Possession makes the children of the farmer love the old home place and there , a majority of them will remain.

You will be a proud and happy man when the membership of your organization reaches the one hundred thousand mark. That will certainly mean power and influence and recognition. Most of the watermelons and sweet potatoes grown in America are produced by colored farmers and we expect to control these markets within the next three years. Within the next ten years at least seventy-five thousand colored tenants should purchase farms. Your organization will do everything it can do to help decrease Negro tenancy an increase Negro land ownership. We will be able to do much.

TO YOU WHO CAN HELP

If you are a tenant farmer you can make no better investment than in a membership in this organization. No other organization is going to work so hard or so diligently for your welfare. You will be associated with those more fortunate and the inspiration you will receive will be a great source of help to you. You will be where you can receive nformation that will benefit you and you will be able to take immediate advantage of many opportunities that will come only to our members. The cost of member ship is very reasonable—eighty per cent less than then the cost of membership in the American Farm Bureau Federation,—a white organization. This is your opportunity and we appeal to you to accept it now.

If you are one who owns a farm you can readily see just what the organization will mean to you. It will bring you more money for your products,—it will bring you the recognition you deserve,—and will teach you the benefits of co-operation. Certainly the organization deserves your support. There are a thousand reasons why you should join it and not one logical reason why you should not.

To you who are recognized as the leaders of our racial group in this country, our teachers and preachers, business and professional men,—lodge men and club women,—farm demonstration agents and to all others of influence,—we appeal to you for your support and co-operaton. We need your help now. Eventually you will need our help. We are working for the good of the race. Let us work together. Selfishness, suspicion and skepticism will get us nothing and nowhere. Our farmers are the "backbone of the race" and in America they will ever he. They shall not be neglected and persecuted and vilified any longer. They shall not continue to be the victims of rapacious sharks and scoundrels who are ever ready to destroy them, body and soul. As sure as God reigns in heaven, their day has come. Let us not temoprize with evil any longer, just for a little personal gain. Preach and teach organization and co-operation. That is what the others are doing. If it is a good thing for them it is a good thing for us. The organizers of the National Federation of Coored Farmers have aid the foundation. Help us build. Don't try to hinder us for you cannot. We are going through. A MILLION FOR THE NATIONAL FEDERATION OF COLORED FARMERS!

CROSS BRED PIGS

(Continued from Page 1)

self-fed; supplemental protein mixture (50) parts by weight of tankage, 25 of corn-cake oilmeal, 25 of alfalfa meal). self-fed; plus mineral mixture self-fed. The mineral mixture contains 19.9 pounds of flake salt, 39.9 pounds of wood ashes, 39.9 pounds of ground bone-black and .05 pounds of potassium iodid. This mineral mixture was self-fed. The pigs have had the run of a blue-grass pasture.

In this cross-breeding work, those in charge emphasized from the first that if the cross-breds were used for breeding purposes, their pigs probably would not be so good as either the cross-breds or purebreds. In order to test this out, last year a few of the cross-bred gilts were kept and bred to purebred boars of the parent breeds.

The pigs from these cross-bred sows bore out what Evvard and his co-workers had contended—they did not gain so fast nor so economically as either the cross-breds or purebreds

To test this breeding back toward purebreds still further, a few of the pigs from the cross-bred sows (these were either three-fourths Duroc and one-fourth Poland or three-fourths Poland an done-fourth Duroc were kept and bred to the boars of the breeds from which they derived most of their blood. This cross resulted in seven-eighths Durocs or seven-eighths Polanas. These seven-eighths pigs looked much like purebreds and could hardly be distinguished from them. Also, they were about the equal of the purebreds in ability to gain rapidly and economically.

225 PIGS FROM 84 SOWS

(Continued on page 2.)

and one part salt is available at all times.

As the period advanees I increase the corn an ear or two and give a little more tankage. Oats of course are in the feeder I can't say too much for them for keeping the sows in condition and helping to make big healthy pigs.

At college I found oats as valuahle as middlings but seldom costing more than two-thirds as much. It woud be foolish to sell oats at a cent a pound and buy middlings at two cents. The same is true of our mineral mixture. I make it for a cent a pound and it is as serviceable as the commercial product costing five to six cents.

For the first ten days or so after the pigs are born the sow is given very little tankage, corn and oats, so as to hold down the flow of mlik. It is my experience that pigs are more often hurt by too much rather than too little nurse. Usually the pigs that are a bit underfed for the first few days come out rugged and strong

In two to three weeks, depending upon the condition of the sow and litter, they are moved to a clean individual house on blue-grass pasture. We rotate from year to year, aiming to keep away from each field for about three years. We are pretty sure to avoid worms and germs in this time. On pasture the sows get oats, corn and tankage; corn is gradually increased.

As soon as the pigs begin to nibble we fix a a creep shelled corn and let them have all they want. They get oats and tankage from the sows' allowance. When they are three months old, corn is cut to about two pounds per head per day and hand-fed. Oats are put in a feeder and tankage is fed daily. A little supplementary protein feed, even though they could get along nicely without it on pasture, develops them that faster. We pasture one year on alfalfa and the next two on blue grass. Our acreage of the legumes is not large enough.

The alfalfa pasture for the pigs also yields hay, about half a crop being made from two cuttings. Trimming back the field twice during the season keeps the stalks short, green and tender, and they are eaten more readily than if allowed to grow tall and rank. Pigs don't pasture a field so that it is even, and cutting is almost necessary.

The hay made from the pasture is used for cattle and horses and the leaves which shatter and drop into the botton of the racks are swept up and saved for the sows.

The shotes are carried along on a little grain on pasture until late September, when they are made for the cornfields in which I plant soy beans. As a starter I feed them a few green ears, gradually increasing the number until they are getting the equivalent of a full feed. This takes about two weeks. Then the pigs are turned into the field. In a month to forty-five days they will be ready for market, averaging from 230 to 240 pounds. Pretty good weight for pigs eight months old, considering no attempt at fattening is made until they are turned into the corn and soy beans.

TEN PER CENT PER ANNUM, ONE PER CENT PER MONTH AND HIS MULE.

During the World's War, cotton reached pretty high levels. One of our farmers in South Carolina had been "trading" with a white supply merchant in his community for over 20 years on a "time" basis, that is to say, the merchant had been selling him his groceries and supplies and permitted him to pay in the fall; after he had been able to gather and sell his crop.

The terms were one per cent per month and then at "settling time" the merchant added an extra ten per-cent. At the end of each year for 16 years he found himself still in debt to the merchant after settling up.

Cotton brought top prices that year, and he felt sure that he could more than pay out, and have his chattle mortgages cancelled besides.

After turning in five bales of cotton to the merchant as the last payment on the aceount, he inquired as to "how he stood." The old merchant got out his book, put on his glasses, slowly sharpened his pencil and began adding—

"Naught's a naught, and nine is nine, your are forty dollars behind and your mule is still mine."

GENERAL MARKET CONDITIONS FRUITS AND EARLY VEGETABLES .

Advice from the leading terminal markets show that there is a steady demand for early vegetables, at good prices Green vegetables such as mustard, turnip greens and kale leading as sellers, with green cabbage and spinach running second in demand.

There is also a most excellent demand for young beans but with the arrivals of the Texas crop of the wax variety, the market is somewhat easier as to prices and, receipts heavier.

One of the largest receivers in the South Water market Chicago, told our representative that there was a steady increasing demand for all southern vegetables. He further stated that a few years ago there was very little demand for such vegetables as okra, squash, yellow yam sweets and etc. These varieties that were formerly shipped from the south by express—a few crates at a time, now come in solid car lots and find ready sale .

Turnip greens continue to retail at around 25 and 30 cents per three pound peck. Yellow yam sweets remain firm in price at 3 and 4 pounds for a quarter or about three dollars per bushel.

Early squash is bringing 10 to 15 cents per pound and okra 18 to 20 cents per quart. Green beans 12 to 15 per quart. Old white or better known as Irish potatoes are a drag on the market with very little demand.

New potatoes of the red variety are selling well but prices are low.

We look for an improvement in the potato market as soon as the old stock is out of the way.

Green cabbage is a good seller at 3 to 5 cents per pound.

The strawberry market has been playing all sorts of pranks within the last two weeks. Heavy arrivals of immature fruit caused a break in the market, and prices in some instanees lowered to 20 and 25 cents per quart, but the berries of superior quality and packed continue to bring good prices around 30 and 35 cents per quart to the consumer.

In the eastern markets, and especially around Baltimore and Washington, berries are bringing fancy prices.

We find that unbolted or flat ground corn meal is increasing in demand, and corn bread is being served with vegetables in the finest hotels and the most humble restaurents, but the price is somewhat out of proportion in comparsion with the corn market.

Corn meal packed in pound cartons retails for 10c per carton, while the bulk corn meal is bringing 3 and 4 cents per pound, or about $1.75 to $2.50 per bushel.

The owner of any grist mill buying corn at present prices and turning it into corn meal will find quite a nice profit in the transaction.

NEW STANDARD FOR HAMPERS AND BASKETS

The standard hampers and round stave baskets for fruits and vegetables shall be of the following capacities:

One eighth bushel, one fourth bushel, one half bushel, five-eights bushel, three-fourth bushel, one bushel one and one-fourth bushel, one and one-half bushel and two bushels, which respectively shall be of the cubiccontent set forth in this section. For the purpose of this act, a bushel standard dry measure has a capacity of 2,150.42 cubic inches.

(a) The standard one-eighth bushel hamper or round stave shall contain 268.8 cubic inches.

(b) The standard one-fourth bushel hamper or round stave basket shall contain 1,075.71 cubic inches.

(c) The standard one-half bushel hamper or round stave basket shall contain 1,075.71 cubit inches.

(cc) The standard five-eights bushel hamper or round stave basket shall contain 1,344 cubic inches.

(d) The standard three-fourths bushel hamper or round stave basket shall contain 1,612.8 cubic inches.

(e) The standard one bushel hamper or round stave basket shall contain 2,150.42 cubic inches.

(f) The standard one and one-fourth bushel hamper or round stave basket shall contain 2,688 cubic inches.

(g) The standard one and one-half bushel hamper or round stave basket shall contain 3,225.63 cubic inches.

(h) The standard two bushel hamper or round stave basket shall contain 4,300.84 cubic inches.

Section 2

That the standard splint baskets for fruits and vegetables shall be the four-quart basket; eight quart basket; twelve quart basket, sixteen quart basket, twenty-four quart basket and thirty-two quart basket, standard dry measure. For the purpose of this act a quart standard dry measure has a capacity of 67.2 cubic inches.

(a) The four quart splint basket shall contain 268.8 cubic inches.

(b) The eight quart splint basket shall contain 537.6 cubic inches.

New Standards No. 2

(c) The twelve quart splint basket shall contain 806.4 cubic inches.

(d) The sixteen quart splint basket shall contain 1,075.21 cubit inches.

(e) The twenty-four quart splint basket shall contain 1,612.8 cubic inches.

(f) The thirty-two quart splint basket shall contain 2,150.42 cubic inches.

The Secretary of Agriculture shall in his regulations under this act prescribe such tolerances as he may find necessary to allow in his capacities for hampers, round stave baskets and splint baskets set forth in sections 1 and 2 of this act in order to provide for reasonable variations occuring in the course of manufacturing and handling.

This act does not apply to Climax baskets, berry boxes and till baskets which comply with the provisions of the act of August 31, 1916. Sections 5 and 6 of the Act make it unlawful to manufacture hampers and baskets in violation of the act and any hamper or basket not complying with the terms of the act are subject to seizure and confiscation. These sections become effective one year from November 1, 1928.

The above is a copy of an Act passed by the Seventieth Congress Our members should read the act carefully, and file this issue for future guidance.

MAPLE SUGAR PRODUCTION GOOD IN NORTH WISCONSIN

Rinelander, Wis. April—The Maple sugar season is drawing to a close in northern Wisconsin. The flow sap this spring was heavy and there was a good production of syrup and sugar. There are several sugar camps in this part of the state; the the largest is located near Phelps and is owned by C. E. Hazen. Over five thousand trees are tapped each season at the Hazen camp.

FACTS AND FIGURES

Michigan

Wheat	19,270,000 bu.
Corn	38,995,000 bu.
Barley	5,301,000 bu.
Rye	2,167,000 bu.
Potatoes	23,120,000 bu.
Hay	4,748,000 tons
Beans (dried)	5,004,000 bu.
Apples	4,288,000 bu.
Grapes	51,700 tons
Celery	846,000 crates

A few of the leading farmers of our group in the state are:

Prof. Moses Davis, Mears.
Otis E. Newsome, Cassopolis.
H. Clyde Wade, Cassopolis.
Mrs. Lucy Hazley, Peacock.
Geo. Bryant, Ypsilanti.
Mrs. Geo. Richardson, Whittaker.
Guy Smith, Milan.
Attorney Edward H. Morris, Chicago.
M. M. Curry, Fort Wayne, Ind.
A. T. Parker, Chicago.
Mr. Sewell, Chicago, City.
Col. Samuel H. Brown, near Michigan City.

LARGEST AVERAGE YIELDS PER ACRE 1927

Corn, Maryland	44 bushels
Wheat, Idaho	27 bushels
Oats, Washington	50 bushels
Barley, Utah	47 bushels
Rye, New Jersey	20 bushels
Buckwheat, Vermont	23 bushels

Massachusetts produced 370,000 barrels cranberries, which was an average yield of 26 barrels per acre, but Oregon's yield per acre was 40 barrels. The total value of the 1927 crop was 6,077,000 dollars from 5 states.

North Carolina

23,000 colored farm owners, owning in round numbers 650,000 acres valued at 58 million dollars. There are 42 counties in the state in each of which Negroes own 200 more farms.

A few of the outstanding farmers of our group are Bishop L. W. Kyle. Winston-Salem, who has been interested in farming for over 30 years, and is the owner of several farms.

R. J. Beverly of Wadesboro owns 1200 acres for which it is said he paid $75,000 cash.

J. F. Lytle, Huntersville, owns between 7 and 8 hundred acres in Mecklenberg county.

J. E. Hall of Ashokie is owner of several farms in Herford county and one of the leading farmers in the state.

Willie Wood of Windsor is considered one of the best farmers in Bertie county

States having largest acreage commercial truck crops of 1927.

	Acres
Asparagus, New Jersey	10,500
Beans (snap) Florida	19,490
Cabbage, New York	32,800
Carrots, Louisiana	11,600
Cauliflower, California	8,950
Celery, California	8,850
Eggplant, New Jersey	1,100
Cucumbers (table) Florida	7,440
Lettuce, California	42,010
Green Peas, California	21,110
Peppers, New Jersey	7,000
Onions, Texas	11,220
Spinach, Texas	19,450
Strawberries, Missouri	72,340
Early I. Potatoes, Virginia	78,700
Tomatoes (table) Florida	29,800
Watermelons, Georgia	54,060
Potatoes (late) Minnesota	328,000

The 1927 crop of white potatoes amounted to 402,149,000 bushels—from 3,505,000 acres, valued at 387,870,000 dollars.

The average farm value per bushel was 96 cents.

Minnesota led all of the states in production.

Sweet potatoes, 93,928,000 bushels that sold for $77,520,000 dollars. Texas led all of the states in production with 11,970,000 bushels, an average yield of 90 bushels per acre. Maryland led in the largest yield, 144 bushel per acre.

The yellow yam variety is the leading seller in the west and the jerseys in the east.

The farmers of Virginia, North Carolina, South Carolina, Georgia, Tennessee, Alabama, Mississippi, Louisiana and Texas produce more sweet potatoes than the rest of the United States combined.

Total yield of peanuts 866,822,000 pounds valued at 35,193,000 dollars.

Georgia led in production, 220,400,000 pounds, with an average yield of 725 pounds per acre, but North Carolina had the largest yield per acre, 997 pounds.

There were 18,765,000 bushels cowpeas harvested that sold for 10,007,000 dollars. North Carolina led all states in production of over three million bushels.

Louisiana produced 77,840 tons sugar which is an average of 139 pounds per acre . Louisiana also made 5,478,000 gallons syrup, leading all states, with Georgia a close second.

Georgia led all states in the production of watermelons producing 17,570 carloads, and the average yield was 325 melons per acre.

The value of the crop for the entire United States was 10,661,000 dollars.

Alabama, Florida, Georgia, South Carolina, North Carolina and Texas produced over two-thirds of the entire crop.

Colored farmers could easily control he melon market if organized into marketing associations.

On Janury 1st, 1928 Missouri had on her farms 604,000 horses, 340,000 mules, 2,109,000 heads of cattle, 827,000 cows, 4,270,000 hogs and 986,000 sheep. Iowa led all states in number of swine, having 10,650,000.

Illinois led all states in the production of soy beans in 1927, producing 394,000 acres that yielded 5,122,000 bushels.

POWER AND FARM PROFITS

A recently issued Department of Agriculture bulletin on the farm power situation shows that more power means more profitable and comfortable agriculture, and that the most economical power is from the large Interconnected electrical systems.

"Power and labor together represent on the average about 60 per cent of the total cost of carrying on farm business," says the report, "and since these are two items directly subject to the control of the farm operator, great opportunities exist for cutting down production costs through a better understanding of the power rquirements of farm operation, through the adoption of more efficient and less expensive types of power units, and by a more extenive use of power to replace human labor."

This decisive statement is then proven by a question-and-answer arrangement whereby the costs of different kinds of power are compared. By this is shown that the use of one horsepower for one hour costs the farmer 25 cents if obtained from a horse or mule or a private farm electric plant, and 15 cents if it comes from a small central station, but only five cents when supplied by a large central station.

It is stated further that a large percentage of farms are using expensive power, and that 30 per cent of the present 16 billion horsepower hours now used yearly on farms could be efficienty electrified.

The value of farm electrification is no longer problematical; it is an established fact. It can be safely said that before many years the farm without power service will be as outmoded as a present day farmer using tools of a past century.

CITIES CONSUME MORE FRUIT AND VEGETABLES

By Associated Press Leased Wire.

Philadelphia, April 26.—Fresh fruit and vegetable consumption at the three leading eastern markets, New York, Philadelphia and Boston, broke all records during the first quarter of the current year, based on the number of cars unloaded at these terminals.

The total reached 61,595 cars, an increase of 11 per cent over the corresponding period of 1928, the previous high year. Compared with 1926 the volume was 40 per cent higher.

New York received almost 40,000 carloads, Philadelphia, 10,157 and Boston, 11,501. Produce dealers say, the increased consumption arises chiefly from the heavy crops of citrus fruits and the increasing acreage devoted to winter vegetables in the south.

FARM MANAGER WANTED

Major R. A. Byrd, 400 Williams St., Springfield, Ill., is in need of a manager for one of his farms.

Major Byrd is well known throughout the middlewest for his fair dealing and is a man of means.

Any one looking for a good location as manager of a farm, will do well to write him at once.

PHILADELPHIAN OWN CHAIN OF THREE STORES

Philadelphia, To Negroes throughout the United States and particularly those directly interested in the advancement of the economic status of the Negro, it is gratifying to know that there is a chain of three grocery stores owned and operated by a colored man in this city.

The man is C. O. Gibson, a native of Rusk, Texas. Mr. Gibson's three stores are located at 1723 Lombard street, 1632 Bainbridge street and 1824 Federal street. He also has a hardware store at 1713 Lombard street. Such a success in these days of corporations and mergers is a little short of marvelous.

The general econmic status of the Negro has the key to the situation of health and lonevity. Other agencies are doing their part, but if the Negro wishes to grow in health and long life he must grow in wealth.

FROST TAKES NIP AT EARLY FRUITS AND VEGETABLES

Early fruit, vegetables, and flowers growing in exposed places were nipped by a frost that hit the orchards and gardens around the southern end of Lake Michigan early yesterday morning, according to reports.

C. A. Donnell, official weather forecaster, said that heavy frost in this region was confined to the north part of Illinois, northern Ohio, Indiana, and southern Michigan. A light frost hit the southern part of Iowa. Illinois' big fruit belt where trees are colored with blossoms escaped damage.

Dr. E. W. D. Laufer, an expert crop observer at Arlington Heights said that the frost caught plants and trees opening their buds at least thirty days in advance of the normal schedule.

CLOVER, ONCE JUST A WEED, BECOMES FARMER'S FRIEND

Crop Fertilizes Fields for Pasture and Hay—Nebraska Plants 100 Carloads.

Omaha, Neb.—Sweet clover seed, approximately 100 carloads valued at around $250,000, has been distributed from this agricultural metropolis in a single year. Behind those colorless statistics there lies a story of a once humble and greatly misprized roadside weed pulled out of the rut by gentle hands and, within a decade or so, advanced in rank to one of the important western farm crops.

Farmers once looked askance at the weed because they thought it would overrun their fields. But along came those "book farmers," the agricultural extension men from the state colleges, to prove sweet clover was a vertiable pearl cast beneath their feet. Now it is generally admitted that this crop is indispensable as a fertilizer and producer of both pasture and hay.

Few are the farmers in Nebraska and western Iowa, say the seedsmen, who do not sow it with their oats, wheat and barley. For after the grain harvest in midsummer they find the sweet clover remaining to give forth an abundance of forage or hay, whereas stubble fields used to lie idle before the value of the sweet clover was known

"Here is a crop that makes Muscle Shoal look insignificant," declared one of the dealers here recently, for it gives the farmer, free, all of the nitrogen his soil needs, while at the same time it feeds the live stock.

SOME LETTERS—ENCOURAGEMENT! THANK YOU

From F. G. Manly, County Demonstration Agent, Eclectic. Ala:—I have just received a copy of your paper, The Modern Farmer, and am very much interested in the matter of the organization of the Negro farmer which it is advocating. Employed as I am in the U. S. Exttension Service, working among Negro farmers in this State naturally adds to this interest.

From Arkansas. Letter on file. Gentlemen:

Production is only half tthe battle in the fight for the farmer's success. Marketing is just as important and neccessary. If the Federation is capable of finding buyers for my rice then I am sold on membership and subscription to the Modern Farmer, and am perfectly willing to go from farm to farm in this county and sing your praises.

Never before in the history of my career as a farmer have I heard of any association or individual making any efforts to help us get a decent price for what we produce. Lots of them come and tell us what to plant and diversify.

Last year I was forced to sell my crop of rice at a great loss, and the white merchant sold it for nearly 250 per cent profit. I am in possession of informantion to warrant my assertion. The white farmers in this county are already organized.

From Hon. Emmett J. Scott, Sec Treas., Howard University, Washington, D. C.:—

I thank you for your kindness in sending me copy of the Modern Farmer. It is a promising fledgeling. I wish you all the success in the promotion of your idea. There is need for such a publication among thousands of colored farmers throughout our country.

The thing that pleases me most, however, about the Modern Farmer is that it will be found equally helpful to, not only colored farmers, but white farmers as well, and to all others likely to be interested in such subject matter..

From Rt. Rev. L. W. Kyles, Bishop A. M. E. Z. Church, Winston-Salem, N. C.:—The work in which you are engaged is as necessary a service as any of the lines of activity engaged in by the constructive workers of our race. In recent years I have been giving considerable attention to the interests of colored farmers. Here in the south, which constitutes their stage of action, they are excluded from tthe white farmer's associations and as a rule, they are discouraged in their offorts to organize. A National Organization in which they could be guaranteed the combined intelligence and wisdom of farmers of more liberal sections of the country, is bound to result in great good for our farmers here in the south.

I wish to assure you that you shall have my hearty co-operation in this undertaking.

From Benj. F. Hubert, Pres. Ga., State Industrial College:—I see every reason why Negro farmers should be organized to protect their economic rights and to build for themselves a larger, fuller and more satisfying social life. Any movement that has for its main objective the bringing about of more co-operative effort on the part of Negro farmers should meet with very hearty support.

Negro farmers, fully organized, would be in position to bargain collectively, not only in buying supplies and marketing their purchases, but would be a great source of strength to our race in any other movements that might be started for the improvement of conditions among Negro farmers.

(Editor's Note) —We have many others and we wish to thank all who have written. We appreciate all of them. Some are optimistic. The writers of these are those who will not give up,—who know that better days are coming and are determined to stay on the farm and be ready to enjoy them. We sympathize with those who are discouraged. We want to help them. If they will stay with us they will find no better friend than tthe National Federation of Colored Farmers.

NATIONAL FEDERATION OF COLORED FARMERS

J. P. DAVIS,
President.

C. R. RICHARDSON,
Chm. Board of Directors

TEN REASONS WHY YOU SHOULD BECOME A MEMBER

1. CO-OPERATION. This movement has for its main objective the bringing about of a more co-operative effort on the part of Negro farmers.

2. SIGNS OF THE TIMES. The signs of the times point to co-operative efforts in all directions, whether in production or distribution. The springing up of numerous chain stores is a splendid example of co-operative buying and selling exemplified in every community.

3. AMERICAN FARM FEDERATION. A splendid example of co-operation is the great work being accomplished by the American Farm Bureau Federation. (White). This organization is ten years old and has a membership of 303,000 in forty-five states. They have led the way.

4. URGENT NECESSITY. The colored farmer's position, with the vast majority living in southern states, makes the necessity for co-operative organization all the more urgent in order that economic life may be protected, and that Negro Farmers may build for themselves a fuller and more satisfying social life.

5. SELF HELP. Not for charity, but because he desires to help himself, is the reason why the Negro farmer must take his place beside his white brother in the present economic struggle. and thereby reap the bountiful harvest that will come from a united co-operative effort.

6. THE MODERN FARMER. Our periodical, The Modern Farmer, will from time to time not only serve to promote the best interests of its thousands of readers, but will also, in a bigger way, supply a long felt need for further advancing the great host of colored citizens who are industriously extracting from America's soil much of her bountiful riches.

7. BETTER TIMES. A new day of hope looms brightly before the Negro Race, with splendid organization and the necessary co-operation. This will come from the origination and performance of intelligent activities, as will be demonstrated through the National Federation of Colored Farmers.

8. FUTURE OUTLOOK. The future outlook for the Negro, not only on the farm, but in every walk of life, will grow brighter and better. In union there is strength. Modern methods of production and distribution as exemplified by this organization, will do much to bring about the desired conditions for thousands.

9. CONTINUAL GROWTH. The National Federation of Colored Farmers has not come about spontaneously, but with the great mass of her people still on the farm, either as land owners or as tenants, produces a splendid opportunity for continual growth as espoused by this organization.

10. ULTIMATE GOAL. With the Negro Farmers fully organized, they will be in a position to bargain collectively. Not only in buying supplies and in marketing products will this organization be a great source of strength to our Race, but it will also provide encouragement and support for many other movements that might be initiated for the improvement of conditions among Negro Farmers everywhere.

THE MODERN FARMER

Vol. I. Nashville, Tenn., and Chicago, Illinois, Saturday, June 15, 1929. No. 4.

STATE COLLEGE LIBRARY JUN 26 1929

"CHAIN STORE FARM" POINTS TO NEW ERA

JOSEPH J. JOHNSON, DIRECTOR OF FARM MANAGEMENT

Reaches Conclusion After Four Years on Thirty-two Farms In Illinois

Chain store farming may be the destiny of agriculture, with the modern grain grower and stock raiser operating as a unit of a big corporation.

After four years of managing 32 farms in central Illinois under a practical business system, Joseph J. Johnson director of the farm management department of a Champaign bank, expressed such a view toward modern agriculture.

This outlook is similar to the new idea expounded at the Convention of the American Farm Bureau federation this week, where cooperative production played a prominent part in discussions of farm relief.

Johnson, as farm manager of the Champaign bank, controls the operations of 7,500 acres on the 32 farms which pay $1 per acre annually to the bank for its services. The farms of this model "corporation" are all operater by tenants of the land owners in cooperation with Johnson.

Work on 5 Year Program

When a farm takes over the Johnson system a map of the property is made, soil tests conducted and a building and equipment survey taken. Then a five year program of crop rotation is laid out, built chiefly around a big profit crop, which in this region is corn, and including complete refertilization of the soil during the five year period.

Under the system the tenant-operator receives one-half of all crops produced, the remainder going to the owner.

As an example of how the Johnson system functions, the 320 acre farm owned by W. R. Chambers in Champaign county was cited. This farm during the last five years showed a net return of $19,620, amounting to 6.13 per cent on the investment.

Johnson said it costs on the average farm $26 to produce 40 bushels of corn per acre, which sold for $28, while the Chambers farm spent $29 per acre to produce 70 bushels, which sold for $49.

Tenants Big Problem

The big problem, Johnson said, was to procure tenants who were open minded, industrious, and thrifty. The owner-operated farm is in an even better position to make his farm yield a good income under the business management system.

Many of the farms now using the Johnson plan were losing money until they went to the bank and placed the lands under the business system.

GARDENERS "AUTO" LIKE IT.

City vegetable gardens are fast disappearing, due to automobiles, says a New Jersey professor. Figures collected by the National Garden Bureau, he tells us, show a decrease of 13 per cent in city vegetable seeds, during the last three years, but a gain of 11% in sales of flower seeds.

City folks used to grow vegetable gardens for recreation, this man thinks, but now autos provide them with pleasure more to their taste. They can spin out into the country and buy vegetables fresh, or get them almost as good right in city markets, for gardeners are bringing in their stuff faster now, with improved roads and trucks. The urbanites who still like to grow things have turned to flowers, and thus truck growers have the auto to thank for more customers.

FROM 21 SOWS 191 PIGS

STATISTICS PRODUCED FROM ACTUAL FARM LIFE

By saving 191 pigs from 21 sows and making them weigh 182.15 pounds in 180 days with a feed cost of 5.52 bushels of corn and 17.5 pounds of protein supplement for each 100 pounds of pork George Tatman of Harrisonville, Missouri, has won a second gold medal in the last two years, completed a second year of profitable pork production and shown conclusively that it is a good management and not luck that brings success to his efforts as a hog raiser.

Spring before last (1927) these same 21 sows saved 197 pigs that were marketed at an average weight of 178.6 pounds, or a litter weight of 1,675.6 pounds at 180 days. They consumed 5.5 bushels of corn and 16.5 pounds of protein supplement per 100 pounds of gain. The 21 sows saved 188 pigs in the fall of 1927 and made an average last fall of nine pigs to the litter for 17 sows that pigged.

The 1928 spring pig crop weighed 34,785 at 180 days of age with a total feed cost of $2,196.21. She feed required for each hundred pounds of gain was equivalent to 5.57 bushels of corn, 17 1-2 pounds of tankage and oil meal, and pasture estimated at 40 cents.

These pigs were farrowed in clean pens and kept practically free of worms. Lye water was used in the farrowing pens, and the pens were cleaned out and new dirt put in on the floor. The sows were washed before farrowing.

Duroc Jersey sows were bred to a Poland China boar.

Mr. Tateman feeds corn shorts and bran until the pigs average 80 pounds, when he switches to corn and tankage.

—R. R. Thomasson.

FEEDS FOR BIG PROFITS

DALLAS WINGATE OF MONROE COUNTY SUCCESSFUL

Three calves fed and cared for according to instructions received from the Missouri College of Agriculture through 4-H club work netted Dallas Wingate of Monroe county $82.27 in 198 days. The satisfaction that came with the money in having done a good job was just as great as in the case of a feeder who finishes several carloads.

The three calves, two Shorthorns and a Hereford, sold on the St. Louis market for $16.25, $16.50 and $16.75 per hundred, bringing a net return of $427.50 after paying marketing costs. They had been purchased at a weight of 500 each on the Shorthorns and 390 on the Hereford, costing $135 for the lot. gained almost 2 1-2 pounds a day or a total of 493 pounds each. The feed

During the 198-day feed period they cost, for 158 bushels of corn, 17 1-2 bushels of oats, 550 pounds of bran, 630 pounds of linseed oilmeal, 812 pounds of beans, and 500 pounds of hay, was $229.63. Adding the original cost of $135 to this plus $5.80 for interest and $5.50 for hauling. Dallas had $373.93 charged against the calves when they were sold for $427.50. This gave him a net profit of $51.57 without any credit for pork.

Three pigs purchased for $14 followed the calves until May 8, when they were sold for $30.15. The feed cost had amounted to $315, leaving a profit of $13. The next day three more pigs weighing 233 pounds were purchased at a cost of $22.91. On August 7 they weighed 620 pounds and sold for 11 cents a pound or $68.20. After deducting the feed bill there was left $17.70 to be credited to the calves. This brought the total profit on the calves, including the $51.57, the $14, and the $17.70, to $82.27.

Dallas started his calves on a light feed of corn, oats, bran, and linseed oilmeal with soybean hay for roughage. The grain was gradualy increased until the calves were on full feed.

THE CANE GROWING PROVES BIG SUCCESS

INTELLIGENTLY DISCUSSING PORK

MR. WM. BAKER OF RANDOLPH COUNTY, MISSOURI

"Can you afford to push your pigs with feed so high?" was the question neighbors put to Will Baker of Randolph county, Missouri, last spring. He thought he could. Now he knows he was right. On August 31, when they were only 5 months 8 days old the litter of eight weighed 1,748 pounds or an average of 218.5. They were ready to go on a $13 market and had consumed just $7.12 worth of feed per 100 pounds of pork.

It required 5.14 bushels of corn, 444 pounds of skimmilk, and 3.6 pounds of tankage for each 100 pounds of gain. "The cost of the feed is 85 per cent of the total cost of producing pork," County Agent Frank Stonner, who cooperated with Baker in making this demonstration record, says, "Such rapid and economical gains," he continues, "are possible only when healthy pigs are raised under sanitary conditions and fed a balanced ration"

Claude Shores of the same county conducted a feeding demonstration with Stonner earlier in the season using stock hogs. He produced pork at a feed cost of $7.64 a hundred. He used 6.04 bushels of corn and 23.4 pounds of tankage in getting 100 pounds of gain. Going on feed at a weight of 101.6 pounds they gained slightly over two pounds a day during the 48-day period.

Commenting on his results, Shores said, "I have been feeding hogs for some time but I never before got such rapid and economical gains, price of feed considered, as I got from the corn and tankage on pasture this year. I fed the tankage at the rate of one-half gallon, or 3 pounds, to the bushel of corn."

THIRTY THOUSAND GALLONS OF CANE SYRUP PRODUCED

Allen Brothers of Magnolia, Mississippi Operate Successful Plant

Thirty thousand gallons of cane syrup every season is the output of the syrup plant of Allen Brothers of Magnolia, Miss.

Quality and quantity are both there and always where the product manufactured is of superior quality there is no trouble in disposing of the output.

In fact the syrup is sold before it is made. A wholesale dealer in Memphis, Tennessee, takes the entire output of this cane farm. For the past two seasons this has amounted to around six carloads.

The firm of Allen Brothers consists of three brothers, I. P. Allen, J. B. Allen and R. M. Allen. They were born and reared on the farm where they now live and until the year 1900 they farmed the land to general crops growing cotton, corn and cane for family use.

The syrup made by the Allens was always a little better than that of their neighbors and any surplus was readily sold in local markets.

A family conference decided the matter. After six years of general farming they say they had progressed little, and so they decided to specialize on syrup.

The first year's experience brought out interesting facts. An acre of cane will produce around 18 tons and a ton of cane will yield about 20 gallons of syrup under conditions of farm manufacture.

It costs the Allens $15 per acre to fertilize the cane. Work and fertilization is about the same as for cotton. Cane is planted in February and March and harvested as late as December.

The demand for the Allen syrup grew until they could not supply it, so the next step in the successful venture was contracting with tenants to grow the cane under the direction of R. M. and J. B. Allen. A great deal of their syrup is made cane grown by others who receive an average of 40 cents per gallon without having to make the syrup.

The Allens buy no syrup nor do they blend any syrups made away from their plant.

I. P., who is the syrup maker of the firm, likes to examine the cane before it is ground and stays right with the syrup making from first to last all the time the mill is in operation.

He has made a study of syrup making, has received all the data the government has to offer and has profited by the experience others had to give.

He has found that complete control of the heat is a big factor in making uniform syrup, and at the Allen plant particular attention is paid to heat control and ample arrangements are made with that end in view.

After much experimenting a fine system of clarification was established

Congressman DePriest Says Negro Farmers Should Organize

SHOULD TAKE ADVANTAGE OF BENEFITS OF REVOLVING FUND IF NO ORGANIZATION, THEN NO RELIEF

(Special To Modern Farmer)

In a statement for publication to the Modern Farmer, Congressman Oscar Depriest of the First Illinois District, emphasizes the necessary of Negro farmers of America organizing if they expect to reap any benefit from the new farm legistation which will soon be passed by Congress. Congressmen DePriest, is the only member of our racial group serving in Congress. His statement, which follows, is of supreme interest to every Negro farmers of America organiz-

"That part of the President's message dealing with the subject of farm Relief Legislation, meets my full approval. Proposed legislation on the subject is recognized as experimental. An ample Board is provided and with the provision for full cooperation on the part of Farmer organizations, something definitely to the advantage of the farmer should be worked out.

I feel that the matter of diversification of crops would tend to largely limit the danger of surplusage of crops in wrong products and meet the necessity of a "Debenture" or other subsidizing expedients.

In event of the successful passage of the Bill without serious amendments, Negro Farmers should take advantage of benefits of the five hundred million revolving fund. IF COMPETENT ORGANIZATIONS DO NOT NOW EXIST, THEN THEY SHOULD BE FORMED IN ORDER TO MEET THE REQUIREMENTS OF THE LAW."

CAREFUL CAKE MAKING.

By Barbara B. Brooks,

Home Economics Department, Kellogg Company, Battle Creek, Mich.

Fortunate is the woman who can "mix up" a batter which will be transformed in the oven to a golden brown cake minus disfiguring cracks, bumps and scorched edges. Good cake makers are scarce—as any baked goods sale will prove. Yet there are women in every community with a reputation for skill in this phase of the art of cookery.

Cake making is dependent upon three things—ingredients, measurements and baking. Since flour is the basis for cake, select a pastry flour or if only bread flour is available, substitute two tablespoons of cornstarch for two of flour in each cup of flour measured. Many people think that a solid shortening will yield a finer grained cake than a liquid fat. If a tasteless shortening is employed, add salt in the proportion of one teaspoon to each cup.

Sift the flour and measure it by filling the cup with a spoon, being careful not to pack the flour into the cup. Add the salt and baking powder and sift to mix.

The conventional method of mixing a cake is by creaming the shortening and sugar together, adding beaten egg yolks, dry ingredients and milk, and folding in the beaten egg whites. Beat the shortening and sugar all you want to, but stir the flour in quickly and fold in the whites of the eggs.

(First Choice)

PROFIT ON BEEF CATTLE.

Feeding corn, linseed oilmeal and clover hay to 13 head of Angus calves over a period of January 5 to May 1, and keeping records of results in cooperation with T. A. Ewing, the county agent, a Boone county, Missouri, farmer, Orin Young secured an average daily gain of 2.36 pounds and a return above the cost of feed of $25.50 per calf. This includes a credit of $6.13 per calf for the gains made by the hogs following them.

At the beginning of the feeding period the calves averaged 615 pounds. At the end of the 117-day period they averaged 891 pounds. For each 100 pounds of gain, the cattle ate 9.72 bushels of corn, 42.12 pounds of linseed oilmeal, and 230 pounds of clover hay, costing $12.50.

The cost of the cattle on January 5 was $61.50 per head. On May 1 they were worth $13 a hundred or $115.83 per head at home.

The hogs following the cattle were fed 53 bushels of corn and gained 1,418 pounds, of which 885 pounds were credited to the cattle. The gain on the hogs for each bushel of corn fed to the cattle was 2.55 pounds. In addition to the value of the cattle and hogs Young had 32 tons of manure worth $72.—R. R. T., Mo.

ATTENTION FARMERS!

If you have early watermelons and cantelopes to market, write or telegraph to our head office in Chicago for correct market prices and full information. Don't give your crops away. Don't be misinformed and fooled. We will give you correct information gratis.

The Modern Farmer

Official Organ of the National Federation of Colored Farmers

James P. Davis - - President
Cornelius R. Richardson - Secretary
Leon R. Harris - - Editor

Published Monthly by the Modern Farmer at Nashville, Tennessee, and Chicago, Illinois.

Nashville, Tenn., Office: 447 Fourth Avenue, North.

Chicago, Ill., Office: Vincennes Hotel, 36th and Vincennes Avenue.

Devoted to the interests of the Farmer, Truck Gardener, Livestock and Poultry Breeder, the Home and the People.

Application made for entry as second-class mail matter, under Act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 447 4th Avenue, North, Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

EDITORIALS

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT!

"BY THEIR FRUITS"

We do not expect everyone to believe that the National Federation of Colored Farmers is an organization that is essential to the welfare of all the Negro farmers in America. Some folks don't know what is good for them. Some don't want to help themselves nor be helped by others. Some colored folks are suspicious of any organization controlled by colored people. So many will have no faith in the organization nor in its founders.

This paper, however, will continue to talk organization until a majority of the colored farmers of America are organized. But you will not be satisfied and we will not be satisfied until we see some of the fruits of the organization. Here is some of the progress to date. You can call "fruit" if you so desire.

A certain per cent of all membership dues received is being set aside as a relief fund and will be used for the relief of distressed farmers. How? The organization will decide.

Our marketing bureau has answered all inquiries addressed to us relative to the marketing of products some farmers had on hand. Complete information was given and we know that we have helped some farmers get much better prices for what they had to sell than they would have gotten had they not consulted us. Practically all who have requested marketing information were not members of the organization, but we served them without charge. We are also announcing in this issue that we shall continue to give this service.

At the present time we are endeavoring to negotiate loans for several farmers whose properties are being eaten up by high rates of interest they are compelled to pay.

We have collected and have on file statistics of such value that we are able to give at any time correct and detailed information relative to colored farmers residing anywhere in America. No other organization knows as much about Negro farmers as we know. These statistics have cost much but we were determined to have them and we got them.

We have received letters endorsing and commending our efforts from a majority of the progressive leader of our racial group in America and from many others. The thinking people are for us and for the organization. Your organization belongs to you and you will manage it. It is not a scheme to afford an income to a few individuals. It is an organization for a million. It is not a secret organization Our office door is open. Come on in.

Our work will not be finished until the Negro farmer is recognized as a factor in American agriculture and as an asset to American agriculture. This organization will put the colored farmer on his feet. He is lying down, now,—prone,—flat,—grovelling. Who is recognizing him? Who is interested in him except to get what can be gotten out of him?

The American Farm Federation is meeting in Chicago, this week to further enhance the chances of its members securing aid from the new farm relief legislation. Not one Negro farmer was a delegate. You are un-

Last fall, delegates from thirty-one states attended the annual meeting of this organization. Not one Negro farmer was a delegate. You are unknown.

There will be no relief for you unless you organize. Wake up! Think! Act! "Do instantly!"

THOSE WHO TURN BACK

The first Sunday in June, known to all members of the Eastern Star as "Esther Day." We love to read about the great women characters of the Bible. We read of their work,—of their mission,—how they conquered difficulties and succeeded. Few of them failed. We love to read about the great women characters of the Bible. We read of their work,—of their mission,—how they conquered difficulties and succeeded. Few of them failed. We love courageous Esther and faithful Ruth.

Ruth, the dark skinned Moabitess, followed her mother-in-law to Judea, married a rich and prosperous farmer, and became a direct ancestress of David and Jesus Christ. Ruth had a sister, Orpah. "Orpah kissed her mother-in-law and departed," the good Book tells us, and so we read no more about Orpah. Orpah turned back.

You modern dark-skinned Ruths,—wives of colored farmers—don't let your husbands turn back. We are attempting to build up in this country a national organization of colored farmers. Many of your husbands,—like Boaz of Bethlehem,—are in prosperous circumstances. They can help. They should help. Talk to them about their organization. Don t let them rest,—content with a little. A modern, progressive farmer should want much,—at least all that is due him. Is your husband getting this? Is he getting a fair price for his products? Has he modern convenience on his farm, in his home? Has he money in the bank? Has he time for recreation and social enjoyment?

If he has not these he is turning back. Start him forward, toward his promised land. The first step is his membership in the National Federation of Colored Farmers.

YOU AND A STAMP

We are anxious to know the name and address of every colored farmer in America. Won't you please write down the names and addresses of those you know,—your neighbors and relatives,—and send them to our national office. It will only cost you a stamp and will help us greatly. Address National Federation of Colored Farmers, Vincennes Hotel, Chicago Ill.

YOU AND YOUR BUSINESS

Our personal business becomes everybody's business when everybody knows about it. As a race, we should learn how to keep our own business to ourselves. One way in which we can do this is by depositing our savings with a banking institution that will not yell out from the housetops how much money a certain colored farmer has on deposit. Some banks have a way of letting such information "leak out,"—specially where a colored farmer is concerned. The farmer then becomes the prospect of every agent in his country and his time is consumed by the dozens who are trying to sell everything from a grindstone to a Michigan sand-let.

Banking by mail is a good policy to pursue when one wants to keep his financial affairs out of the neighborhood gossip. To those who wish to bank away from home, we highly recommend the facilities of the Citizens Savings Bank and Trust Company, of Nashville, Tenn. They have a special "Banking By Mail Department." They are trustworthy, pay good interest on savings' accounts, and will appreciate your business. They are located in the central south,—convenient to most of our farmers. When you don't want your financial affairs to "leak out" deposit your money with the Citizens Savings Banks and Trust Company, Fourth Ave., North, and Cedar St., Nashville, Tenn.

YOU AND YOUR FARM PAPER

We know that the Modern Farmer is not a first class farm magazine. It is an infant in swaddling clothes. But it is yours. Be thankful for that. You can help it grow by subscribing for it.

If you have read it from the beginning you must admit that you have gotten some information from its pages that you could not have gotten from any other farm paper. This information was about you and your brother farmers of our racial group. Then, it has been of some service to you. It pays to "Know Thyself."

We appreciate your interest in us,—your kind advice,—your subscriptions. We will also appreciate and thank you for more.

Cooperation simply means doing things together. "All for each and each for all."

You cannot get unless you give.

The natives of Africa are fast organizing protective and cooperative unions. And yet some of us think they are heathens.

A group of white farmers in an Iowa neighborhood raised and shipped one hundred car loads of cabbage. This cabbage was raised on two hundred acres of land.

Are you a member of the National Federation of Colored Farmers?

MORE LETTERS—ENCOURAGEMENT! THANK YOU

From W. T. Reid, Grand Chancellor Knights of Pythias, Jurisdiction of Georgia, Macon, Ga.:—

I am thoroughly interested in any movement for the uplift of my people and I am sure that the organization of the Colored Farmers over the states will be a blessing to our race and to coming generations.

From Capt. Horace W. Bivins, O. R. C. Proprietor Majestic Plant Gardens, Billings, Mont.:—

I am glad to know of your organization. I have been trying to get in touch with some society East or, South, that would induce some of our colored farmers to come West. I have written during the past three years fifty-five letters to schools and persons East and South trying to induce some of our group to come West. I could say many things on this subject.

From Mississippi. Letter on File.

I shall mail application as soon as possible. It is the organization we have been needing, lo these many years. I truly hope that the colored farmers everywhere will grasp this opportunity to help ourselves out of this awful condition. Its equal is found only in slavery.

I received the Modern Farmer and read practically every word of it. The letters in the paper were most interesting. They simply stated the conditions of the millions of colored farmers who have been the shade trees for the other fellows.

MODERN FARMER READERS COMMENT ON PUBLICATION

EXCERPTS FROM SOME OF THE LETTERS FROM FARMERS WITH DISCRIMINATING TASTE WHO APPRECIATE GOOD NEWSPAPERS

"Terre Haute, Ind., Sir:—I received your paper, The Modern Farmer, a few weeks ago and was much interested in it. We colored people should have more papers and books on our shelves, published and printed by our own race. I am very much interested in this paper because of its farm news. I have a small farm myself, of 120 acres and several good milk cows, therefore, I think farming is very interesting.

I am inclosing a post office money order for $1.00, for which I wish to become a reader and subscriber of your Modern Farmer Paper.

Respectfully yours,
MR. JOE BATTON."

"Cutter, Ill., Modern Farmer, Kind Sir:—Yours of recent date received, and I will be glad to receive a copy of the Modern Farmer. I am very much interested in this pioneer move you have made in the publication of this paper. A farm paper of our race is what we have been wanting. Agriculture is the world's most basic industry.

I am a farmer and am anxious to see a sample copy of the paper. You can count me as a subscriber in the very near future, and I will gladly cooperate with you in any way I am able.

Respectfully yours,
ELMER RHINEY."

"Modern Farmer, Nashville, Tenn., Gentlemen:—Enclosed find check for $1.00 for one year's subscription to your paper. I trust that it will reach all of the farmers of our group in this country, as they are very much in need of such a paper. I am sure that you will have success in your undertaking. May your efforts increase one hundred fold. With best wishes to you, I am

Yours with great respect,
C. H. CALLOWAY.
Kansas City, Mo"

"Modern Farmer, Dear Sirs:—I have your letter of April 5th and am pleased to learn of the founding of a farm publication devoted to the interests of Negro farmers. I enclose one dollar herewith, for a year's subscription, and I include with it my best wishes for the success of the Modern Farmer.

Cordially yours,
ARTHUR CAPPER,
Washington, D. C."

"To The Modern Farmer, Nashville, Tenn.:—I received your paper and I truly do like it. Please give me all the information you can about farming, and please send me your paper promptly every month. You will find enclosed $1.00 for the same. I hope you can get more readers in Lee County, Arkansas.

Yours truly, JOE CANNON.

"Modern Farmer, Nashville, Tenn., Dear Sirs:—I received a copy of your paper and think it is a right step in the right direction. I am sorry I cannot enclose amount for a subscription at present, but you have my best wishes for great success in your enterprise.

Yours truly, M. A. DAVIS,
Mears, Michigan."

"The Modern Farmer, Gentlemen:—I am inclosing $1.00 for my subscription to your paper. I received a copy and like it very much.

Yours truly,
ELLIS GRIFFIN,
Wetmore, Texas"

"The Modern Farmer, Nashville, Tenn., Gentlemen:—Your letter of the fifteenth came, and your invitation to become a subscriber is accepted. I am going to send my subscription at the earliest opportunity. You may rely on that, because I have certainly appreciated the paper, and my family too, helps in making it a welcome guest in our home. The news that the Modern Farmer brings is invaluable, such as we need to know, and should know, especially about our group. There is too much information that we need and cannot get first-hand, but The Modern Farmer brings it right to our door and places it at our disposal. I hope the opportunity will be given at some time to contribute to The Modern Farmer. Thanking you very sincerely, I am

Yours truly, DAVID A. JACKSON,
Sandersville, Ga."

"The Modern Farmer, Nashville, Tenn., Gentlemen,—I am in receipt of your letter announcing the publication of a newspaper in the interest of the farmer. Your paper will fill a great need if famers are shown the benefits to be derived from diversified crops and close application to the cultivation of their crops. To my mind the automobile fever is causing too many farmers to neglect their farms, when the automobile should enable them to spend more time on the farm. Farms should be made more attractive and more productive.

Yours very truly,
C. C. SPAULING,
Durham, N. C."

"Modern Farmer, Nashville, Tenn., Gentlemen:—I received a copy of your paper, The Modern Farmer, and I like it very much. I am inclosing one dollar for my subscription to the paper for one year. I think this paper should have the support of all farmers, because it contains so many wonderful things about our group.

Wishing you much success, I am
Very truly yours,
GEO. W. SILLIVAN,
Sweet Home, Ark.

"Editor, Modern Farmer, Nashville, Tenn., Dear Sir:—Yours of the 15th instant came duly to hand and contents perused. I also received a sample copy of the Modern Farmer a few days prior to receiving your letter, and I certainly think it is a great undertaking and very much needed among our group of people in America.

"I welcome your monthly journal and wish for it long life and great success. I shall, in the near future, remit to you my year's subscription, for I know what it meas to encourage worthy beginners, having had twenty-five years experience as Editor of The Bystander, I am in sympathy with your struggles at the beginning.

Very truly yours,
JOHN THOMPSON,
Des Moines, Iowa."

A LITTLE ABOUT GEESE

Geese do best when the gander has only one wife, but more often he is given two or three, sometimes four.

Sometimes it's hard to tell the gander from his mate. Usually he is larger and coarser, and has a shrill high voice, while she has a hard coarse cry. The gander also has a longer neck and larger head.

Toulouse and Embden geese will lay some eggs for hatching in their second year, and sometimes in their first healthy stock. Often the first eggs their third year and should not be depended on before then to raise good healtry stock. Often the first eggs lain will not hatch, and should be used for cooking.

Both ganders and geese are best for breeding stock when from 3 to 5 years old. Yearling ganders will breed however, and the geese often lay well up to 10 years old, and even older.

Eggs should be taken from the goose as they are laid, and she will lay more than if they are left with her. The first ones can be hatched under a hen. When the goose is ready to set, give her the nest she has been laying in—she doesn't take at all kindly to a new one.

Breeding geese should be fed plenty of roughage—clover or alfalfa hay, vegetables, and the like—with some grain. Silage is a good roughage if it doesn't contain too much corn. Breeding geese shouldn't be allowed to get too fat, or the hatch will be poor. They need grit and oyster shell or ground limestone all the time—and plenty of drinking water, in dishes deep enough so they can wet their heads all over.

NATIONAL FEDERATION OF COLORED FARMERS

J. P. DAVIS,
President.

C. R. RICHARDSON,
Chm. Board of Directors

TEN REASONS WHY YOU SHOULD BECOME A MEMBER

1. CO-OPERATION. This movement has for its main objective the bringing about of a more co-operative effort on the part of Negro farmers.

2. SIGNS OF THE TIMES. The signs of the times point to co-operative efforts in all directions, whether in production or distribution. The springing up of numerous chain stores is a splendid example of co-operative buying and selling exemplified in every community.

3. AMERICAN FARM FEDERATION. A splendid example of co-operation is the great work being accomplished by the American Farm Bureau Federation. (White). This organization is ten years old and has a membership of 303,000 in forty-five states. They have led the way.

4. URGENT NECESSITY. The colored farmer's position, with the vast majority living in southern states, makes the necessity for co-operative organization all the more urgent in order that economic life may be protected, and that Negro Farmers may build for themselves a fuller and more satisfying social life.

5. SELF HELP. Not for charity, but because he desires to help himself, is the reason why the Negro farmer must take his place beside his white brother in the present economic struggle, and thereby reap the bountiful harvest that will come from a united co-operative effort.

6. THE MODERN FARMER. Our periodical, The Modern Farmer, will from time to time not only serve to promote the best interests of its thousands of readers, but will also, in a bigger way, supply a long felt need for further advancing the great host of colored citizens who are industriously extracting from America's soil much of her bountiful riches.

7. BETTER TIMES. A new day of hope looms brightly before the Negro Race, with splendid organization and the necessary co-operation. This will come from the origination and performance of intelligent activities, as will be demonstrated through the National Federation of Colored Farmers.

8. FUTURE OUTLOOK. The future outlook for the Negro, not only on the farm, but in every walk of life, will grow brighter and better. In union there is strength. Modern methods of production and distribution as exemplified by this organization, will do much to bring about the desired conditions for thousands.

9. CONTINUAL GROWTH. The National Federation of Colored Farmers has not come about spontaneously, but with the great mass of her people still on the farm, either as land owners or as tenants, produces a splendid opportunity for continual growth as espoused by this organization.

10. ULTIMATE GOAL. With the Negro Farmers fully organized, they will be in a position to bargain collectively. Not only in buying supplies and in marketing products will this organization be a great source of strength to our Race, but it will also provide encouragement and support for many other movements that might be initiated for the improvement of conditions among Negro Farmers everywhere.

WHY NOT BECOME A MEMBER?

Dues $2.50 Every Six Months Or $5.00 Per Annum.

CANE GROWING IS A BIG SUCCESS

(Continued from Page 1)

and all the syrup the Allens turn out is of uniform clarity and density. Those who purchase the Allen product find that it is all syrup and that half of the bucket's contents has not sugared as is often the case.

The government cooking test is used in the making. Allen Brothers have found this cooking test to be the best. It produces a clear, uniform, grade that does not lose its flavor or ferment. But while the government test for syrup is 33. I. P gives the syrup he produces another and makes it 34. He cooks to this extra density to be sure the syrup is done.

The Allens have found that the demand for good cane syrup is growing but that a great deal of the syrup turned out by the small plants is scorched, or is of improper density. There is no doubt but that good cane syrup, put up in small containers will push maple syrup for the place on the market.

The cash and carry system of stores and limited storage facilities in modern kitchens have made small containers more in demand.

The Allen plant has an output of 1,000 gallons each day and this is sold by the wholesale grocery firm of Memphis in gallon, half gallon, quart and pint containers.

The secret of the success of Allen Brothers is the superiority of their product. They say they could cash out for $50,000 but they do not want to. They have found a work which pleases them and they turn out a product which satisfies the public and they want to continue to grow in prosperity and efficiency.

The Allens contract with growers and give them $8 per ton for cane. Some of the growers receive more than $150 per acre gross for their cane crop.

In addition to operating the syrup plant the Allen cultivate 840 acres of land. The sugar cane mosiac gave them a big scare and for a time it looked as if the disease would spread. But the new P. O. J. cane seems mosaic desisting, and solved the problem.

ORPHAN CHILDREN SEEK RELATIVES IN GEORGIA

The three orphan children of Mr. and Mrs. Charley White are living in the daily fear that they will be turned over to the city and separated before relatives claim them.

Mrs. Rosa White, the mother, died a year ago, and her brother, Peter Jacobs, came from Ogeeche, Ga. and took the body home. He wanted to take the children with him at the time, but the father wanted to keep them.

Last week, the father, Charley died, without saying where relatives of the children could be found.

Little Charley (girl), aged 9, says that her father had no relatives, and remembers only her Uncle Peter Jacob of Ogeeche on her mother's side.

The other two children are Peter James, aged 5 and Henry, aged 18 months.

The children are in a destitute condition, and are now being taken care of by a woman who was rooming at the house when the father was taken to the hospital.

The Detroit Independent has been asked to help locate these relatives. Any one knowing the whereabouts of any of the relatives of Charley White and Rosa Jacobs White, is urged to get in touch with us at once.

NEGRO GIRL IS SLAVE

New York.—The New York World, through the aid of the National Association for the Advancement of Colored People, investigated and published the story of a young Colored girl held as a slave by a southern white family from South Carolina, now living near Little Falls, New Jersey.

Alsie Martin, the Colored girl, was "given" into the care of the white family named Allen when she was two years old. She is now sixteen, does the family cooking, cleaning, and washing without pay. She does not know how to read and write, and has always worn second hand clothing, and has been prevented from associating with any children.

No formal adoption was made, because the child was a Negro, but papers of indenture "binding out" Alsie until she was eighteen were signed by Mrs. Winnie Martin, Alsie's grandmother. This was because the mother, at that time, was not twenty-one.

These papers were reported to have been lost.

NEGRO COMPANY WILL INCORPORATE STORE

Pulaski, Tenn.—Application for a charter has been made by the Giles Mercantile Co., Inc., capitalized at $5,000, and composed of a number of leading Negro citizens of Pulaski, who propose to construct a general merchandise cash store in the Pythian building on North First street, opening this week.

The incorporators are: Nelson N. Reynolds, president; Dr. W. A. Lewis, secretary-manager; T. P. Turner, J. T Bridgeport, Andrew Givens, Ben B Jones and William Burch, Jr.

MISSOURI MEERSCHAUMS

One distinctively American contribution to the comfort of the world is the corncob pipe. It is regarded as the farmer's favorite method of enjoying his tobacco smoke but many a city dweller with a big collection of pipes turns now and then to a blackened corncob.

The secret of the corncob pipe came to light recently when the son of the founder of the industry died. A Missouri woodworker made the first corncob pipes on a commercial basis. They were good, but they burned out. They afforded satisfying smokes but they didn't last long. His son found a way to plaster them with a fire-resistant filler. Today 20,000 acres of good Missouri farm land is devoted to growing the fat cobs favored by the industry.

In a recent year nearly 2,000,000 corncob pipes were shipped from this country to foreign parts.

It is hardly probable that wandering American farm boys account for all of them.

It may be that plain smokers in other lands have yielded to the challenge of the untamed corncob pipe. Strong indeed is the man who can get through the initiatory smoke without reflecting that the next one will be sweeter. And it is. But always it is a good, tough, masculine smoke.

—Collier's Weekly.

THE SCIENCE OF AGRICULTURE

The composition of soils is learned by analysis made in the laboratories and fields of agricultural colleges, and of the United States Department of Agriculture. By analysis it is possible to determine also what compounds are needed in the soil for certain crops, grass, corn, and potatoes. Each has its own needs and the same fertilizer will not prepare the soil equally well for all of them. The preparation of artificial fertilizer is a great industry.

The study of the needs of the soil and crops has been of great benefit to mankind. It is not farmers alone who are benefited, for the whole world depends on the success of crops for its daily food.

By T. R. White, Department of Agriculture, Barnwell County Training School, Blackville, S. C.

NEW THINGS IN COMMERCIAL FERTILIZER

The testing of soils or plants for fertilizer requirements is a new development that is worth watching by the farmer. The Ohio Extension Service is now using a chemical test to determine the relative amounts of available phosphorous in the soil, as an aid to making more-intelligent fertilizer recommendations.

In Indiana, Dr. G. N. Hoffer, who, with his associates, is working for the Indiana Experiment Station and the U. S. Department of Agriculture, is using the "corn-stalk" test to determine the nitrogen and potash deficiencies of the soil. This lack is reflected by the content of those elements in the corn-stalk grown from that soil.

Professor C. H. Spurway, of Michigan State College, has proposed a simple field test as a guide to knowing the phosphorous requirement of the soil. The test for acidity is often considered practically as a test for phosphorous need, since practically all lime-deficient soils are also lacking in available phosphorous.

Testing for plant-food requirement has come a long way in the past five years. It is worth a guess that, within the next five years, the fertilizer needs of a soil can, within reasonable limits, be told by a field test. When and if this is an accomplished fact, it will prove a valuable supplement to the field experiment plots which, for obvious reasons, can not cover fully the hundred or more soil types of a state and the wide variations in farms on the same soil types.

IT MAKES MANURE BETTER

The best fertilizer for gardens or truck patches is manure. It not only contains plant food all ready for hungry little roots, but by its decay, manure breaks down raw elements of the earth into a form plants can use. Any vegetable matter decaying in the soil will do this, but no other does it quite so well as manure.

Manure alone however, is an unbalanced plant ration. It doesn't contain enough phosphorus (an element necessary to forming fruits, seeds, and roots of crops like carrots) to balance its nitrogen (an element used chiefly in leaves.) So on well manured gardens, crops like lettuce and cabbage may do well, while carrots, potatoes and the like "go all to tops."

This trouble is easily fixed by applying 40 to 50 pounds of acid phosphate with each ton of manure. That balances it up. By thus reinforcing manure, 10 to 20 tons of it to the acre will make your garden something to crow about.

COFFEE FARMS

By Charles S. Smith

(Chief A. P. Foreign Service)

Campinas, State of Sao Paulo, Brazil.—Brazil's countless millions of coffee trees are now bright with the little green berries which will be picked next July, dried, shelled, and converted into the coffee bean of commerce.

Coffee plantations in the state of Sao Paulo, which produces more thon half of the Brazilian coffee crop, have something of the appearance of Iowa and Illinois cornfields. The trees, four in a group, are planted in rows at intervals of about twelve feet. These rows run on endlessly over gently rolling hills of soil that is redder than the red hills of Georgia.

Most of the coffee fazendas have an immense acreage. Individual owners have as many as 4,000,000 trees. Where the railways run through a rolling prairie country it is not unusual for trains to pass for hours through coffee fields. Many of these estates have their own small railways to handle their crop.

Strangely enough to North American eyes, Indian corn is often planted between the rows of coffee trees. It affords shade which prevents grass from growing among the rows and provides feed for the small sleek mules that constitute motive power for the fazendas.

Most of the large coffee plantations keep their trees cut to a height of about 12 feet, and the four trunks standing together, provide a compact mass of dark green leaves which give a heavy shade to the berries growing along their branches. At this season it is impossible to see the little green berries at any distance.

Like apple trees in the United States, coffee trees seem to do best on gently rolling land which drains well, and on hillsides which are capable of cultivation. Coffee trees seldom appear in bottomlands that are not high above water courses. While coffee is grown near sea level in Brazil, the great estates are practically all on plateaus at least 2,000 feet high, where the cooler climate is more favorable to development of the crop.

Santos, the chief port of the state of Sao Paulo, handles 60 per cent of Brazil's coffee crop. The coffee goes first to Sao Paulo, the state's capital and railway center, and then is shipped down to sea level at Santos over a cable railway which drops 2,700 feet within a distance of seven miles.

HOUSEHOLD COLUMN

Hoover's Favorite Breakfast Omelet

2 cups minced ham, heat slowly in a buttered pan. Beat six eggs all together, have a buttered pan hot and put in the eggs. Cook slowly and set in a hot over for about 3 minutes. Take out and fold in 1-2 of the ham in the center of the omelet. Roll over very carefully until it is the size of a large bottle. Garnish with the remainder of the ham around it. Pour a little melted butter over the top and serve.

Asparagus Patties

Fill pastrypatty shells with creamed boiled asparagus tips to which you have added chopped fried bacon in the proportion of one tablespoon of the bacon bits to each patty.

Gingerbread Shortcake

1-4 Cupful of Shortening
1-4 Cupful of Brown Sugar
1 1-4 Cupfuls of Pastry Flour
1 Teaspoonful of Ginger
1-4 Teaspoonful of Cinnamon
1-4 Teaspoonful of Mace
1-4 Teaspoonful of Salt
1-2 Cupful of Molasses
1 Egg
1-2 Teaspoonful of Soda
1-4 Cupful of Milk

Banana shortcake is not unusual, but banana ginger bread short cake is. This recipe makes enough to have some left-over gingerbread. Cream the fat, sift in the sugar gradually, then part of the mixed and sifted dry ingredients. Then beat in the molasses, blended with the well-beaten egg and with the milk in which the soda has been dissolved. The rest of the dry ingredients may then be added and the mixture poured into a well-oiled layer-cake pan and baked in a moderate oven—375 degrees F.—for about twenty-five minutes. When done and cool, cut a square for each individual. Split them and on the under half place sliced bananas and pieces of marshmallow, cover and garnish with whipped cream. This gingerbread keeps well.

—Mrs. R. B. J.

Smothered Pork

One cup rice.
One pint tomatoes.
Five onions, cut fine.
Pork chops.
Salt and pepper.

Stir first three ingredients together and place in a small roaster. Add seasoning, then pork chops. Cover with water and cook for two and one-half hours in a moderate 350 degrees oven, stirring occasionally so that rice does not settle in the bottom of the pan. One-half hour before serving remove top of roaster to allow meat to brown.

Liver With Vegetables

Two pounds sliced beef liver.
Two tablespoons fat.
One cup small onions.
Two cups cut carrot or turnip.
One quart small potatoes.
One tablespoon celery top or parsley.
Two tablespoons flour.
Two teaspoons salt.
One-eighth teaspoon pepper.

Prepare vegetables, put into a baking dish, cover with boiling water, bake for twenty minutes; add one tablespoon flour mixed with cold water. Cover with liver from which skin and veins have been removed, and which has been seared in hot fat. Cover dish and bake in slow oven for one hour. Cut this recipe in half if you are cooking for two.

Barbecued Spareribs

3 Pounds of Pork Spareribs
2 Onions
1-2 Cupful of Catchup
1 1-2 Teaspoonfuls of Smoked Salt
1-4 Teaspoonful of Tabasco Sauce
1-8 Teaspoonful of Chili Powder
1 Cupful of Water

For preparing this dish, you will need a heavy pot to which there is a well-fitting heavy lid. Put half of the ribs in the bottom of the pot and cover with a layer of thinly sliced onion and half of the sauce made from the catchup, smoked salt, tabasco sauce, chili powder and water, all thoroughly mixed. Add the rest of the ribs, the onions and sauce in the same way. Cover and bake in a moderate oven—375 degrees F.—for about two hours. When done the meat will be tender and brown, with a rich well-blended and individual flavor that has no outstanding trace of the great variety of spices and seasonings added. With plan boiled hominy this makes a hearty dinner main course.

—Mrs. N. M.

Cornmeal Crisps

1 Cupful of Cornmeal
1 Cupful of Flour
2 Tablespoonfuls of Shortening
1-2 Cupful of Milk

These are dainty, round cornmeal wafers that offer a new accompaniment for the family vegetable soup or any fruit or vegetable salad. Mix and sift the cornmeal and pastry flour together into a bowl and cut in the shortening until it seems to be a part of the meal. Make a hole in the center, pour in the milk, then lightly toss the ingredients together with a spatula. When formed into a ball, roll out as thin as possible on a board, lightly sprinkled with flour. Cut into rounds about an inch and a half in diameter and bake in a moderate oven—375 degrees F.—about ten minutes. When left over, these crips may be reheated with a sprinkling of grated parmesan cheese on top.

—B. M.

ELECTRIC HEATING SYSTEM IN HOMES FOUND PRACTICAL

New Method Is Successful in Eight-Room House at Cost of $350 for Winter

Philadelphia, Pa.—The electrically heated home, without chimney or coal bin, predicted years ago by Dr. Steinmetz, is a reality. Homes and buildings in a half dozen different cities are being successfully heated by this means this winter.

This fact was made known by Chester I. Hall, president of the Hall Electric Heating Company of this city, who as research engineer of the General Electric Company, in charge of its experimental laboratory at Fort Wayne, Ind., developed this new method of electrical heating.

The method consists of heating large thermal storage tanks of water, using electric current only at night, when it can be obtained at the lowest cost, and releasing this stored heat to the home as required. The same plan, either in conjunction with the home heating system or independently, can be used to supply the domestic hot water needs. The Hall heating system can be installed as a hot air, hot water, vapor or double-pipe steam system. The charging or storage of heat is substantially the same in all, and the only difference is the matter of discharging the heat.

"Electric heating is no longer experimental, the cost reasonable," according to Mr. Hall. "It is the second winter for its use in Fort Wayne and from data received from that city, as well as other restricted territories in which the company is operating, I feel sure that it is firmly established. I believe that the average eight-room home in the central belt of states, comprising Pennsylvania, Ohio, Indiana and Illinois can be heated electrically for approximately $350 per winter, providing of course that the building is well insulated. Otherwise, the cost will be greater.

"There is neither flame nor combustion of any sort in the house," Mr. Hall explained. "Heat by electricity is not the product of combustion and does not consume oxygen. The total oxygen in the house, ordinarily used to a great extent by coal, oil, gas or wood fires, is therefore left intact. The further products of combustion, such as smoke, gases, soot or ashes, etc., do not exist."

CO-OPERATIVE ASSOCIATION OPENS CHAIN OF STORES

Los Angeles, Cal.—Along plans such as those suggested in recent A. N. P. Industry and Business Surveys, the Pyramdi Co-operative Association has opened its first store, on Central Avenue. There is a meat market, fruit and vegetable department and candy nook.

Some of the leading business men of the city are members of this new organization which plans within a year to have several like stores in operation.

THE MODERN FARMER

Vol. I. Nashville, Tenn., and Chicago, Illinois, July 15, 1929. No. 5.

Five Hundred Million Dollars For Farm Relief

U. S. HOUSE AND SENATE PASS BILL

President Hoover Affixes Signature to Aid the Farmers

Five Hundred Million Dollars were provided for farm relief in a Bill which passed the United States Congress, and which already has the signature of the President upon it, making it a law. From this vast and stupendons amount that will stretch over a period of years, and that will be used as a revolving fund, there will be one hundred and fifty millions immediately available. This last Act was a special request of President Herbert Hoover, and the first Bill itself is supposed to have embodied the idea of the new Republican Chief Executive, who called an extra session of Congress with the primary object of giving to the tillers of the soil, the live stock and poultry raiser, in fact, those who make rural life their chief occupation, some immediate relief.

There were those in the nation's capital who injected their personal idea into the Bill, and at first it was thought that the obstruction would be so great that Congress would be all the summer passing it.

The President is to name a board to handle this fund, but it will be available for the relief of all farmers. No particular lines will be recognized; no race, color or creed will enter into it; no section will be considered, but sectional lines will be entirely obliterated: There will be no North, no South, no East, no West,—It is merely a Farm Relief Bill. There will be no rich farmer and poor farmer; they will come in share and share alike in the benefits to be derived therefrom.

In the naming of the Board, it is expected that President Hoover, who already has the matter under his personal advisement, will name men broad in their views, well experienced in the handling of such weighty matters and such matters of import. It is understood too, that most of those states are urging their favorite sons, and that the President is considering well all of the advantages and disadvantages offered in the selection of his Farm Relief Board.

SPRING PIG CROP SMALLEST SINCE 1925

The spring pig crop is smallest since 1925. The Department of Agriculture disclosed that the crop of 1929 was eight per cent less than 1928.

A decrease of eight per cent, the report said would be equivalent to 4,300,000 pigs. The decrease shown in 11 corn belt states was about 6 per cent, which would be about 2,500,000 pigs.

The number of sows farrowed for the United States was ten per cent smaller and for the corn belt eight per cent smaller than last spring. There is an increase of seventeen per cent in sows bred or to be bred for fall farrowing this year, compared to sows farrowed last year for the United States and also for the corn belt.

The June supply has fallen short of all expectations, and the total for the month at 11 leading receiving terminal markets is the smallest since June 1917.

Cattle receipts at Chicago, ran smaller during June since 1912 and there has been only two smaller June totals since 1886. With these facts before our readers, we suggest that you go long on hogs and also save your calves. Prices are bound to be higher.

Man With Hoe Must Hurry to Meet Demands

IS SATISFIED ON FARM

MISS OLIVER OF BLESSING, TEXAS, EXPLAINS THE WHY

For many years we have looked upon the farm with dread and owing to the way it has been carried on, many of our youths have left the farm and drifted to the city.

But the modern methods of farming are so charming and thrilling that I have become satisfied on the farm.

What is more essential to a strong and healthy mind than a strong and healthy body? In order to have a body like this it must have pure wholesome food.

When we consider the many high ways constructed by the state and the net work of telephones through the country, we can easily see that we are not drifting but it is being brought to us.

Have you thought of the real pleasure and enjoyment that comes from living in the country? Out free from all allurements of town life out where you can hear neighing of horses, the braying of mules, the squeeling of hogs, the bleating of calves, crowing of cocks, the cackling of hens and noise made by the geese and ducks out where you can enhale the pleasant odor that comes from frying ham and making coffee early in the morning.

Out where there are plenty of milk cows. The cow is the most wonderful labratory; she takes the grass of the pastures and the rough hedge of the fields and converts them into the most perfect food for man. In that food there is a mysterious something which scientist have found essential

(Continued on Page 4.)

CHICAGO TRIBUNE'S ARTICLE ON FARMER

Mr. Frank Ridgway Shows What The Soil Tiller Must Do

This nation's children are growing up on a diet of "biled greens and pot likker"—turnip tops and ham bones or pig jowls. They are making truck gardeners double their pace with the hoe. Appetites of both children and grownups for vegetables are increasing by leaps and bounds.

Twice as many fresh and canned vegetables are being eaten in the United States today as there were ten years ago. All of this cannot be credited to the increase in the size of Uncle Sam's family.

Federal marketing specialists' figures show that the consumption of canned vegetables doubled between 1914 and 1925. The consumption also was doubled between 1919 and 1927. Official reports show that there were more than fifty-seven million cases or 2,736,000 cans of vegetables turned out by manufacturers in 1919 compared with one hundred and fifteen million cases or 5,520,000 cans in 1927.

These vegetables in cans were valued at $164,000,000 in 1919 and $282,000,0000 in 1927.

Shipments Doubled in Ten Years

The figures do not include the enormous volume of green vegetables that are hauled into big consuming centers from trucking areas nearby or the fresh vegetables that are shipped by the carloads from gardening areas in other sections.

Reports collected by the government in 1918 show that there were 145,000 carloads of seventeen different kinds of truck crops shipped in the

7 BALES OF COTTON

FIVE ACRES NETS JOHN B. LAY SEVEN HUNDRED DOLLARS

Jefferson, Ga.,—To the Editor of The Modern Farmer. Gentlemen:—Just this bit of information for the benefit of the farmers throughout the nation, especially to the colored farmers. Permit us to state that one of the farmers of this section, in the person of John B. Lay, who lives at Route Four, Box Seventy-eight, Jefferson, Ga., entered the Five Acre Cotton Contest here last year, the results of which have just become definitely known. Mr. Lay produced seven bales of cotton, each bale weighing five hundred and over on five acres of land. While he did not secure the first prize, he received prominent mention. These seven bales of cotton after they were sold and all expenses paid for raising, harvesting, hauling etc., netted him in clear profit $771.84.

Mr. Lay says that he is going to do his best to make his entire crop this year a better one, and that he is devoting his time not only to cotton, but to corn and to other staples on the farm.

There happens to be a large group of farmers in this section, most of whom own their own land. They are industrious and now that they know about the National Federation of Colored Farmers and have heard mention about The Modern Farmer, they plan cooperation. It is their desire to participate in the five hundred million dollar farm Relief Loan, which bill has recently passed Congress and become a law.

PLAN TO TAKE THE ADVANTAGE GAINED

Murfreesboro, Former Capital of Volunteer State, Place of Meeting

Murfreesboro, Tenn.—(Special):—Interest is being created in Rutherford County, Tennessee, for the organization of a Rutherford County Farmer's Association that will work in conjunction with the National Federation of Colored Farmers. While no exact date has been set to perfect this organization, a general call is expected to be issued within the next fortnight for the coming-together of those who not only own soil, but those who till it, who raise live stock, poultry and are engaged in farm industry.

It is estimated that there are more than one hundred farmers in this section of Tennessee, and the movement on foot is said to bid fair to bring them together and to take steps to assist the individual farmer to receive the benefits that are to be derived from the recent Farm Relief Legislation that was passed sometime ago in the nation's capitol and which has already been signed by the President and has become a law, and at the same time to enable the farmers to get in touch with and to be assisted by the Farm Loan Banks, scattered throughout the various states in the southland. These Banks have an unlimited amount of funds made available by previous legislation in Congress for farm loans.

Many well-known farmers in this section are in hearty sympathy with the movement. A notice will be sent out to the following individuals to meet at some convenient place to perfect this organization: Mr. Joe Carruthers, Mr. Jessie Miller, Mr. Robert Smith, Mr. Harry Ward, Mr. Felix Haynes, Mr. Will King, Mr. Chas. Orr,

(Continued on Page 4.)

WILL THE NEGRO FARMER RECEIVE BENEFITS FROM THE NEW FARM BILL?

KANSAS CITY CALL DOUBTS THAT THE COLORED FARMER WILL BE HELPED UNLESS HE RESORTS IMMEDIATELY TO ORGANIZATION BY COUNTIES AND STATES

Will the Negro farmer be benefited by the recent Five Hundred Million Dollar Farm Relief Bill which is now a law? Will he be subjected to and kept out of farm relief in this instance by his own inactivity as he has been kept out before denied the advantages offered by the Farm Loan Banks, by his failure to organize? These are just two big pertinent questions that have been asked from time to time since "Farm Relief" has been under discussion.

(Continued on Page 4.)

Will New Farm Relief Legislation Aid Negro Farmers?

GREAT ORGANIZATION DRIVE

AMERICAN FARM BUREAU FEDERATION TO ORGANIZE EVERY COUNTY IN AMERICA

$100,000 TO BE SPENT

A great membership drive, to cover every state and county in America, will be put on by the American Farm Bureau Federation (white) early in September. Plans are now being made to organize this movement and farm schools,—one in each of the northern, eastern western and southern regional districts of the country,—will be opened immediately. These schools will train organizers and workers for the drive. The school in the southern regional district will be held in Biloxi, Miss.

The Modern Farmer is in sympathy with this movement and we wish it

(Continued on Page 4.)

Some Facts, Theories And Predictions

By Leon R. Harris

My friend, Charlie Hostins, a sensible Negro, a white neighbor farmer, and myself, were discussing this much talked about new farm relief legislation the other day.

"Well," said our neighbor, "that law might do us some good in the long run."

Charlie wiped the perspiration from his honest face.

"I dunno," said he. "I dunno. I farms by workin, not by law. That sholy does me SOME good in the short run, anyhow."

After I got home that evening I followed a shower to my corn patch and while I was pulling out the grass and weeds I began to think.

"Yes, Charlie hit the nail on the head. The law may help in the "long run" but we know that work will help in the "short run."

Despite the much talked about government farm relief, the successful farmer is the one who is going to continue working. Working and thinking. The law may help the

(Continued on Page 4.)

MR. ECTOR DISCUSSES COOPERATION

(Special to Modern Farmer)

The contribntor of this interesting article is an experienced farmer and truck gardener. He is a sincere friend of our Federation and we expect in the near future to give him a larger opportunity to engage in some missionary work for us. The article follows:—

"It is interesting to note that according to the Bible cooperation had its beginning in the the creation, Gen. 1st chapter and the 26th verse. 'And God said let us make man in our image after our likeness: and let them have dominion over the fish of the sea, and over the fowl of the air, and over the cattle, and over all the earth and over creeping things that creepeth upon the earth.'

"If God in all his wisdom and divine power, saw that it was good to cooperate, then why shouldn't we who and over creeping things that creep are such inferior creatures.

(Continued on Page 4.)

ATTENTION FARMERS!

If you have early watermelons and cantelopes to market, write or telegraph to our head office in Chicago for correct market prices and full information. Don't give your crops away. Don't be misinformed and fooled. We will give you correct information gratis.

EDITORIALS

"OUR SLOGAN"

VIRGINIA,—AND HER APPLES

The following little news item appeared in the Chicago Hearld-Examiner the other day.

$1,000,000 Fund t Advertise Apples

A million-dollar-a-year advertising campaign, in the interest of apple-eating, was planned yesterday at a meeting at the Hotel Sherman of directors of the Apples for Health Association.

The association voted to finance the advertising cost by assessing 1 cent on every bushel sold by a producer. Governor Harry Byrd of Virginia was elected vice president.

Colored farmers of Virginia, especially you who live in the apple belt,—as many of you do,—and you who produce and market apples, no matter where you live, listen and take notice.

Not one Negro farmer attended this meeting. We have been informed that not one Negro farmer belongs to the "Apples For Health Association." You do not belong to any of the apple growing associations. You produce your apples and hand them over to these organizations to market them for you and you take what they give you for them. And from now on you are going to be taxed one cent per bushel to help pay this Association's lvertising expenses.

An organization in which you ave no voice nor vote is going to ke some of your meagre profit for its own benefit. This is simply "taxation without representation." You are helping the white man help himself. You have no voice, yet you are made to pay. You are told that you haven't brains enough to stand on your own feet,—you haven't brains enough to handle your own business. — You must be led around by the nose and be made to produce for the benefit of somebody else.

Few Negro apple growers have joined the National Federation of Colored Farmers, an organization in which you have a voice and vote. Why? We can market your apples and get for you as good a price as you can get from any of the others. Why don't you stand up and be independent? That one cent per bushel will soon amount to much more than your membership dues in the National Federation of Colored Farmers. We shall expect at least two hundred and fifty Negro apple growers to join our Federation this month. After what you know now we don't see how you can stay out.

GEORGIA,—AND HER COTTON

There is a cotton crisis in Georgia and in the other cotton growing states. Negro farmers are feeling the effects of it now and they are going to feel it worse by Christmas.

Mr. Martin Amrous, a prominent white Georgian, in a letter to the Atlanta Constitution, says that the present method of grading and classifing cotton is the sole cause of this crisis. We heartily agree with Mr. Amrous. Read his letter, which follows, and you will get some intelligent information that will start you thinking.

"Editor Constitution: Planting "half and half variety seed, "typed" by the established universal grades fixed by United States law, I will produce more high-grade cotton than the man that plants college No. 1 or the majority of other varieties.

Another fact: I will produce more lint cotton to the acre with "half and half" seed than any other man that uses any other seed.

Another fact: the street buyer will pay me as much for "half and half" cotton as he pays for any other variety of seed cotton.

The state is suffering from the government methods of marketing cotton.

I deny that it is due to the neglect or need of better methods by the farmer.

"Half and half" matures quicker and beats the boll weevil.

Classification is the first step in valuing cotton.

Under the United States law the buyer is the sole judge of the grade or class of cotton he is buying, and he can cut the market price of the farmer's cotton from 3 to 16 cents per pound by his idea and conception of grade.

Farmers are ignorant of grade of their cotton. It is a rotten system and the whole cause of the Georgia cotton crisis. I challenge dispute of these facts."

Mr. Amrous says that classification is the first step in valueing cotton" and that the present method is "a rotten system." It is. Yet it is the government method.

This method keeps thousand of Negro cotton growers poverty stricken. The "grade-buyer" shows the Negro no mercy,--especially the Negro tenant farmer. The National Federation of Colored Farmers is opposed to this system and intends to fight it tooth and toe-nail. The "buyer" has no business being the "grader." We favor the appointment of government graders." We shall insist that the new Farm Board so recommend. You Negro cotton growers can assist us if you will join and work with us. We want you to speak with a big voice. You will be heard. Remember that when the National Federation of Colored Farmers speaks it is YOU speaking. We will have more to say on this subject in the near future.

MISSISSIPPI,— AND ORGANIZATION

We take off our hat to the Negro farmers of Mississippi. They are waking up. The Modern Farmer and our Federation are receiving more encouragement from Mississippi than from any other state in the Union.

Not long ago we received a letter from Marshall County, Miss. The writer asked two very pertinent questions. One was: "What do YOU know about the colored farmers of Marshall County?"

In reply to this question we told the writer that his County had a colored farm population of 15,113 and a white farm population of 4,176, nearly four times as many Negroes as whites. We told him that there were 3,143 colored farmers in his county and 1,020 white farmers. We told him that 415 colored farmers owned their farms and 414 white farmers owned theirs. We told him that the value of the principal farm crops produced in his county in one year was $2,325,560, and that four-fifths of this was produced by Negroes. We told him that of this amount only $53,427 worth was sold through cooperative methods and that the colored farmers sold nothing co-operatively because they had no co-operatives. We told him all this and more and he discovered that we knew more about the colored farmers of Marshall County, Miss., than he knew himself.

What of it? "Knowledge is power!" "We know it. Its our business to know about the colored farmers of Marshall County, Miss., and about the colored farmers everywhere else in America.

His second question was, "What can YOU do for the colored farmers of Marshall County, Miss.?

We told him plainly that we could help them help themselves. We told him that through the National Federation of Colored Farmers, Negro farmers could buy and sell co-operatively and would get more money. We told him that we could help them get loans. We told him that we could keep them informed on all matter of state and National legislation affecting agricultural interests. We told more, and in the end that it was the aim of the founders of the Federation" to build up in this Nation a colored group of organized, influenctial and satisfied producers."

The Negro Farmers of Marshall County, Miss., are joining the the National Federation of Colored Farmers. We are glad to have them. They are the thinking kind.

TENNESSEE,—AND SOME

A colored farmer of Dayton, Tenn., writes to the Chicago Defender and ambasts the "middlemen."

"Those awful middlemen," he says. "They are the cause of all the farmers' woes."

We will admit that some of the so-called "middlemen" are a "pain in the neck,"—but some colored farmers of Dayton, Rhea County, Tenn., give US a pain in the neck. We will tell you why.

The white farmers of Rhea County, Tenn., are organized. They market their strawberries and other farm products co-operatively. They are not squabbling about the middlemen for they get fair prices for their products and are succeeding. We know it. Here is the proof.

The ratio of debt to value of land in Rhea County is only 36.3 per cent. In most of the other counties of Tenn., it is much higher.

If the forty odd Negro farmers of this county would organize and affiliate with the National Federation of Colored Farmers they would see an immediate improvement in their financial condition. If it is essential that the white farmers organize it is absolutely necessary that the colored farmers get together. Why don't they?

THE FEDERAL FARM BOARD

The Federal Farm Board will be appointed before you receive this paper. At this time it is evident that no one of our racial group will be a member of it. There are more than one million Negro farmers in America and Negroes compose sixteen per cent of America's total farm population, but still we are unknown. We will remain unknown until we are organized and are able to do more than merely suggest and request.

The National Federation of Colored Farmers will insist however, that the promotion work carried on by the Farm Board among farmers of our group be placed in the hands of members of our group. No one understands the Negro as he understands himself. Some sort of recognition is due the Negro farmer and he must get it.

BLACKBERRY JAM

Blackberry flavor seems to be best retained in the jam when the berries are well heated first so that some of the water cooks out of them before the sugar is added. For a superior jam the heated berries are sieved and measured and then cooked with an equal measure of sugar.

A way to hasten the starting of the water is to mash the berries before they are heated. There is a good deal of water in a blackberry, much more than people generally realize. By mashing the berries, heating them to the boiling point, straining out the seeds and adding the sugar measure for measure gradually, one can cook a jam of blackberries or raspberries in ten minutes of one that will jelly.

7,000,000 EGGS A DAY EATEN IN NEW YORK

City's Residents Also Consume 2,650,632 Quarts of Milk.

(Special From Monitor Bureau)

NEW YORK—Residents of New York City eat 7,000,000 eggs a day, pick up telephone receivers 190 times each second, drink 2,659,632 quarts of milk every 24 hours and get married at the rate of 14 couples an hour during the daytime.

These statistics are contained in "The Story of New York Today," just completed by the Merchants' Association. The object of the booklet is to let the rest of the Nation know the extent of the activities ergaged in by New York's 6,056.000 population.

40 ACREE GIVEN FARM BUYER AS 'GOOD MEASURE'

Wautoma, Wis., May 4.—(Special-Lewis Chaimson, Wautomia, who sold eighty acres of land and then "threw in" an additional forty acres for good measure, believe he isn't as generous as he is described.

Lewis' 120 acre farm near Neillsville has been unproductive and a financial burden to him for many years. So when he found a purchaser for 80 acres, he had the title for the entire tract includes in the deed.

Chaimson said if the new owner discovers he has more than be paid for and refuses to take the extra forty acres he will let the country have it for taxes.

HOME MADE FERTILIZER

Home made fertilizer may be cheaply concocted by commercial trucker, growers, farmers, and city gardeners through a process of hastening the decay of vegetable waste. Flower and vegetable gardens may be greatly improved and yields increased through the use of chemical fertilizers and material that comes from compost heaps rotted down in a short time through the use of a preparation recommended by soil experts.

An excellent substitute for well rotted manure can be made by this process. Home gardeners in the city can build one of these inexpensive fertilizer factories in an obscure corner. Build a pen by setting up boards about twelve inches high and then throw in lawn clippings, weeds, vegetable leaves from the kitchen, straw, and similar material.

As the pen is being filled sprinkle on the following chemical mixture at the rate of about 20 pounds to every 250 pounds of material in the heap. The proportion of chemicals given here are recommended by the Iowa station for making artificial manure out of straw, cornstalks, and other vegetables waste,) Limestone, 40 pounds; sulphate of ammonia, 15 pounds, and superphosphate, 15 pounds.

After waste material has packed down, soak it thoroughly and scatter the chemical mixture evenly over the surface, which should be lift level or slightly concaved to hold water. Apply the chemical on each twelve inch layer of the material and repeat until there are about six layers. Keep the top level so that it will not shed water and dry out. It must be kept soaked for about three weeks. The heap will rot rapidly. When well rotted it may then be used as is old manure that has thoroughly decayed.

HOW TO TRIM SHRUBBERY

When J. P. Porter goes out to trim the shrubs on the grounds around the state agricultural college in New York he divides the bushes into two classes. Some are pruned immediately after blooming, while others are left to be pruned in the fall, winter and spring. out of straw, cornstalks, and other vegetables waste,) Limestone, 40

There are practical reasons back of Mr. Porter's pruning methods which differ from those followed in trimming fruit trees. In explaining his reasons for classifying shrubs for pruning, he says those which blossom early set their flower buds during the preceding year. If they are pruned during the following winter or early spring all blossom is destroyed. They should be pruned immediately after they blossom. In this group he puts spirea Japanese quince, and Japanese snowball. If these are not pruned until late summer young growth will develop before winter and much tender stems are frequently winter killed, he says.

In the second group Mr. Porter puts all shrubs which blossom from the middle of the summer on, and these he prunes either in the fall, winter or early spring. This second group includes such bushes as roses, hydrangea, and rose of Sharon.

For the most part this pruning expert limits his work to the removal of injured, dead, or ungainly branches.

"Never give them a typical "barber's haircut," says Mr. Porter "for this destroys their natural symmetry and grace. Clipped hedges should be pruned twice during the year, once during June and again during winter or early spring. All plants profit from an occasional and intelligents, pruning."

HAS PATENT ON COTTON CHOPPER

Mr. James E. King of 4320 State St., Chicago holds a patent on a cotton chopper and thinner. The implement is rather small and is run by gasolene or Kerosene. The moter is about the size of the motorcycle motor.

The mechanism is rather interesting. There are two small plows in front which disturbs the soil, then two hoes operated on a revolving shaft that chops and thins the cotton, destroying the weeds. This is followed by two large plows that throw the dirt back to the plant.

It is so constructed that the plows and hoes can be folded back, and the machine used as an autombile.

It can be operated either behind the handles as a plow, or you can ride—the same as a tractor.

Mr. King has had several flattering propositions from large concerns for this patent, but says he is seriously considering the idea of forming a company and manufacturing it himself. Mr. King is a native of Texas.

RECORD BREAKING MELON SEASON

George Winningham of 37th and Giles Ave., is one of the largest dealers of watermelons in Chicago.

He purchased the first car of the season in May and they retailed at from $2.00 to $2.50 per melon. He has several large trucks and last year handled over 175 carloads.

Mr. Winningham is very interesting and has a profitable business. He is originally a southerner, having been born in South Carolina where he spent his early days.

Mr. Winningham says he begins the season with Florida melons and winds up with two varieties.

REV. P. W. ROGERS VISITS NASHVILLE

Among the visitors who spent a day in this city this week was the Rev. P. W. Rogers, D. S., D. D., Presiding Elder of the New Orleans District Louisiana Conference. The Rev. Dr Rogers was being shown around the city by Mr. Ira T. Bryant of the A. M. E. Sunday School Union. It is understood here that Rev. Rogers was a candidate for the management of the A. M. E. Book Concern at the last General Conference and that he had the support and indorsement of the State of Louisiana. He was on his way back home from the Bishop's Council that met recently in Denver and was a visitor to the National Baptist Publishing Board Plant and had a talk with the President of the Nashville Globe Publishing Company.

THE CAROLNA TIMES announces the organization of the Mortgage Company of Durham, a $250,000 corporation, with Pearson, Spaulding, McDougald, O'Kelly and other North Carolina business leaders at the helm. The company will sell stocks and bonds and make long term loans on Negro property.

NATIONAL FEDERATION OF COLORED FARMERS

J. P. DAVIS,
President.

C. R. RICHARDSON,
Chm. Board of Directors

TEN REASONS WHY YOU SHOULD BECOME A MEMBER

1. CO-OPERATION. This movement has for its main objective the bringing about of a more co-operative effort on the part of Negro farmers.

2. SIGNS OF THE TIMES. The signs of the times point to co-operative efforts in all directions, whether in production or distribution. The springing up of numerous chain stores is a splendid example of co-operative buying and selling exemplified in every community.

3. AMERICAN FARM FEDERATION. A splendid example of co-operation is the great work being accomplished by the American Farm Bureau Federation. (White). This organization is ten years old and has a membership of 303,000 in forty-five states. They have led the way.

4. URGENT NECESSITY. The colored farmer's position, with the vast majority living in southern states, makes the necessity for co-operative organization all the more urgent in order that economic life may be protected, and that Negro Farmers may build for themselves a fuller and more satisfying social life.

5. SELF HELP. Not for charity, but because he desires to help himself, is the reason why the Negro farmer must take his place beside his white brother in the present economic struggle, and thereby reap the bountiful harvest that will come from a united co-operative effort.

6. THE MODERN FARMER. Our periodical, The Modern Farmer, will from time to time not only serve to promote the best interests of its thousands of readers, but will also, in a bigger way, supply a long felt need for further advancing the great host of colored citizens who are industriously extracting from America's soil much of her bountiful riches.

7. BETTER TIMES. A new day of hope looms brightly before the Negro Race, with splendid organization and the necessary co-operation. This will come from the origination and performance of intelligent activities, as will be demonstrated through the National Federation of Colored Farmers.

8. FUTURE OUTLOOK. The future outlook for the Negro, not only on the farm, but in every walk of life, will grow brighter and better. In union there is strength. Modern methods of production and distribution as exemplified by this organization, will do much to bring about the desired conditions for thousands.

9. CONTINUAL GROWTH. The National Federation of Colored Farmers has not come about spontaneously, but with the great mass of her people still on the farm, either as land owners or as tenants, produces a splendid opportunity for continual growth as espoused by this organization.

10. ULTIMATE GOAL. With the Negro Farmers fully organized, they will be in a position to bargain collectively. Not only in buying supplies and in marketing products will this organization be a great source of strength to our Race, but it will also provide encouragement and support for many other movements that might be initiated for the improvement of conditions among Negro Farmers everywhere.

WHY NOT BECOME A MEMBER?

Dues $2.50 Every Six Months Or $5.00 Per Annum.

GREAT ORGANIZATION DRIVE

(Continued from page 1.)

all success. What helps the white farmers of America is bound to benefit colored farmers. To a large extent our interests are mntual and we will rise or fall together.

The sum of $100,000 will be spent by the A. F. B. F. to finance this drive. We only wish that the National Federation of Colored Farmers was able to spend 10 per cent of this amount of money to finance a similiar drive. Some day we will be able to do so.

Right now however, it is the dnty of Negro farmers, whether members or not, to send in to us the name and address of every Negro farmer in their communities. We want to acquaint our farmers with laws governing farm relief and send them other helpful literature. Your cooperation will be greatly appreciated. Address National Federation Colored Farmers, Vincennes Hotel, Chicago, Ill.

MR. ECTOR DISCUSSES COOPERATION

(Special to "Modern Farmer)

(Continued from page 1.)

The outstanding feature of the National Federation of Colored Farmers is co-operation.

"Let me speak a few words about farming. Fifteen years of my life I spent as truck farmer. I will say that farming is a fine vocation. Its origin is almost as old as creation. I don't know whether Adam was a truck farmer or not but in the 2nd chapter of Gen. we find that God planted a garden in Eden and Adam was put in there to dress it and keep it but I think his real experience began after he broke the law for we find in the 3rd chapter of the same book 'Therefore the Lord God sent him forth from the garden of Eden, to till the ground from whence he was taken.'

"I will not attempt to discuss this subject at length. You remember according to Bible history the plow had only one handle and it was mnch harder to hold it steady than onr modern plow. So we have this beautiful lesson from the Scriptures. 'He that putteth his and to the gospel plow and looks back is not worthy of the Kingdom.' So if we as farmers mean to succeed, we mnst not look back at past failures or mishaps, we must be constructive and not destructive."

WILL NEW FARM RELIEF LEGISLATION AID NEGRO FARMERS?

(Continued from page 1.)

farmers collectively. A trained hand and a clear head will help you individually. No law can take the place of honest, intelligent effort.

The Law That Is

Every Negro farmer should get a copy of the new farm relief bill and read it twice. Yon will discover that it is a remarkable piece of experimental legislation. It is entitled, "A bill to establish a Federal Farm Board to promote the effective mercandising of agricultural commodities. To place agriculture on a basis of ecnomic equality with other industries."

The biggest thing that the law will do will be to establish the Federal Farm Board. This Board will consist of seven members including the Secretary of Agricnlture. The business of this Board will be to attempt to bring more wealth and more happiness to the farmer. In order to do this it will attempt to give these organizations intelligent advised on production, diversification, and especially marketing.

The question of the distribution of farm crop surpluses is the main question of the day and will be the hardest to solve.

A revolving fund of five hundred million dollars has been appropriated. This fund will be loaned to farm cooperatives for the purpose of securing adequate storage facilities, extending the membership of cooperative associations, and educating producers in the advantages of cooperative marketing. It is distinctly stated that no part of this loan will be available to individual farmers.

What Law May Accomplish

This law will benefit no farmers who are not members of farm organizations. Organizations only are recognized. As these organizations are aided they, in turn, will be able to serve members profitably. They will become stronger and more influential in time.

It is expected that the proper distribution of farm crop surpluses will enable farmers to receive better prices for what they produce. Improper distribution creates untold abuses. The farmer will probably not be advised to produce less, on the other hand it will be gnaranteed that what he does produce can be sold at a profit.

You And The Law

If you are a cotton raiser, for you to be benefited you must be in a cooperative association of cotton raisers. Your association, probably aided by the revolving fund, will be able to sell your product at a fair advantage to you. If the market is glutted it will be able to store your cotton and hold it for better prices. You will be able to borrow money on your stored crop. The same will apply to producers of tobacco or of any other stable crops.

If you are a producer of perishable crops you must belong to an organization that handles and markets perishable products. The profitable marketing of perishables will have to be worked out. It is a fact that the present method is absolutely wrong in both theory and practice.

In the last analysis it all comes down to one main requirement on your part. You must belong to a farm organization to get farm relief of any kind. Our own organization. "The National Federation of Colored Farmers" offers yon an opportunity to get in line. It is essential that you accept this opportunity.

MAN WITH HOE MUST HURRY TO MEET DEMANDS

(Continued from page 1.)

United States. Last year shipments of the same products filled 550,000 cars or more than double the movement ten years ago. This does not include such field crops as white potatoes and sweet potatoes or much of the green products used by canning factories, according to a recent federal report

Chicago is eating its share of the nation's vegetable crop, in addition to consuming tons of vegetables harvested from the trucking area that covers thonsands of acres in northern Illinois, northern Indiana, and southern Wisconsin, Chicago, received nearly 40,000 carloads of fresh vegetables last year. That's more than 5,000 carloads above the receipts of vegetables in Chicago three years ago. These shipments include cabbage, cantalonpe, celery, lettuce, onions, white potatoes, sweet potatoes, strawberries, tomatoes, and watermelons.

B. C. Boree of the federal government's marketing staff says that the annual gain of at least 1,500,000 in population, does not explain all the increase in acreage and production of truck crops. "Our appetite for vegetables seems to be growing, both because of encouragement from health authorities and because it is now possible to have a wide variety of fresh vegetables in Chicago three years ago.

Chicago Does Her Share

"While the population increased about 15 per cent, car lots shipments of vegetables increased 140 per cent." Mr. Boree points out. Lettuce, green peas, spinach, string beans, celery, and cucumbers have made especially noticeable gains. Shipments of lettuce are now seven times as great as they were ten years ago, and range from 40,000 to 50,000 cars annually. Most of the lettuce originates in the far southwest and ends its journey in the markets of northeastern coast cities after about as long a jonrney as is possible within our continental borders."

—Chicago Tribune

WILL THE NEGRO FARMER RECEIVE BENEFITS

(Continued from Page 1)

There are those who feel that the Negro farmer will receive little relief from the new Bill, but the concensus of opinion seems to be that he will get all that is coming to him if he takes time by the forelock, if he will organize in counties and states, and then back up this with a national organization so that he becomes a potent factor.

The Kansas City Call, edited by Mr. C. A. Franklin, published a special dispatch from Washington, D. C., in a recent issue, in which this correspondent of The Call takes the optimistic view. The Call article says:

WASHINGTON, D. C.,—Lack of agricultural co-operative organizations will shut out Negro farmers from the farm relief legislation of this congress.

The farm relief bill was signed by President Hoover last Saturday. At the same time the president announced that he was asking congress for an initial appropriation of $150,000,000 of the $500,000,000 revolving fund authorized by the measure.

While there was some agitation for the appointment of a colored man to a vacancy on the Federal Farm Loan Board, no cognizance was taken of it by the president. It is expected that the appointment of a colored man to membership on the newly created Federal Farm Board will be proposed but with no degree of sincerity.

The bill as signed by the president provides for the creation of a Federal Farm Board of nine members including the secretary of agriculture as a member ex-officio, with one of the members to be designated as chairman by the president. The eight appointed members of the board will serve for six years at salaries of $12,000 a year. The board is authorized to make loans for agricultural co-operative organizations and commodity stabilization corporations out of a revolving fund of $500,000,000.

As far as could be ascertained there are no Negro agricultural co-operative organizations or commodity stabilization corporations.

The censns of 1920 showed 925,708 Negro farmers operating 41,432,182 acres of land. There were among them 218,612 owners whose farm property was valued at $554,158,002. Among the white farmers 24 per cent were owners.

Because of the lack of federal farm loan associations, Negro farmers were not able to get the benefits of the Federal Farm loan act of 1916. They have become discouraged, according to reports reaching government departments here.

Kansas City Call.

IS SATISFIED ON FARM

(Continued from page 1)

to the highest health of human race which can be found anywhere else.

Men have searched for centuries for the fable fountain of yonth and the nearest approach to that fountain which is yet to be discovered is the butter of the cow.

Without milk children languish the vigor of the adult declines and the vitality of the human race runs low

Patrich Henry, said upon one occasion, "I know not the course that others may take bnt as for me, give me liberty or give me death."

But I say unto yon ladies and gentlemen, I know not the course other girls and boys may take but as for me give an ideal country home.

Miss Grace Oliver,
At Blessing Texas.

THE COTTON CROP AND SITUATION

The first bale of cotton from the 1929 crop was sent to New York by aeroplane from the Rio Grande Valley in Texas last week. The cotton produced in this section is planted as early as February. The movement is fairly under way and July shipment will average about 75,000 bales.

The old cotton crop year ends in July. For awhile there has been a bearish feeling in several sections, caused by the belief that the planters increased their acreage. This belief however is not now so strong.

The Oklahoma and Texas crops received a set-back in the season caused by torrential rains. The Mississippi Valley District lost many acres from backwater and seepage. There has also been a wet season in Georgia, Alabama, and other southern states, and this has been highly favorable to weevil propagation. The Government Bureau of Entomology indicates that 10 of the 14 experiment stations weevil was heavier than last year, and at eight of the stations it was the heaviest ever known.

Investigations in the field in states of (northern) Louisiana, Miss, Ala., and S. C., show weevil infestation was very heavy.

The weevil pest destroyed 14 per cent of the 1928 crop.

Cotton consumption for the month of May was 36,000 bales larger than for April and 91,000 larger than for April and 91,000 larger than May 1928. Consumption of lint cotton for the crop year so far, is over 100,000 bales heavier than a year ago

All of these facts mean a big crop is needed this year. It is estimated that spinners of the world will need 2 million bales out of the present stocks before new cotton is available, and the present visible supply is only 2,727,000 bales.

Consumption of lint cotton is running around 15 million bales per year. The average carry-over every year is around 5 million bales.

A very large per cent of the carry over of lint cotton this year is low grade, and this is not suitable for spinners use. Some of the experts place the amount of low grade in the carry-over to total a million bales.

Weather conditions play a very important part in the final analysis, and it is too early to determine the crop's estimate, but everything indicates that the cotton farmers will get a most excellent price for their crop this year.

Along about the middle of August speculators will be making their rounds getting a survey of the crops and general conditions. They will be making all sorts of propositions to the growers for their crop.

We warn our members to hold to their cotton nntil it is ready for harvest, and we make the prediction now that cotton will bring better prices this fall than for the past several years. We all easily remember about 8 years ago how prosperity spurred us on to expand and then how prices cracked and business had a stroke of paralysis.

We urge caution in buying from every agent that comes along and especially those that have something to sell on the budget or installment plan. Watch cotton.

BIG PRICES FOR WOOL

During the week of June 24th, to 30th the demand in Boston for high grade wool was very good, and indications point to still higher prices. Texas 12 month and 8 month wools were selling at 90 to 95 cents per pound when cleaned and combed.

The new rate on wool inported into this country under the tariff schedule, if adopted will make prices still higher. The present tariff is 34c per pound and the new rate will be 36.

FARM BOYS AS FARM RELIEVERS

"Dads Should Take Lessons At Home," Says Illinois Farmer

In a letter to the Chicago Daily News, John T. Bramhall, Illinois farmer, advises relief-seeking farmers to look abont them and imbibe the lessons constantly being tanght by their progressive sons and daughters. Negro farmers should encnrage their children to experiment. An acre of land is the most valuable laboratory in the world and in it something new may be discovered every day in the year.

Mr. Bramhall's letter follows:

Have the farmers overlooked the fact that the great dynamic force for farm aid lies in their boys? In every state where agriculture is a leading industry special schools of agriculture of secondary grade are maintained. Every state also has its agricnltnral college and some have several. Practically all maintain extension departments with correspondence courses, farmers' institutes, movable schools and experimental farms. Fifty or more provide opportunity for stndents to prepare for teaching and summer schools are provided by many more. The importance of agricultural education is no longer questioned even in the most backward districts. The one-horse farmer will admit that if he cannot run a tractor or an anto he may learn how. And if he cannot produce a hundred bushels of corn, twenty bushels of wheat or a bale of cotton to the acre or blne-ribbon stock from his feed lot there are thousands of boys today who are showing him how it can be done.

Despite all the wailings of the fathers, the boys of the 4-H clnbs are showing their dads how to raise bigger crops on fewer acres, and despite the obstacles of Hessian fly, corn borer, boll weevil and a thousand other pests, they are demonstrating by daybook and ledger how the job can be done at a profit.

At the international live-stock show in Chicago last December the grand champion fat-steer prize went to Clarence Goecke af State Center, Iowa, a boy 12 years old, member of an Iowa calf club, Clarence gave the job of showing the steer to his sister Emma, 18, who did as well, the jndge said, as any experienced show-man. At $7 a pound the animal brought Clarence $8,039.10, besides the blue ribbon. In Iowa, Illinois, Kansas and other states in the corn belt boys of the 4-H clubs are taking prizes for superlative corn and wheat, and in the cotton belt, where a third of a bale or less of cotton is the rule, the boys are showing hundreds of examples of bale-to-the-acre cotton and sometimes making two bales.

Instead of going to Washington, and clamoring for "some form of relief" the farmers who have not mastered their trade would do better to sit at the feet of their children.

NASHVILLE MINISTERS RETURN FROM DENVER

After spending about a week from this city, quite a number of ministers of the A. M. E. Church are back from the Bishop's Council at Denver. Notable among those who attended this meeting are Revs. Anderson, Gray, Brown, Lewis, Pinkston and others. They reported a very successful stay in the Rocky Mt. City but declared the weather was almost as hot in Denver as it is in Nashville. Not any of them, however, had any particular statement to give out for publication but it is understood that they put some important matter before the Council, asking their support and endorsement.

Dr. Darby Class '29 Meharry Medical College left the city last Thursday in company with several others for St. Lonis, Mo. Dr.Darby will entern in General Hospital No. two.

THE MODERN FARMER

Vol. I. Nashville, Tenn., and Chicago, Illinois, August 15, 1929. No. 6.

THE NEW FARM BOARD

CONGRESSIONAL ACT CONSIDERED MOST IMPORTANT LEGISLATION

Personnel of Membership Represents Some of America's Leading Men

The Farm Board is considered the most important and responsible ever created by Congress. After mature deliberation the President has made the following selection:

Honorable Alexander Legge, Chairman. Mr. Legge was born on a farm in Wisconsin in 1866 and entered the employ of the International Harvester Company in 1891 and advanced by promotion until 1922 when he became President of the Company.

Honorable James C. Stone, Lexington, Kentucky. Mr. Stone is originally a Kentuckian, having been born in Richmond, Kentucky in 1878. He founded the Burley Tobacco Growers Association and was its President.

Honorable Carl Williams, Oklahoma City. Mr. Williams was born in Indiana. He organized the Oklahoma Cotton Growers Association and for a number of years was President of the American Cotton Growers' Exchange.

Hon. C. B. Denman, Farmington, Mo. Mr. Denman was President of the National Livestock Producers Association with head offices in Chicago.

This association operates in 12 states and has an annual gross business of over $150,000,000 dollars yearly.

Hon. Chas. C. Teague, Santa Paula, California. Mr. Teague was born on a farm in Maine in 1873, was founder and President of the California Fruit Growers' Association.

Hon. William Frank Shilling, Northfield, Minn. Mr. Shilling was born in Hitchinson, Minn. in 1872. Was President of the Twin City Milk Producers' Association.

Honorable Charles S. Wilson, Hall, New York. Mr. Hall was born in New York in 1879 and was Secretary of N. Y. Fruit Growers Co-op Packing Association, Inc.

After a few brief sessions in Washington the Board members journeyed to Chicago and held important conferences and as a result of which several small co-operatives were advised to merge into a national organization in order to get relief.

GEORGIA TOBACCO CROP

Atlanta, Ga. (Special to the Modern Farmer)—First offering of the Georgia brightleaf tobacco crop totaled something over 16 million pounds, which is an increase of over five and one-half million pounds and brought growers an increase of almost two millions of dollars.

The average price of this grade of tobacco here is about nineteen to twenty cents per pound. The 1928 crop price average was something over twelve cents per pound. The average of tobacco yield (all varieties) for the state is almost twenty-eight million pounds.

The following are the principal tobacco counties: Appling, Berrien, Brantley, Coffee, Cook, Jefferson Davis, Lowndes, Mitchell, Pierce and Tatnall. In these ten counties there are over three thousand colored farmers.

HEN PECKS SNAKE TO DEATH

On the large poultry farm of Mr. Liege Rivers near Griffin, Georgia, a hen was found in the coil of a large rattlesnake—both dead. The rattler had done his work, but was pecked to death by the hen, in fighting to protect her brood of chicks.

CALF HAS HEART IN THROAT

Clarence, Ia., July 13.—Veteranarians are fighting to save the life of a calf owned by W. D. Rix. The animal was born with its heart in its throat, and it is feared it will choke.

TOBACCO GRADING REPORTED

GOVERNMENT PROMISES TO SEE STANDARD MAINTAINED

After a long and hard fight final preparations for the inauguration of the government tobacco grading service will begin about the middle of August. The establishment of this service will begin in the principal tobacco growing states and gradually spread into the others. One branch of the grading has been opened at Lake City, South Carolina and this is to be followed by other branches in the state as well as in North Carolina, Virginia, Kentucky and Tennessee.

This tobacco grading service will be under the bureau of agricultural economics, United States Department of Agriculture, Mr. Frank B. Wilkerson, staff member of the bureau's tobacco section and Mr. William R. Wilson, expert tobacco grader opened up the first branch at Lake City.

Tentative standard grades and a reduction in the number of grades will be the principal feature under the change, and a corps of government graders are now being coached in the application of the standards

Mr. Wilkinson developed the classification of American grown tobacco now used by the department of agriculture and also the system of grades now in use. He is considered the highest authority in this line of work.

It is predicted that within another year this grading service will be extended to all of the tobacco growing states.

The National Federation of Colored Farmers have been fighting for government graders of tobacco for the past two years—even before farm relief was being considered.

Under the old rule and custom tobacco was graded by the buyer who was invariably in the employ of the large tobacco interests in the east, and the farmer was at his mercy by being forced to accept his bid based on his conception of the grade.

The Colored farmers of this country produce over ninety million pounds of tobacco every season, and this change in the system will mean at least one-half million dollars more in their pockets every year, if they are organized.

CONGRESSMAN OSCAR DE PRIEST SAYS NEGRO FARMERS SHOULD ORGANIZE

Take Advantage of Revolving Fund. If organizations meeting the requirements of the Federal Farm Board do not now exist, they should be formed.

In a release at the office of Congressman De Priest, the Illinois Member, emphasizes the great necessity of the Negro farmers of the country to organize if they hope to obtain the benefits of the new farm legislation now enacted into law. His statement is of paramount importance to every Negro farmer—those who are members of co-operative organizations and those who are not and who should form such co-operative bodies.

The once proposed measure, said he, is now a law and provides, among other things, "The board shall invite the cooperative associations handling any agricultural commodity to establish an advisory committee to consist of seven members, of whom at least two shall be experienced handlers or processors of the commodity, to represent such commodity before the board in matters relating to the commodity. Mem-

(Continued from Page 5)

TWO MILLION IN TOMATOES

GIBSON COUNTY FARMERS SET ENVIABLE RECORD

Milan, Tenn., July 29.—With the close of the tomato season in Gibson county last week, the farmers are more than $2,000,000 better off than they were at the beginning of the season. In an area of about twenty miles square about $2,500,000 have been distributed to growers and packers.

About 1,800 carlots have gone from Gibson county in the past three weeks to northern and eastern markets. This is not a big crop but the fair prices received made up for the shortage of a few hundred cars.

The shipping reports from the individual shipping points of the county are: Medina, 163; Milan, 576; Gibson, 225; Humboldt, 311; Trenton, 172; Fruitland, 170; Bradford, 60; Dyer and Rutherford (estimated), 30; a few cars have been shipped out since this report was tabulated and the final total will probably reach 1,800 cars. The price has not been so good the past few days, but has held up much better than was expected.

The season opened with the price at $2.25 per bushel and the price gradually ranged upward as high as $4 per bushel, which is about the best price ever paid for green wrapped tomatoes in this section. This high scale of prices lasted while the crop was at its best.

Gibson county has 5,954 white farmers and 1,216 Colored farmers. The principal farm product is cotton, there being an average of over thirty thousand bales harvested each year. Gibson County also produces over one hundred thousand bushels sweet potatoes each season. The Colored farmers by all means should have an organization in Gibson County.

GENERAL MARKET CONDITIONS

Wheat had had a sensational advance, and at a time when the farmers are in a position to sell. This means a cash profit in the pockets of the wheat growers, when it is badly needed. Generally when wheat advances it is too late to benefit the growers. Corn is also following wheat in the advance, and livestock has been advancing for several months, with the end not in sight.

This means that the farmer who markets his corn in the form of meat cannot go wrong.

Wheat is now between 50 and 60 cents per bucabove the low price of the crop season, and this is not bad for the wheat farmer.

Top cattle is selling at $12.60 per hundred pounds, and predictions are that prices will be much higher as the fall and winter seasons approach.

The price of corn has slowly crept above the dollar mark, and oats selling for about half the price of corn.

If the grains are sold direct they will return a nice profit to the farmers, and if they are sold as meat there will be still larger profits.

Reports as a result of operation of Indiana farms show that for every dollar's worth of grain fed to livestock the farmer made 32 cents. This means that the farmer made a third more profit from selling his grain as meat instead of as grain.

Put your spare dollars in calves and pigs.

The tobacco crop is fine and indications point to a very fine quality and yield. Prices are good, and with the installation of government graders, the growers will in all probability get more satisfactory prices.

Reports from the cotton belt vary. In some sections the weevil is very prevalent. He is there in a large majority.

(Continued on page 8)

WHEN SWEET POTATO MEETS YAM

PROF. CARVER'S EXPERIMENT BRINGS OUT MUCH INFORMATION

(New York Herald-Tribune)

Those sweet potatoes which informally and without urging reached a weight of twenty pounds apiece in a private garden at Miami are easy to believe in when one considers how astonishingly the different varieties of tubers wax in size, from Idaho to the equator. An Idaho baked potato seems to fill a dining car until it is placed beside the buried gold of our south—those giant sweet potatoes which go with barbecues and make credible the most extravagant estimates of southern hospitality. Yet both are mere dainty morsels when confronted by the hugest of the tropical yams—stupendous vegetables which are dug one at a time.

If you buy a seal-top yam in St. Croix, of our Virgin Islands, you must provide for its transportation, since it may quite possibly weigh 150 pounds. These massive prodigies are posed in solitary state on good sized tables when they are to be photographed as evidence of the land's fertility. Yams differ among themselves almost as much as they differ from sweet potatoes, with which they should not be confused, although the name yam was long ago transferred by African slaves from the vegetable they knew so well at home to our big yellow potato. Some species are native to the American tropics; some still grow wild there, and many have been brought from Africa and have thrived under cultivation here. Porto Rico alone is now growing eleven species of yams, some of them displaying thirty or more varieties Wonderful things take place underground in the West Indies, and yams will be yams.

Some of the experts claim there is more energy in the sweet potato than any other vegetable. For the past 25 years Dr. Carver has featured the sweet potato. He has made some startling discoveries thru experiments in his laboratories at Tuskegee.

In the larger terminal markets throughout the west there is always a demand for sweet potatoes, and if the Colored farmers who grow fully 25 per cent of the crop in this country, will properly grade and pack their potatoes, the Federation will be of considerable aid to them in finding real good buyers.

AID TO FARMERS SEEN IN MUSCLE SHOALS OPERATION

Hon. Edward Berton Almon, Congressman from Alabama in a recent statement issued to the public says "One of the chief causes of the bad condition in which farmers are, is due to the fact that lands are growing less fertile each year and as a result large quantities of commercial fertilizer are needed to replenish the soil.

The farmer is not making enough on each acre. Congress realized this in 1916 and authorized the development at Muscle Shoals for two fundamental purposes; to make explosives in time of war and fertilizer for the American agriculture in peace times.

About $140,000,000 was expended by the government at Muscle Shoals. We have one of the largest and best air nitrogen plants in the world, with an abundance of hydro-electric power with which to operate it, and fertilizer can be produced there at from one-third to one-half the current price. This has been shown by evidence of experts before the congressional committees.

We have failed after ten years of effort in congress to enact legislation providing for its operation. Both houses of congress have never agreed on a bill but one time, and that bill was not approved by President Coolidge.

(Continued on page 8.)

A HUGE CHEESE MANUFACTURED

TWELVE THOUSAND POUNDS IS THE WEIGHT REPORTED

New York State Fair at Martinsburg, was the Place of Exhibition

A cheese weighing 12,000 pounds made at West Martinsburg, N. Y. will be shown at the New York State Fair.

The cheese required 130,000 pounds of milk, equivalent of one day's yield from 6,000 cows. Nine jack screws were required for pressing it. The binding required 249 feet of cheese cloth.

DAIRY FARMING BRINGS WEALTH TO 'NEW SOUTH'

Value of Cattle in Dixieland Has Increased $16,568,000 Since 1925.

(Special to The Christian Science Monitor)

Louisville, Ky.—Dairying, according to bankers who ought to know, is a formidable, but friendly, rival of industry in promoting the prosperity of the "New South." Here in the state which numbers more dairy cows than any other in the South, among them the champion 3-year-old butter-fat producer of the world and the champion county group of heifers, the extraordinary strides which dairying has taken in the territory below the Ohio and Potomac Rivers are markedly noticeable.

Dairying, in its way, is a hand-maiden of industry since it is directly responsible for the establishment—all within a comparatively few years—of 381 dairy product plants, turning out butter, cheese and condensed and powdered milk.

Ten states south of the Ohio and Potomac, plus Arkansas and Louisiana, had on their farms 3,721,000 dairy cattle on Jan. 1, 1929. This was but a 1 per cent numerical increase over Jan. 1, 1928, but the value of these cattle grew 16 per cent—from $181,981,000 to $211,394,000. Obviously, the type of dairy cow is improving in Dixie, and the movement against the "scrub sire" is credited by colleges of agriculture with being responsible in great measure for this. Better cows mean not only more milk but more butter fat.

"Worthy of comment," says James Speed, Kentucky editor of the Southern Agriculturist, "is the fact that the value of the South's dairy cattle exceeds by $16,568,000 the value of all cattle in the southern states as shown by the census of 1925."

Specific instances of how the dairy industry has improved the situation of the cotton-growing farmer might be cited on every hand. Dairying has liberated many southerners from "one-crop slavery," and has given them the new freedom that comes with increased prosperity.

Kentucky leads the South in the number of cattle with 493,000, Tennessee is second with 437,000 and Mississippi third with 390,000, but Miss. is sixth on the list in the matter of cattle value. Virginia and Arkansas each have 382,000 dairy cows, but Virginia is third in the value list and North Carolina, with 294,000 cattle, ranks fourth.

FARMERS' SUPPLY BUYERS TO MEET HERE TOMORROW

(Chicago Tribune, Sunday, July 14)

The American Farm Bureau federation has called a meeting of state farm bureaus to coordinate the activities of organizations that buy supplies for farmers. The meeting will be held at the Chicago federation's headquarters tomorrow. Managers of the various state farm bureau purchasing departments will attend the meeting.

No colored farmers present.

Suffered a Long Time

MRS. ALTHEA BURRIS, 802 E. Vine Ave., Knoxville, Tenn., of whom a picture is printed above, writes:

"I suffered a great deal and a long time with a pain in my side and extreme weakness in my back. It hurt me to straighten, and I had quite a bit of pain when I stood on my feet.

"I was looking around for something to help me. I read in the newspaper about Cardui, and decided to try it. After my first bottle, I felt better. I continued taking Cardui until I had finished six bottles. By that time, I was stronger and better than I had been in a long time."

Cardui has been in use by women for over 50 years. Try it for your troubles.

For sale by all druggists.

NOTHING FOR INDIVIDUALS

(Pittsburgh Courier)

At its fourth session the newly-created Federal Farm Board decided that loans under the act were authorized only to regularly organized co-operative associations and not to individuals. Mr. Alexander Legge, president of the board, stated that thousands of applications for loans had been received from individual farmers whom he wished informed that they could as individuals expect nothing.

As the Pittsburgh Courier has said time after time, we are living in an organized world in which the individual counts for little. In order to get anywhere nowadays it is absolutely necessary to be organized, and militantly organized at that. Negro farmers like Negro laborers have been content to remain individuals on the economic field and they will, of course, have to suffer the consequences. Because he has remained ignorant or indifferent to the necessity for joining farm cooperatives, the Negro farmer, who needs far more relief than the white farmer will get nothing.

Of course, the Negro is organized but the sort of organization in which he is largely engaged has little or no economic value. He has church and fraternal organizations in great number, greater, perhaps, than is necessary, but he has no economic organizations created for the purpose of protecting his agricultural interests. Even where white economic organizations are available and would welcome his membership, he has hesitated to join them.

We would like to see Negro farmers get some of the money that is going to be dispensed for the relief of those engaged in agriculture. We can, however, see no way for the Negro farmer to get any of it so long as he persists in functioning as an individual. Nor do we believe the Negro farmers entirely to blame. They have received little or no instruction and advice from the numerous Negro farm agents and officials of Negro agricultural institutes that dot the South.

There is still, time, however, for something to be done. The Negro farmers if they are shown the way, will take as willingly to economic co-operation as the white farmers. They only need to be shown. We hope those Negroes who are supposed to be familiar with such matters will jump in and do a little agitational and organizational work before all of the farm relief money is appropriated.

The above editorial was from a recent edition of the Pittsburgh Courier. It is more than timely. It sounds a note of warning to the Colored farmers. Since our last issue of the Modern Farmer different groups of white farm organizations have held meetings principally in the middle western states and increased their activity in getting together. In Chicago to our knowledge there has been six large gatherings, and not one Colored farmer was in evidence.

The white farmers are qualifying and will be eligible for all the relief to be given and offered by the new farm board.

For the benefit of our readers, we are giving the amount of principal crops raised by Colored farmers:

Cotton, four million bales or 37 per cent of average crop.

Corn one hundred million bushels or 3.5 per cent of average crop.

Oats, four and one-half million bushels, or .4 per cent of average crop.

Wheat, four million bushels or .5 per cent of average crop.

Rice, twenty million pounds or 9 per cent of average crop.

White potatoes, four million bushels or 1 per cent of average crop.

Sweet potatoes, twelve million bushels or 21 per cent of average crop.

Tobacco, ninety million pounds or 10 per cent of average crop.

Watermelons, thirty-two per cent of average crop.

With these facts before you, there is no reason why you should not organize and protect your interests before it is too late.

SMALL FARM CO-OPERATIVES MUST MERGE TO GAIN HELP

(From the Chicago Tribune Press Service.)

Washington, D. C., July 22.—(Special).—Combinations of small farmers' cooperative organizations to eliminate duplication of terminal and warehousing facilities must be effected before financial assistance will be extended by the federal farm board under a policy announced today. The announcement was made in response to an appeal from Florida citrus fruit growers for help to market their fall crops and stem the ravages of the Mediterranean fruit fly.

During today's hearing of the petitions of the Florida citrus exchange and the Florida United Growers for loans to finance the installation of equipment to kill the larvae of the fruit fly it was disclosed that both organizations have terminals and warehouses scattered through the same section.

Representatives of the citrus farmers were advised that no loans would be made until they merged and thereby reduced expenses by eliminating duplicated facilities.

Legge Evolves Policy

Commenting on the decision, Alexander Legge, chairman of the farm board, declared the new policy would be followed in future dealings with other cooperatives as a means of placing marketing systems on a sound financial basis. Out of the nearly 12,000 co-operative groups in the country, only 500 are comprehensive organizations, and it has been estimated that if the indicated mergers are accomplished not more than 1,000 co-operative organizations will exist.

The board's announcement of the new policy was contained in a review of the hearing granted the Florida citrus growers, which concluded:

"The board was most sympathetically inclined. It pointed out to this committee that the evident intention of the agricultural marketing act was to encourage group action to a point so that intelligent direction and control could be had of the movement of crops so as to avoid surpluses and to avoid gluts and famines and unnecessary and expensive duplication of facilities.

Told to Consolidate

"The board therefore suggested to these two co-operative groups that they should first get together in a consolidation of this co-operative movement and come to the board with a unified program looking forward to a more orderly distribution of the citrus crops of Florida. They were assured that if they could do this the board would go just as far as it possibly could in helping to finance them in their most difficult situation."

CO-OPS TO FORM FARM CHAMBER TO DIRECT WORK

Leaders from All Sections of U. S. Teaming Up.

Baton Rouge, La., July 31.—(Special)—The cooperative farm leaders now in session here are ready to approve the proposal to create a national chamber of agricultural co-operatives, which its sponsors declare will be to agriculture what the chamber of commerce of the United States is to business men, and the American Federation of Labor is to the organized workers of the nation.

The chamber will be ready to function almost immediately. The headquarters will be in Washington and from its offices there the officers of the chamber will champion the cause of the farmers before the committees of congress and for the benefit of the public generally.

Farmers Get Together.

In the three days the American institute of co-operatives has been in session, it has become more and more evident that for the first time in history the farmers of all sections of the country are getting together. Cotton, wheat and corn growers apparently are ready to team up.

If the farmers of the west and of the south begin to think alike, will they also vote alike? The farm leaders from 31 states who are now in Baton Rouge prefer not to answer the question. Just now they want to look on the farm problem as a great nonpartisan economic issue in no wise concerned with partisan politics. They hope to keep it out of politics.

Conferences Continue

Formal approval of the plan for a farm chamber will be voted Friday.

Today was spent largely in conferences of Chairman Legge, Secretary of Agriculture Hyde, and other members of the farm board, with the representatives of the various co-operative groups. These conferences were executive and the discussions general in nature.

DEVELOP POULTRY RAISING IN ALASKA

Anchorage, Alaska—(A. P.)—Poultry raising is being developed in Alaska with the discovery by Prof. Gasser of the Fairbanks agricultural college and school of mines that short tundra moss is one of the best chicken feeds obtainable.

Like all varieties of sub-arctic mosses, the short moss, a perennial, cures on the ground and when cut may be cured like hay.

Several mining companies have established their own poultry yards where transportation facilities would make the cost of eggs and chickens prohibitive.

NOMADIC CLASS TO TOUR NEBRASKA IN FARM STUDY

Lincoln, Neb., July 3—(A. P.)—A nomadic summer school class of the University of Nebraska will travel 1,800 miles through the state this summer studying crop and soil problems under direction of Dr. F. D. Keim of the college of agriculture.

The class, limited to twenty, will leave here July 29 and return August 10. The tour has been arranged for the purpose of studying the principal geographic regions and the types of soils and farming found in each.

Problems of hilly, glacial land, the level loess plains, grazing, irrigation, and land values in general will be considered. Four experimental sub-stations will be visited.

GORED BY BULL

While leading his bull to pasture Mr. Curtis Pinnell, farmer near Kansas, Illinois was severly gored and may die from a punctured lung. The animal lifted him on its horn over ten feet in the air, breaking his collar-bone and a number of ribs.

OVER 34,000 COLORED FARMERS IN TENNESSEE

Some Vital Statistics About Farmers In the Volunteer State Taken From Government Records.

There are 34,647 colored farmers in the state of Tennessee who are ursuing farming as a livlihood in some form or other. This startling fact and splendid information was released recently by Mr. James Perry Davis, President of the National Federation of Colored Farmers, on his visit to Nashville, after he had spoken in Murfreesboro, Rutherford County, and in Clarksville, Montgomery County. He further gave the information that there are 7686 colored farmers in Tennessee who own their own farms. These records were taken from Government reports. They serve as splendid information to his hearers and to his audiences where he spoke.

The complete list of figures given out by Mr. Davis for Tennessee and Rutherford County is:

Tennessee

Total value of land and buildings $883,646,221.00

Number of farms $252,669, comprising 17,901,139 acres.

Cotton, 358,943 bales.

Sweet potatoes, 2,399,353, bushells.

Corn, 60,248,771 bushels.

Wheat, 2,892,296.

Oats, 954,459.

Hay, 1,164,853.

Tobacco, 98,632,359 pounds

Apples, 3,798,917 bushels.

Peaches, 2,162,200.

Chickens raised 16,148,484.

Chicken eggs produced 41,038,754 dozens.

Number counties in state, 91.

White farmers 218,022.

Colored farmers 34,647.

There are 7,686 colored farmers in the state who own their farms.

Rutherford County Tennessee

Value of crop $3,910,367.00.

Number of farms 5,862 comprising 392,960 acres.

Number white farmers 4,302.

Number colored farmers 1,560.

Value of farm property $23,274,604.00.

Livestock on farms 2,157,903.00.

Breeding sows 2,763.

Dairy cows 12,897 produced 4,212,003 gallons milk.

Chickens, 309,121, valued at $244,206.

Chickens eggs produced 1,132,928 dozen value 305,981.00.

Grain Harvested 1,233,251 bushel.

Bales cotton produced 15,423.

Sweet potatoes 7,284 bushels.

Peaches, 47,941 bushels.

Apples, 23,658 bushels.

Firewood cut 20,920 cords.

Expenditures

2,130 farms reported having spent $233,334.00 for feed

2,684 farms reported having spent $95,845.00 for fertilizer.

Value of farm products sold co-operatively $268,523.00.

LETTERS TO THE MODERN FARMER

Humboldt, Tenn., The Modern Farmer, Gentlemen:—I have received a few copies of your paper and enjoy reading it so much. It is very inspiring. I cannot send in my subscription at present, but will do so very soon, as I want to read it and keep posted on news of interest to farmers.

Very truly yours,
W. J. Leets.

Keysville, Ga., The Modern Farmer, Dear Sirs:— I received a copy of your paper in the spring, which I understood was a sample copy I noticed some very helpful points in The Modern Farmer, and I have been considering the matter of joining the corporation and subscribing for the paper.

I will keep in touch with you, because I enjoy the contents of the paper, and I think it very important.

Yours as ever,
R. A. Brantley.

Athens, Ga., Modern Farmer, Gentlemen:—I have received two or three issues of your paper, and wish to say that I like it fine. I think it is the thing we poor farmers need to stay in touch with the times. I will send my dollar in some time soon for a year's subscription.

Yours for cooperation,
J. W. Stepney,

MR. SAM ROBINSON OF MOUNT PLEASANT S. C., WRITES THE MODERN FARMER.

The Editor of The Modern Farmer:—Dear Sir:—I am about to take step in this great world with hand and heart. I am now at the point of asking your advice in a step that I want to make for the betterment of our race. I want to solicit as many farmers as I can to subscribe for The Modern Farmer. By doing this, I believe they will gain a clear view of agricultural conditions, which cannot help but to helpful to them. I might add that heretofore, I am on my feet, erect on my feet, I have been sitting down, but now in position and ready to go. Awaiting a reply from you, I remain.

Yours truly,
Sam Robinson.

TAILORING AGENTS!

$5.00 and $6.00 Profit in Advance on every Sale

ALSO BONUS

Competitors have no chance against this premier of all tailoring lines. Year in and year out our agents earn big and steady profits. Even beginners make as much as $100 per week, and up.

SELLING PRICE
Fine ALL Wool Suits $23.50

Woods' Suits, topcoats under any other name would cost $35. Made strictly to measure in the latest fashions with tailoring that exemplifies the craft. Guaranteed linings and trimmings. Always a perfect fit. Complete outfit of large samples, fashions, tape measure, order blanks, etc. put up in beautiful carrying case FREE.

Write now for exclusive agency. Experience not necessary, but if you have had some, mention it.

OLIVER E. WOODS & COMPANY
Famous for 20 years

Whitens Brown Skin
in only 1 minute or money back!

Test Amazing New Fluid Without Risk

If you want to quickly whiten and completely change the color of your skin in just one minute, you should make this simple test.

First, look carefully in your mirror and see just how dark your skin now appears. Then, give your face a one minute massage with Spanola—made from the newly rediscovered old Spanish Formula for instantly whitening skin.

In less than one minute you will see truly amazing results. A light, white-toned beautiful skin will appear that will be envied by all your friends and acquaintances—but it is not a matter of what your friends will say or think—your mirror will tell you the story. Instantly prove to yourself, without question or doubt, the effectiveness of Spanola. It is the greatest beauty discovery of all times.

It will give you the alluring natural skin beauty you have always wished for in a harmless, beneficial and instantaneous way. No matter how dark or unattractive your skin may be, you should test SPANOLA and see what a difference it makes.

Make Test at Our Risk

Would you like to test Spanola without risk? Would you like to see how much whiter and more beautiful it can make your skin? See what a remarkable improvement it makes in less than one minute, then if not simply delighted, your money will be refunded for the asking.

Send no money. Simply mail coupon or write. When package arrives, pay postman only $1.67 for the regular large size bottle. Test Spanola just once. Then if not delighted, return it and your money will be refunded, without comment. Mail coupon today. Dept. B.

COLORED FARMERS URGED TO ORGANIZE

WASHINGTON, D. C. Aug.—(CNS)—The colored farmers of the country Gare slowly but surely organizing themselves into farmers' alliances and cooperative associations in an effort to satisfy the condition precedent to obtaining aid through the Federal Farm Board, which will be strictly adhered to, according to a recent announcement.

A number of colored farmers associations have been formed recently and numbers of others are springing into being as a result of the announcement by the Federal Farm Board that its loans will be restricted to marketing agencies owned and controlled by farmers.

A nation-wide appeal for the American farmer to organize cooperatives is being sent out by the Federal Farm Board and every possible means of communication is to be employed to reach the farmers and urge them to form responsible organizations with which the board may deal.

Alexander H. Legge Chairman of the Farm Board, calls attention to the fact that the Board was directed under the recent farm relief act, to do its relief work through the cooperative marketing agencies.

"The farm relief act is essentially to assist cooperative producer-owned agricultural associations," he declared. "We want the farmers of the country to organize."

Chris Christensen, secretary of the Board and a leader in the cooperative marketing movement, estimates that only about one-third of the 6,000,000 farmers of America are now organized. The proportion of unorganized colored farmers is considerably higher, but has been cut down by the recent activity and organization of the farmers in several of the agricultural communities. —The Chicago Bee of August 4th

BETTER DAYS. FOR THE FARMERS

On the whole, the farmers of the central states may regard recent events at Washington with considerable satisfaction. The new farm board, headed by Mr. Legge is dominated by men of ability and attainments. The board has lost no time in getting down to business. It has announced its policies and conferred with the representatives of producers' organizations through which government aid is to be extended to the individual farmers. No one can doubt that the board means business.

Perhaps the most hopeful aspect of the situation is the determination to make the farmers themselves responsible for the success or failure of relief measures. The nation is not to be burdened with a new army of functionaries who will draw their salaries at the expense of taxpayers and producers. The farm board will occupy itself principally in assisting farmers in organizing themselves into large business units and in advancing credit to such organizations when formed.

The wheel has turned full circle. A few years ago the farmers found their leaders among those who shouted loudest against big business, its methods and its relations to the consuming public. Today the farmers are finding in the methods of big business their own economic salvation. They are combining to control production and supply in accordance with the power of the markets to absorb their goods. Further, they are going to congress for exactly the sort of tariff help which agrarian demagogues condemned only a few years back. And the indications are increasing that the farmers are going to get a tariff corresponding pretty closely to their needs.

The tariff bill as it has been drafted by the senate committee reflects clearly the protests and demands of farmer groups which were dissatisfied with the house draft. The duties on shingles, for instance have been removed. The duties on dairy products have been raised. In general, the duties on what he farmer buys are lower in the senate than in the house bill and the duties on what the farmer sells are higher.

It appears that at last the farmers are on the way to prosperity. They seem to have abandoned the old tactics of reviling and opposing the more successful and to have resolved to employ the tactics of success on their own behalf. The change is welcome. It promises much for the welfare of the whole country and particularly for this region.

The above editorial from the Chicago Tribune of August 7th.

This is not only timely, but between the lines it sounds a note of warning.

The Colored farmer is the farthest down. The Farm Board and the Secretary of Agriculture backed by the President and both houses of Congress are urging ORGANIZATION.

For the next thirty days there will be little to do on the farms. The crops are "laid by" so to speak and it is the duty of every Colored farmer to get together.

Since last February we have been preaching organization.

Never before in the history of farming has the Negro farmer been afforded the advantages of a National organization. The National Federation of Colored Farmers, Vincennes Hotel Chicago stands more than willing to give you information necessary for you to become eligible to farm relief.

They have a staff of experts both in marketing and organization, and will gladly aid you. In this issue there is a blank application for membership. Clip it sign with your full name and address and enclose money order or American Express for $5.00 and mail same to the National Federation of Colored Farmers at once.

ROADSIDE FRUIT MARKETS PLANNED BY GROWERS' BODY

One Will Be West of Chicago, Other at Bloomington.

Roadside co-operative fruit and vegetable marketing systems, one west of Chicago and another with Bloomington as the center, will be put into operation this year by the Illinois Fruit Growers' exchange, A. B. Leeper, manager, announced today. It will be the first cooperative endeavor of its sort in the United States.

The plan contemplates that all kinds of fruits and vegetables grown in the state will be offered for sale thru roadside markets. Such products as are grown in the vicinity of the markets will be furnished by the local growers, while products which are not grown locally will be delivered to the markets by truck and rail.

The prices at which the products will be sold thru the roadside markets will be the wholesale prices that growers are receiving at shipping points, plus the cost of transportation and necessary operating expenses.

Among the organizations who have pledged their support to the fruit growers are the Illinois College of Agriculture, the Illinois Chamber of Commerce, the state department of agriculture, the Illinois State Horticultural society and the Illinois Agricultural association.

TO SECURE BEST RESULTS FROM BULL FEED WISELY

In order to secure the best results with the bull, it is necessary that he be fed very carefully in order that he does not become too fat and sluggish, therefore a poor breeder.

In feeding the mature bull, a very satisfactory grain ration can be made up of: One hundred ponnds ground corn, 50 pounds wheat bran, 40 pounds oats, ten pounds oilmeal, five pounds bonemeal.

It is not often that the bull will need more than two to four pounds of such a grain mixture per day before he is put to service. A two-year-old bull when in service will probably require a pound of such a grain mixture per day for each 100 pounds of live weight; therefore, if he weighs 1,500 pounds he would require 15 pounds of grain per day if in good condition; but if thin, would probably require 18 to 20 pounds per day while being used. Mature bulls should have just enough grain to keep them in good, vigorous condition but not too fat. Mature bulls often become slow breeders when they become fat.

As a general thing a limited amount of corn silage may be allowed to the mature bull, but generally not over a half feed such as 15 or 20 pounds per day. Along with the silage a mature bull can usually have all the alfalfa or clover hay he will eat without waste. Most authorities claim that heavy feeding of silage makes the bull a slow breeder.

TO KILL DANDELIONS

The national garden bureau recommends the following method for killing dandelions:

"Dandelion eradicators in the form of chemical formulae are now staple articles of the horticultural trade and are efficient if applied according to directions. The active principle in most of them is sulphate of iron, which may be purchased by itself and applied according to directions furnished with it.

"Much interest has been manifested in the new preparation devised by British scientists which has come into popular use abroad known as 'lawn sand.' The great advantage of this preparation is that it is easily mixed at home and easily applied and a spray is not necessary. The mixture consists of one-half pound of sulphate of iron, one and one-half pounds of sulphat of ammonia, a valuable lawn fertilizer, and nine pounds of sand, the whole being thoroughly mixed together.

"The British authorities advise using this 'lawn sand' at the rate of four or five ounces to a square yard. For practical purposes without a scale handy to measure ounces, a tablespoonful to an ounce may be taken, heaped moderately. This proportion apparently is designated for one application a season and to be thoroughly watered in after application."

FEEDING COWS IN SUMMER

Dairymen who do not have sweet clover pasture should prepare to feed their cows hay or some other roughage and a liberal grain ration, especially where the milkers are heavy producers.

Dairy feeding experts have come to the conclusion that flies which tantalize cows in summer are blamed too much for the decrease in production common during the hot days. They find that where dairymen feed liberally from the latter part of June until the last of August they are able to keep the milk flow up fairly well. Neglecting to feed cows grain and roughage in summer, particularly when the grass is short, not only cuts down on the amount of milk produced during hot weather, but probably leads to a reduction in the milk flow the following winter. Having to fight flies on a skimpy allowance of feed causes cows to become thin and run down, according to practical dairymen.

HOME FERTILIZER MAKING DESCRIBED BY GOV. CHEMIST

At "hog-killing time," and at any other time when animals are killed for meat on the farms of the United States there is usually a waste of the inedible offal which has value for fertilizer. Only too often this is allowed to become not only a waste but a danger to sanitation. G. P. Walton, of the United States Department of Agriculture, estimates that in a year this offal amounts to a third of a million tons. For disposal of this waste and for realization of its fertilizing value, Mr. Walton makes the following suggestions, the result of experimental work in the department:

"Open-kettle rendering of offal and cooking of the shed blood is ordinarily feasible on the farm. A 65 gallon caldron or open-kettle cooker with stove complete can be purchased for $20 or $22 f. o. b. factories in Michigan and Ohio. By boiling the fresh offal for several hours wet "tankage" that is safer than the raw offal for direct feeding to hogs may be obtained, and also considerable grease of some commercial value. The bulk of the manure can be eliminated by chopping up the offal and sluicing it with water. The blood recovered from the slaughtering can be cooked with the offal.

"It has been found feasible to prepare air-dry fertilizer material from the wet "tankage," and even from the hashed raw offal, by mixing it with simple preserving agents and allowing it to dry in the air under shelter. Freshly crushed quicklime gives fair results as a preservative to use during winter. A mixture of quicklime and the wet tankage which is produced by open-kettle rendering of sheep's offal, will dry during the winter to an inoffensive product that may be easily ground to meal. One pound of quicklime may be used for every 10 pounds of tankage. In these tests the air-dry product contained 6 per cent of ammonia and 11.2 per cent of bone phosphate.

"Ordinarily commercial superphosphate gives the most promising results of any of the preservatives tested. A mixture of moist tankage made from hog's offal, with 1 pound of 16 per cent superphosphate (acid phosphate) to every 3 pounds of the tankage, dries in mid-summer without becoming offensive. In the test the mixture was spread out in a shallow box and raked over frequently. Four weeks after mixing it was in condition for grinding and bagging. The product contained 2.8 per cent of ammonia and 7.6 per cent of available phosphoric acid.

In preserving raw offal or blood with acid phosphate it is advisable to use more of the preservative (about 4 pounds for every 10 pounds of the hashed offal or blood) and to include some nonalkaline absorbent material, such as dry chaff, peat, or gypsum, to keep the compost from becoming liquid. By insuring a sufficiently high acidity, putrefaction, and the breeding of flies may be avoided.

"This composting process may also prove useful in rural districts for converting other perishable material into

CROPS IN FLOOD AREA GROWN FROM SEED GIVEN BY RED CROSS

Washington, D. C.—Crops of an estimated value of $48,314,162 were grown in seven states in 1927, and 1928 from seed furnished Mississippi Valley flood sufferers by the American Red Cross, according to statistics made public today.

This seed cost $2,600,000 and was distributed as part of the American Red Cross rehabilitation plan in the valley following the disastrous flood of 1927 and the repeated flood conditions in 1928 in the Mississippi river tributaries.

The estimated value of the cotton crop in these seven states, from the seed furnished by the Red Cross, was $21,860.78. Other crops and their estimated value follow: corn, $13,587,018; soy beans, $858,385; cow peas, $2,603,149; alfalfa, $2,130,083; oats, $1,031,146; wheat, $757,437; sweet potatoes, $647,339; sugar cane, $632,852; sorghum and sagrain, $620,361; millet and sudan, $234,666; Irish potatoes, $233,060; and rye, $117,908.

States in which the seed was given and which are covered by these estimated figures are Arkansas, Illinois, Kentucky, Louisiana, Mississippi, Missouri, and Tennessee.

The statistics show that the crop value for the year 1927 was $30,609,565 from seed given that year, and $17,704,597 in 1928, when the floods were not so disastrous.

BROOD OF WINGLESS CHICKENS ANNOUNCED

Often pullets need more room in the brooder house and taking out the cockerels is the most practical way to provide more space. With the cockerels out some poultrymen find it a good plan to keep the pullets in the brooders until it is time to put them in their laying qaurters. Cockerels may be sold as broalers. Where they are kept for the breeding flock they should be housed and ranged away from the pullets.

Dr. R. T. Renwald, Omaha poultry fancier, has produced a brood of chickens without wings and toenails, says the World-Herald. The chickens, Dr. Renwald is quoted as saying, can not fly or scratch.

"Each year," said the doctor, "when chickens moult their wing feathers, egg production is reduced to such an extent that average yield of a hen is about fifty eggs. Without wing feathers chickens are not bothered by moulting and should produce 300 eggs a year."

Free to Asthma and Hay Fever Sufferers

Free Trial of a Method That Anyone Can Use Without Discomfort or Loss of Time

If you suffer with those terrible attacks of Asthma or Hay Fever; if you choke as if each gasp for breath was the very last, don't fail to send at once to the Frontier Asthma Co. for a free trial of a remarkable method. No matter where you live or whether you have any faith in any remedy under the Sun, send for this free trial. If you have suffered for a lifetime and tried what you thought was the best skill known to cope with the most terrible attacks of Asthma, if you are discouraged beyond hope, send for this free trial. Simply mail coupon below. Do it to-day.

The Modern Farmer

Official Organ of the National Federation of Colored Farmers

James P. Davis - - President
Cornelius R. Richardson - Secretary
Leon R. Harris - - Editor

Published Monthly by the Modern Farmer at Nashville, Tennnessee, and Chicago, Illinois.

Nashville, Tenn., Office: 447 Fourth Avenue, North.

Chicago, Ill., Office: Vincennes Hotel, 36th and Vincennes Avenue.

Devoted to the interests of the Farmer, Truck Gardener, Livestock and Poultry Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 447 4th Avenue, North, Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

TO THE COLORED FARMERS OF THE UNITED STATES:

The time has arrived when the Colored Farmers of the United States are able to aid themselves through an organization which has as its main objective, CO-OPERATION; devoted to the practice of diversification of crops, correct methods of grading, packing, shipping and marketing of live-stock, fruits, vegetables and grain, and also the purchasing of needed farm supplies co-operatively. To you a farmer, whether owner, manager, cropper or tenant, this organization is absolutely necessary. How many are the farmers who know that in several sections of the cotton-belt Colored farmers have carried their cotton to market, have had their good middling graded as low, and have been told that a bale which weighed 510 pounds when it left the farm only weighed 470 pounds? How many have been told by track buyers that the watermelon market was over-supplied, and 75 or 80 dollars per car was all they could afford to offer, when, as a matter of fact the market was offering more than twice that amount? Many farmers have been misled about such products as sweet potatoes, white potatoes, peas, beans, hogs, chickens eggs and butter, peaches, apples, strawberries and other fruits.

In terminal markets like New York, Chicago, Philadelphia, Cleveland, St. Louis and other large cities there is always a good demand for fruits and vegetables. You have in the National Federation of Colored Farmers both representation and protection. We keep you posted on prices, find buyers for your products and give correct information as to grading and packing. To the western farmers of our group we are in position to bring you in touch with our brother farmers of the South and find you a good market for high grade hogs, sheep, cattle and chickens, seed corn, wheat and oats. Such exchange will bring to a higher standard the stock and products of southern farms. For the middle western farmers we are able to find markets for hay, white potatoes, apples and other products.

It will also be our aim to aid the farmers of our group in securing loans through the Federal Loan Banks, live insurance companies and capitalists. In fact, the National Federation of Colored Farmers is your Clearing House.

Farm leaders, students of the farm problem, law makers, business men all unite into saying that organization is the real solution of the farm problem. Over two million white farmers are organized. If it is essential for them to get into organization it is more than necessary for us to get together.

We are receiving hundreds of letters every week asking for information relative to the new Farm Bill and the policies of the Federal Farm Board and advantages gained by becoming a member of our Federation.

We are giving you herewith a copy of the principal points in the Farm Bill as passed by the 71st Congress.

We will further state that in a statement issued by Hon. Andrew H. Legge, Chairman of the Farm Board, he said that the Board was to help the farmer help himself, and urged organization as the first step toward farm relief. The Board will not recognize the wants of the individual farmer. Relief begins with organization, which of course means strength.

(PUBLIC—NO. 10—71ST CONGRESS)
(H. R. 1)

An Act To establish a Federal Farm Board to promote the effective merchandising of agricultural commodities in interstate and foreign commerce, and to place agriculture on a basis of economic equality with other industries.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

Declaration of Policy

Section 1. (a) That it is hereby declared to be the policy of Congress to promote the effective merchandising of agricultural commodities in interstate and foreign commerce, so that the industry of agriculture will be placed on a basis of economic equality with other industries, and to that end to protect, control, and stabilize the currents of interstate and foreign commerce in the marketing of agricultural commodities and their food products—

(1) by minimizing speculation.

(2) by preventing inefficient and wasteful methods of distribution.

(3) by encouraging the organization of producers into effective associations or corporations under their own control for greater unity of effort in marketing and by promoting the establishment and financing of a farm marketing system of producer-owned and producer-controlled cooperative associations and other agencies.

(4) by aiding in preventing and controlling surpluses in any agricultural commodity, through orderly production and distribution, so as to maintain advantageous domestic markets and prevent such surpluses from causing undue and excessive fluctuations or depressions in prices for the commodity.

(b) There shall be considered as a surplus for the purposes of this Act any seasonal or year's total surplus, produced in the United States and either local or nation in extent, that is in excess of the requirements for the orderly distribution of the agricultural commodity or is in excess of the domestic requirements for such commodity.

(c) The Federal Farm Board shall execute the powers vested in it by this Act only in such manner as will, in the judgment of the board, aid to the fullest practicable extent in carrying out the policy above declared.

Federal Farm Board.

Sec. 2. A Federal Farm Board is hereby created, which shall consist of eight members to be appointed by the President, by and with the advice and consent of the Senate, and of the Secretary of Agriculture, ex officio. In making the appointments the President shall give due consideration to having the major agricultural commodities produced in the United States fairly represented upon the board. The terms of office of the appointed members of the board first taking office after the date of the approval of this Act shall expire, as designated by the President at the time of nomination, two at the end of the first year, two at the end of the second year, one at the end of the third year, one at the end of the fourth year, one at the end of the fifth year, and one at the end of the sixth year after such date. A successor to an appointed member of the board shall have a term of office expiring six years from the date of the expiration of the term for which his predecessor was appointed, except that any person appointed to fill a vacancy in the board occurring prior to the expiration of the term for which his predecessor was appointed, shall be appointed for the remainder of such term. One of the appointed members shall be designated by the President as chairman of the board and shall be the principal executive officer thereof. The board shall select a vice chairman who shall act as chairman in case of the absence or disability of the chairman. The board may function notwithstanding vacancies, and a majority of the appointed members in office shall constitute a quorum. Each appointed member shall be a citizen of the United States and shall not actively engage in any other business, vocation, or employment than that of serving as a member of the board; nor shall any appointed member during his term of office engage in the business (except such business as is necessary to the operation of his own farm or farms) of buying and selling, or otherwise be financially interested in, any agricultural commodity or product thereof. Each appointed member shall receive a salary of $12,000 a year, together with necessary traveling and subsistence expenses, or per diem allowance in lieu thereof, within the limitations prescribed by law, while away from his official station upon official business.

Advisory Commodity Committee

Sec. 3. (a) The Board is authorized to designate, from time to time, as an agricultural commodity for the purposes of this Act (1) any regional or market classification or type of any agricultural commodity which is so different in use or marketing methods from other such classifications or types of the commodity as to require, in the judgment of the board, treatment as a separate commodity under this Act; or (2) any two or more agricultural commodities which are so closely related in use or marketing methods as to require, in the judgment of the board, joint treatment as a single commodity under this Act.

(b) The board shall invite the cooperative associations handling any agricultural commodity to establish an advisory commodity committee to consist of seven members, of whom at least two shall be experienced handlers or processors of the commodity, to represent such commodity before the board in matters relating to the commodity. Members of each advisory committee shall be selected by the cooperative associations from time to time in such manner as the board shall prescribe. No salary shall be paid to committee members, but the board shall pay each a per diem compensation not exceeding $20 for attending committee meetings called by the board and for time devoted to other business of the committee authorized by the board, and necessary traveling and subsistence expenses, or per diem allowance in lieu thereof, within the limitations prescribed by law for civilian employees in the Executive branch of the Government. Each advisory committee shall be designated by the name of the commodity it represents, as, for example, the "Cotton Advisory Committee."

(c) Each advisory committee shall meet as soon as practicable after its selection, at a time and place designated by the board. Each advisory committee shall meet thereafter at least twice a year upon call of the board, and may meet at other times upon call of a majority of the members thereof. Each advisory committee shall select a chairman and secretary.

(d) Each advisory committee may by itself or through its officers, (1) confer directly with the board, call for information from it, or make oral or written representations to it, concerning matters within the jurisdiction of the board and relating to the agricultural commodity, and (2) cooperate with the board in advising the producers through their organizations or otherwise in the development of suitable programs of planting or breeding in order to secure the maximum benefits under this Act consistent with the policy declared in section 1.

General Powers of Board

Sec. 4. The board—

(1) shall maintain its principal office in the District of Columbia, and such other offices in the United States as in its judgment are necessary.

(2) shall have an official seal which shall be judicially noticed.

(3) shall make an annual report to Congress upon the administration of this Act and any other matter relating to the better effectuation of the policy declared in section 1, including recommendations for legislation.

(4) may make such regulations as are necessary to execute the functions vested in it by this Act.

(5) may appoint and fix the salaries of a secretary and such experts, and, in accordance with the Classification Act of 1923, as amended, and subject to the provisions of the civil service laws, such other officers and employees, as are necessary to execute such functions.

(6) may make such expenditures (including expenditures for rent and personal services at the seat of government and elsewhere, for law books, periodicals, and books of reference, and for printing and binding) as are necessary to execute such functions. Expenditures by the board shall be allowed and paid upon the presentation of itemized vouchers therefor approved by the chairman of the board.

(7) shall meet at the call of the chairman, the Secretary of Agriculture, or a majority of its members.

Special Powers of Board

Sec. 5. The board is authorized and directed—

(1) to promote education in the principles and practices of cooperative marketing of agricultural commodities and food products thereof.

(2) to encourage the organization, improvement in methods, and development of effective cooperative associations.

(3) to keep advised from any available sources and make reports as to crop prices, experiences, prospects, supply, and demand, at home and abroad.

(4) to investigate conditions of overproduction of agricultural commodities and advise as to the prevention of such overproduction.

(5) to make investigations and reports and publish the same, including investigations and reports upon the following: Land utilization for agricultural purposes; reduction of the acreage of unprofitable marginal lands in cultivation; methods of expanding markets at home and abroad for agricultural commodities and food products thereof; methods of developing by-products of and new uses for agricultural commodities; and transportation conditions and their effect upon the marketing of agricultural commodities.

Revolving Fund

Sec. 6. There is hereby authorized to be appropriated the sum of $500,000,000 which shall be made available by the Congress as soon as practicable after the approval of this Act and shall constitute a revolving fund to be administered by the board as provided in this Act.

Loans To Cooperative Associations

Sec. 7. (a) Upon application by any cooperative association the board is authorized to make loans to it from the revolving fund to assist in—

(1) the effective merchandising of agricultural commodities and food products thereof;

(2) the construction or acquisition by purchase or lease of physical marketing facilities for preparing, handling, storing, processing, or merchandising agricultural commodities or their food products;

(3) the formation of clearing house associations;

(4) extending membership of the cooperative association applying for the loan by educating the producers of the commodity handled by the association in the advantages of cooperative marketing of that commodity; and

(5) enabling the cooperative association applying for the loan to advance to its members a greater share of the market price of the commodity delivered to the association than is practicable under other credit facilities.

(b) No loan shall be made to any cooperative association unless, in the judgment of the board, the loan is in furtherance of the policy declared in section 1 and the cooperative association applying for the loan has an organization and management, and business policies, of such character as to insure the reasonable safety of the loan and the furtherance of such policy.

(c) Loans for the construction or acquisition by purchase or lease of physical facilities shall be subject to the following limitations:

(1) No such loan for the construction or purchase of such facilities shall be made in an amount in excess of 80 per centum of the value of the facilities to be constructed or purchased.

(2) No loan for the purchase or lease of such facilities shall be made unless the board finds that the purchase price or rent to be paid is reasonable.

(3) No loan for the construction, purchase, or lease of such facilities shall be made unless the board finds that there are not available suitable existing facilities that will furnish their services to the co-operative association at reasonable rates; and in addition to the preceding limitation, no loan for the construction of facilities shall be made unless the board finds that suitable existing facilities are not available for purchase or lease at a reasonable price or rent.

(d) Loans for the construction or purchase of physical facilities, together with interest on the loans, shall be repaid upon an amortization plan over a period not in excess of twenty years.

Miscellaneous Loan Provisions

Sec. 8. (a) Loans to any cooperative association or stabilization corporation and advances for insurance purposes shall bear interest at a rate of interest per annum equal to the lowest rate of yield (to the nearest one-eighth of 1 per centum) of any Government obligation bearing a date of issue subsequent to April 16, 1917 (except postal-savings bonds), and outstanding at the time the loan agreement is entered into or the advance is made by the board, as certified by the Secretary of the Treasury to the board upon its request: Provided, That in no case shall the rate exceed 4 per centum per annum on the unpaid principal.

(b) Payments of principal or interest upon any such loan or advance shall be covered into the revolving fund.

(c) Loans to any cooperative association or stabilization corporation shall be made upon the terms specified in this Act upon such other terms not inconsistent therewith and upon such security as the board deems necessary.

(d) No loan or insurance agreement shall be made by the board if in its judgment the agreement is likely to increase unduly the production of any agricultural commodity of which there is commonly produced a surplus in excess of the annual marketing requirements.

Stabilization Corporations

Sec. 9. (a) The board may, upon application of the advisory commodity committee for any commodity, recognize as a stabilization corporation for the commodity any corporation if—

(1) The board finds that the marketing situation with respect to the agricultural commodity requires or may require the establishment of a stabilization corporation in order effectively to carry out the policy declared in section 1; and

(2) The board finds that the corporation is duly organized under the laws of a State or Territory; and

(3) The board finds that all the outstanding voting stock or membership interests in the corporation are and may be owned only by cooperative associations handling the commodity; and

(4) The corporation agrees with the board to adopt such by-laws as the board may from time to time require, which by-laws, among other matters, shall permit cooperative associations not stockholders or members of the corporation to become stockholders or members therein upon equitable terms.

(b) Any stabilization corporation for an agricultural commodity (1) may act as a marketing agency for its stockholders or members in preparing, handling, storing, processing, and merchandising for their account any quantity of the agricultural commodity or its food products, and (2) for the purpose of controlling any surplus in the commodity in furtherance of the policy declared in section 1, may prepare, purchase, handle, store, process, and merchandise, otherwise than for the account of its stockholders or members, any quantity of the agricultural commodity or its food products whether or not such commodity or products are acquired from its stockholders or members.

(c) Upon request of the advisory committee for any commodity the board is authorized to make loans from the revolving fund to the stabilization cor-

(Continued from Page 5)

poration for the commodity for working capital to enable the corporation to act as a marketing agency for its stockholders or members as hereinbefore provided. Not less than 5 per centum of all profits derived by a stabilization corporation each year from its operations as such a marketing agency shall be paid into a merchandising reserve fund to be established by the corporation. No such payment shall be required whenever the fund is in such amount as, in the judgment of the board, constitutes a sufficient reserve for such operations of the corporation. Out of the remainder of such profits for the year the corporation shall repay any outstanding loan made under this subdivision and the accrued interest thereon, or if all such loans and accrued interest have been fully repaid, then it may distribute a patronage dividend to its stockholders or members. Such patronage dividend shall be paid to each stockholder or member on the basis of the total volume of the commodity or its products for the year marketed for his account through the corporation.

(d) Upon request of the advisory committee for any commodity the board is authorized to make loans from the revolving fund to the stabilization corporation for the commodity to enable the corporation to control any surplus in the commodity as hereinbefore provided and for meeting carrying and handling charges and other operating expenses in connection therewith. The board shall require a stabilization corporation to establish and maintain adequate reserves from its profits from its surplus control operations before it shall pay any dividends out of such profits. All losses of the corporation from such operations shall be paid from such reserves, or if such reserves are inadequate, then such losses shall be paid by the board as a loan from the revolving fund. Any amounts so loaned for payment of losses shall be repaid into the revolving fund by the corporation from future profits from its surplus control operations. Any stabilization corporation receiving loans under this subdivision for surplus control operations shall exert every reasonable effort to avoid losses and to secure profits, but shall not withhold any commodity from the domestic market if the prices have become unduly enhanced, resulting in distress to domestic consumers. Stockholders or members of the corporation shall not be subject to assessment for any losses incurred in surplus control operations of the corporations.

(e) A stabilization corporation shall keep such accounts, records, and memoranda, and make such reports with respect to its transactions, business methods, and financial condition, as the board may from time to time prescribe; shall permit the board to audit its accounts annually and at such other times as the board deems advisable; and shall permit the board, upon its own initiative or upon written request of any stockholder or member, to investigate the financial condition and business methods of the corporation.

(f) No loan shall be made to any stabilization corporation unless, in the judgment of the board, the loan is in furtherance of the policy declared in section 1.

Clearing House Associations

Sec. 10. Upon application of any cooperative association handling an agricultural commodity or of producers of an agricultural commodity, the board is authorized, if it deems such association or producers representative of the commodity, to assist in forming producer-controlled clearing house associations adapted to effecting the economic distribution of the agricultural commodity among the various markets and to minimizing waste and loss in the marketing of the commodity, if such assistance, in the judgment of the board, will be in furtherance of the policy declared in section 1. The board may provide for the registration, and for the termination of the registration, of any clearing house association in accordance with such regulations as the board may prescribe. Such clearing house associations are authorized to operate under rules adopted by the member cooperative associations and approved by the board. Independent dealers in, and handlers, distributors, and processors of, the commodity, as well as cooperative associations handling the commodity, shall be eligible for membership in the clearing house association: Provided, That the policy of such clearing house association shall be approved by a committee of producers which, in the opinion of the board, is representative of the commodity. Clearing house associations shall utilize the market news service and other facilities of the Department of Agriculture as far as possible.

Price Insurance

Sec. 11. The board is authorized, upon application of cooperative associations, to enter into agreements, subject to the conditions hereinafter specified, for the insurance of the cooperative associations against loss through price decline in the agricultural commodity handled by the associations and produced by the members thereof. Such agreements shall be entered into only if, in the judgment of the board, (1) coverage is not available from private agencies at reasonable rates, (2) the insurance will be in furtherance of the policy declared in section 1, (3) the agricultural commodity is regularly bought and sold in the markets in sufficient volume to establish a recognized basic price for the market grades of the commodity, and (4) there is available with respect to the commodity such market information as will afford an accurate record of prevailing prices for the commodity covering a period of years of sufficient length to serve as a basis to calculate the risk and fix the premium for the insurance. The agreements shall require payment of premiums so fixed and shall include such other terms as, in the judgment of the board, are necessary. The board may make advances from the revolving fund to meet obligations under any insurance agreement, but such advances together with the interest thereon shall, as soon as practicable, be repaid from the proceeds of insurance premiums.

Administrative Appropriation

Sec. 12. For expenditures in executing the functions vested in the board by this Act (including salaries and expenses of members, officers, and employees of the board and per diem compensation and expenses of the commodity committees), incurred prior to July 1, 1930, there is hereby authorized to be appropriated the sum of $1,500,000. No part of the moneys appropriated in pursuance of this authorization shall be available for expenditures, including loans and advances, for the payment of which the revolving fund or insurance moneys are authorized to be used.

Avoidance of Duplication

Sec. 13. (a) The board shall, in cooperation with any governmental establishment in the Executive branch of the Government, including any field service thereof at home or abroad, avail itself of the services and facilities thereof in order to avoid preventable expense or duplication of effort.

(b) The President may by Executive order direct any such governmental establishment to furnish the board such information and data as such governmental establishment may have pertaining to the functions of the board; except that the President shall not direct that the board be furnished with any information or data supplied by any person in confidence to any governmental establishment in pursuance of any provision of law or of any agreement with a governmental establishment.

(c) The board may cooperate with any State or Territory, or department, agency, or political subdivision thereof, or with any person.

(d) The board shall, through the Secretary of Agriculture, indicate to the appropriate bureau or division of the Department of Agriculture any special problem on which a research is needed to aid in carrying out the provisions of this Act.

(e) The President is authorized, by Executive order, to transfer to or retransfer from the jurisdiction and control of the board the whole or any part of (1) any office, bureau, service, division, commission, or board in the Executive branch of the Government engaged in scientific or extension work, or the furnishing of services, with respect to the marketing of agricultural commodities, (2) its functions pertaining to such work or services, and (3) the records, property, including office equipment, personnel, and unexpended balances of appropriation, pertaining to such work or services.

Examination of Books and Accounts of Board

Sec. 14. Vouchers approved by the chairman of the board for expenditures from the revolving fund pursuant to any loan or advance or from insurance moneys pursuant to any insurance agreement, shall be final and conclusive upon all officers of the Government; except that all financial transactions of the board shall, subject to the above limitations, be examined by the General Accounting Office at such times and in such manner as the Comptroller General of the United States may by regulation prescribe. Such examination, with respect to expenditures from the revolving fund pursuant to any loan or advance or from insurance moneys pursuant to any insurance agreement, shall be for the sole purpose of making a report to the Congress and to the board of expenditures and of loan and insurance agreements in violation of law, together with such recommendations thereon as the Comptroller General deems advisable.

Miscellaneous Provisions.

Sec. 15. (a) As used in this Act, the term "cooperative association" means any association qualified under the Act entitled "An Act to authorize association of producers of agricultural products," approved February 18, 1922. Whenever in the judgment of the board the producers of any agricultural commodity are not organized into cooperative associations so extensively as to render such cooperative associations representative of the commodity, then the privileges, assistance, and authority available under this Act to cooperative associations, shall also be available to other associations and corporations producer-owned and producer-controlled and organized for an actually engaged in the marketing of the agricultural commodity. No such association or corporation shall be held to be producer-owned and producer-controlled unless owned and controlled by cooperative associations as above defined and or by individuals engaged as original producers of the agricultural commodity.

(b) It shall be unlawful for any member, officer, or employee of the board to speculate, directly or indirectly, in any agricultural commodity or product thereof, or in contracts relating thereto, or in the stock or membership interests of any association or corporation engaged in handling, processing, or disposing of any such commodity or product. Any person violating this subdivision shall upon conviction thereof be fined not more than $10,000, or imprisoned not more than ten years, or both.

(c) It shall be unlawful (1) for any cooperative association, stabilization corporation, clearing house association, or commodity committee, or (2) for any director, officer, employee, or member or person acting on behalf of any such association, corporation, or committee, to which or to whom information has been imparted in confidence by the board, to disclose such information in violation of any regulation of the board. Any such association, corporation, or committee, or director, officer, employee, or member thereof, violating this subdivision, shall be fined not more than $5,000, or imprisoned not more than five years, or both.

(d) That the inclusion in any governmental report, bulletin, or other such publication hereafter issued or published of any prediction with respect to cotton prices is hereby prohibited. Any officer or employee of the United States who authorizes or is responsible for the inclusion in any such report, bulletin, or other publication of any such prediction, or who knowingly causes the issuance or publication of any such report, bulletin, or other publication containing any such prediction, shall upon conviction thereof, be fined not less than $500 or more than $5,000, or imprisoned for not more than five years, or both: Provided, That this subdivision shall not apply to the members of the board when engaged in the performance of their duties herein provided.

(e) If any provision of this Act is declared unconstitutional, or the applicability thereof to any person, circumstance, commodity, or class of transactions with respect to any commodity is held invalid, the validity of the remainder of the Act and the applicability of such provision to other persons, circumstances, commodities, and classes of transactions shall not be affected thereby.

(f) This Act may be cited as the "Agricultural Marketing Act." Approved, June 15, 1929.

Vincennes Hotel, Chicago, Ill.
James P. Davis, President.
Major R. A. Byrd, Vice Pres.
Leon R. Harris, Secretary.
S. B. Wilson, Treas.
C. R. Richardson,
Chairman Board of Directors

A WONDERFUL PLANT.

The Boys' Industrial Home of which Prof. T. W. Coggs is the able and efficient Superintendent, is located about nine miles east of Pine Bluff, Arkansas. This farm has a tract of about 700 acres of which the management with approximately seventy delinquent boys cultivates 550 acres and the rest of the farm of 150 acres is sub-rented. They have 350 acres in cotton, one hundred of which was planted last April and the cotton plant is far in advance of the average crops in Arkansas. The remaining 200 acres are planted in corn, peas, alfalfa and etc.

This school is fostered in part by the state as its contribution to the welfare of the colored delinquent boys but the success of the farm is due to the ability of Prof. Coggs and his assistants.

The farm is well drained, and heavily stocked with mules, horses, hogs and cows.

ENCOURAGE DAIRY FARMING

Monroe, La.—A movement to encourage Louisiana's dairy farming is being sponsored by Dr. Joseph A. O'Mara, president of the state board of health, who points out that only 65 per cent of the milk used within the state is home produced.

Congressman Oscar DePriest Says Negro Farmer Should Organize

(Continued from page 1.)

bers of each advisory committee shall be selected by the co-operative associations from time to time in such manner as the board shall prescribe..."

It is provided further, the congressman said, "The board is authorized and directed (1) To promote education in the principles and practices of cooperative marketing of agricultural commodities and food products thereof. (2) To encourage the organization, improvements in methods, and development of effective cooperative associations. (3) To keep advised from any available sources and make reports as to crop prices, experience, prospects, supply, and demand, at home and abroad. (4) To investigate conditions of overproduction of agricultural commodities and advise as to the prevention of such overproduction. (5) To make investigations and reports and publish the same, including investigations and reports upon the following: Land utilization for agricultural purposes: reduction of the acreage of unprofitable marginal lands in cultivation; methods of expanding markets at home and abroad for agricultural commodities and food products thereof; methods of developing by-products of and new uses for agricultural commodities; and transportation conditions and their effect upon the marketing of agricultural commodities."

He said the revolving fund provided is $500,000,000, available as provided in the Act—— and that

"Section 7. (a) Upon application by any cooperative association the board is authorized to make loans to it from the revolving fund to assist in—

(1) The effective merchandising of agricultural commodities and food products thereof;

(2) The construction or acquisition by purchase or lease of physical marketing facilities for preparing, handling, storing, processing, or merchandising agricultural commodities or their food products;

(3) the formation of clearing house associations;

(4) extending membership of the cooperative association applying for the loan by educating the producers of the commodity handled by the association in the advantages of cooperative marketing of that commodity; and

(5) Enabling the cooperative association applying for the loan to advance to its members a greater share of the market price of the commodity delivered to the association than is practicable under other credit facilities.

(b) No loan shall be made to any co-operative association unless, in the judgment of the board, the loan is in furtherance of the policy declared in section 1 and the cooperative association applying for the loan has an organization and management, and business policies, of such character as to insure the reasonable safety of the loan and the furtherance of such policy.

(c) Loans for the construction or acquisition by purchase or lease of physical facilities shall be subject to the following limitations;

(1) No such loan for the construction or purchase of such facilities shall be made in an amount in excess of 80 per centum of the value of the facilities to be constructed or purchased.

(2) No loan for the purchase or lease of such facilities shall be made unless the board finds that the purchase price or rent to be paid is reasonable.

(3) No loan for the construction, purchase, or lease of such facilities shall be made unless the board finds that there are not available suitable existing facilities that will furnish their services to the cooperative association at reasonable rates; and in addition to the preceding limitation, no loan for the construction of facilities shall be made unless the board finds that suitable existing facilities are not available for purchase or lease at a reasonable price or rent.

(d) Loans for the construction or purchase of physical facilities, together with interest on the loans, shall be repaid upon an amortization plan over a period not in excess of twenty years.

Section 10, Mr. De Priest stated, reads: "Upon application of any cooperative association handling an agricultural commodity or of producers of an agricultural commodity, the board is authorized, if it deems such association or producers representative of the commodity, to assist in forming producer-controlled clearing house associations adapted to effecting the economic distribution of the agricultural commodity among the various markets and to minimizing waste and loss in the marketing of the commodity, if such assistance, in the judgment of the board, will be in furtherance of the policy declared in section 1. The board may provide for the registration, and for the termination of the registration, of any clearing house association in accordance with such regulations as the board may prescribe. Such clearing house associations are authorized to operate

Look For These Symptoms

Tired and drowsy feelings accompanied by headaches, depression or state of indolence; roughness of skin; breaking out or eruptions; sore mouth, tongue, lips and throat flaming red; much mucus and choking; indigestion and nausea; diarrhea or constipation; mind affected and many others. It is FREE, and mailed in plain sealed wrapper. — DR. W. J. McCRARY, Inc., Dept. 115, Carbon Hill, Alabama.

CITY KNOWS ITS VEGETABLES

Chicagoans know their vegetables.

Not only in metaphor, but in fact, as proved by a report just issued by the Chicago Association of Commerce, which reveals that between $250,000,000 and $300,000,000 is spent on vegetables and fruit each year in Chicago.

While the great mass of business is wholesale market catering to the entire country, retail purchases attain the respectable total of $14,500,000.

THE VALUE OF BREAD

It is a matter of scientific knowledge that the diet choice of the human family, in the majority of cases, is due to a subconscious sense of what the human system needs, says Burdette. That is why bread has been the first of the instinctive choices. The yeast that helps to make bread is rich in antineuritic vitamins. The yeast which causes the bread to rise generates these vitamins in large quantities, which tend to improve the condition of the skin.

FARM OUTPUT MUST BE CONTROLLED, HYDE TELLS U. S. EDUCATORS

Atlanta, Ga., July 14—(Special)—With an address by Arthur M. Hyde, secretary of agriculture, in which he brought out advantages offered to agriculture by the farm relief bill, and formal announcement of the election of Miss E. Ruth Pyrtle of Lincoln, Neb., as president, the National Education association ended its six day convention today.

Organization of farmers, involving control of markets, standardization of output, and elimination of waste and duplication in distribution were held by Secretary Hyde to be the one general answer to the farm problem.

Assistance in the organization of agriculture is the aim and the purpose of the farm relief bill, Mr. Hyde declared.

The directors recommended to the executive committee the selection of Columbus, O., as the scene of the 1930 teachers' convention. Los Angeles has asked for the 1931 meeting, and Chicago the 1933 meeting.

J. M. Gwynn, superintendent of San Francisco schools, was re-elected a member of the board of trustees and Frank E. Reynolds of Columbus was re-elected to the executive committee.

Herbert C. Hansen of Chicago was elected president of the department of elementary school principals

FERTILIZING THE TOMATO

The tomato plant is one of the "pigs" of the plant world. It is a glutton for food. Just as the pig needs extra feed when it comes time to fatten him for the market, the tomatoes need an abundance of certain kinds of plant food when they reach the proper stage of growth.

Nothing has brought this out more clearly than recent tests at Cornell. Because the tomato plant is a rank feeder, investigations found that when it begins to bear fruit an extra amount of nitrogen in some readily available form is needed, regardless of how thoroughly the field may have been fertilized at the time of setting out the plants.

Commercial growers should use nitrogen carrying material as a side dressing. Material increases in yields were obtained at the Cornell station where 100 pounds of sodium nitrate or 75 pounds of ammonium sulphate to the acre were applied just as the first clusters began to set. It is safe to put on 150 pounds of sodium nitrate or 115 pounds of ammonium sulphate to the acre, but this is considered the limit because there is danger of overfeeding the vines at the expense of maturity of the fruit.

C. B. Sayre, one of the station's horticulturists, warns gardeners of the fact that such quick acting fertilizers as the two recommended may injure the plants if improperly applied. For that reason he says it is important that the fertilizer be kept away from the plants as contact with the growing plants results in severe burning and may even kill the vines.

Truckers are advised to mix the fertilizer with the soil around the plants wherever it is possible. Sayre says that a second side dressing put on just as the tomatoes begin to color up may give good results, although this has not been tried.

FIGHTING HOG MANGE

Mange is likely causing the trouble. E. F. Ferrin of the animal husbandry department, University of Minnesota, recently issued a statement in which he said that hog mange has been increasing in your state (Minnesota). He explained that mange is caused by parasites of microscopic size which burrow in the skin and produce a reddened thickened area

TANKAGE FED WITH CORN ADDS TO HOG PROFITS

The feeding of tankage when hogging down corn or corn and soy beans is profitable, states J. H. McLeod, extension swine specialist, Universtiy of Tennessee.

The Missouri experienment station even if it is green, will not produce maximum gains. Some nitrogenous supplement must be supplied to make the hogs gain rapidly and economically. Part of this supplement may no doubt be in the form of roughage such as alfalfa, clover or soy beans pasture. Experimental work indicates, however, that when hogs are on full feed of corn that some additional protein concentrate is necessary for maximum gains even though hogs have access to alfalfa, clover, soy beans or similar forage.

"In other words nitrogenous forage may reduce the amount of protein supplements required but will not entirely replace them. Five year experimental results at the Missouri agricultural experiment station show that soy beans planted in corn the same time the corn was planted will not entirely take the place of tankage. Hogs self-fed tankage while "hogging down' corn alone gained on the average 1.81 pounds per head daily, produced 518.8 pounds pork per acre and consumed 192.9 pounds tankage. The hogs on the corn and soy bean plot (no tankage) gained 1.07 pounds per head daily and produced 303.15 pounds gain per acre In other words an addition of 215 pounds of pork was produced with 192.9 pounds of tankage."

Estimating the tankage at $4.50 per hundred and pork at $10 per hundred, this would mean that for each $8.68 invested in tankage $21.50 was secured in pork, states Mr. McLeod

Tankage is a good supplement to the corn ration whether it be fed to fattening hogs, growing hogs or brood sows. Its use pays whether the hogs are fed in dry lot or on pasture.

It can be fed by hand or through a self-feeder. It is concentrated feed and only a small amount is required to satisfy the appetite of the hogs. Fattening pigs will eat from 1-4 to 1-2 pound daily; pregnant sows 1-2 pound and sows suckling pigs will have to be fed more in accordance to the size of the litter and size of the sow; but about 1-10 of her ration should be composed of tankage. One pint of tankage weighs approximately 1-2 pound.

When feeding hogs on pasture give one-half gallon of tankage to each bushel of corn fed or when in dry lot give one gallon of tankage to each bushel of corn.

WHEAT TRANSFORMED TO BISCUITS IN 18 MINUTES

Ranger, Texas, July 1—(U. P.)—Just seventeen minutes and thirty-eight seconds after wheat had been cut in the field it had been transformed into hot brown biscuits. The wheat was reaped, threshed, rushed in an auto to a mill, made into flour, thrust into ovens, and emerged, ready to be consumed, in less than eighteen minutes. K. C. Jones, Ranger mill owner, and Ben Whitehouse, agricultural instructor, conducted the race against time aided by two chefs. Last year a similar test required forty-one minutes.

MONTANA CROPS PROMISING

Helena, Mont., July 3.—Although crops are spotty, conditions in about two-thirds of Montana fields compare favorably with those which obtained in the bumper crop years of 1927 and 1928. Winter wheat production is still estimated at 8,000,000 bushels. Spring wheat looks well.

Information dealing with the use of sodium chlorate in eradicating weeds has been widely broadcast during the last year. Plant pest experts, however, are slowing up on their recommendations of this chemical for extensive use. It no doubt can be used about as well in getting rid of weeds on vacant lots in cities as in any other place.

When used for small patches of quack grass, or Canada thistle in pastures, fields, or along fence lines, sodium chlorate probably is superior to any other method of eradication, provided from two or four applications are made, according to an entomologist of the farming school at Ames, Ia.

But he advises farmers to use only small quantities of it at first, repeating the spraying as often as possible He also warns users of the explosiveness of this chemical under certain conditions. In a steel or iron drum it is harmless and can be handled with little or no danger, but after the container is opened there is danger of dust or other organic matter getting in which makes it highly inflammable.

"Clothing, wood or other organic material when soaked in sodium chlorate solution may be easily set on fire by friction, and often explodes," according to R. H. Porter of the school. "A person walking through a field recently sprayed with sodium chlorate solution may suddenly find himself surrounded by flames."

Mr. Porter has summarized directions for using this chemical in his new circular, P. D. number 44, which may be obtained by writing to the Iowa State College, Ames, Ia.

ARKANSAS FARMERS TO ORGANIZE

An organization of the Arkansas farers is scheduled to be held at Pine Bluff, Ark., on the twelfth of August. This information was communicated to the Modern Farmer in in a letter from Mr. J. S. Phelix, of Marion, Ark. He said that it would be a state-wide gathering. Notices have been sent throughout the entire state. The meeting is to be held in the Masonic Temple.

It is understood that an invitation would be extended to James Perry avis, the President of the National Federation of Colored Farmers in Chicago to come down and address this Arkansas gathering.

Since the matter for the Modern Farmer was being prepared early in August, so that it could be off the press by the middle of the month, it was not possible to get details from the meeting scheduled for August 12th, but a fuller report is promised in the September issue of the Modern Farmer.

MR. JAMES ROBINSON OF PERRY, GA., WRITES THE MODERN FORMER.

Editor of Modern Farmer: —You will find inclosed a list of farmers names. I, for my part, am ready to join the Federation, I have talked it over with several men, but cannot get them to see how thep can aid. This is the question they want to know. Under what terms can they secure aid? Now, I want to make it as clear as possible to them. I told them their crops would be the only collateral they would have to put up; or in other words, the crops would have to be stored in the warehouse If I am able to get enough men to organize down here, could I join an organization elsewhere and get the desired benefits? Please give me all the information you can, so I can get to work and organize Georgia.

Yours very truly,
James Robinson.

A Dangerous Condition

"There was a time when my health was not so good," says Mr. Miles Hopkins, of Catlettsburg, Ky. "I suffered a great deal from gas pains. My system was saturated with poison which was not properly eliminated. From time to time I had severe headaches, and I felt sluggish and dull.

"I knew of Black-Draught as a medicine for

CONSTIPATION

so I thought I would try it. For a while I took a small dose every night until my system was rid of the accumulated poison.

"I gained in weight and my general health was good. That experience made me realize the merits of Black-Draught. I kept it in my home and when I begin to feel lifeless and dull, I take a dose, after which I feel O. K. again.

"I try to keep my system cleansed, and I find Black-Draught a great aid."

25 cents. All druggists.

A Baby in Your Home

Doctor's Prescription Sent Free

Hundreds of married women, childless for years, suddenly find themselves in a state of the most blissful anticipation due to the influence of a doctor's most wonderful prescription that overcomes sterility in many cases when due to functional weakness. Mrs. Mary Etters of 5 Tenth St., Braddock, Pa., writes: "We are blessed with a fine baby boy. I congratulate you on your splendid prescription. I will be glad to recommend it to any woman." Every married woman who really wants children should write at once for a free trial of this prescription and a free copy of an invaluable book that tells how to use it and many other things every woman should know. Please enclose 10 cents for postage and packing. Address in confidence.

Dr. H. W. Elders,
77-F Ballinger Bldg., St. Joseph, Mo.

TOBACCO OR SNUFF HABIT CURED OR NO PAY

Any form, cigars, cigarettes, snuff, pipe, chewing. Full treatment on trial. Harmless. Costs $1.50 if cured, nothing if it fails. Over 500,000 treatments used. SUPERBA CO. NT5 Baltimore, Md.

ASTOUNDING!

New Quick Action
BEAUTY BLEACH CREAM

Over-Night Results Guaranteed or Money Back

Newly Discovered Oxygen Treatment

JADORENE is the wonderful discovery of one of the world's leading chemists. It is totally different than any bleach cream you have ever used or even heard of. It acts at once. It is absolutely harmless to use — Does not peel or roughen the skin — Bleaching process depends on the liberation of purifying oxygen for its powerful bleaching action. Removes pimples, blemishes and freckles. You can notice results over night. Make your test right away and see how much whiter JADORENE will make your skin. Send no money. Mail coupon below today or write. Pay postman only $1.00 plus postage on arrival. Make overnight test. If not delighted with wonderful results, return it and get your money back. Mail this coupon now. Dept. B.

under rules adopted by the member cooperative associations and approved by the board. Independent dealers in, and handlers, distributors, and processors of, the commodity, as well as cooperative associations handling the commodity, shall be eligible for membership in the clearing house association: Provided, that the policy of such clearing house association shall be approved by a committee of producers which, in the opinion of the board, is representative of the commodity. Clearing house associations shall utilize the market news service and other facilities of the Department of Agriculture as for as possible."

The Congressman also said the law provides: "As used in this Act, the term 'cooperative association,' means any association qualified under the Act entitled 'An Act to authorize association of producers of agricultural products,' approved February 18, 1922. "This act provides that persons engaged in the production of agricultural products as farmers, planters, ranchmen, dairymen, nut or fruit growers may act together in associations, corporate or otherwise, with or without capital stock, in collectively processing, preparing for market, handling, and marketing in interstate and foreign commerce, such products of persons so engaged. Such associations may have marketing agencies in common; and such associations and their members may make the necessary contracts and agreements to effect such purposes; PROVIDED, however, that such associations are operated for the mutual benefit of the members thereof, as such producers," and conform to certain requirements as to one vote for each member, limiting dividends, if any, to 8 per cent, and requiring certain limitations for dealing with the products of non-members.

Congressman De Priest said: "I feel that the matter of diversification of crops would tend largely to limit the danger of surplusage of crops in the wrong products. Now that the so-called Farm Relief Bill has passed, Negro farmers should proceed to comply with its provisions, meet its requirements and take advantage of a share in the five hundred million dollar revolving fund. IF COMPETENT CO-OPERATIVE ORGANIZATIONS DO NOT NOW EXIST, THEN THE FARMERS SHOULD FORM SUCH ORGANIZATIONS AT ONCE IN ORDER TO MEET THE REQUIREMENTS OF THE LAW."

—Nashville Globe

GENERAL MARKET CONDITIONS

(Continued from page 1)

The cotton carry-over from last season was the smallest ever known. We predict very satisfactory prices, and urge our readers to be careful and harvest the cotton as early as is possible and get it to market.

The melon market is holding up very well. Southern growers as a rule are highly pleased with the returns they have received. The mid-western crop is almost ready for the market, and indications point to satisfactory prices.

Cabbage, corn, tomatoes are selling at lower prices due to the home grown crops now coming in on the market.

New crop sweet potatoes from Alabama brought fancy prices and the demand is excellent.

AID TO FARMERS SEEN IN MUSCLE SHOALS OPERATION

(Continued from Page 1)

I believe one of the reasons why Muscle Shoals has not been settled is due to failure of the President heretofore to give Congress a definite program of what, in his opinion should be done with this plant.

Germany is using its wartime nitrogen plants in the production of fertilizer and has been so successful that she no longer imports nitrates from Chile, but has become a large exporter of fertilizer, and we are importing it into this country. What Germany has done in this respect, we can and should do.

In this country we continue to import Chilean nitrates and in 1928 we imported from Chile 1,018,183 long tons of nitrate valued at $36,261,894, on which we paid the Chilean government an export tax of $12.53 per long ton which totaled $12,757,000.

GROWING USE OF FARM EQUIPMENT

Agriculture's steadily increasing trend toward abandonment of antiquated farm machinery, and the use of modern labor saving devices in greater numbers than ever, finds striking proof in 1928 and 1927 production figures according to Mr. Milton W. Anderson, president of the United Tractor and Equipment Corporation. "Farm equipment made in the United States in 1928 was valued at $522,654,464.00, compared with $460,881,111.00 in 1927," he said. This is an increase of 13.4 per cent over 1927, and of 13.3 over 1926. The increase for 1929 will be even greater.

A careful check shows that it requires 300 hours to plow, plant, cultivate and harvest one acre of corn under the old method of farming.

POTATO INSTITUTE TO ADVERTISE

Claiming that advertising campaigns waged for other food products have seriously cut into the market for potatoes, Hugh B. Tabb, executive secretary of the National Potato institute, states that his organization will soon undertake a national advertising campaign to restore the potato to its former place in the American meal. Educational copy will be used in an endeavor to overcome the feeling that potatoes are fattening. The campaign, it is understood, will be concentrated in daily publications in the larger population centers.

A RECORD WHEAT TRADING

Mr. L. A. Fitz of the Grain Futures administration says July set all records of wheat sales for future delivery. There were 2,431,961,000 bushels sold on the Chicago Board of Trade. The previous high record was in December 1925 which showed 2,068,928,000 bushels.

Sales of all grains are understood to have been below the high mark.

FIVE MILLION FOUR HUNDRED TWENTY-SIX THOUSAND AND NINE HUNDRED AUTOMOBILES ON UNITED STATES FARMS

Automobiles in use on farms of the United States number 5,426,900 according to the latest figures from the offices of the National Automobile Chamber of Commerce.

Texas leads all of the states with 363,000. Ohio is second with 259,000, with Illinois a close third, having 258,000, Iowa 250,000, Pennsylvania 237,000, Wisconsin 231,000, Indiana 208,000, Kansas 196,000, Okla. 177,000, Virginia 132,000, North Carolina 155,000, Georgia, 116,000; Alabama, 105,000; Mississippi, 94,000; Tennessee, 93,000; Arkansas 86,000, and Louisiana, 62,000.

TREATING THE SOIL BY ELECTRIC PLOWS

Electric plows are now killing the weeds and insects and giving new life to the soil on the Sibley Farm in central Illinois. The plow is a large box shaped affair with the generator under the driver's seat. This is rather new, but promises the very last thing in modern and up-to-date farming.

LEE COUNTY, ARKANSAS

We have inquiry from one of our readers asking for accurate and complete data on Lee County, Arkansas and we are pleased to give same as follows:

Total acreage of all land in farms, 384,640.

Total farm population, white, 3,178.

Total farm population, colored, 12-794.

Total number white farmers in the county, 841.

Total number colored farmers in the county, 3,324.

Value of all crops grown in the county, three and one-half million dollars.

Rice crop, 122,800 bushels.

Cotton, 21,721 bales.

Sweet potatoes, 13,785 bushels.

Number of head of swine, 8,526.

Number cows, 2,757.

Number of chickens, 74,619.

Number mules, 6,631.

This is one of the heaviest producing counties in the state—not only in the state of Arkansas but in the southern states.

There are four times as many colored farmers as there are white farmers. They are not organized. The above figures are from the Census Bureau, Department of Commerce, and as of 1924 and 1925.

CARLOT ARRIVALS FRUITS AND VEGETABLES IN CHICAGO FOR THE MONTH OF JUNE

Asparagus, 62 cars, Illinois leading shipper.

Bananas, 598 cars, Imports.

Beets, 15 cars, Missouri leading shipper.

Beans, 206 cars, Louisiana leading shipper.

Blackberries, 9 cars, Tennessee leading shipper.

Blueberries, 11 cars, Georgia leading shipper.

Carrots, 431 cars, California leading shipper.

Corn, 122 cars, Texas leading shipper.

Cucumbers, 228 cars, Alabama leading shipper.

Dewberries, 14 cars, North Carolina leading shipper.

Egg Plant, 3 cars, Florida leading shipper.

Mixed Vegetables, 203 cars, Louisiana leading shipper.

Okra, 3 cars, Florida leading shipper.

Parsley, 1 car, Texas leading shipper.

Peanuts, 92 cars, Georgia leading shipper.

Peas, 145 cars, California leading shipper.

Peppers, 65 cars, Louisiana leading shipper.

Pineapples, 135 cars, Cuba leading shipper.

Raspberries, 20 cars, California leading shipper.

Spinach, 1 car, Maryland leading shipper.

Turnips, 2 cars, Indiana leading shipper.

Cabbage, 382 cars, Tennessee leading shipper.

Cantaloupes, 805 cars, California leading shipper.

Celery, 129 cars, California leading shipper.

Cherries, 95 cars, California leading shipper.

Lettuce, 683 cars, California leading shipper.

Onions, 303 cars, California leading shipper.

Oranges, 754 cars, California leading shipper.

Peaches, 160 cars, Georgia leading shipper.

Potatoes, 2433 cars, North Carolina leading shipper.

Strawberries, 358 cars, Missouri leading shipper.

Sweet Potatoes, 67 cars, Tennessee.

Tomatoes, 848 cars, Texas leading shipper.

Watermelons, 1575 cars, Florida leading shipper.

The above will total 10,958 cars. These figures were secured from the United States Department of Agriculture, Bureau of Agricultural Economics.

A wonderful opportunity for our truck farmers if they will only organize, get together, and ship co-operatively. These fruits and vegetables are all bringing good prices.

WORMY PIG WILL PAY NO PROFIT

Lack of Sanitation Is Expensive to Growers

The common round worm which infests many swine herds is costing the growers more money than the combined losses from cholera, thumps, pneumonia and other common swine diseases.

"The reason why this is true is that most of us think any place is good enough to raise pigs in," says W. V. Hays, assistant swine specialist at the North Carolina State College. "Most growers overlook the need for sanitary measures in the hog lot, yet an infestation of worms may be prevented by a little care. When the sow is ready to farrow, put her in a place where hogs have not been kept. Give the under part of her body a good scrubbing, using soapy water and a fiber brush. Some mild disinfectant in the water would not hurt. This will remove the worm eggs attached to the mother's body. Now place her in the new quarters and the result will be a pleasant surprise to the one who has not tried this plan."

The next best thing to do, says Mr. Hays, is to worm the young pigs. There are specially prepared worm capsules that may be used. For best results in using these, the stomach and intestines of the pigs should be empty of feed. Give all the water the pigs want. In some cases it is wise to give a laxative dose of epsom salts in a thin slop before putting the animals on the fast. This fasting period should last 24 hours, after which the medicine is administered. One capsule for a weanling pig and two for the larger shoats will do. After eight or ten hours, give another dose of salts in a thin slop to wash out the worms.

Mr. Hays says this form of treatment is being followed by progressive hog growers in a number of North Carolina counties, and these men would not attempt to fatten pigs now before treating them, especially if there is any evidence of worms.

BEAUTIFICATION OF FARM HOME STARTS

Bright green lawns and shubbery constituted the magic wand that transformed a bleak and bare farmhouse into a place of beauty and gave impetus to a beautification movement of Pennsylvania.

Ten years ago the farm of Harry R. Dyer at Roaring Creek station, near here, was typical of thousands of farms where the men who tilled the soil had given no thought to making the home surroundings satisfying to the eye.

The house was unshaded. Unsightly buildings were exposed to view. Straw provided the carpeting for the small patch of ground surrounding the house.

Then Mrs. Dyer waved a wand and in a decade the metamorphosis took place. Little expense was involved and Mrs. Dyer did most of the manual labor, altho nature worked the greatest transformation.

Shrubbery and trees were transplanted from near-by woods, and a velvet carpet of grass grew up about the home whose exterior appearance was enhanced by paint and the addition of an inclosed front porch. The foliage and an arbor screened the barns from view.

The Dyer home has filled other farmers with ambition and the Extension association had requests from a half dozen communities requesting courses in landscape gardening. Those were given, with demonstration meetings.

More than 100 farmers went to school and most of them now are aiding nature in the transformation of their own homes into places of beauty as well as utility.

RATTLESNAKE BITES BOY; HIS PET COLLIE KILLS IT

Galesburg, Ill., July 11—(AP.)—Prompt medical treatment may save the life of John Heikes, 8, who was bitten on the right foot by a rattlesnake at London Mills, near here, Wednesday. Prompt vengeance was meted out by John's big collie, Ted, who killed the reptile. The boy is in a Galesburg hospital. The snake bit him while playing with his brothers in a grove on the Heikes farm.

BOOM CORNSTALK PAPER PROJECT IN TOWNS OF ILLINOIS

Chamber of Commerce in Survey to Encourage Industry.

Active encouragement of a new industry—the manufacture of paper from cornstalks—is the purpose of a statewide survey projected by the Illinois Chamber of Commerce.

The survey, under direction of C. L. Hardin, secretary of industrial development for the chamber, will seek to determine the most feasible sites for the location of the pulp factories. Amount of cornstalks available, water supply and transportation facilities are the three most important factors in selecting sites.

Seek Other Plants.

Primarily made to assist the Cornstalks Produce Company of Danville, pioneer manufacturer of cornstalk paper, in selecting new sites, the survey is also designed to bring other manufacturers into the state.

The Cornstalks Product company is adding equipment to the Danville plant and is making an active survey of the corn belt preliminary to establishing new factories.

Several state departments, with the state department of agriculture foremost, are co-operating with Mr. Hardin in the project. The director of agriculture, at Mr. Hardin's request, has furnished statistics on the yield of corn from the 9,570,000 acres of farm land devoted to the crop last year in Illinois, and will forward the figures for 1929 as soon as they are available. The department estimated that about seventy-five billion stalks were grown in Illinois last year.

Attracts Much Notice.

Altho still in its infancy, the Illinois constalk paper industry has attracted wide comment, Mr. Hardin said. Hundreds of newspapers have published special issues printed on the paper and a number of business houses are using cornstalk bond in their offices. Most of this bond is marked as made from Illinois cornstalks.

The cornstalk pulp is also utilized for a number of other purposes.

FARM RETURNS IMPROVED BEST SINCE DEPRESSION

Farm returns in 1928 showed improvement over 1927 and were the best for any year since the post-war agricultural depression, according to the annual survey of farm returns by the bureau of agriculture economics of the United States department of agriculture.

DO NOT FATTEN PIGS ON CORN ALONE, SAYS EXPERT

F. W. Bell of the Kansas station says that forage crops for growing and fattening pigs will increase the rate of gain and result in more economical gains. Good results will not be secured when pigs are fattened for market on corn alone with pasture. Pigs cannot utilize enough pasture to supplement a full ration of corn. Some tankage or skimmed milk or other protein supplement is necessary.

SORT CHICKENS EARLY

Poultry experts usually advise separating the cockerels and the pullets when they are from two to two and a half months old. Separating them at that age gives the pullets a much better chance to develop into good, healthy layers for winter egg production.

MEADOW MOUSE A COSTLY GUEST IN FARM FIELDS

Eats 23 Pounds a Year and Never Lets His Family Run Down.

(Special to The Chicago Daily News)

Washington, D. C., July 3.—The meadow mouse looks soft and pretty and harmless, but he is a most expensive guest just the same. Vernon Bailey of the United States biological survey has been figuring his board bill, with rather startling results. A meadow mouse eats about 30 grams, or a little over an ounce, of green food every day. That runs up to twenty-three pounds a year.

A hundred mice will stow away over a ton of green grass or clover in a twelve-month. A hundred mice to an acre is not an unusual number in meadows favorable to their habits, while in "mouse years" the number has been estimated at thousands to the acre.

Mouse plagues, disastrous as they are locally, are of minor importance in comparison with the steady yearly drain on crops by the mice over the country at large in normal years. Even as few as ten meadow mice to the acre on 10 acres of meadow would take about eleven tons of grass or five and a half tons of hay a year. This number, on the 65,000,000 acres of hay raised in the thirty-eight mouse states of the country, would cause a loss of over 3,000,000 tons of hay a year, or a money loss of some $30,000,000 annually in hay alone.

THE MODERN FARMER

Vol. I. Nashville, Tenn. and Chicago, Ill., September 16, 1929. No. 7.

Will Loan Twenty Million To Move Crop For This Month

Over Eight Thousand Farmers In One County

COAHOMA, MISSISSIPPI HOLDS BEST RECORD

Crops Sold Cooperatively for Nine Hundred Fifty-seven Thousand Dollars

The Modern Farmer has received two or three inquiries, asking full and complete statistics on Cahoma County Mississippi, which we take pleasure in giving herewith:

Number of farms in the county 8,585.

Number of white farmers in the county 912.

Number of Colored farmers in the county 7,672.

Paid out for feed and fertilizer $836,000.00 dollars.

Crops sold cooperatively $957,000.0 dollars.

Total hogs in the county 5,965.

Total cows in the county 3,084.

Total chickens raised 95,465.

Number bales cotton harvested 58,329.

Number bushels sweet potatoes 7570.

Number bushels corn harvested 262,470.

Number bushels peaches 5,060.

These figures are as of 1925 and taken from the Government statistics of the Census of Agriculture and i correct.

From the above our readers wi see that there are about 9 colored farmers in the county to every white farmer, which means that the Colored farmers in the county produced over 50 thousand bales of cotton over six thousand bushels sweet potatoes and 230,000 bushels of grain.

If the Colored farmers in the county would organize they would control the prices of these commodities get better prices for their products and in a few years would be able to own considerable more property while at present they are producing the bulk of the crops and not able to exercise any authority in the buying or selling of the supplies, such as fertilizer lime and etc., and disposition of their cotton, fruits and vegetables.

The Modern Farmer urges the Colored farmers of Coahoma County to wake up and organize.

BACK TO THE FARM MOVEMENT FOR NEGROES URGED

"Return to the farm." the Rev. J. S. Woods told the congregation of Calvary Baptist Church, 583 4th St., in a lecture last night. He discussed social and economic conditions of Negroes in metropolitan areas.

"The number of the unemployed grows larger each year, due to machinery constantly displacing the working man," he said.

"Disintergration of the family is developing from the increasing employment of women and children. A man's own wife and children drive him out of employment.

"Of the 15,000,000 colored people in the United State, 195,207 are owners and managers of farms. They are mostly residents of the southern states and are in a prosperous condition.

"Prosperity will increase in the agricultural territory west of the Mississippi, and there will be a new south and a new north.

—From The Milwaukee Leader.

A meeting to organize the Colored Farmers in Wisconsin is called for Friday, September 14th.

GOVERNMENT GRADES POULTRY

BUREAU OF AGRICULTURE AND ECONOMICS DECISION

Realizing the need of standardization and uniform grading of dressed poultry the Bureau of Agricultural Economics has decided on four distinct grades.

United States Prime is the highest grade of poultry than can be marketed commercially, then U. S. No. 1, No. 2 and No. 3.

The most important factor considered in placing a bird in any of these grades is the fleshing condition of the carcass. In order for it to grade U. S. Prime, it must be full fleshed, of uniform pack and free from deformities or dressing imperfections.

United States grade Number One must be well fleshed, of uniform pack and free from deformities or dressing imperfections, or they may be full fleshed birds that would grade U. S. Prime so far as to fleshing condition, but be barred from that grade on account of slight dressing defects or deformities.

United States Number Two birds are poorly fleshed that have been well dressed or they may be full or well fleshed birds with too great deformities or dressing deformities or dressing imperfections to Class as U. S. Prime or U. S. No. 1.

United States grade Number Three birds are not only poorly fleshed but

FARM BOARD RESPONSIBLE FOR STATEMENT ISSUED

FUNDS AVAILABLE BY DECEMBER FIFTEENTH SAYS CHICAGO TRIBUNE

(Chicago Tribune Press Service) Washington, D. C., Sept. 5—(Special)—Extension of additional financial assistance to southern cotton co-operatives, enabling the organizations to advance members 75 per cent of the value of their cotton when delivered, was announced by the federal farm board today.

Several weeks ago the board announced negotiation of an agreement with the intermediate credit banks, under which the cooperatives would be loaned a total of 90 per cent of fixed value of the cotton, a plan designed to meet the needs of growers compelled to realize the full price of their cotton when they need money, whether or not the cotton actually has been sold by the association.

Two Types of Loans.

The new plan is intended to assist the grower who wishes to obtain a substantial advance on his cotton, pending sale by the cooperative, and under the two types of loans, according to Alexander Legge, chairman of the board, $20,000,000 will be advanced before Dec. 15.

"The two types of loans," Mr. Legge declared, "are expected to meet every merchandising need of the southern cotton cooperatives in their transactions with their membership and should result in a very considerable increase in deliveries and in membership of the associations themselves. The amount of money involved will be limited only by the demands of the cooperatives."

Formation of a national cotton cooperative financing and selling organization, similar to the Farmers' National Grain corporation, recently organized at the board's suggestion, is under

Cotton Hold Worlds Greatest Interest

STATE LIBRARY SEP 30 1929 AGRICULTURE

POULTRY NEEDS PROTEIN

BEST RESULTS OBTAINED FROM CHICKENS REPORTED

Chickens on wild range require only feed enough for natural growth and maintenance and to produce a few eggs during the spring months for reproduction. These needs are supplied principally by grains and seeds and insects.

Under domestication poultry is kept for profitable growth and production must be fed more heavily and especially of high protein feeds. Lack of protein is why eggs are scarce during fall and winter months—the chickens do not get the proper protein for rapid growth during the summer and the hens do not get sufficient amount during the winter to produce the eggs.

An egg contains something over 13 per cent protein and the poultry flesh contains something over 21 per cent protein.

A feeding mixture of corn, wheat and other grains fed to hens contains about 10 per cent protein. Mash should be fed freely with these grains in order to increase the protein content. This will increase egg production, which of course lowers the cost of the feed.

In several of the larger colleges experiments are being made in order to determine the best protein for chickens, and it is generally conceded that proteins from animal sources, such as meat scrap, fish meal and tankage and

(Continued on Page 2).

FLEECY WHITE STAPLE KEEPS MILLS OPEN

Recent Strike in New England Had Telling Effect

The recent strike of the cotton mill workers in Manchester England a few weeks ago has had telling effect upon all branches of commercial activity. The strike began the latter part of July and involved over a half million spinners and weavers.

The mills it seems, organized into an organization. There are something over two thousand in the combine who agreed to cut wages about 12 1-2 per cent.

However, they were not quite unanimous and part of the mills continued to pay the old scale, yet something around 1800 mills did close on account of the cut in price.

The Wage-earners by almost solid vote decided not to accept the reduction and voted the strike. Statistics show that fully 80 per cent of the production of these mills enters into the country's export trade. This strike has temporarily halted the movement of our American cotton.

During the six months prior to July 1st the United Kingdom took something over seven hundred thousand bales of our American raw cotton. Germany took nearly five hundred thousand bales with Japan purchasing almost an equal amount, and the entire output of our cotton going to foreign shores for a period of six months was slighly more than three million bales.

During the year of 1928 America sold and shipped a little over 8 1-2 million bales valued at $913,000,000.00.

The heaviest shipments of cotton to foreign countries always coming during October, November and December and July and August are invariably the months where shipments are less. The strike has been settled and the mills are all running. During the fall months we are of the opinion that cotton for export will be heaviest than it has been for several years and this demand will naturally mean higher prices and better profits for our southern farmers.

General Crop News Reported To Modern Farmer

HONEY AND MONEY IN BEES

CONSUMPTION ON DECIDED INCREASE SAYS REPORT

According to government reports consumption of honey is on the increase.

We are using more than one pound per capita annually. It is now being sold in a crystalized form and to be used like maple sugar on bread and pan-cakes. The crystalized honey is not as sticky as the extracted honey.

Candy manufacturers are using it in large quantities. It is also popular with bakers. Ice cream manufacturers are using it in sherbets for the reason that it does not crystalize like can sugar in the sherbet

There are several kinds of honey. This is due to the flowers.

White clover is the most popular grade, although alfalfa honey is preferred by many.

Honey is profitable to the farmer. The bee-keepers are averaging slightly more than 100 pounds to the colony. In some secions more than 200 pounds of honey is being harvested from an acre of good sweet clover.

Farmers in Illinois, Michigan and California are now leasing "honey producing rights" to bee-keepers. Honey

(Continued on page 8.)

INTERESTING DATA AND STATISTICS COMPILED

Complaints of drouth from practically every section of the country During August rainfall was almost nil. It is the worst dry spell in years. The corn crop has suffered most of all, and the oat crop comes second Feed grains will be very short this year and this of course means higher prices for feeding of live stock and hogs.

The extreme high temperature the past few weeks are causing tthe corn to fire in many states.

The government report figures for Sept. reflect a considerable shortage over last year. The total forecast corn crop for the United States Sept Sept. 1 was 2,490,326,000 bushels, as compared wih 2,740,510,000 bushels as given by the government August 1st or a month ago.

The visible supply of corn in thi country is estimated to be 5,417,000 bushels. This time last year the visible supply was nearly ten million bushels.

News from the south show that cotton is suffering in some sections but as a whole the crop is good and the plant in a fine healthy condition

Cotton will bring good prices this fall, and we continue to urge our grower to go slow in selling. The Liverpool market is in good condition and the demand for cotton in that country continues satisfactory. Beware of any bearish talk on cotton prices, and be sure that you do not

(Continued on page 8)

POTATO PRODUCTION AND PROFITS

ARTICLE TAKEN FROM NORFOLK JOURNAL AND GUIDE

Irish potato growers of this section made a profit on their yield this year, for the first time in several seasons. Limited production was the greatest contributing factor to their profits. Last year when the potato market took a slump that proved disastrous for the growers, an intense campaign for curtailed production for the coming year was instituted, with growers, bankers, fertilizer houses and business men co-operating. The result was that this year witnessed an enormous reduction of the white potato crop, with a consequent ascent and stablization of prices.

The present danger for the potato growers, however, is that they may stupidly allow this year's success to prove to be next year's disaster. No doubt the handsome returns from the potato yield of 1929 will prove an almost irresistable stimulus to overproduction for 1930, and over-production will certainly have s disastrous reaction in a glutted market. The farmers are advised to remain sensible, to exercise the same good judgment in

(Continued on Page 2.)

COTTON STATISTICS—MISS., DELTA STAPLE

Staple cotton premiums reported to representatives of the United States Department of Agricultuure based on the United States official standards for grade and staple.

For Cotton Grown in Mississippi Delta.

Based on New York Close September 6th. December future contracts 19.30. Quotations are for fall shipment F. O. B. and freight to mill, incidental expenses and commissions paid by the shipper.

Grade 1 1-16; 1 1-8; 1 5-32 1 3-16; 1 1-4.

Strict Middling 250-300 on 325-375 on 375-425 on 475-525 on 95-105 on, Middling 200-250 on 275-325 on 325-375 on 400-450 on 800-900 on.

Strict low Middling 100-150 on 175 225 on 225-275 on 300-350 on 600-700 on.

From the above can be seen just what big premiums are being offered on Mississippi Delta cotton.

Our colored farmers in the Delta have good crops this year and if they get the correct grading they should have no reason to complain.

A BAD WEED

Mr. Frank Potter who edits the Farm and Garden column in the Chicago Tribune says:

Small yellow vines entwined in patches of clover fields are being reported frequently by corn belt farmers.

This vine is clover dodder, a very bad weed in clover and alfalfa fields. In case the soil becomes fouled with such seed it will cause trouble for years to come, since under favorable conditions it may retain its vitality as long as five to eight years, according to J. H. Lefforge of the botany extension staff, Purdue university.

Dodder begins to show during June and July. The young dodder seedlings sway about searching for a plant to which they attach themselves. In case no plant is within reach they soon die, but in case clover or alfalfa plants are near they soon entwine themselves about them, break connection with the ground and live entirely on juices of the clover or alfalfa plant.

Since dodder is such a bad weed, drastic measures must be used in order to control it. Dodder may be controlled by cutting close to the ground and burning just before it comes into blossom. Plowing under during the preblossom stage also is to be recommended, thus utilizing it as a green manure crop.

Soon after dodder begins to blossom seeds may be found in the milk and dough stage, and such seeds given a relatively high per cent germination. After the blossom stage of dodder begins the best control involves cutting and burning, using applications of straw or oil for the best results. For the next two or three years plant corn, small grains, soy beans, or cow peas, all dodder immune crops.

In purchasing clover of alfalfa seed just insist on the presence of the seed law tag, and in case the data required on the tag indicates the slightest trace of dodder seed the Purdue botanists say to leave it alone. An ounce of prevention worth a pound of cure is certainly true in controlling dodder.

SELECTING SEED CORN

Your corn crop depends largely upon the selection of the seed. There will be quite a lot of soft corn this year which makes all the more important the selection of and proper drying of seed.

In selecting your ears for seed see that the plant is strong and healthy —the leaves and stalk green. The ears must be well matured with dry husk and well balanced in size. The kernels must not be chaffy but on the other hand well matured. It takes a lot of time to select corn for seed. The best time to select the corn for seeding purposes is just before frost.

Other observations in the selection of corn for seed is the way the ear hangs from the plant, the shape and its size. The ear that matures best under farm conditions that is the ear to be selected. Choose fields that are of average fertility on the farm. We say this because you may not plant your corn on a fertile field.

A well matured, nicely shaped ear borne on a vigorous green stalk in a full stand hill is good seed corn.

The most dangerous time for seed corn is from the time it is picked until it is properly dried out.

Thorough ventilation is absolutely necessary to proper drying When corn is properly dried it will not freeze and also checks the development of dry-rot molds.

At temperature of 100 to 10 will dry corn out in a week or ten days. It is not safe to heat the corn any higher, for it may kill the vitality of the seed.

A temperature of 95 degrees will kill the rot molds.

The baby chick brooder house can be used for drying seed corn. While the corn is drying in the brooder house the stove can be kept going with low fire for the first few days. Leave the doors and ventilators open.

MINT AS A MONEY MAKER

Starke County Indiana produces one-fifth of the mint grown in the United States. One acre of mint produces about 35 pounds of mint oil.

The mint is cut, dried and then distilled. The oil is very valuable and the product of a few acres runs into hundreds and sometimes a thousand dollars.

Mint gum is very popular and cannot be produced unless mint oil is used.

The largest mint distillery is located at Kalamazoo, Mich. Mint is easily grown and requires very little time to produce. It is very profitable, and the supply is always short of the demand.

Starke County Indiana is near South Bend and there are only two colored farmers in the county.

ONIONS

There is no better profit on vegetables than that earned from the onion. In sections of the middle west it is an easy matter to produce from 200 to 400 bushels to the acre, and there is always a market for them. No kitchen is complete without an onion, and no dish is prepared in the way of meats and relishes unless the onion plays a very important part.

Texas is the largest producer of onions. This state produced in 1928 over three million bushels and the average price was $1.10 per bu. Indiana ran second with something over two million bushels.

THE SWEET POTATO AGAIN

The question whether starch can be recovered economically from cull sweet potatoes and satisfactorily used for industrial purposes is now being discussed in by heads of the Bureau of Chemistry and Soils Department in the Department of Agriculture.

There is about 20 per cent of the sweet potato crop that go into culls after the grading, and if the experiment shows that starch can be extracted from the sweet potato in any quantity, this waste can be turned into hundreds of thousands of dollars every year.

Sweet potatoes constitute the second largest vegetable crop in the United States—the production of 1927 totaled something over 94,000,000 million bushels.

Georgia led in production, with Texas, Alabama, Virginia and Tennessee as close seconds.

Statistics show that the sweet potato is growing very fast in demand in the large cities of both east and west. and invariably bring good prices.

ATTENTION COTTON FARMERS

It is not generally known, but there is a cotton classification service now maintained by the Division of Cotton Marketing under the United States cotton standards act which should prove of much value to cotton farmers as well as to dealers and handlers in general.

Any grower of cotton or owner of cotton may send samples of his holdings to the United boards of cotton examiners at New Orleans, Houston, Galveston or New York or to the appeal board of review examiners at Washington. All necessary to secure this service is to make application for blank forms used for this purpose from either of the above named cities.

If a cotton farmer feels that the buyer has under graded his cotton he can easily have the question settled by sending the samples in to either of these cities and the dispute settled.

The cost for this service is 40 cents for each sample sent in for classification.

There are so many instances where a cotton farmer feels that his cotton is good middling when the buyer feels that it is low middling. Not that the buyer is not inclined to give his customer a square deal but merely a difference of opinion. In this case the cotton farmer can have the matter decided by the above named method.

We will try and have blanks on hand in our office in Chicago to supply our members when needed.

National Federation of Colored Farmers, Vincennes Hotel, Chicago, Write for them.

A NEW DINNER COLOR

Housewives will be interested in the announcement by the Food Administration that an additional food dye has been approved for use after September 15th.

The new color which has the government approval is a brilliant blue and will be known officially as FCF.

Frozen creams and ices which have been placed before us in white the various shades of red, tans, browns and chocolate may now come to us in brilliant blue. There will be no trouble in making the dinner patriotic so to speak Red white and blue may be placed before us in our ices, drinks, puddings, candies or gravies. We can have red rice, white rice or blue rice.

Chemical and physiologieal tests have proved it to be harmless. This dye has been placed on the permitted list effective September 15.

IRISH POTATO GROWERS MAKE PROFIT THIS YEAR

(Continued from Page 1)

potato plnating next spring that they exercised last spring with encouraging results. The price of white potatoes is gradually stiffening. That can even be observed by any housewife who is buying this food product at retail. In the retail stores the price of the spud has doubled in the past sixty days. This stiffening of price, to some extent, reflect the price advantage the growers enjoyed this summer. It is not begrudged them.

But the important thing is for the farmers of our counties, Tidewater Virginia and Eastern North Carolina in particular, to plant every hill of potatoes with a thought to production and market prices. No merchant would be so stupid as to overload his shelves with a commodity upon which he was persistently losing money. After all the greatest need of the farmer is some of the kind of sense that is exercised by an ordinary business man. If the frmer measured production costs in the same manner that the merchant measures operating costs, and figured in his sales conditions and market in a similar manner as the merchant, much of his trouble would vanish. The scientific farmer is doing this.

The above editorial was taken from a recent edition of the Norfolk Journal and Guide.

The average crop of white potatoes is something over seventeen million bushels, and about four million bushels of sweet potatoes.

Organization principally among the white farmers in the state resulted in their ability to get better prices this season. This organization naturally aided the colored farmers to some extent, but if our farmers will organize before another season their profits will be even greater than they were this season. There are 50,147 colored farmers in Virginia which constitutes over one-third of the total farmers in the state. By organizing both as buying and selling the farmers of our group could command more.

Amelia, Brunswick, Charles Ciyt, Cumberland, Dinwiddle, Essex, Goochland, Greenville, Halifax, King William, Lancaster, Mecklenberg, Middlesex, New Kent, Powhattan, Prince Edward, South-Hampton, Surry and Sussex counties all have more colored farmer than white farmers.

It is not generally known, but Accomac county produces nearly seven million bushels of white potatoes and about 2 1-2 million bushels of sweet potatoes annually. The white farmers in the county total 2,226 and the colored farmers total 1,192, which is interesting. Suppose these 1,192 colored farmers were organized in the same manner that the 2,226 white farmers are already organized.

GOVERNMENT GRADES DRESSED POULTRY

(Continued from Page 1).

have considerable dressing defects or deformities. All birds must be wholesome and from external appearances free of disease.

In addition to the four grades the United States standards provide for different classes based principally on age and weight.

Young birds that weigh 2 1-2 pounds or less are classed as broilers; those weighing more than 2 1-3 pounds to as high as 3 1-2 pounds are classed as roasters. Male birds that are hard meated and well developed are classed as stags regardless of weight and if they are fully matured they are classed as cocks.

Distinct classes and grades are also made of the other varities of poltry, such as ducks, geese, turkeys, guineas, capons and squabs, and each grade and class is distinctly defined.

POULTRY NEEDS PROTEIN TO OBTAIN BEST RESULTS

(Continued from Page 1)

milk are better for feeding poultry than proteins from vegetable origin, for the reason that proteins from animal sources supply mineral as well. Then again, the animal proteins, especially milk and meat scrap are high-digestible.

Soy-bean meal, cotton seed meal, peanut meal and gluten meal are good vegetable protein feeds, however, if too much cotton seed meal is used it will effect the color of the egg yolk especially if the eggs are placed in cold storage.

Mash does not contain over 10 per cent cotton seed meal. Ready mixed laying mashes usually contain 20 per cent protein and scratch feeds about 9 per cent protein. This is why equal parts of mash and scratch feed should be fed as the average for the year.

A Baby in Your Home

Doctor's Prescription Sent Free

Hundreds of married women, childless for years, suddenly find themselves in a state of the most blissful anticipation due to the influence of a doctor's most wonderful prescription that overcomes sterility in many cases when due to functional weakness. Mrs. Mary Etters of 5 Tenth St., Braddock, Pa., writes: "We are blessed with a fine baby boy. I congratulate you on your splendid prescription. I will be glad to recommend it to any woman." Every married woman who really wants children should write at once for a free trial of this prescription and a free copy of an invaluable book that tells how to use it and many other things every woman should know. Please enclose 10 cents for postage and packing. Address in confidence.

NATIONAL BAPTIST PUBLISHING BOARD

Nashville, Tennessee — Henry A. Boyd, Secretary

TOBACCO GROWERS URGED TO ORGANIZE

Raleigh, N. C., Sept. 7.—Hon. Jame C. Stone of Kentucky member of the Farm Board representing the tobacco producers, in a speech made at Raleigh, North Carolina to the Tri State Tobacco Growers Association. More than 200 farmers were present.

Mr. Stone urged the farmers to organize in order to evolve a better and more orderly method of marketing tobacco. He also told the farmers that in order to obtain aid from the farm board, organization was absolutely necessary.

WHY THIS DIFFERENCE?

The Modern Farmer has been making a survey of the market on cotton seed products and comparing them with the prices that the farmer gets for his seed and there is such a wide difference between the raw product and the finished product that we are now asking, the authorities in Washington to give us this explanation.

For instance, the mills are offering the farmers about $30.00 per ton for new seed. The quality this year is much better than it has been for the past several years. When the same farmers go to market to buy 41 per cent cotton seed meal they are forced to pay about $41.00 per ton for it.

They cannot buy cotton seed hulls for less than around $10.00 per ton. These two articles of feed cost the farmer $51.00 per ton, and the oil manufacturer has the oil and the linters to sell for additional profit.

This high cost is in our opinion too much, or in other words the spread between 30 dollars per ton paid the farmer for his seed and then force him to pay 41 dollars for meal and 10 dollars for hulls works a hardship.

PURSLANE GREENS

Purslane is supposed to be a hateful weed, although it was in repute for medical purposes three and four hundred years ago, and seems to have been used as a food also that far back. If you consider it a weed try a dish of weeds some time, especially if you have a fine garden where this presumable nuisance will grow avidly.

I would like particularly for Mrs. J. B. to see this little stalk because she has two lovely vegetable gardens back of her acres of spreading and marvelous flower framed lawns. One of these gardens you may approach by a labyrinth of wooded paths, but there is a short cut, passing by a lovely stream with a ripple in it. The garden this year is covered with long strips of paper mulch, setting off the thin lanes of green things, and on one of these blankets I found in the middle of June a little bunch of withering purslane, while I was filled with envy that such a delicious acid green should go to waste.

To prepare purslane for cooking: Cut off the roots of the purslane plant and usually cut the plant into about two or three parts. The fat stem is often too fibrous to cook as quickly as the leaves, so in many cases it should be discarded. Wash the whole thoroughly and then prepare it by blanching it in boiling water for about five minutes, rinse in cold water, then steam until it is done in just the least bit of water over a tiny fire. This green molds well and because of its slightly acid flavor it is delicious with good cooking.

Probably almost every green that grows is the better for being dropped first into boiling water and rinsed with cold water, but after thoroughly washing purslane it can be cooked without the double process and over a gentle fire with only so much water as clings to it from the washing. If there is a quantity it may be necessary to add a little water up to half a cup until the steam develops. Any such green may be cooked over a tiny fire and under a cover, but if not covered it is a good plan to stir it while it is cooking. A hot fire may and usually will change its quality undesirably.

The purslane may be finished like any green with plain butter. The Dutch, who use this green in great quantities and can it when it is just ready to blossom, often add a beaten egg to it.

—Exchange.

WILL LOAN TWENTY MILLION TO MOVE CROP THIS MONTH

(Continuetd from Page 1)

way, according to Mr. Legge, who declared that "the same general policy of centralization of effort in the marketing of agricultural commodities will apply to other farm products.

Sponsored by Farmers

"It is the hope of the board," Mr. Legge continued, "that eventually these organizations, owned, controlled and operated by farmers, may become large enough to do for farmers on a permanent basis many of the things which the federal farm board is expected to do on a temporary basis.

"Pending the organization of the Farmers' National Grain corporation, the board recently agreed to make supplemental loans to wheat cooperatives on practically the same basis adopted for cotton.

"These loans to wheat cooperatives will be on the basis of 10 cents per bushel on unsold wheat and on a basis of 90 per cent of the value of wheat on which a price has been fixed.

Must Qualify for Loans.

"Only those wheat and cotton associations which have qualified for loans from the federal intermediate credit banks can at this time be served by the supplemental loans of the federal farm board.

'The farm board itself has as yet no machinery with which to handle its funds. Through the courtesy of the federal farm loan board and the federal intermediate credit banks, however, the loan machinery of those banks has been available for use by the federal farm board, so that the loans for both government agencies will be handled by the federal intermediate credit banks."

From the above we still see the absolute necessity of organization. The American Farm Bureau Federation with headquarters in Chicago and who already has over three hundred thousand active members, have put on a nation wide campaign reaching practically into every state in the union. This campaign is for the purpose of securing the white farmers to become members of their organization and thereby become eligible for farm relief. If it is necessary for the white farmers to organize it is more than essential that the colored farmers get together.

COWPEAS

The cowpea is one of the most valuable in the pea family. The average yield last year was about 9 1-2 bushels per acre. South Carolina led all of the states in production, having 229,000 acres in peas. The price of cow peas last year ranged all the way from $1.65 to $2:50.

The greatest hindrance to getting good prices for cow peas is the manner in which they are sent to the market after harvest.

Large wholesale handlers of peas located in Cincinnati, Louisville and St. Louis are forced to reclean the peas and then place them in new even weight branded bags. If the farmer would prepare and properly clean and grade these peas he would be able to get at least 20 per cent more for his crop.

The white black eye pea is in excellent demand throughout the middle west, and if any of the southern farmers have this variety for sale, get in touch with the National Federation officers at the Vincennes Hotel in Chicago and they will be glad to give you the market prices.

We have been informed that Chicago takes over 100 cars of peas every season. Practically every grocer on the south side handles them.

CHAIN OF THIRTY RETAIL GROCERIES FOR CHICAGO

The Willingham Stores a chain of approximately 30 retail groceries to be operated on the south side of Chicago, headed by Mr. George Willingham of Athens, Ga., who has recently located in Chicago is the latest addition to the Negro commercial world.

In talking with Mr. Willingham he said that for the past several years he has made trips to Chicago making careful survey of conditions and the possibilities for a chain of retail grocery stores and he has satisfied himself that it can be made a success.

Mr. Willingham further states that he had been in conference with Mr. A. L. Holsey the secretary of the National Negro Business League, and that his chain would be affiliated with the Colored Merchants Association which was organized by Mr. Holsey.

Mr. Willingham was born on a farm near Athen, Ga. He made a success of farming and for the past 15 years was a successful grocery merchant in Athens, where he built up a large and profitable business

Mr. Willingham is married, and his wife a very brilliant and attractive woman is due much credit for the success he made in the grocery business at Athens. The Chicago Daily Tribune of August 23 had this to say:

NEGRO LEADERS PLAN CHAIN OF GROCERY STORES

Plans for a chain of 30 grocery stores, owned and run co-operatively in Chicago by Negroes, were made yesterday by a group of colored leaders at a conference with Albon L. Hosley, secretary to the president of Tuskegee institute. Hosley is visiting the city in the interests of the Colored Merchants Association an outgrowth of the National Negro Business league, active in many southern cities. The proposed grocery store chain is merely a forerunner of Negro owned cooperatives in every line of business, he prophesied.

"The most important problem before the Negro today is the bread and butter problem," Hosley said. "We can't keep going into white men's offices hat in hand asking for five dollars for this institution, ten dollars for that. We must quit rearing our brightest Negro boys to be doctors and lawyers and bishops, thus leaving the drones of our race to business.

"We must make the Negro an economic asset to the nation. There are 12,000,000 Negroes, 4,000,000 of these adults, and a limited supply of jobs. This is an age of cooperative business. The only way to emancipate the Negro today is by launching cooperative chains of business similar to those operated by whites."

Mr. Willingham told a representative of the Modern Farmer that his stores would open an outlet for large quantities of farm products—fruits, vegetables and poultry, eggs and butter from our colored farmers, and give them the advantage of getting better prices.

The colored population of Chicago is over two hundred thousand and there is fully a quarter of a million dollars spent by this 200,000 every week for food.

BROOD SOWS SHOULD FARROW TWICE YEARLY

An authority on hogs says that it is a bad practice to keep brood sows for 12 months and raise only one litter of pigs during that time. If pigs are farrowed before the first of October they will get a good start before cold weather, and can then be fattened for market during the winter months.

The market price for fat hogs is generally good in the spring months because there are fewer pigs being marketed at that time of the year. Of course in the far northern states where the winters are longer, this would not be very practicable, but can easily be done in the southern and middle western sections.

EDITORIAL

THE FARM BOARD

The September edition of the Review of Reviews says:

HOW THE FARM BOARD IS FUNCTIONING

"The Farm Board has not been performing sensational stunts, but it has already created a new spirit of hopefulness among the great agricultural interests of the United States. Its advice and moral support may prove to be more valuable than its advances of money. It does not compete with the Agricultural Department, but cooperates with it at all points. The Department's fund of information on crops and farm products of every kind would astonish the citizen who is not familiar with agricultural statistics and research. Foundations have been well laid for unifying the marketing methods of producers, whether of wheat, live-stock, fruit dairy products, cotton, or tobacco. The provision in the new law for a revolving fund of $500,000,000, to be loaned at 3 1-2 per cent. to farmer-owned cooperative agencies, has naturally raised the question how this great sum is to be obtained. At present there is no prospect that Farm Board bonds will have to be issued. The Treasury will be able to advance money from time to time, and no special financing will be required. It is not so much the lack of available capital as the lack of coordination and thoroughly capable mangement that has kept agriculture from lifting itself to the economic status of what we call "big business." The Farm Board is not at the outset trying so hard to find people willing to borrow large sums of money as to put its finger on the difficulties here and there that stand in the way of efficiency. For several years, in this periodical, we have advocated the establishment of a Farm Board of high qualifications as the starting-point for agricultural relief. The tendency to anticipate the future, and to provide against every conceivable contingency, was responsible for the long delay in getting any kind of farm legislation adopted. If equalization fees or debenture subsides are needed, the Farm Board's experience will in due time afford a demonstration. Having been in existence only a few weeks, the Farm Board has already established contacts with representatives of almost every important group of agricultural producers, and is in touch with every part of the country. It gave zest to the annual session of the cooperative interests meeting this year at Baton Rouge, Louisiana. Chairman Legge and other members of the board were present."

There are lots of our farmers who seem to think that the only thing necessary to get a loan from the Farm Board is to simply tell them the amount they need.

The first requisite necessary is to organize, and we have been giving quite a bit of space in the Farmer to this fact. Get a unit in your county organized. Elect your Chairman, Secretary and County Agent.

The American Farm Federation (white) has a campaign on for new members that will go into practically every state in the union. This campaign is to last practically all of September. When the white farmer is practically a unit and the colored farmer still partly organized it will not be a difficult matter to understand why we do not get recognition.

MR. DAVID JACKSON'S LETTERS

326 Spring Street, Sandersville, Ga., Sept. 2, 1929.—Modern Farmer, 447 4th Avenue, North, Nashville, Tenn.,—Gentlemen:— Your letter of the twenty fourth of July came just about the time when I returned from summer school. I should have sent you my subscription on the arrival of your letter, but I was a little neglectful. However I hope it is not too late for me to enroll. I feel as if I cannot do without the paper. It is a source of inspiration to me and mine.

We are looking forward for a good return from Washington County this year. The farmers have been building their soil by planting winter Legumes and using barn yard manure. In making my survey about three weeks ago I found that quite a few farmers were picking cotton. Beginning two weeks ago the cotton mills of Sandersville, are pretty busy, and as far as noticeable they will be more busy throughout the month of September as there are many fields that are not, or just about opening.

We are encouraging the farmers of Washington County to use more soil building crops and plenty of barn yard manure, so that the dry sand hills of Georgia, may be built up and farmers will be double paid.

You may use this bit of news if it is desirable.

Wishing the "Modern Farmer" all success.

I am,
Yours truly,
David A. Jackson.

MISS NELL B. NICHOLLS IN AUGUST WOMAN'S HOME COMPANION SAYS

Lids off Green Vegetables

If this new rule in cooking is followed peas, spinach, beans and other foods of similar hue will come from the not unfaded. The reason is explained by Miss Lela Joy Bennett of the Iowa State College in this manner: The vegetables contain volatile acids. When a lid is used these condense on it and drop back on the food changing it to an olive or bronze green. If the cooking utensil is uncovered, the acids escape and the bright green color is retained.

Although the green coloring is not soluble to any great extent, Miss Bennett considers it advisable to cook the vegetables in as large pieces as are attractive to serve in order to preserve vitamins B. and C. which are water soluble. This also will help to conserve the more soluble minerals such as iron and phosphorus.

Parsley Carries Off the Honors

Of one hundred and fifty green foods studied by two chemists, W. H. Peterson and C. A. Elevehjem of the University of Wisconsin, parsley was found to have the highest per cent of iron. Even spinach, long heralded as an iron food, has to take a back seat when parsley appears. In consequence this green, hitherto employed extensively for a garniture, is being promised a more important place in the menu.

Parsley butter as a sandwich spread is an interesting way of introducing this newly important green into the diet. Wash parsley and drain it thoroughly. Then using the nut knife of the food chopper, grind up enough parsley to fill a cup. Save a few of the sprigs for garnishing the plate on which the sandwiches are served. Blend this ground parsley with about 1-2 cup of well-creamed butter until it makes a smooth-spreading mixture and season with 2 tablespoons lemon juice and 1-4 tablespoons salt. Ground watereress, carrots, raw cabbage and celery and grated orange rind may be used in other butter fillings.

No Excuse for Canning Failures

Research and practical experience have demonstrated, says Dr. A. F. Woods, director of scientific work, United States Department of Agriculture, that non-acid food products like asparagus, beans, corn, peas, beets, spinach, meats and fish cannot be canned safely by processing in boiling water but must be sterlized under pressure with approved time and temperature. Pressure cook are now standard equipment and are readily available at small cost. The department does not recommend any particular make, although attention is called to the importance of having the pressure kettle equipped with a thermometer and a pressure gnage for proper control.

"There is now no excuse," says Dr. Woods, "for continuing to take risks involved in canning non-acid foods without adequate pressure cooking."

A CUP WITHIN A CUP

Accurate measurements are essential to success in cooking New measuring cups made according to specifications of the United States Bureau of Standards, which means they are accurate, are appearing in many shops. They are made of aluminum and come in a set of four —one fourth, one-third, one-half and one cup sizes.

OHIO AND ILLINOIS FARMERS USING LIME

Ohio farmers used more than 210,000 ton of liming materials on their soils in 1928 according to sales records obtained by the soil department of the state university. About 180,000 tons of this amount was of agricultural limestone. About 18,000 tons of hydrated or burned lime was also used and about 12,000 tons of other liming materials, including agricultural slag.

On 13 farms in Illinois the use of limestone increased the profits an average of $2,222.00 a year. The gross receipts from the farms on which lime was used were 27.72 per acre compared to 21.14 for the unlimed farms in addition to operating costs.

These limed farms grew fours bushels more corn, eight bushels more oats and nine bushels more soy beans than the unlimed farmers. In addition they furnished more legumes for both hay and pasture thereby making the livestock more profitable.

Lime pays two ways. It makes better paying crops and these crops make more profitable livestock. Sour land is unprofitable.

SEX FIXED BY MOTHER'S NOSE

LONDON, April 13.—The contour of a woman's nose and shoulders indicate whether her children will be boys or girls according to Mrs. Erskine, wife of the member of the House of Commons from Westminster.

Mrs. Erskine, who has made a long study of the subject, claims to have foretold with almost exact precision the sex of an unborn child by observing the tilt of the future mother's shoulders and hips.

In outlining her theory Mrs. Erskine said:

"When the left shoulder is higher and shorter from the neck to arm than the right one, or when it is pushed out and forward, the organs corresponding to that side will be less well developed, dwarfed or congested. There will then be a natural preponderance of boys born to that woman.

"When the right shoulder is hunched and awkwardly tilted, the curvature will have affected the organs to such an extent that to these women daughters only will ordinarily be born.

"On the other hand the girl like a 'straight young sapling' will be most likely to have sons and daughters alternately."

Mrs. Erskine has formed another queer conclusion from her observations.

"A woman with a nose slightly crooked and inclining toward the left is the potential mother of sons," she says. "If the turn is to the right, then daughters are the likely offspring."

DRINK MILK AND GROW TALL, CHICAGO TOLD

Drink milk and grow tall.

This is the advice of M. O. Maugham, executive secretary of the Milk Council of Greater Chicago, who points to Sweden as an example of a milk-drinking country.

"The Swedes, according to a survey made by Professor J. W. Hulcrantz of the University of Upsala, Sweden, are tallest people in the world," Maugham said. "The height of the average inhabitant of Sweden is 5 feet 11 inches."

"The United States bureau of statistics show that Sweden drinks more milk than any country in the world. The average Swede drinks seventy-one gallons of milk a year. The average consumption for an American is 55.3 gallons."

Ergo, according to Mr. Maugham, if you would be tall, go to Sweden—or stay here and drink more milk.

CO-OPERATION

"Co-operation is not merely a means of saving a few dollars or a few hundred dollars in the purchase of supplies or the marketing of produce (though when properly managed it brings that result), but rather it is a movement which aims to lift humanity to a higher level, morally and intellectually as well as economically. Co-operation seeks to make it impossible for one man to make profit at another's expense, to substitute service for profits as the motive of our productive and distributive agencies, and in its practical aspects to bring the necessities of life from producer to consumer in the cheapest possible manner, without profit, with a fair return for every necessary service rendered."—The Scoop Shovel Exchange.—Exchange.

HEROIC YOUTH WHO DREW HAYFORK FROM OWN ABDOMEN DIES

Dodgeville, Wis, July 22—(Special)—Twenty-four hours after he had, without assistance, withdrawn from his abdomen the heavy prong of a harpoon hayfork, Laverne Peterson, 15, died in a hospital here today.

Sliding from the haymow with the broken fork in his arms, the youth was impaled on its prong when his progress was stopped by a cross beam. Other workers were so terror stricken at the ghastly sight that they were unable to move to his aid. Peterson, however, calmly grasped the lever which prevented the harpoon from spreading and withdrew the shaft, which was deeply imbedded. He then walked unassisted to the house and later refused help in moving from an automobile, to the hospital.

The youth's courage did not desert him up to the moment of his death, according to physicians.

LAMB HAS SIX LEGS ON WHICH TO GAMBOL

AURORA, Wis., July 20,—A six legged lamb, was born on the farm of Benjamin F. Williams, near here It is healthy and able to walk almost as well as a normal animal. It has two front egs, which are a little weak, and four back legs, all of normal length. —Ex.

WHITE POTATO CROP

The 1929 crop of white potatoes will in all probability run smaller than 1928 yield by 75,000 million bushels, and it is of course means higher prices to the growers, if they are properly marketed.

Maine will have the largest yield of any state, the estimate being something over 41 million bushels, which is an increase of 3 million over 1928 crop.

Minnesota and Wisconsin as well as Michigan, all large producing states, will each run from 2 to 21-2 million bushels less than last year. The 1928 crop was 462,943,00 bushels and the total for this year is estimated at about 385 million bushels.

TAILORING AGENTS! $5.00 and $6.00 Profit in Advance on every Sale ALSO BONUS

Competitors have no chance against this premier of all tailoring lines. Year in and year out our agents earn big and steady profits. Even beginners make as much as $100 per week, and up.

SELLING PRICE Fine ALL Wool Suits $23.50

Woods' Suits, topcoats under any other name would cost $35. Made strictly to measure in the latest fashions with tailoring that exemplifies the craft. Guaranteed linings and trimmings. Always a perfect fit. Complete outfit of large samples, fashions, tape measure, order blanks, etc. put up in beautiful carrying case FREE. Write now for exclusive agency. Experience not necessary, but if you have had some, mention it.

Application For Membership
NATIONAL FEDERATION OF COLORED FARMERS
Vincennes Hotel, Chicago.

As a Farmer, I believe the time has arrived when the Colored Farmers should form a National Organization devoted to diversified production, grading, packing, shipping and marketing of farm products and to the purchase of needed farm supplies through co-operative methods, to the end that a more prosperous financial condition may result from their efforts as producers.

I herewith subscribe and forward $5.00 for membership in the National Federation of Colored Farmers for a period of 12 months from date.

ALFALFA FOR HOGS

Chicago Tribune

Milk and bacon hog producers in the central west are finding that alfalfa not only furnishes excellent grazing for milk cows but is a good pasture for pigs. Alfalfa is perhaps better known as a hay crop than as a pasture crop. Animal nutrition men claim that alfalfa is he best of all hog pastures.

L. A. Weaver, a Missouri hog feed specialisist, points out that alfalfa pasture for hogs is very palatable and since it contains a relatively large amount of protein and mintral matter it is admirably adapted for supplementing a ration of corn which is low in these nutrients. The crop begins growing early in the spring, makes a relatively heavy growth during the summer, especially if the season is hot and dry, and continues its growth late in the season. This gives a long grazing season and big yields.

Missouri station tests show that with pork a 10 cents a pound the return from alfalfa, when used as a hog pasture was $59.18 an acre. This was 116 per cent more than the return from bluegrass and 52 per cent more than the return from red clover. which is probably the next best hog pasture, according to invesigators.

Mr. Weaver explains that one of the disadvantages of alfalfa as a hog pasture is that it must be seeded prior to the year it is to be used. If seeded in August it may, in an open and favorable fall, furnish some pasture he first year (1930), although it should not be pastured unil the following year, Mr. Weaver says.

Field crop men find that to grow alfalfa successfully the soil must be well drained, deep, fertile. If the soil is sour, lime should be used to correct the acidity. Fifteen pounds of good seed to each acre should be sown in late summer. If the seed is only average an additional five pounds to the acre should be sown. —Ex.

RAILROAD WILL PLANT 40,000 TREES YEARLY

Forty thousand trees will be planted annually along the Burlington railroad west of the Missouri River, beginning this year, according to a planting program announced yesterday by F. E. Williamson, president of the road.

He says that the trees will be planted in three rows on each side of the tracks, the first row form the rails to be of Caragana, or China pea tree the second row to be Russian olives, and the third American elms.

In some sections box elder and honey locust will alternate, and in still other districts Scotch, Austrian and jack pine will be used. The trees will be planted according to soil and climatic conditions.

These plantings are being made for the most part in western Nebraska and eastern Colorado. Some of this territory is comparatively treeless because the proper varieties of trees for these particular regions have not yet been established. The trees now being planted have been demonsrated as especially well adapted to the prevailing climatic conditions of this territory through experiments at state and federal experiment stations located in these communities, accord ing to Mr. Williamson.

The planting plan is in line with the movement among citizens to increase the number of trees in each locality. The plantings, however will serve a dual purpose; in addition to beautifying the landscape they will provide natural hedges for protection of he right of way from drifting snow. The trees are being planted under the direction of the federal and state forestry officials in cooperation with the railroad.

Last season the company planted about 7,000 trees in an initial experiment and 80 per cent of them lived The balance were destroyed by Jack rabbits and grasshoppers.

Interest in tree planting has become so general that it is estimated that over three-quarters of a million, trees are being planned in Nebraska, this year, said Mr. Williamson.—Ex.

13,162 POUNDS OF MILK

SIX HUNDRED NINETY-TWO POUNDS OF BUTTER FAT

Spermfield Owl's Peerless owned by John R. Sibley of Spencer, Mass, produced 13,162 pounds of milk and 692 pounds of butterfat in 305 days. This is a Jersey cow.

Lady Segis Burk, a Holstein, produced 25,812 pounds of milk and 1,012 pounds of butterfat in 12 months. She is owned by F. W. Durvin and Son, of South Salem, Oregon.

A silver and gold medal has been awarded to Ralph Do It, a pure bred Jersey cow, owned by H. H. Goss of Ann Arbor, Mich. This cow is only two years old and produced 12,187 pounds of milk and 700 pounds of butterfat in one year. This record makes her the state champion of her age class.

Julian Rippling's Ruby, owned by Mr. Blackwell, of Glendora, California, holds fourth place in class CCC. Her production in ten months on twice a day milking was 14,078 pounds of milk and 592 pounds of butterfat. Gypsy Dido, a Jersey cow now in her 12th year, produced 8,374 pounds of milk and 461 pounds of butterfat in one year.

On the Baker farm at Rockingham, New Hampshire, Hollyhock Bess recently completed a record of 972 pounds of butterfat in 12 months.

Lily's Pet Mabel, owned by William J. Behrman of Forest Grove, Oregon, has qualified for a medal. This Jersey cow has a year's record of 12,221 pounds of milk and 852 pounds of butterfat.

POWDERED FRUIT

Such fruits as apples prunes, plums, peaches and pears that drop from thetrees and bruised are now dried and ground into a powder and is being sold for making jellies. The powder retains its natural taste of the fresh fruit and will keep for several months.

APPLE SCAB

Hon. T. J. Talbert, Chairman of the Department of Horticulture of the Missouri College of Agriculture says that weather conditions this year have made it pretty bad for the spread and development of apple scab. This disease causes the dropping of apples from the trees and black spots to appear on the apples when ripe—causing the apples to be forced on the market as low grade. Apple scab should be avoided. It can be avoided if the growers will only spray properly. Orchads that were sprayed will not have this disease in the apples at harvest time.

It should always be remembered that the attack may be as serious another year as it is this season, and to control the disease the proper spray applications must be made.

ATTENTION ILLNOIS WHEAT FARMERS

The Hessian fly is the great worst of all pests. It is making considerable headway in Illinois. Wheat sown before the recommended fly free dates will be in danger of heavy damage according to the Illinois Natural History survey.

Damage is threatened to early sown wheat despite the fact that parasites preying upon the fly are heavier this year than last.

Another wheat pest—the joint worm was found in two or three counties in Illinois.

Increases in Hessian fly infestation are more marked in the central and southern part of the state than in the northern section.

Mr. W. P. Flint, state entomologist, says central and southern counties showed stubble infestation running on the average of 2 to 4 per cent last year and 8 to 33 per cent for this year. This is quite an increase.

On the basis of ten years' experimental results the seeding dates when wheat will most likely escape Hessian fly damage and produce heaviest yields are as follows:

For all points from the northern border of Illinois south to a line drawn across the state from the southern edge of the Rock Island county and through central part of Will county, September 18th to about September 25th.

For points south to a line drawn across the state through the northern fourth of Hancock county and the southern part of Iroquois county, September 22 to about September 30th.

For points south to a line drawn across the state through central part of Pike county and the central part of Edgar county, September 27th to September 30th.

For points south to a line drawn across state from central part of Madison county to southern border of Crawford county, September 30th to October 5th.

For points south to a line drawn across the state through the southern third of Randolph county to the third of White county, October 5th to about the 9th.

For all remaining section of Illinois, not above mentioned, October 7th to 10th.

TO PREVENT ROPY MILK

Most farmers who have cows at some time or another found their milk to be ropy, and especially in the late summer and early fall. Most all milk troubles are caused by bacteria. Germs grow in milk faster than through any other food. Bacteria causing ropy milk is generally due to state water. You can use stale stale water. You can use stale water in washing utensils and the result will be ropy milk.

It is quite often caused by cows drinking stagnant water.

Wash all utensils with clean water, then scald, steam and sun them. Wash the cow's udder and flanks with warm water with a bit of disinfectant before milking. See that the cows do not get stagnant water

TO THE FARMERS:

The Modern Farmer contains information every month that you will not find in any other farm journal. It is the only journal paper published by and for our people that is devoted exclusively to the farmer and his family.

The price is in reach of every one—being less than 2 cents per week. During these times when the farming industry is undergoing so many changes, and there are so many advantages that can be had by our colored farmers if they are only aware of them, it is absolutely necessary that you should know what is going on. Three-fourths of the white farmers are subscribers to the white farm magazines and journals. They know just what is going on.

Fill out the blank—secure a money order for $1.00 and mail at once:

The Modern Farmer,

447 Fourth Avenue, North,

Nashville, Tenn.

Whitens Brown Skin
in only 1 minute or money back!
Test Amazing New Fluid Without Risk

If you want to quickly whiten and completely change the color of your skin in just one minute, you should make this simple test.

First, look carefully in your mirror and see just how dark your skin now appears. Then, give your face a one minute massage with Spanola—made from the newly rediscovered old Spanish Formula for instantly whitening skin.

In less than one minute you will see truly amazing results. A light, white-toned beautiful skin will appear that will be envied by all your friends and acquaintances—but it is not a matter of what your friends will say or think—your mirror will tell you the story. Instantly prove to yourself, without question or doubt, the effectiveness of Spanola. It is the greatest beauty discovery of all times.

It will give you the alluring natural skin beauty you have always wished for in a harmless, beneficial and instantaneous way. No matter how dark or unattractive your skin may be, you should test SPANOLA and see what a difference it makes.

Make Test at Our Risk

Would you like to test Spanola without risk? Would you like to see how much whiter and more beautiful it can make your skin? See what a remarkable improvement it makes in less than one minute, then if not simply delighted, your money will be refunded for the asking.

Send no money. Simply mail coupon or write. When package arrives, pay postman only $1.67 for the regular large size bottle. Test Spanola just once. Then if not delighted, return it and your money will be refunded, without comment. Mail coupon today. Dept. B.

A Dangerous Condition

"There was a time when my health was not so good," says Mr. Miles Hopkins, of Catlettsburg, Ky. "I suffered a great deal from gas pains. My system was saturated with poison which was not properly eliminated. From time to time I had severe headaches, and I felt sluggish and dull.

"I knew of Black-Draught as a medicine for

CONSTIPATION

so I thought I would try it. For a while I took a small dose every night until my system was rid of the accumulated poison.

"I gained in weight and my general health was good. That experience made me realize the merits of Black-Draught. I kept it in my home and when I begin to feel lifeless and dull, I take a dose, after which I feel O. K. again.

"I try to keep my system cleansed, and I find Black-Draught a great aid."

25 cents. All druggists.

OF INTEREST TO GREENHOUSE OWNERS AND CITY GARDENERS.

The Bayce Thompson Institute for Plant Research at Yonkers New York have found that illuminating gas has no place in a green house. It is death to plants even when in such small amounts that the human nose cannot detect it.

The institute says that gas mains even as far as 2,000 feet away have been known to leak and the gas spread under a frozen crust of earth and seep into a greenhouse. Gardeners are advised to locate their greenhouses as far as possible from gas mains.

Using chemicals or the canary bird to test the presence of gas is not practical.

The Institute investigators found that carnations will go to sleep with only one part of illuminating gas to 50 to 60 parts of air. Easter lilies are stunned and acacias and roses shed their leaves or show their leaves turned backward.

Tomatoes are also sensitive to gas. Tests showed that vigorous young tomato plants grown in the warm greenhouse will immediately give warning of a gas leakage, as the plant will turn back their leaves with as little as one part of gas to 200,000 parts of air. The more vigorous the plants the quicker they will react.

The institute says that gas malns even as far as 2,000 feet away have been known to leak and the gas spread under a frozen crust of earth and seep into a greenhouse. Gardeners are advised to locate their greenhouses as far as possible from gas mains.

Using chemicals or the canary bird to test the presence of gas is not practical.

The Institute investigators found that carnations will go to sleep with only one part of illuminating gas to 50 to 60 parts of air. Easter lilies are stunned and acacias and roses shed their leaves or show their leaves turned backward.

Tomatoes are also sensitive to gas. Tests showed that vigorous young tomato plants grown in the warm greenhouse will immediately give warning of a gas leakage, as the plant will turn back their leaves with as little as one part of gas to 200,000 parts of air. The more vigorous the plants the quicker they will react.

and others so that the process may be applied with little difficulty, with certain results and at a small cost. The equipment, besides the room itself, can be obtained for $30, or less, and gas enough to ripen a carload can be purchased in a cylinder from supply houses for fifty cents. The room used for the ripening operations should be well constructed to prevent leaks; the temperature should be accurately controlled and one cubit foot of gas should be used to each 1,000 cubit feet of air space in the room. The cylinders should be kept away from flames and a special value is needed for measuring the flow of gas to insure the correct mixture with the air. The concentration necessary for ripening fruits is so low that, within a minute of two after closing the valves, fires may be lighted with safety. Bananas, tomatoes, celery, pineapples, cantaloupes, oranges, limes, lemons and grapefruit are among the products that have been treated on a large and successfully with ethylene.

Popular Mechanics.

LAWS AGAINST MIS-BRANDED SEED

Forty-five states now have laws regulating the sale of agricultural seeds within their respective borders. These laws vary in their respective requirements, but are all intended to give the farmer information as to the quality of the seed he is buyIng. The individual states do not have control over interestate commerce and therefore cannot prevent the shipment of agricultural seed into a State because it is misbranded in any respect.

Section 6 of the Federal Act prohibits the shipment in interstate commerce of misbranding seeds and Is intended to supplement State laws.

This legislation enables the United States Department of Agriculture to co-operate with the State in cases where gross misrepresentation occurs. This section of the act applies to false statements of all kinds, including origin, kind, and variety, as well as purity and vitality.

Several cases have been prosecuted under this act.

FRUITS ARE RIPENED BY GAS TO AID GROWERS

From ancient time when the Chinese ripened hard pears by placing them in a tightly closed room and burning incense around them, fruits of various kinds have been matured artificially by one means or another, after an early picking, to insure bet ter quality and flavor and to aid the grower in marketing. Recently, the use of ethylene gas in ripening fruits has been developed to a high degree of success by Prof. R. V. Harvey, of the University of Minnnesota,

RANGE PARALYSIS IN CHICKENS

Hon. Paul Potter an authority on poultry in a recent edition of the Tribune says:

Taking its heaviest toll during the late summer and fall months by known as range paralysis may be responsible for some of the losses which Illinois poultry raisers will suffer during the coming months, according to a warning issued by Dr. Robert Graham, chief in animal pathology and hygiene at the College of Agriculture, University of Illinols.

The same disease in chicks six to twelve weeks of age is characterized by bloody diarrhoea according to Dr. Graham. Young chicks which apparently recover or survive in a flock where that has prevalled may suffer from the paralytic form of the disease during the fall months. The disease gets its name from the fact that it frequently occurs on the range.

Much can be done to prevent range paralysis in pullets during the late summeh and fall months by guarding against diarrhoea in chicks. Ranges also may become contamlnated and perpetuate the disease. Clean ground and houses therefore are the chief weapons against the disease. Wholesome feed and water are important, while laxatives and intestinal anti-septics may give temporary relief. Milk in any form has been used extensively in the treatment of range paralysis. Powdered skim milk in the dry mash is a convenient way of feeding.

Success in treating the trouble depends on correct diagnosis. There are different causes of paralysis in fowls, and it may be hard to recognize coccidial or range paralysis from paralysis due to other causes Local veterinarians can differentiate between the different types of paralysis, althought obscure cases may require the assistance of a labortory.

COTTON PICKER AND CLEANER

A mechanic In Oklahoma has invented and now practlcally displaying a cotton harvesting machlne in western Texas.

It is drawn down a row and the plants led into a ramp and the cotton picked off by steel fingers. The cotton is then elevated to a hopper at the top of the machine. The trash, hulls and other foreign matter are separate from the cotton and thrown back on the field where they can be plowed under for fertilizer.

According to reports from the first demonstration there was quite a saving in the harvesting of the cotton In comparison with the cost of the hand picked method.

From the Savannah Journal:—

Twenty-five years ago the late Booker T. Washington urged Negro farmers to organize; and through his interest a publlcation known as The Negro Farmer was started and operated for more than three years. The pertinent observation of Mr. Charles E. Hall in last week's summary would have been unnecessary had Dr. Washington's advlce been heeded. Twenty-five years of service of such an organization would have given the Negro farmer some leverage to assure him some of the direct benefits of the $500,000,000 Revolving Fund made available by Congress in the Farm Relief bill. Speaking in Atlanta last week, Secretary Hyde of the Department of Agriculture, said of the functions of: the Farm Board: "The Board does not buy or sell. It has no right to engage in business, its job is to foster the organization of agriculture, to finance farmer owned and farmer controlled cooperatives, which may buy, sell, process, or store farm commodities.'

Stephen Bell, writing in Commerce and Finance says: "It will be observed that the Farm Board cannot itself spend any of the money in the Revolving Fund. It can only loan this money to the cooperative bodies organized by the farmers or to the 'stablization corporations created by the cooperations.'

James P. Davis founder of the National Federation of Negro Farmers, which was organized about a year ago,, said in an interview this week: "Our organization is the colored farmers' only hope. Every white farm organization in the nation is now engaged in a membership drive, but not one of them is looking for Negro members Negro farmers are not invited to the public meetings, usually held in the county court house. No Negro farmer has ever becn a delegate to any of the meetings of the American Farm Bureau."

SMALL FARM CO-OPERATIVES MUST MERGE TO GAIN HELP

(Chicago Tribune Press Service)

Washington, D. C., July 22.—(Special) Combinations of small farmers' cooperative organizations to eliminate duplication of terminal and warehousing facilities must be effected before financial assistance will be extended by the federal farm board under a policy announced today. The announcement was made in response to an appeal from Florida citrus fruit growers for help to market their fall crops and stem the ravages of the Mediterranean fruit fly.

During today's hearing of the petitions of the Florida citrus exchange and the Florida Unlted Growers for loans to finance the installation of equipment to kill the larvae of the fruit fly it was disclosed that both organizations have terminals and warehouses scattered through the same section.

Representatives of the citrus farmers were advised that no loans would be made until they merged and thereby reduced expenses by eliminating duplicated facilities.

Legge Evolves Policy

Commenting on the decislon, Alexander Legge, chairman of the farm board, declared the new policy would be followed in future dealings with other cooperatives as a means of placing marketing systems on a sound financial basis. Out of the nearly 12,000 cooperative groups in the country, only 500 are comprehensive organlzations, and it has been estimated that if the indicated mergers are accomplished not more than 1,000 cooperative organizations will exist.

The board's announcement of the new policy was contained in a review of the hearing granted the Florida citrus growers, which concluded:

"The board was most sympathetically inclined. It pointed out to this committee that the evident inention of the argricultural marketing act was to encourage group action to a point so that intelligent direction and control could be had of the movement of crops so as to avoid surpluses and to avcid gluts and famines and unnecessary and expensive duplication of facilities.

TOLD TO CONSOLIDATE

"The board therefore sugested to these two cooperative groups that they should first get together in a consolidation of this cooperative movement and come to the board with a unified program looking forward to a more orderly distribution of the cltrus crop of Florida. They were assured that if, they could do this the board would go just as far as it possibly could in helping to finance them in their most difficult situation."

Exchange.

FARMERS' CO-OPS INCREASE DAIRY PRODUCTS SALES

Dairy products to the value of $640,000,000 were marketed through farmer controlled cooperative associations in 1928. This is an increase of $20, 000,000 over the final estimate for 1927, according to the United State department of agriculture. The items making up the total are: Cooperative creameries, $245,000,000; milk bargaining associations, $200,000,000; milk distributing associations, $150,000,000; cheese factories, $30,000,000, and cream stations, $15,000,000.

Federal records show that nearly a half billion pounds of butter was made in producer owned plants in 1928. More than 100,000,000 pounds of cheese and about 50,000,000 pounds of milk powder were also manufactured by the cooperatively inclined farmers. Abuot 2,500 separate farmer owned dairy enterprises, stretching from ocean to ocean, were active during the year.

Present indications are that a larger business will be transacted in 1929 than in 1928, according to federal men.

—Chicago Tribune.

AMERICA USED 348 MILLION GALLONS ICE CREAM LAST YEAR

Washington, D. C.—America's addiction to ice cream is increasing annually and last year 348,048,000 gallons were consumed in this country.

The bureau of agricultural economics today, in making public the statistics, estimated the per capita Ice cream consumption in 1928 at 2.90 gallons. Ten years ago, in 1919, enough ice cream was sold to have supplied each inhabitant with 2.49 gallons, while in 1910 the consumption was only one-third what it was yast year. Per capita estimates for 1910 were 1.04 gallons.

TO OUR COLORED FARMERS:

The campaign for membership in the Federation is actively on, and will continue through September and October.

We plan to have our President visit several states, and aid in the organizing of units for the Federation. There is no charge for this service, and the only requirement necessary is for each community to defray the railroad expenses.

Any county or community that is desirous of having our President visit them while on this tour, and willing to guarantee the railroad expense, send in your name and approximate date and you will be included in the itinerary.

HONEY AND MONEY IN BEES

(Continued from page 1.)

co-operative associations are also being formed. The American Honey Institute of which Dr. H. E. Barnard, of Indianapolis, Ind., is secretary, is making quite a study of both bees and honey.

Our colored farmers who grow alfalfa and clover should try out the "bee business." There is honey and honey in it.

GENERAL CROP NEWS

(Continued from Page 1)

sign any paper selling your cotton unless you know just what you are doing.

Wheat is in strong position and in our opinion will bring much better prices during October, November and December than at present.

White potatoes are somewhat easier due to local crops coming in. The crop as a whole is much less than last year and we look for good prices.

Sweet potatoes have held up remarkably well the entire year, and retail prices continue around 4 pounds for a quarter, and in some of the fancy retail grocery stores new sweet potatoes are selling readily at 10 cents per pound. Virginia and Tennessee are furnishing the bulk of the sweet potatoes at present.

Water melons and other fruits are holding up in demand due to the continued hot weather and fruit growers will have no reason to complain as to prices they have been getting for their producs.

The cabbage market has not been doing so well, due to large supplies of home grown coming in from nearby truck gardens. Prices to the wholesale trade run around 1.50 to 175 per 50, and 60 pound crate. The retail price is about 5c per pound.

Monthly Crop Estimate of Sweet Potatoes August.

Principal States Only

New Jersey 1,837,000 Bu. last years crop 2,175,000.

Delaware 1,011,000 Bu. last year's crop 980,000.

Total all states last year's crop 77,127,000 Bu.

LAST OF GEORGIA COAST ISLANDS PASSES INTO HANDS OF RICH MEN

St. Catherine's Once Owned by Button Gwinnett, Signer of Declaration of Independence, Believed Saved From Separation.

Special To The Christian Science Monitor.

SAVANNAH, Ga.,—St. Catherine Island, near the city of Savannah, Ga., which has just been bought by James C. Wilson of Louisville, Ky., and New York, C. M. Keys of New York and Howard Coffin of Sapelo Island and Detroit is about the last of that beautiful string of Islands on the South Atlantic Coast to go into the hands of those who will beautify it.

St. Catherine, Sapelo, Warsaw, and Ossabaw, each of considerable size and each isolated and yet in close reach of the mainland by telephone, water, or flying machine, have now passed into the hands of men of money and leisure who can afford to own and exploit them for their own delight and entertainment.

St. Catherine, the last to be brought at a figure something like $1,000,000, is one of the most picturesque of the number. The purchase was made from the estate of Jacob J. Rauers who bought it in 1876 from Anna M Rodriguez.

Plenty of Game on Island.

Mr. Rauers' family had kept the island intact until its purchase by the three buyers during the past few weeks. Many consider St. Catherine the most beautiful of all the islands on the chain that extends for soveral miles along the coast of Georgia. There are 23,000 acres on the island and most of it is high land. It is stocked with game of all kinds.

There are 12 miles of South Atlantic beach and numerous ponds and estuaries where fish abound and where wild ducks come by the thousands in the winter season.

St. Catherine dates back to the days of the Indians who often went there to hunt and fish and camp. The Spaniards knew it as early as 1566 when they sent missionaries there to teach the Indians. The foundations of mission buildings erected by the Spanish are still discernible. The Spaniards were very active from about 1566 to 1680.

Once Owned by Indian Premier

From dates estimated at from 1747 to 1765 Mary Musgrove, the Creek Indian Princess, lived on or near St. Catherine and she prevailed upon Malatche, the Creek Chief, to convey to her St. Catherine, Ossabaw and Sapelo Islands. "So long as the sun should shine and the waters run in the rivers."

Button Gwinnett, one of the signers of the Declaration of Independence from Georgia, and whose signature is valuable because it is so scarce, had his attention attracted to the island and in 1765 he bought it from Mary Musgrove. He built a house upon it which still stands and is habitable. It stands near Waldburg Creek and in its day it must have been one of the most commodious dwellings of this immediate vicinity.

Button Gwinnett, or his administrators, sold the island to the Waldburg and Johnson families, who used it for cotton growing and in other agricultural pursuits. The island passed through several hands until Mr. Rauers secured it in 1876.

It is anticipated the new owners will spend much money in putting modern conveniences on the island One of the things that it will soon have will be a wide and adequate landing field for flying machines. Each of the news purchasers is a 'flying' enthusiast. They believe firmly that the air is to furnish the field for the greatest advance in quick transportation methods the world has ever known, and they are going to fit out a section of St. Catherine to share in this development.

SELLING EGGS BY WEIGHT

Government breeding specialists have learned that it is much more difficult to breed into a flock of chickens the factors which are responsible for the size and quality of eggs than it is to breed for a greater number of eggs.

The year book of Agriculture for 1928 says "In the interest of the future of the industry, a minimum standard of 2 ounces per egg or 24 ounces per dozen has been adopted as a basis for culling the department's flock of breeding hens." To sell eggs by weight instead of by dozen would be protection to the poultry farmers who feed scientifically and produce large eggs.

THE MODERN FARMER

Vol. I. Nashville, Tenn. and Chicago, Ill., October 15, 1929. No. 8.

WARNING ON APPLE RUST

FARMER'S ADMONISHED TO EXERCISE CARE THIS YEAR

Spraying Both the Apple and Red Cedar Trees Highly Indorsed

Apple rust is doing considerable damage this year. It can be removed by the removal of red cedars from which the rust spreads. Cedars within the range of about a quarter of a mile of the orchards are removed there is likely to be very little result.

Spraying both the apple and red cedar trees and cutting the galls from the latter will help to reduce the amount of rust, but it will not prevent it entirely.

Where there are valuable red cedars on lawns located near orchards it will be well to cut off the galls. Dr. Stakman disease specialist University of Minn. is authority for the above.

Apples that are subject to the rust are Crab apples, Whitney, Wealthy and Jonathan.

The government estimate of apple crop for 1929 is 29,473,000 barrels Last year's crop was 35.308,000 barrels.

The above was taken from the Daily News and our colored farmers should beware. Our slogan has always been "Stay on the Farm."

FARMS BELIEVED WORTHLESS BRING FORTH MILLIONS

Hollandale, Minn.,—In Hollandale, where six months ago many settler families struggled against virtual starvation, a vein of vegetable gold valued at nearly $2,500,000 has been uncovered in the black muck of their truck farming lands.

Families who lived only on potatoes last spring, and sometimes very little of those, have seen potato wealth take the place of potato poverty as they harvested a vegetable and truck crop worth more than $2,500,000, it was said today by R. F. Hall, director of produce marketing in Minnesota for the United States department of agriculture.

Out over the flat 14,000 acres of the Hollandale irrigation project hundreds of loaded trucks and wagons are crowding the roads where only last winter relief expenditions set forth through snow drifts to carry food and clothing to 120 suffering families in the district.

Horses that had died from starvation have been replaced by sleek, well fed teams and in many cases motor trucks by the wealth drawn from the reclaimed lake bed, as between 50 and 85 carloads of potatoes are shipped to market each day at a price of $2.50 a 100 pounds.

Farmers who petitioned the court last winter for relief from obligations when they found that $500 an acre land and 30 cents a bushel potatoes did not mix learned that a $1,000 an acre crop substracted from $500 an acre leaves a tidy sum.

Chicago Tribune.

MODEL HOMES PLANNED TO KEEP YOUTH ON FARM

Oklahoma City, Sept. 14 (A. P.).—A model farm home is to be erected in each of Oklahoma's 77 counties. This "better farm home" movement sponsored by the State Chamber of Commerce has been organized to keep boys and girls from deserting agriculture.

By demonstrating the advantages of ultramodern furnishings in rural homes, it is believed, farm life may become more attractive to many who otherwise might leave it.

GENERAL CROP BULLETIN ON FRUITS AND VEGETABLES

OCT 13 1929

CONECUH COUNTY ALABAMA

STATISTICS TAKEN GIVING THE VALUE IN UNITED STATES MONEY

Statistics taken from the Census Bureau of the Department of Agriculture at Washington, D. C.

Value of crops harvested 2,126,362 dollars.

Principal Crops

Peanuts 2,411 acres, 43,411 bushels.
Cotton, 11,262 bales.
Sweet potatoes, 83,877 bushels.
White potatoes, 38,432 bushels.
Strawberries, acres 1,037.
Watermelons, 187 acres.
Peaches, 13,489 bushels

Value of mules in the county over half million dollars.

Number hogs in the county 20,655.
Number chickens, 85,293.
Number milk cows, 3,456.
Number white farmers in the county, 1,779.
Number colored farmers in the county 1,335.

This county is located in the southern part of the state. the land and climate is suitable for orange pecans. There are almost as many colored farmers in the county as there are white farmers, and this shows that the colored farmers produce about half the crops.

If these 1,335 colored farmers organize and have their own officers and ship all of their products like straw berries, sweet potatoes, white potatoes, melons, cotton etc., they will get better results. If these 1,335 colored farmers are in an organization they can wield more power and get better loans.

If the white farmers organize and the colored do not, it will be a very easy matter to tell what will happen.

These figures are accurate and taken from the Government records.

If these 1,335 colored farmers buy all of their fertilizer, brand middlings, hay, cottonseed meal and other supplies in carlots, how many thousands of dollars will they save each year.

WATERWAYS BEST FARM AID PLAN, HULL DECLARES

Greater farm relief than any legislation congress will ever pass may be expected from the proposed lakes to the gulf waterways, Congressman William E. Hull of Peoria asserted yesterday, addressing the first fall rally of the Association of Cook County Republican Women at the Illinois Woman's Athletic club.

Congressman Hull said the building of the Panama canal crippled middle western commerce, while benefiting the east and the west coasts.

"In order that you may understand what I mean," he explained, "a grand piano can be shipped from New York to Los Angeles by water for $12.50. From Chicago to the same destination, by rail, the cost is $51.50.

"In less than fifteen months the nine foot Illinois river waterway channel from Utica to Grafton will be completed. We must prepare for it. Peoria has already voted a bond issue for $400,000 to construct a terminal."

Party politics was soft pedaled at the meeting, which was attended by 300 Republican women, with Mrs. Donald I. Graham, president, presiding. Two nationally known Republican women, Mrs. Lulah T. Andrew of Washington, president of the United States Housing corporation, and Mrs. M. D. Cameron of Omaha, national committeewoman of Nebraska, spoke on organization.

—Chicago Tribune.

UNITED STATES DEPARTMENT OF AGRICULTURE'S REPORT

Last Month Analyzed From Economic Standpoint by Department

Dry weather during August was chiefly responsible for the reduction of 24,000,000 bushels in the potato crop, leaving the latest production estimate at 349,000,000 bushels. This would be the lightest crop in ten years, except for that of 1925. The August decline was rather general, except in the New England and some western sections. Sharp decreases were made in the north central states. The crop in Maine was increased. In the important surp'us producing states, a reduction of about one-fourth from last year may leave only 239,000,000 bushels this season.

Sweet potato prospects also declined to 75,200,000 bushels, compared with 80,100,000 bushels in August, and 77,700,000 bushels last year. Some of the most important shipping states suffered a considerable setback.

The commercial apple crop was reduced slightly to 29.500,000 barrels, as against 35,300,00 bbls. in 1928 Production will nowhere be heavy, but in Virginia, New England and in some of the western states, the crop will be a little above average. Washington, the leading apple state this year has only about an average commercial crop. New York, second importance, has a commercial crop, 16 per cent less than that of last year, with a much larger proportion of Baldwin and McIntosh. In Virginia the crop is sizing up fairly well.

Peaches deteriorated during August in nearly all states, chiefly as a resulut of dry weather. The September forecast of 44,374,000 bu. is two (2) per cent less than the August figure. Prospects declined in New York and only 1,530,000 bushels are now expected there, or one-third less than last season. The Michigan crop is also decreased and the dry weather had kept peaches in both these states from developing large size. Colorado has more peaches than last year.

Pears were retarded by drought in Illinois, Michigan and New York so that the outlook for those states is not as good as it was a month ago, but prospects improved in the Pacific states, which have nearly 60 per cent of this year's pear crop, so that the total forecast has been increased slightly to 20,056,000 bushels, or about 4,000,000 bushels less than in 1928.

Prospects for grapes declined slightly in all important states except New York. The total crop is

$3,000,000 BREAD "AD" CAMPAIGN, PLAN OF BAKERS

Plans to expend $3,000,000 in a bread advertising campaign were discussed yesterday at the Stevens hotel at the convention of the American Bakers' association, which is being attended by 2,500 bakers from all sections of North America.

Frederick H. Frazier of New York told the delegates that America, the greatest wheat country in the world, eats less breat than any European country. He said the United States consumes one-half a loaf of bread a day per capita while France and England consume one loaf.

HOUSTON INFORMER'S ADVICE

TEXAS EDITOR URGES ORGANIZATION OF FARMERS

"The position previously assumed by The Informer, advising colored farmers to organize their forces, is now being brought directly home to the farmers of our race throughout the country.

If black farmers hope to get any assistance or relief from and through the recently appointed farm relief board, it is very obvious that they can obtain this succor only through an organized body.

If white farmers must secure financial aid from this board through an organization, then it does require a sage to see that Negro farmers must pursue a similar course if they are to be successful in getting any relief at the hands of this board.

This is an age of organization and combines, and the progressive tillers of the soil of other races have seen the urgent necessity of organizing their forces and pooling their interests for the common good of all their farmers; and colored farmers will do well to follow suit.

At best, colored farmers will not get much help from this farm relief board, for it seems that some way is always discovered to disqualify Negroes when it comes to reaping some benefit from certain federal measures intended as an aid to particular groups; and the fact that the Negro is unorganized and therefore unable to push his claims with anything like telling force, always works to the detriment of our racial contingent.

We hold our farmer's conferences and short courses in all sections of the South, but when it comes to perfecting and maintaining organized effort for the good of all the farmers, we are weighed in the balance and found wanting.

This situation ought not to exist, for the farmer is the backbone of our American economic system; but without organization he is at a disadvantage in enjoying and sharing

(Continued on Page 6)

FARM HEADS OF SOUTH MET MONDAY

Tallahassee Fla., (AP)—The fruit fly situation in Florida is to be placed before agricultural heads of the south at a meeting of those officials, was held at Memphis Monday, Nathan Mayo, Florida commissioner of agriculture, announced today.

Mr. Mayo left here this afternoon for the meeting. He will be joined at Jacksonville by L. M. Rhodes, state marketing commissioner, and A. M. Tilden, vice president of the Citrus Fruit Clearing House Association.

The Memphis meeting was called by Harry D. Wilson, Louisianna agricultural commissioner, who invited all commissioners and secretaries of agriculture of the south. The 1929 cotton crop, tariff bill and federal farm board and other matters of interest to the agricultural interests of the south will be considered in addition to the fruit fly problem, Mr. Mayo was advised.

Proposals that the various states modify their restrictions against Florida fruit because of prevalence of the fly will be made by Mr. Mayo, the Florida commissioner said.

Mr. Mayo also said that he and Governor Doyle Carlton dispatched letters to officials of all states of the nation last week urging them to also modify the fruit fly regulations.

FARM AID LAW STRESSED

STIMULANT TO ORGANIZATIONS BY FEDERAL LEGISLATION ACT

Sixty-three Illinois County Bureaus Spurred to Membership Drives

Federal legislation for agricultural relief passed by the special session of congress has had the effect of stimulating the organization of farmers in the various co-operatives already functioning, according to a statement of the Illinois Agricultural association today.

"Farmers were among the last of economic groups in America to organize," said the statement. "But the developments of recent weeks and the statements of agricultural leaders, like Secretary of Agriculture Arthur Hyde and Chairman Alexander Legge of the federal farm board, are bringing many farmers to think anew about the needs of thorough organization before the farm industry can be stabilized."

The September drive for members in Illinois is a part of the nationwide movement fostered by the American Farm Bureau Federation to stress the need for membership.

Sixty-three county farm bureaus in Illinois are conducting membership campaigns this month to accommodate the demand for organization made by the nonorganized farmers.

The above was taken from the Chicago Daily News and shows the activity on the part of the white farm federation to secure new members.

In practically every state in the Union there is a campaign on for membership to increase the strength of the white farmers. Meetings are being held in Chicago almost every week, but no colored delegates are being in attendance.

Our colored farmers are urged to beware, and get together, in order that the National Federation of Colored Farmers will be able to mass a strength that will be helpful to our race.

VENTILATION PREVENTS FIRE IN HAY BARNS

One of the causes of barn fires during the haying season is a lack of ventilation in the mow. Hay which is put into the barn damp or green, heats and forms combustible gases. If these gases are quickly removed by a ventilation system such as that supplied by a cupola on the barn, the danger of spontaneous combustion is lessened.

The United States department of agriculture offers three recommendations for the prevention of spontaneous combustion. First mowing only properly cured hay; second, the use of salt on green hay, and third free ventilation after storage. Farmers have found that it is a mistake to dig into hay which starts heating in the barn and to admit air to the heated portion. It is wiser to leave the surface unmolested.

BIG SHORTAGE IN HAY

Pastures throughout the United States are the poorest they have been in fifteen years, and dry weather has cut down the hay crop nearly 4,000,000 tons according to a recent survey.

The 1928 crop of hay was the shortest they have had in several years, and this crop was about thirteen million tons less than the 1927 crop.

Our farmers will do well to bear this in mind and anticipate their winter requirements.

FARM BOARD WILL AID COTTON FARMERS

Twenty Million Dollar Loan Available December 15th.

By Leon R. Harris, Secretary National Federation of Colored Farmers

The Federal Farm Board has decided to loan twenty million dollars to the cotton farmers of the South. This should be joyful news to thousands of colored farmers who produce cotton and to all who are interested in the welfare and progress of the one million colored farmers in the United States.

It is stated on good authority that around December 15th is the time when the Farm Board will likely consider favorably the application for the loan. There is a strig attached to the promise however, and that is,—the cotton farmers must be organized.

The individual loans will be made based on about ninty per cent of the cotton at the time the farmer sends in his application. In order to get consideration, the farmer must hedge on his cotton loan to the extent of the amount he is borrowing. If a farmer has fifty bales of cotton and the market is twenty cents per pound, he can get around eighteen cents per pound as a loan. He must store his cotton in a warehouse and surrender his receipts as security, then he must hedge by selling on the cotton exchange the same amount of cotton as that on whlch he is borrowing. If the market should decline to less than the amount he has borrowed, then the hedge will protect the farm revolving fund, from which he has borrowed, and neither borrower nor lender will sustain any loss. If, on the other hand, cotton should advance in price, the borrower will receive the benefit of the advance and will gain by the transaction.

Approximately twenty-five per cent of all cotton produced in this country every year is sold by Negro farmers. The proceeds from his cotton supplies all the luxuries the farmer enjoys, and most of his necessities. It may be said truthfully that the cotton farmer's happiness is tied to his cotton. A new day will dawn for him if he will organize, as his white neighbors are doing, and get in position to take advantage of government farm relief.

The colored farmers of Mississippi and Arkansas are organizing. Others are getting together in spots, but a big majority are waiting. The Farm Board has told the farmers plainly that if they desire help then they must get together,—they must organize. This statement is meant for colored farmers a swell as white farmers.

It is apparent that many colored farmers are afraid of a National Negro Farmers' organization. But it is their only alternative. No white farmers' organization has ever made an effort to secure Negro members. There are various social features attached to these organizations and their several units, and for this reason, many believe that colored farmers could not feel at home in them. Negro business men professional men, teachers and etc. are organized in national bodies and the leaders of these white farm organizations are of the opinion that Negro farmers would be better off if they would build up an organization of their own.

Colored farmers, in particular, need information and instruction along the lines of marketing grading and shipping, and information concerning loans and the purchasing of needed farm supplies. It is a fact that the Negro cotton farmer is grossly discriminated against—especially in the grading of his cotton. If more of them would refuse to accept the buyer's grading they would be better off. They can, and should have their cotton graded by the Board of Cotton Examiners in Washington, D. C. The cost of this service is only forty cents, and blanks for the purpose can be obtained by applying to the Board of Cotton Examiners, U. S. Department of Agriculture, Washington, D. C., or to the National Federation of Colored Farmers, Vincennes Hotel, Chicago, Ill. These blanks are furnished free of charge.

Leaders of organization work among Negro farmers are encouraged by the great interest manifested and by recent progress and they believe that in the near future the farmers of their race will have a strong national organization.

TO CONTROL WILD GARLIC

Timely plowing late each fall and and again early in the spring followed by growing of thoroughly cultivated row crops are the essential steps in the socalled cultural methods of controlling wild garlic according to the United States Department of Agriculture.

SECURES LOAN FROM FARM BOARD

The Co-Operative Grange League Federation Exchange (white) of Ithaca, New York is to get a loan of 50,000 dollars from the Federal Farm Board.

The money is to be used for the purchase of construction of marketing facilities at a number of shipping points. These farmers are organized.

GIRL TRAMPLED TO DEATH BY BULL IN A CORN FIELD

Washington, — (Special) — Katherine Bridenbaugh, seven, daughter of John Bridenbaugh, living fifteen miles southeast of here, was trampled to death early today by a bull which she attempted to chase out of a corn field.

DISTRIBUTION IS HELD MAJOR FARM PROBLEM

By Scrutator

It is more than a little difficult to get beyond vague generalities and define even the biggest of the influences bearing on the farm problem. Even those which are recognized are so shrouded in mystery that there is grave doubt that any body such as the federal farm board can attack the whole problem from the farmer's end with important results.

The suggestion has been made frequently that the entire distributive machinery of the country must be studied carefully, and in some ways reformed, before farm products can be marketed in a manner fair both to the farmer and the ultimate consumer of his products. Those holding this view advance the argument that retail and wholesale trade in foodstuffs and textiles has not improved its methods as farming and manufacturing have, and that it must do so before the solution is reached.

One of the important facts in the farm problem, in the opinion of W. G. Jamison, business specialist in the Chicago office of the bureau of foreign and domestic commerce, is the speed with which farm products now arrive in trade channels as compared with speed in the past.

Cotton Speeded Up.

"It takes a cotton farmer less time by ten days to grow and send his product into trade than it did just a few years ago" he said yesterday. "The wool grower saves thirty-five days. Other products are between this minimum and maxium of time saving. Obviously the saving was not made by nature. It requires about as much time to grow cotton and wool to maturity as it ever did. The saving has been made in methods of picking cotton in shearing sheep, and in the better facilities of transport from the farm to the railroad.

"Quite recently in west Texas a new kind of mechanical cotton picking that increases the work one man can do more than three fold has been adopted. It was impossible until a gin had been invented that would throw out sticks and stones. In the west sheep shearers once went through eight or ten states and made a long job of their work. Now every sheepman has his power clipper and the shearing is much more quickly done. Where the wool once was placed on a wagon and carried fifteen miles a day to reach a railroad, it now moves in a truck at 150 miles a day.

"With a combine in Kansas three men and a boy can cut a field of wheat and deliver the marketable grain to a railroad station the same day. Going through the old cutting, shocking, and thrashing processes would require weeks. Idaho potato and apple growers once occupied ninety days in moving out their whole crops. That has been cut to about sixty days."

Have Not Kept Pace

The result has been this authority explains a congestion of products in the trade channels. The storage facilities have not kept pace either with the increase in production or with the speed with which crops are ready for the market. Railroads have to a good degree speeded up their service and the processer or manufacturer of most of the food stuffs and textiles has done likewise. But the retailer and the wholesaler, on the whole, are nearer to the methods of long ago than other parts of the economic system.

Foodstuffs as an industry rank first with a wholesale selling value of ten billions a year. Textiles rank second. Mr. Jamison's opinion is that the whole interrelated distributive system, even to the corner grocery, must be studied accurately to determine how a farmer may get fair markets in which he will have confidence. The farmer, in this view, has become so efficient that those who handle his products after they leave his hands are making a bottleneck for him.

—Chicago Tribune.

PATIENT FARMER FINDS BIG PROFIT IN GINSENG

Cape Girardeau, Mo.,— Growing ginseng takes the patience of Job, but Clement Brockmeyer may profit almost $10,000 from two acres of it this year.

The 22-year old farmer expects to harvest 800 pounds of ginseng roots on his small plot. At prevailing prices of $12 a pound he would get $9,600 for that crop. One year a cracker box of dried roots brought Brockmeyer enough to buy a cheap automobile.

FARM AND GARDEN

By Mr. Paul Potter

The fruit and vegetable season for people who live in large cities lasts twelve months each year. There is no closed season for fruits and vegetables and green peas can be bought in the metropolitan market every business day in the year.

Another characteristic of this market is the great variety of fruits and vegetables offered to the people throughout the year. Seventy-eight varieties of fruit and vegetables have enough sales to be represented in the market summary issued by the New York City office of the United States department of agriculture.

The foregoing facts are from a bulletin on the production and sale of New York market peas, just issued by the Cornell university station. This bulletin discusses the growing of market peas, which is characterized as profitable, especially where the vine are fed to stock. A recommendation made by the bulletin is that all peas should be marketed in baskets, because the buyer can see them more easily and they sell for enough more to justify the actual expense of the better package. Bags are still used in some sections, but this practice is declining.

Chicago Tribune.

PRIZE BULL BRINGS HIGH PRICE

Mr. F. B. Avery a dairyman of Monck's Corner, South Carolina, purchased for the Gipsy Dairy owned by Mr. Nicholas Roosevelt of New York, a 6 year old bull of the Guernsey strain at a price of ten thousand dollars. This is said to be the largest price ever paid for a bull in this section of the south.

EXPORTS OF APPLES TO FOREIGN COUNTRIES FOR WEEK ENDING SEPTEMBER 7TH

The International Apple Association gives out the total export of apples from this country to the foreign countries as 60,352 barrels and 53,443 boxes for the week ending September 7th.

Total shipments to foreign countries for this season is 136,060 bbls. and 301,891 boxes.

STOLEN GOOSE HEARS VOICE OF MISTRESS

Chippewa Falls, Wis.—Mrs. Jeanette Wensell of Cadett is convinced that a pet goose can be useful as well as entertaining. She has such a pet and has trained it to come to her when she calls it by name. Recently a number of chickens, ducks and geese were stolen from the Wensell flocks.

Mrs. Wensell suspected a neighbor, Charles Anderson. Accompanied by the sheriff, she went to the Anderson farm. She called out a name. A goose waddled to Mrs. Wensell's automobile, climbed in and sat down beside her. Anderson's trial will come up in Circuit court soon.

BRAZIL SEEKS WORLD MARKET FOR ORANGE

Machinery from California and Florida, which attractively packs oranges for shipment with a minimum of human handling, is being introduced here as part of Brazil's effort to win a world market for her oranges, especially in Europe.

The shorter haul from Rio, as compared with the distance from the orange country of the United States, is a natural help to Brazilian growers and they have the further advantage of being able to ship at all seasons.

May to November, however, are the best months for European sales. From January to August this year 200,000 cases were sent to Covent Garden market in London. From that place distribution is made to northern Europe.

A Baby in Your Home

Doctor's Prescription Sent Free

Hundreds of married women, **childless for years,** suddenly find themselves in a state of the most blissful anticipation due to the influence of a doctor's most wonderful prescription that overcomes sterility in many cases when due to functional weakness. Mrs. Mary Etters of 5 Tenth St., Braddock, Pa., writes: "We are blessed with a fine baby boy. I congratulate you on your splendid prescription. I will be glad to recommend it to any woman." Every married woman who really wants children should write at once for a free trial of this prescription and a free copy of an invaluable book that tells how to use it and many other things every woman should know. Please enclose 10 cents for postage and packing. Address in confidence.

NATIONAL BAPTIST PUBLISHING BOARD

Nashville, Tennessee — Henry A. Boyd, Secretary

(Continued from Page 1)

(Continuetd from Page 1)

now estimated at 2,032,000 tons as against 2,671,000 tons last year. California expressed 1,000,000 of raisin varieties, 420,000 tons of wine varieties and 350,000 tons of table grapes. The combined production in California is one-fourth lighter than a year ago. Outside of that state the grape crop is now placed at 262,000 tons, or 14 per cent less than last season.

Citrus Fruits in Florida and California still show relatively low condition and are far below last year's corresponding position. Texas and Arizonia report citrus crop conditions nearly 90 per cent of normal. Shipments of new crop of grapefruit are beginning heavier than last season.

Prospects for late onions improved and production in sixteen states may now amount to 18,631,000 bushels as against 12,775,000 bushels last season. A bumper crop of 2,457 bushels is expected in Colorado. Increases in the crop forecast were made for nearly all the leading states except Mass., Ohio and California. With respect to size of crop, Colorado now ranks second only to New York.

The strawberry outlook for 1930 is better than in any year since 1926. Intended reductions of acreage in important second early and intermediate states may bring down the areas for harvesting in 1930 to 183,000 197,000 acres picked in 1929 and 205-00 in 1928. This reduction of about 7 per cent from last season is expected to take place in Arkansas, Missouri, Kentucky and Tennessee, the states where the marketing problem has been most difficult in recent years.

LOOKING AHEAD IN POTATOES

Reports from Florida growers indicate that they are planning to increase their acreage of early potatoes about 26 per cent over last year, and growers in the lower valley of Texas plan increasing their acreage 8 per cent. This would give Florida 28,000 acres and the spring crop in the lower valley 9,600 acres. Production may be 4,100,090 bushels. Prices for early potatoes next spring will depend chiefly on the production in these states and on the supply of old stock still available. Based on the September forecast of production stocks of merchantable potatoes on hand next January first probably will be around 75,000,000 bushels, or 80,000,000 bushels, compared with 131, 000,000 bushels last January and 100,000,000 bushels two years ago. The supply of certified seed in producing sections of the United States and Canada promises to be considerably smaller than that of 1929.

MISSISSIPPI'S CORN CROP A THIRD LARGER

State to Produce 30,740,000 Bushels, Indications.

Gulfport, Miss — Sept.— The yield in the corn crop in Mississippi this season will be about 34 per cent larger than that of last year, according to the figures in the September crop report issued here today from the office of the federal statistician, D. A. McCandliss.

This comparatively large increase in production will be about 8 per cent lower than the five-year average for the period of 1923-1927, according to the September crop report of the U. S. Department of Agriculture.

The condition of the corn crop on Sept. 1, reported as 78 per cent of normal, indicates an average yield of 18.3 bushels, which on the 1, 677,000 acres estimated as planted to corn in Mississippi this year, indicates a production of 30,740,000 bushels, campared with 22,945,000 bushels produced in 1928. and the five-year average of 33,435,000 bushels.

The Sept. 1 condition of sweet potatoes, reported as 81 per cent of normal, indicates an average yield per acre of 108 bushels, and a production of 6,033,000 bushels, which is practically the same as produced last year, but about 5 per cent below the five-year average production.

Syrup Production Bigger.

Tame hay production in Mississippi this season is forecast at 566,000 tons, the same as the 1928 production, but 18 per cent larger than the five-year 1923-1927 average production for the state.

September 1 conditions indicate a 2 1-2 per cent increase over last year for sorghum syrup production, and a 7 1-2 per cent larger production of sugar cane syrup. Sorghum syrup production is forecast at 2,462,000 gallons, and sugar cane syrup at 3,866,000 gallons.

Fruit crops this year are much larger than last year, and slightly below the five-year average productions. Peach production is estimated at 444,000 bushels compared with 635,000 bushel last year; the apple crop is forecast at 202,000 bushels, compared with 194,000 bushels last year.

Pecan production will be considerably smaller than in 1928, as the per cent of a full crop in prospect this season is reported as only 45 per cent, compared with 72 per cent on September 1 last year.

NEW PEACH PEST REMEDY TONGUE-TWISTER

(Atlanta Constitution)
By Paul Stevenson

Here's where the old typewriter "busts" under the strain. Several months ago John N. Holder, then chairman of the highway board, drove the newspapermen crazy by reporting a washout at Eetcheeconee creek near Macon. Some of them were able to stand up under the strain of "Eetcheeconee."

Next came along Manning S. Yeomans, state entomologist, with the Mediterranean fruit fly. Well "Mediterranean" sounds easy until you try to write it two or three dozen times.

Then came Bonnell H. Stone and his trip to Okefenokee. Many writers have been trying to spell "Okefenokee" the same way twice in succession for years and have failed miserably.

But now comes the straw that not only broke teh old camel's back, but shoved him down six feet in the sand.

The new word is "Paradichlorobenzene."

Now if a newspaperman has to write "Paradichlorobenzene" many times they might as well reserve a place in the booby hatch for him right at the start.

The long word is a remedy Mr. Yoemans announced Saturday to destroy the peach tree borer. The "paradichlorobenzene" crystals should be applied to fruit trees in north Georgia from September 25 to October 8, and in south Georgia from October 10 to October 20, acording to Mr. Yoemans.

But before they will attempt to spell "paradichlorobenzene" it is highly probable that Georgia peach growers will turn to raising apples

SELLS FIRST BALE OF COTTON

Wright Prince prominent colored farmer of Sanford, North Carolina, Lee county, sold the first bale of cotton for this section. The entire bale was grown on his land and this is the fifth consecutive year Mr. Wright has brought the first bale to market.

Lee county is one of the best argicultural countries in the state and the total value of all crops run over a million and a quarter dollars.

There are 1129 whate farmers in the county and 464 colored farmers. 186 of these colored farmers are owners of their farms.

The average crop of tobacco every year is over half million pounds, and about 8 thousand bales cotton besides considerable sweet potatoes peaches and apples.

FLORIDA FINDS MUCH IODINE IN VEGETABLES

Tampa, Fla., September—High percentage of iodine—only known protection against goitre—was found today in Florida vegetables by a chemical test made at the direction of the Braden Chamber of Commerce, and arouse state-wide interest in the value of the discovery.

Two vegetables, eggplant and potatoes, showed an iodine content rating higher than that officially proclaimed by South Carolina, which had paved the way to find out and capitalize on its record.

Florida eggplant showed 4.87, as campared with a unit value of 1.87 in the Carolina product. Irish potatoes showed 2 93, as compared with 211 for Carolina.

WILL FARMING PAY?

Benjamin F. Hubert, president of the Georgia State college and executive secretary of the Association for the Advancement of Negro Country Life, says that Negroes should more and more turn their attention to the farms as a source of independent living. He has just returned from his 500-acre farm in central Georgia.

He says:

"I took over the Zack Hubert farms of about 500 acres, the farms formerly belonging to my father, on January 1, 1928. At the time I became owner of the farms, there was a general depressed spirit on the part of the people living on the place, due to fear of the boll weeil and the economic depression that followed the World War. Houses were run down and some people had already left for northern centers.

"After my father's death not enough was being produced on the farm to feed and care for the people and stock. It had been many a day since much cash money had been seen in Hancock county.

"When I assumed charge, all houses were immediately repaired, new farm stock purchased and the men were told that they must follow a diversified farming program if they wanted to remain. This program says that every farm must have a garden, some cows and chickens. There must be a little cotton and plenty of corn, velvet, beans, peas, oats, wheat, sorghum, Fertilizers must be used in sufficiently large quantities to make the crop pay for labor invested. The soil must be perservered so that it will become more fertile each year,

RESULTS

"At the end of the first year, men were producing from three-fourths to a bale per acre of cotton, and corn and velvet beans in abundance. They were selling sour cream every week having a little cash coming in regularly and there were smiles on their faces.

"This year no better crops will be found anywhere in Georgia than in the section of Hancock county where the Zack Hubert farms are located. Many of the farmers have already paid up their accounts and are hardly half through gathering crops. On my individual demonstration plot, I will get close to a bale per acre with only about a half of stand. Corn, while not the best, will be sufficient to take care of the needs of the farm.

"What has been done in Hancock county can be done anywhere if our people will get busy and plan a future for themselves in the country. The Association for the Advancement of Negro Country Life will gladly furnish information about where to purchase farms and a diversified program."

President Hubert is from one of Georgia's first families and has steadily advanced, not through pull or influence, but brain and ability until he is today one of the foremost educators.

Hancock county is interesting.

It is quite a farming section and we find the following:

Number of white farmers in the county 552.

Number of colored farmers in the county 1,226.

Approximate crops annually

Peanuts, nineteen thousand bushels.

Cotton, six thousand bales.

Sweet potatoes, fifty thousand bushels.

Peaches, fifty thousand bushels.

The Modern Farmer

Official Organ of the National Federation of Colored Farmers

Leon R. Harris - - Editor

Published Monthly by the Modern Farmer at Nashville, Tennnessee, and Chicago, Illinois.

Nashville, Tenn., Office: 447 Fourth Avenue, North.

Chicago, Ill., Office: Vincennes Hotel, 36th and Vincennes Avenue.

Devoted to the interests of the Farmer, Truck Gardener, Livestock and Poultry Breeder, the Home and the People.

"OUR SLOGAN"
STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT!

TEST OF FARM RELIEF

The crisis of farm relief will come when farmers, under the stimulus of increased prices, will be subjected to the temptation to increase acreage The farm problem itself arise as a result of overproduction. Were it possible to destroy the surplus and reorganize the agricultural industry on a basis of decreased acreage the farm problem might be solved, but the farm relief scheme as adopted is not based upon a plan to reduce acreage. It contemplates improvement of the economic position of all farmers through the creation of cooperative marketlng systems. In such a program there must, of necessity, be the grave danger of further increase production.

Can the Farm Board bring about an improved position for farmers and at the same time prevent the extension of acreage? It must i ffarm relief is to succeed. Two extensive efforts by governments to fix the price of agricultural commodities point to the peril that lurks behind the tendency to extend acreage. The first is the Brazilian coffee valorization scheme and the second is the Stevenson act by which Great Britain tried to fix the price of rubber.

The Brazilian valorization scheme in its essential respects is similar to the American farm relief plan. Inaugurated in 1921 following a postwar slump in the consumption of coffee and consequent depression of the market it has run the predicted course from artificial price inflation to increased planting and, finally, back to a glutted market and threatened disaster. The plan provided for the creation of a government coffee institute which built government warehouses, issued negotiable warehouse receipts and controlled the the movement of coffee to the seaports. These measures were intended to faciliate orderly marketing" by carrying over bumper crop surpluses to be sold at fair prices in succeeding lean years.

But the program failed to take into account the enterprise of the planters. Assured of stable prices guaranteed by the government they began to increase their acreage. Finally, as teh news filtered abroad that better times were at hand for coffee growers, planters of Venezuela, Colombla and Central Amerlca seized the opportunity and began to lncrease teh output of the plantations. Year after year the world coffee surplus has increased, until now the collapse of Brazillian valorization is in sight. euacrmentesso

The Brazilian experiment in the control of coffee prices was duplicated in the British experiment in the control of rubber prices. When British Malayan planters, in 1921, under the protection of the Steven son act, curtailed production in an attempt to raise the price Dutch and German planters promptly increased their acerage. The United States cut down its rubber purchases and ultimately the scheme collapsed, wiith disastrous effect on the British Malayan rubber industry.

Similar perils face farm relief. The individual American farmer must be brought to realize that success depends to a very large extent upon his limitation of production. But even if he comes to this realization success will not be assured.

Canadian farmers and those of other grain-producing regions will be under no compulsion to limit their acreage and it would be unnatural if under the stimulus of higher prices they should not set out to increase their production. In that event foreign grain might ultimately come into the market in such volume as to be the dominating factor, making it possible for the nations to avoid the purchase of American grain. Should such a development transpire there is a decided possibility that the farm relief program would end in disaster to American agriculture.

Increase prices and increased production can not exist together.

—Washington D. C. Post.

SIXTY-FIVE POUND MELON

Mr. Thomas Felder, prominent white farmer at Wapato Washington produced a sixty-five pound melon on his farm. The melon measured three feet and four inches long. This melon served twenty-two persons.

Washington is not very much on melons as there are only about 800 acres in melons annually.

Over 17 million bushels of apples are grown in Washington every year.

The colored farm population of the state is less than eight thousand, and Indians are included in this number.

RAYON'S AID TO COTTON.

The cotton growers of the southern states may view with hopefulness the remarkable increase in popularity of rayon silk and the accompanying decrease which is reported in the consumption of real silk.

In a recent article, John F. Sinclair, noted economic expert, says:

"Consumption of rayon in the United States crossed a hundred million pounds in 1927. In that year we might say that rayon outgrew its elder sister silk. Silk used fell short of seventy-five million pounds.

"In 1928, and so far in 1929, rayon consumption has continued to expand faster than silk. Aboard the comparisons favor even more, as purchasing power does not permit such liberal buying of silk as in the United States."

Mr. Sinclair attributes this increase to the improvement which is constantly being made in the quality of rayon yarns and in the sharp cuts in prices which have been made during the past two years.

Undoubtedly the fast decreasing prejudice to the use of rayon as against real silk, which was a somewhat natural attitude during the early stages of rayon development, has added largely to its steadily enlarging number of users.

While garments made of rayon are in a large measure taking the place of those formerly made of cot ton the decrease in the consumption of silk shows conclusively that rayon-made goods are supplanting many of those made of silk.

As cotton enters largely into the manufacture of rayon the remarkable growth in popularity of the product of thls new industry means an added demand for cotton undoubtedly more than enough to offset the loss effected by the substitution of rayon for cotton goods.

—Washington Post.

WHAT FRUIT CONTAINS

When you eat frults you are getting the mlnerals needed for body growth and repair. The ash of fruit is rich in iron, calclum, potash and magnesla.

The acid in fruit are malic, citric and tartaric, which are so comblned with potash or soda as to form acid salts. Malic acid predominates in apples, citric in lemons, oranges and grapefruit and tartaric in grapes.

Some fruits contain sufficient starch or sugar to make them valuable as sources of energy. In this class are bananas, prunes, dates, grapes and figs, and it is for this reason that these are regarded as the most nutritious fruits.

Strawberries, cherries, grapes, currants and apples contain considerable vegetable acid.

RAIN IS TOO LATE TO REVIVE CROPS IN MIDDLE WEST

Shortage of Feed to Boost Meat Prices

By Paul Potter

Recent efforts of the weather man to aleviate the trouble he has caused frain farmers of the middle west by bringing cool rains after most of the crops are damaged beyond recovery from prolonged drouth will not prevent the impending feed shortage for live stock feeders. This was indicated in a survey of the situation in the Mississippi river valley the last two days.

States of largest production seem to have felt the sun's rays hardest. Crop observers in nearly every state west of the Mississippi report that the ground has been too hard to plow, seeding of all crops being delayed by weeks. Pastures are the lowest in 14 years or more. Many farmers are beginning to feed the new corn for this season. It will be necessary to conserve all visible foodstuffs to round out the live stock feeding under way.

Hard Hit West of Missouri

Sections of farming country west of the Missouri river have suffered even more so. Reports of crop observers from nearly every county in eastern South Dakota and Nebraska, Kansas, southwestern Iowa, Missouri, Oklahoma, and on southwestward indicate serious firing of the corn crop.

United States department of agriculture reports this week showed the Kansas corn crop 47 per cent of normal and the Missouri crop 55 per cent of normal. Other states already named have lesser decreases but all of them discourging. Iowa and Illinois the two leading corn states also are the heavest feeding states for hogs and cattle. Although farmers in these states are beginning to sell meat animals without regard to their being finished for market the grain farmers farther southwest will have little feed to ship into the feeding states as is the case in normal crop years.

Higher Prices to Follow

Farmers in grain sections less severely damaged are expecting good prices reports indicate. Government reports from most corn producting states give varying dates from Sept. 20 to Oct. 15 as the time necessary for the corn crop to be out of danger from frosts. Behind the action of the weather man in August farmers say, were his heavy rains in the spring, which delayed the planting or he crop two to three weeks in many states.

The aftermath of this national feed shortage on farms will be reflected in retail prices especially meats, live stock shippers in Chicago stated. While present prices are declining, the actural shortage of meat animals hogs, cattle, and sheep will be noticed months later by consumers.

—Chicago Tribune.

FAILURE OF HOUSEWIFE TO TAKE RIGHT CARE OF FOOD CAUSES MANY ILLS

Micro-Organisms in Food

Scientists are are agreed that the reason for food decay lies In the action of micro-organisms—living plant cells so small that they can be seen only with a microscope. These organisms, bacteria molds and yeast, are everywhere, of course—in the air in our bodies, in the food we eat. Under favorable conditions of warmth and moisture, they multiply very rapidly by division—one splitting in to two, two into four. With absolutely ideal conditions of propagation, it has been figured that one bacterinm could in 15 hours produce a thousand million descendants. If they are permitted to multiply rapidly in milk, in meat, in butter, or any other food, they absorb, or eat up, certain elements in the food, causing chemical decomposition. Milk becomes sour, meat putrid, egg rot.

When it goes that far, of course the housewife knows it, throws away the spoiled food and the only damage is the waste. But a greater danger, because it is not perceptible to sight or smell, is the partial decomposition before the food reaches the thoroughly damaged stage and the poisonous substance left in it as a result of its passage through tho bacterial digestive system. The former greatly lessens the nutrive value of the substance eaten, and the latter causes a lesser or greater direct injury, depending on the amount of poison taken into the system with the food.

OF INTEREST TO OUR MEMBERS

Units in several states are now being formed, especially in Tennessee, Georgia and Alabama.

Wisconsin farmers met in Milwaukee the latter part of September and organized a large unit for the state. They were very enthusiastic, and plans discussed for the purchase of a large tract of land to be subdivided into small tracts for truck farming.

Two members in western Tennessee have made application for 34 year farm loans.

Two units in Mississippi have asked for carlot prices on bran, middlings, shorts and poultry feed for October shipment.

Inquiries are coming in from several state relative to the marketing of peanuts, eggs, poultry and etc., but the farmers have not made application for membership into the Federation, and while we are bending every effort for aid to all of the farmers, yet we cannot do very much toward assisting our farmers in the marketing of their products unless they become members of the Federation. The cost is less than 1 1-2 cents per day.

We have just made arrangements with one of the largest feed mills in the south-west for the handling of their feeds, and the mill will ship mixed cars of brand, middlings, shorts, poultry feed, horse and mule feeds and hog feeds at wholesale prices.

These shipments will be made from the mill direct to the units that buy.

Twenty to twenty-five tons make up a carload. Samples and prices sent on request from the Chairman or secretary, of your unit.

Farmers in Bedford county Virginia have had a very enthusiastic meeting, elected officers and promises to develop into one of the largest units that we have. Rev. R. Price has been very active and is a doer and not a dodger.

Rev. B. W. Bryan of Mound Bayou is covering Bolivar county like the dew. He is a good farmer and business man. Rev. Bryant says Bolivar county will carry off the prize for the largest unit by Christmas.

C. C. Jordan of Mileston, Miss., sound and conservative and one of our first supporters has really produced in Holmes county. He is active and has the complete confidence of those that know him.

Several communications from Arkansas reflect interest and will no doubt result in the organization of some two or three units during October.

TAILORING AGENTS! $5.00 and $6.00 Profit in Advance on every Sale

ALSO BONUS

Competitors have no chance against this premier of all tailoring lines. Year in and year out our agents earn big and steady profits. Even beginners make as much as $100 per week, and up.

SELLING PRICE Fine ALL Wool Suits $23.50

Woods' Suits, topcoats under any other name would cost $35. Made strictly to measure in the latest fashions with tailoring that exemplifies the craft. Guaranteed linings and trimmings. Always a perfect fit. Complete outfit of large samples, fashions, tape measure, order blanks, etc. put up in beautiful carrying case FREE.

Suffered a Long Time

MRS. ALTHEA BURRIS, 802 E. Vine Ave., Knoxville, Tenn., of whom a picture is printed above, writes:

"I suffered a great deal and a long time with a pain in my side and extreme weakness in my back. It hurt me to straighten, and I had quite a bit of pain when I stood on my feet.

"I was looking around for something to help me. I read in the newspaper about Cardui, and decided to try it. After my first bottle, I felt better. I continued taking Cardui until I had finished six bottles. By that time, I was stronger and better than I had been in a long time."

Cardui has been in use by women for over 50 years. Try it for your troubles.

For sale by all druggists.

Application For Membership
NATIONAL FEDERATION OF COLORED FARMERS
Vincennes Hotel, Chicago.

As a Farmer, I believe the time has arrived when the Colored Farmers should form a National Organization devoted to diversified production, grading, packing, shipping and marketing of farm products and to the purchase of needed farm supplies through co-operative methods, to the end that a more prosperous financial condition may result from their efforts as producers.

I herewith subscribe and forward $5.00 for membership in the National Federation of Colored Farmers for a period of 12 months from date.

WANTS NEGRO ON FARM BOARD

Box 118 Doddsvile, Miss., 9-20-1929.
—Editor of Modern Farmer, 447 4th Avenue, North, Nashville, Tenn.—
Dear Sir:—I have reeeived your paper and several letters from you and beg leave to offer you the following information, as I have followed the Farm Relief Bill through all of its stages and studied it very elosely.

I have contended and do eontend that as nearly 15 per cent of the U. S. Farmers are Negroes we should have a member on that Farm Board or in lieu of a member on the Farm Board, then a Bureau for Colored be established with a colored man as ehief, for no person of another race can speak for our race like a member of our race.

The Farm Board eontends that as the law is National this is not necessary; to whieh I replied so are the 14th and 15th amendments to the eonstitution of the U. S.

Sen. Arthur Capper of Kansas thinks the colored should have a Bureau and suggested that I write Mr. Carl Williams, whieh I did. He replied Sept. 10th and stated in substanee that the Negro farmer of the South eould sell through the white eo-operative associations and that the white eo-operative associations were opposed to Negro co-operative associations in the South doing business for themselves." I sent Mr. Williams' letter to Senter Capper and told him that the southern white man had decreed by law and eustom that the races have separate sehools, churehes, eoaches, eating plaees and etc., and that we colored people want separate eo-operative associations.

I am enclosing my program which I sent to every Republican Congressman and Senator in the U. S., many of our leading colored people and newspapers and I have assurance that the matter will be gone into when the House of Representatives meet.

I believe in co-operation and anything I ean do please eommand me

Yours for the eause,

W. F. Reden.

A NEGRO FOR THE FEDERAL FARM BOARD

Principal and Founder of the Delta Industrial Institute (an Agriculture High School) Doddsville, Miss., A Graduate of The State University of Iowa, Iowa City, Iowa Class 1908.

The ideal man for the position. Alvin Wallace, Colored County Farm Agent, Humphrey County, Belzoni, Miss.

W. S. Moore, Colored Planter, R. F. D. 2, Box 231, Greenwood, Miss.

DELTA INDUSTRIAL INSTITUTE

For the Training of Colored Boys and Girls.

We Train the Head, Hand and Heart .

Box 118, Doddsville, Miss. 8-14-1929.

Dear sir:—

At the request of many Colored Farmers, I am seeking a position on the Federal Farm Board, or on a Bureau for Colored Farmers; if one is established.

I refer you to my program and ask your support and reeommendation to Hon Arthur M. Hyde, Secretary of Agriculture, Washington, D. C.

Very truly yours,

W. F. Reden, L. L. B., Principal.

MY PROGRAM

Why a Negro on The Federal Farm Board

1. 599,000 or 14.3 per cent of all the farmers in the U. S. are Negroes.
2. The value of the Negroes' farm land and buildings is over $525,000,000.00.
3. Because more Negroes' are engaged in farming than any other occupation.
4. Over 80 per cent of the Negroes in the U. S., are Republieans.
5. An appointment of a Negro on The Farm Board will do the Negro Race more good than "appointing a Reeorder, Registrar, an assistant to somebody or a Minister."

REASON FOR THIS APPEAL NEGRO FARMER OVERLOOKED

In a bulletin issured by the Hon. Seeretary of Agriculture, showing how the members of the present Farm Board were selected; not a Negro President of a Federal Land Grant College, Negro Editor, Negro Politician or Negro organization is mentioned as having been consulted.

In behalf of 959,000 Negro Farmers or 14.3 per cent of all the farmers in the U. S., I make this appeal, for the Negro Farmer to be represented directly on the Federal Farm Board.

MY RECOMMENDATIONS FOR THE POSITION

1. By Hon. G. N. Haugen, M. C., Iowa.
2. By Hon. W. R. Johnson, M. C. Ill.
3. Hon. P. J. Townsend, Mayor of Doddsville, Miss.
4. Hon. W. H. Phipps, President Board Supervisors, Sunflower County, Miss.
5. Pres. Walter A. Jessup, Pres. State University of Iowa.
6. Hon. Perry W. Howard, National Republican Committeeman for Mississippi.
7. Many Colored County Farm Agents.
9. Prof. W. P. Saunders, Ex-Sup't. Education Sunflower County, Miss.
10. Prof. H. T. Sims, Editor "Negro Star," Wichita, Kans.
11. Prof. Geo. Carver, M. S., Agriculture Chemist, Tuskegee Institute, Alabama.
12. Hon. John M. Freeze, Sioux Falls, S. Dak.
13. Hon. L. P. Barth, Editor of Howard County Times, Cresco, Id.
14. Dr. J. E. Coleman, Planter, Member of Mississippi River Levee Board, Trustee of Delta Industrial Institute, Doddsville, Miss.
15 Rev. A. A. Cosey, Editor of Advance-Dispatch, Vicksburg, Miss.

QUALIFICATIONS

1. Born of Ex-Slaves on a farm, near Rock Island, Ill., in 1885.
2. Left an orphan at 10 years of age.
3. Graduate of Cresco High School, Cresco, Iowa, 1905.
4. Graduate of the Law Department, of The State University of Iowa, 1908.
5. Have taught school and farmed in Mississippi 19 years, and know the conditions of the Negro Farmers.
6. Founder of The Delta Industrial Institute (an Agriculture High School) in the Yazoo Delta, in N. W. Mississippi, which is the greatest cotton district in the United States.
7. Have had an abundanee of experienee in organizating my people (Colored).

The Sweet Potato

We give below the government crop estimate on sweet potatoes by states. This statement also gives the estimated crop for last year. It will be seen that the erop for this year will be less than last year's yield. Georgia is leading in the yield by over two million bushels.

The demand for sweet potatoes is growing all over the country and especially in the middle western states. In the city of Chicago the yellow yams are in heavy demand and bringing good prices. The early part of the season sweet potatoes brought fancy prices. Tennessee Nancy Halls are good sellers and the ruling prices around last of September were $1.35 to $1.50 per bu. hamper to the wholesale trade. Retail prices are 3 and 4 pounds for a quarter.

Southern growers will do well to market their potatoes in the larger cities. They must be well graded and clean in order to get good buyers interested.

MONTHLY CROP ESTIMATES (WITH COMPARISONS) PRINCIPAL STATES ONLY—SWEET POTATOES (Bushels)

	Sept. 1, 1929	*August* 1, 1929	*Final* 1928

TO THE FARMERS:

The Modern Farmer contains information every month that you will not find in any other farm journal. It is the only journal paper published by and for our people that is devoted exclusively to the farmer and his family.

The price is in reach of every one—being less than 2 cents per week. During these times when the farming industry is undergoing so many changes, and there are so many advantages that can be had by our colored farmers if they are only aware of them, it is absolutely necessary that you should know what is going on. Three-fourths of the white farmers are subscribers to the white farm magazines and journals. They know just what is going on.

Fill out the blank—secure a money order for $1.00 and mail at once:

The Modern Farmer,

447 Fourth Avenue, North,

Nashville, Tenn.

Find enclosed order for $1.00. Send me the Modern Farmer for one year.

ANOTHER LOAN FROM THE FARM BOARD

The Egyptian Seed Growers Association of Southern Illinois has been promised a loan by the Federal Farm Board. This Association is white farmers. They are organized.

Whitens Brown Skin
in only 1 minute or money back!
Test Amazing New Fluid Without Risk

If you want to quickly whiten and completely change the color of your skin in just one minute, you should make this simple test.

First, look carefully in your mirror and see just how dark your skin now appears. Then, give your face a one minute massage with Spanola—made from the newly rediscovered old Spanish Formula for instantly whitening skin.

In less than one minute you will see truly amazing results. A light, white-toned beautiful skin will appear that will be envied by all your friends and acquaintances—but it is not a matter of what your friends will say or think—your mirror will tell you the story. Instantly prove to yourself, without question or doubt, the effectiveness of Spanola. It is the greatest beauty discovery of all times.

It will give you the alluring natural skin beauty you have always wished for in a harmless, beneficial and instantaneous way. No matter how dark or unattractive your skin may be, you should test SPANOLA and see what a difference it makes.

Make Test at Our Risk

Would you like to test Spanola without risk? Would you like to see how much whiter and more beautiful it can make your skin? See what a remarkable improvement it makes in less than one minute, then if not simply delighted, your money will be refunded for the asking.

Send no money. Simply mail coupon or write. When package arrives, pay postman only $1.67 for the regular large size bottle. Test Spanola just once. Then if not delighted, return it and your money will be refunded, without comment. Mail coupon today. Dept. B.

A Dangerous Condition

"There was a time when my health was not so good," says Mr. Miles Hopkins, of Catlettsburg, Ky. "I suffered a great deal from gas pains. My system was saturated with poison which was not properly eliminated. From time to time I had severe headaches, and I felt sluggish and dull.

"I knew of Black-Draught as a medicine for

CONSTIPATION

so I thought I would try it. For a while I took a small dose every night until my system was rid of the accumulated poison.

"I gained in weight and my general health was good. That experience made me realize the merits of Black-Draught. I kept it in my home and when I begin to feel lifeless and dull, I take a dose, after which I feel O. K. again.

"I try to keep my system cleansed, and I find Black-Draught a great aid."

25 cents. All druggists.

WORMS IN SHEEP

The most common internal parasite of sheep is the stomach worm and causes heavy losses to the farmers. Pastures which have been much used for sheep grazing are almost sure to be heavily infested with eggs of the stomach worm is known as "dry up" paper skin disease black scours" etc.

Thin weak undersized lambs scouring or showing soft swelling under the jaw may rightly be suspected of harboring stomach worms.

Doctor Stonder of the Extension Department of University at Ames Iowa says "Several preparations have been used to drench sheep for stomach worm but a one per cent solution of copper sulphate in water is as dependable as anything." Dissolve 4 ounces of crystals of copper sulphate in 3 gallons of water in a glass or earthenware vessel. Give a sheep 80 pounds or over in weight 4 ounces of this solution and lambs about 60 pounds, 3 ounces and 40 pound lambs about two fluid ounces.

Do not hold the head so that the nose is higher than the eyes. Drench sheep once per month.

Keep sheep supplied with salt at all times.

HOMEOPATHS CLAIM SIMPLE HAY FEVER CURE BY SALT TREATMENT

Thousands, pernaps a million or more, hay fever victims just finishing their annual seige of miserable sniffling and sneezing and looking at the world through watery eyes, will be glad to hear this news: "Hay fever positively can be cured."

Physicians attending the annual convention of the Midwest Homeopathic institute in the Morrison hotel gave that assurance and made it so non-chalantly they didn't seem to think there was much news about it.

The gist of the doctors' statements was that homeopaths have been curing hay fever for more than 110 years, that their cures are certain and that any victim who will place himself in the hands of a competent homeopathic doctor will find himself relieved in less than three weeks.

And the remedy, they said is simple—a little sugar coated pill taken at intervals through the mouth, nothing more.

Dr. H. K. Yorks, and Dr. J. W. Hingston, both of Chicago, were the principal speakers on the subject of hay fever.

Dr. Hingston spoke on "Hay Fever Remedies That Cure," and Dr. Yorks, among other things, told his audience that common table salt, properly treated and administered in the right doses is one of the best cures.

Dr. Yorks said the salt is not used in its ordinary form, but is subjected to a thorough pounding and mixing with water, repounding and remixing.

There are thirty stages to the preparation of the salt for hay fever cures," Dr. Yorks said. "We take one part of salt and 99 parts of distilled water, subject it to crystallization and subject it to a terrific pounding. Then we take one part of the result and 99 more parts water and do the same. There are thirty processes."

In the end the salt goes to the patient in the form of a sugar coated pill.

Dr. Lillian M. Thompson of Rockford was elected president for the coming year at the sessions. Dr. Hingston was elected vice president, and Drs. G. A. Leach of Morris, Ill., and J. Stupnick of Chicago, were re-elected secretary and treaurer, respectively.

Chicago Tribune.

40,000 POUNDS OF FISH CAUGHT IN TWO HOURS

Boston, Mass.—Boston's waterfront had one of the most remarkable examples of fishermen's luck to discuss today that ever came to this port as the auxiliary schooner Bethulia unloaded a cargo of 40,000 pounds of mackerel. The fish were caught within a period of two hours and after an absence of only three and a half hours from port.

The Bethulia had left the fish pier for a trawling trip off the Main coast. She had proceeded only as far as Boston Light scarcely of the harbor, when a large school of fish was seen. Gear quickly was taken overboard and in two hours a $1,500 catch was in her hold.

—Chicago Tribune.

IRISH POTATOES

It is not uncommon for potato farmers to produce 400 bushels per acre. The record to date is 641 bushels per acre.

Dr. E. L. Nixon plant pathologist at Penn. State College gives the following directions for a successful potato crop:

1. Plow down a crop of soy beans or sweet cloer in the fall, about 5 inches deep.
2. Plow the land again in the spring, 9 inches deep.
3. Disk immediately with an engine disk; then follow with a "jostler" or deep tillage machine such as the Killefer chisel.
4. Plant "certified" seed about 4 inches deep and cover shallow.
5. Start the weeder, before the plants appear and weed every week until the plants are 8 to 10 inches high.
6. Cultivate deep twice, the first time just as early as the rows can be seen.
7. Begin to spray as early as the plants can be seen with a sprayer which will develop from 350 to 400 pounds pressure, using a Nixon boom having a center nozzle and two side nozzles to each row. Keep up this spraying with Bordeaux mixture every seven or ten days until frost kills the vines. (The Pennsylvania Dutchman often sprays ten to thirteen times a season.)
8. About 1,000 pounds of fertilizer is used per acre in addition to cover crop of beans or sweet clover.

DALLAS COUNTY ALABAMA

We have had inquiry for statistics on Dallas County, Alabama. Selma is the country seat and has long been known as agricultural section.

Number of white farmers in the county 638.

Number of colored farmers in the county 5,968.

Number farms in the county 6,606.

Approximate land area in the county 612,480.

Value of crops 3,552,457 dollars.

Number bales of cotton 22,609.

Number bushels sweet potatoes 68,992.

Number of acres in watermelons, 982.

Number mules in the county 6,802.

Number of hogs in the county 28,602.

Number of cows milked 9,607.

Chickens raised 188,608.

Here is a county where there are over 9 colored farmers to every white famrer.

They are not organized.

Statistics from Department of Agriculture for 1925.

FIBER INSTEAD OF DIRT CAUSES BULBS TO THRIVE

By James H. Burdett

(Director of National Garden Bureau).

Many bulbs can be grown for indoor decoration in the winter by using bulb fiber instead of soil and decorative bowls instead of flower pots. Snowdrops crocuses, daffodils, hyacinths and tulips, which cannot be depended upon to flower if given water alone, will grow in the bulb fiber, which is a specially prepared combination of humus and plant food.

In addition to enough bulb fiber to fill the chosen bowl a few lumps of charcoal are needed. Scatter the charcoal over the bottom of the bowl where it will absorb impurities and prevent the accumulation of acids which might otherwise cause the tips of roots to decay.

Spread the fiber out on a table and break up all large lumps and sprinkle enough water on it to make it uniformly moist. Place it in the bowl and press it gently into position with the tips of the fingers. The bowl should be only half filled at first to leave room for the bulbs.

Insert the bulbs about one inch apart, taking care not to compact the fiber too much below them, lest the roots have difficulty in penetrating the fiber. Fill the bowl with fiber, pressing it firmly but not too compactly between the bulbs, until only the tips of the bulbs are exposed. The bowl should be of sufficient depth so that this still leaves the fiber within an inch of the top.

It is now necessary to place the bowl in a cool, moist and well-ventilated place where it will be in the dark and will not freeze. A storage celler, well ventilated, is a good place. A cold frame which can be covered with straw mats when frost threatens will serve. The bowl may be covered completely with ashes, or with sand, or by an inverted flower pot. The problem is to keep it cool, moist and in the dark for six or eight weeks, while roots are forming, and yet to keep it from freezing.

When roots have been formed, top growth will begin; and when sprouts an inch or two long have appeared, the bowl may be "brought in," as the florists say, which means brought into warmth and light. This corresponds to the transformation of spring, bringing warmth and light to plants which have made root growth during the fall and winter.

First place the bowl in a semi-shaded position until the shoots become green, then place them in a window in full sunlight. The temperature of the room should not be allowed to rise too high. It may drop to 50 degrees at night without injury to the bulbs. A day tempreature of not over 70 is best.

Special care must be taken in watering, as the bowls are usually without drainage. If the fiber is allowed to remain dry for any time, the bulbs will not flower; and if the fiber is kept too wet, the roots will decay. The fiber is quite spongy, and should be kept as nearly as possible in the condition of a sponge which has been saturated and squeezed so that it is wet, but contains no excess water.

Miss Jane Eddington an authority on vegetables in a recent edition of the Chicago Tribune says:

Carrot History

Purposing to say something, or many things about the carrot, or to begin a regular carrot campaign because this vegetable is the one most needed by people who do not like milk, and because really we ought to learn to cook it in the most highly attractive fashion—when so cooked almost only one will like it—I ran across the following:

"This famous vegetable was not known in Great Britian until it was introduced to us by the Flemings in the reign of Queen Elizabeth. The ancient Greeks used it as a vegetable before the Christian era, and to them it was known as "staphylinos," frequent mention being made of it by old authors. In the reign of James 1 and Charles II, ladies were in the habit of decorating their head dresses with the leaves, which are exceedingly delicate, feathery and fern-like; in deed the leaves of the carrot are frequently used by cooks to decorate a table. The tops of the carrot are cut about one inch below the crest, and stood in a saucer of water. In due time a very ornamental tuft of fine leaves will grow out, requiring but very little further ingenuity to adapt them.

"As to the nutritive value of the carrot, considerable difference of opinion exists among chemists, it being generally admitted that it is less nutritious than the potato; but as a flavoring vegetable we have apparently, none other of such widely accepted utility.

Sir Humphry Davy tells us concerning the carrot that a greater part of the alimentary portion of it consists of saccharine matter, which may in a considerable degree account for its antiseptic qualities."

That idea that the carrot it antiseptic seems to have been lost, but its mineral content is held in the highest posible esteem in this dietetic day.

FILLS SILO WITH ENSILAGE MADE FROM EAR CORN

Genoa Farmer Feeds It As Grain.

Each year, Bryce D. Smith of Genoa, Ill., fills his 16 by 70 foot silo with ear corn ensilage. He harvests the corn after an early frost with a two row snapper and then runs the ears and husks through an ordinary ensilage cutter set to cut as fine as possible.

Ensilage made in this way is fed to cattle as grain rather than as roughage, because it is much more concentrated in form than ordinary silage. A legume hay and some sort of protein supplement, such as oil meal, cottoonceed meal or soy beans, are required to complete the ration for fattening steers.

Smith finds several advantages in this method of handling corn. In a "soft corn" year he has no worry about his crop spoiling and can feed it or hold it for future feeding as he chooses. By harvesting the green corn he can get into the field earlier and operate his machanical picker in more favorable weather. The standing stalks are much more green and palatable for live stock than stalks later in the fall.

Experiments at the University of Illinois have proved ear corn ensilage, to be an economical and profitable feed for beef cattle.

TO OUR COLORED FARMERS:

The campaign for membership in the Federation is actively on, and will continue through September and October.

We plan to have our President visit several states, and aid in the organizing of units for the Federation. There is no charge for this service, and the only requirement necessary is for each community to defray the railroad expenses.

Any county or community that is desirous of having our President visit them while on this tour, and willing to guarantee the railroad expense, send in your name and approximate date and you will be included in the itinerary.

MECHANICAL WAY TO PROVIDE HOME WITH FRESH AIR

SYSTEM WORKS ON LINES OF HEART ACTION

By Homer Grant.

There have been big strides made in modern warm air heating systems in the last few years and one of the most imporant of these is the "supercirculation" development by which and is moved by a mechanical propeller instead of gravity. This results, according to recent tests, in a complete change of air several times an hour.

Air motion, as every one knows, is important to health, comfort and skin wholesomeness. Moving air carries away excess body heat quickly enough to keep a person from feeling dopey, oppressed or developing a fever.

Woman Is Sufferer

Many times it is the woman in the home who is discriminated against in the kind of air she is forced to breathe. The average house is not equipped with ventilating air apparatus, such as theaters and auditoriums, hotels, many factories and schools possess.

Direct drafts rrom open windows or doors, or air leakage around closed windows and door are about the only fresh air supply in the average small home. Therefore, this home mistress suffers many times from headache. strained nerves, lack of "pep" and general lassitude.

Purified by Heat,

Recirculation is a recognized principle in the ventilation of theaters and schools and big buildings of various kinds. Working like blood circulation in he body, the air in the living rooms of a home, heated by the supercirculating system, is drawn through cold air returns to the central heating plant, where it is purified by the intense heat inside the casing and then is recirculated through the living rooms.

More and more the home heating plant must become a complete air conditioning apparatus, providing comforable circulation and humidity as well as comfortable heat, Hence the importance and value of the supercirculation development of the modern warm air heating systems and the reason for the interest it is focussing upon itself.—Ex.

AN OLD COOK BOOK

In a 300 year old cook book there is an interesting article on purslane which is better known as pusley. There is scarcely any one living in the Southern states that does not know "pulscy" and how it was gathered and fed to the hogs some years since.

This green is very good in hot weather. It is cooling and very fine for persons that suffer from the heat and billiousness, and is also very good against scurvy. It is a blood purifier.

Pusley should be gathered when young and tender, boiled in little water and a dressing of bacon fat or butter and lemon juice.

WHAT THE DIFFERENT FRUITS CONTAIN

When you eat fruits you are getting minerals needed for body growth and repair.

The ash of fruit is rich in iron calcium potash and magnesia.

The acid in fruit are malic, citric and tartaric, which are so blended with potash and soda as to form acid salts.

Malic acids predominates in apples, citric acid leads in lemons oranges and grapefruit, while grapes lead in tartaric acid.

Some fruits contain sufficient starch or sugar to make them very valuable as sources of energy. In this class are bananas, prunes, dates, grapes and figs and it is for this reason that these are regarded as the most nutritious.

Strawberries, cherries, grapes, currants and apples contain considerable vegetable acid.

FEAST, FAMINE BOTH BROUGHT BY IRISH POTATO

Lowly Tuber Conceals a Romantic Story

By Paul Potter

Just why Americans should call such a truly typical native of the western hemisphere as the potato Irish must rank with the logic or circumstance behind the naming of the American Indian.

Assuming an inquisitie role among several Chicagoans who should be informed about this gross injustice to a vegetable so prominent in our dietary, a rather romantic story has been disclosed. Man's dependance upon the common tuber as a principal food has brought feast from famine, and famine back again.

Potato Replaces Cereals

It seems that the potato hails originally from South American soil. Such early day explorers as Sir Francis Drake and Sir Walter Raleigh introduced it into European agriculture. Yet until it was recommended to the Irish in 1663, to help save this people from impending famine, potato dishes were a rarity. In a century the potato had almost entirely replaced cereals in the Irish stew.

Though the potato had saved a hungry nation, it proved undependable. The potato blight, a disease still troubling tuber growers, came along as a scourge in 1846 and 1847, almost entirely annihilating the crop. It is estimated that 600,000 people perished during those two years of privation in Ireland. But the blight came into control and the production of potatoes continues on a large scale in the Free State today.

Cash Crop for Farmers

Potatoes have come to be regarded as essential in a "square meal," a custom established by Yankees in this country. From Aroostook county, Maine, to Idaho the potato is an increasingly important cash crop for farmers. Its importance in the American eating scheme seems to be on the incline, federal department of agriculture economists say, with the average person consuming about three bushels during the year.

Latest government estimates point to a smaller crop of spuds this year than the record production of 1928 by about 115,000,000 bushels. Exceptionally low prices to consumers, with heavy losses by producers, last season are not in prospect this winter. Since potatoes furnish nearly one-third the entire cash crop for farmers in a dairy state such as Wisconsin, the situation bears reviewing.

Reductions in Estimated Crop

Maine potato digers are sacking up the largest yield in the country, having experienced fine weather all summer. The other states of large production all report reductions in the estimated crop, a total of 24,000,000 bushels in August alone.

New York, New Jersey, Pennsylvania, Michigan, Wisconsin, Minnesota (the Red river valley), and Idaho furnish most of the market's so-called Irish potatoes. The total estimated production early this month was placed at 349,000,000, or just about the three bushels per person needed for the nation's food basket. It is the lowest crop, save in 1925, for ten years.

Sweet potatoes, sometimes grown as far north as New Jersey, Iowa and Indiana, are primarily a southern crop. Dry weather in August cut this crop 4 per cent from the 1928 figure, the estimated total being 75,108,000 bushels. The sweet potato outlook is not promising Chicagoland housewives lower prices nor tubers of especially high quality.

Chicago Tribune.

STATE STILL LEADING IN OUTPUT OF CHEESE

Madison, Wis.— (AP)— Wisconsin's claim to leadership among cheese producting states continued. The Badger State produced 66.3 per cent of the total American cheese in 1928. The year before it produced 72.9 per cent. Other leading states were New York, Oregon, Minnesota and Michigan.

THE MODERN FARMER

Vol. I. Nashville, Tenn. and Chicago, Ill., November 15, 1929. No. 9.

Erroneous Quotations On Ginnings Cause Great Loss

Head Of National Federation Visits The South

JAMES P. DAVIS SPENDS MONTH SPEAKING

SOUTH ILLINOIS, KENTUCKY, TENNESSEE AND MISSISSIPPI INVADED LAST MONTH

President James P. Davis, of the National Federation of Colored Farmers, made an extensive tour in the south last month. He began his itinerary in southern Illinois and touched Tennessee, the western part of the state, and almost covered the entire Delta section of the state of Mississippi. He made points in Arkansas and Louisiana. His visit to the Delta section was urged by farmers who wanted to hear and know about Farm Relief, co-operative marketing and harvesting grain movements, fruit and vegetables. In fact, they urged the President, who has had twenty-five years of actual experience with farm products, to come and talk to them, show them how to form their County and State organizations, to be present with them, guide them and instruct them on how to get these organizations affiliating with and members of the National Federation. A complete report of the President's trip, the towns he visited, the organizations set up and the number of farmers spoken to, with the farms visited, is promised for the December issue of the Modern Farmer. During his absence from his headquarters in Chicago his correspondence fell considerably behind but he promises to atone for all the delay by redoubling his efforts for the remainder of the winter.

He had a first hand opportunity to see the fertile section of the Mississippi Valley, to go into the low sections, to inspect the farms, gardens, orchards, poultry yards and even look in upon cotton growers. As was expected, cotton was "King" in the sections he visited. He saw the devastation caused by the Boll Weevil. He walked over the fruit districts of Mississippi and became familiarized with what the Father of Waters, the mighty Mississippi River, was capable of doing when it gets out of her bank and overflow even the the levy that had been erected to hold it in her channel. The President will write all these things and tell the readers of the Modern Farmer of the wonderful progress being made.

OUR COUNTY AGENTS

EDITOR LEON R. HARRIS PAYS GLOWING TRIBUTE

They are not talked about enough and we are going to use this space to talk about them and for them. We are not going to mention any names but:—

We are acquainted with one in North Carolina. He drives a mule, hitched to a dilapidated buggy and visits the small farms owned by the people of our racial group,—most of which are off the "big" roads. Tobacco is the "money crop" and this man knows his North Carolina tobacco. The farmers know that he is a true friend,—they know he is a wise adviser,—and they follow his advice. During the past few years the Negro farmers of his county have made money. They have improved their homes and church property,—they have automobiles and radios,—the women are better dressed and the children are attending school longer. This agent has received little credit for helping his county and his people to become more prosperous and happy. True service is its own reward, but,—

We are acquainted with one in Alabama. He is a "cowpea fool" and at times the farmers say he is very worrisome. But the Negro farmers of his county have harvested and said more edible cowpeas during the past ten years than have those of any other county in the state and during the same time, their soil has been improved until today it is worth twice what it was ten years ago. They are eating his "sugar crowders" and "little lady" peas in Chicago and in other northern centers. His county bids fair to become one of the largest dairy counties in the South. Cowpea hay has solved a vexatious roughage problem. This "cowpea fool" goes on about his business,—doing his duty and expecting to reap his reward in the "sweet by-and-by, but:—

We know one in South Carolina. He has worked in one county twelve

WHEAT SESSION HELD

MEMBERS OF FARM BOARD CONFER TOGETHER

(Chicago Tribune Press Service)

Washington, D. C., Sept. 30—(Special).—Several members of the farm board are to go to Chicago this week for conferences in connection with the formation of wheat and wool marketing corporations. The conferences are scheduled for Wednesday and Thursday.

Alexander Legge, chairman of the board; Samuel McKelvie, member from the wheat area, and Carl S. Williams of Oklahoma will be among the board members at the Chicago conferences.

Final details of the organization of the $20,000,000 wheat corporation are to be gone over. Those in attendance will include a subcommittee of the organization committee composed of representatives of the various wheat groups, There also will be spokesmen present for leading farm organizations.

Cotton Aid Predicted.

Benefits will come to cotton farmers from the operations of the federal farm board, Mr. Williams predicted today before the senate committee on agriculture which is considering the question of confirmation of appointments to the board.

"I can look ahead and see the rapid approach of the day when the cotton farmers of the cotton belt will be so organized under the aid extended them by the farm board that they will be able collectively to bargain with the buyers of cotton and bargain to their dependable profit," said Mr. Williams.

"It is the purpose of the board to hurry as fast as possible the organization of the cotton farmers into effective cooperative marketing organizations. How long that will take I do not know, but the helpful effects of such organization will begin immediately. The more cotton acreage that is represented in the cooperatives, the

LETTERS TO MODERN FARMER

J. J. MACK OF GEORGIA, WILSON LOVETT OF ILLINOIS

Among the readers of The Modern Farmer who appreciates it as a publication is Mr. Lovett, Vice-President and Treasurer of the Supreme Liberty Life Insurance Company of Chicago. Mr. Lovett wrote from this office, 3513 South Parkway, Chicago, Illinois on October 11th and said:

"I have just recently returned from a two or three weeks' trip in the East, and in going through a good many publications, I have been greatly interested in looking over The Modern Farmer.

This letter is merely a word of appreciation for the appearance and contents of the publication. It is splendidly printed and ought to fill a long-felt need. I do not see how you can do it for a dollar a year.

I hope you are enjoying your usual good health and with warmest personal regards, I remain

Sincerely yours,

Wilson Lovett.

As evidence that the Modern Farmer is serving a long felt want and meeting the present-day-needs as a farmer's Journal and publication, scores of letters are coming in constantly. Mr. J. J. Mack, the prosperous farmer of Blackshear, Georgia says: "You will find inclosed $1.00 for my subscription to the Modern Farmer. I have seen several copies of the publication and I feel so well satisfied with it. It is just what we farmers need and I am sending in my subscription and I am recommending it to all my neighbors. We have set our farms down here to work. We are already planting our fall crops and we are planning to get our $5.00 ready to send in to the National Farm Federation on time, after which we feel sure we will get all the necessary instructions as we have been receiving through the Modern Farmer from time to time. Sorry I am so late in sending this in but the delay was not intentional.

FARMERS SUFFER FOR MISTAKES OF OTHERS

MILLIONS ARE LOST ANNUALLY DUE TO LACK OF INFORMATION

Millions of dollars will be lost by the Negro farmer if he is not well posted and if he does not watch the corrections in Jennings Quotations appearing in the bulletin from time to time.. This is the statement that came from the headquarters of the National Federation of Colored Farmers, when in a recent issue of The Chicago Daily Tribune a correction in Jennings was published.

President Davis stated further: "This is what always keeps the cotton market down during the early fall months. Usually it happens that these mistakes come at a time when the Negro farmer must sell, and the mistake always favors the buyer."

The Chicago Tribune article was headed "Correction In Jennings; 300,000 Bales Too High."

"An error of 300,000 bales was made in the cotton ginning report by the census bureau yesterday which was not discovered until after the market's close. Ginnings from Aug. 1 to Sept. 16, as given out early in the morning were 3,653,038 bales. The correction reduces these figures 300,000. bales, making actual ginning 3,353,000 bales. The error was made in the Georgia returns which showed 427,988 bales instead of 727,988 bales.

Corrections in ginnings figures were not known until after the market's close yesterday, and it would not be a surprise to see short covering and a rally today as the market closed easy at the [illegible] ginnings compare with 2,083,000 bales in the previous report, compared with 2,495,000 bales for the same time last year.

These figures were higher than expected and although the market at one time was up about 50c a bale strong spots developed selling and a decine, the market having poor support the greater part of the day. At the finish futures in Chicago were 11 to 26 points lower, with other markets off 12 to 19 points.

Liverpool was 6 to 7 points lower.

STRIKE HOLDS UP FRUIT

3,000 Railroad Cars Clog New York Yards

New York, Oct. 6—(AP)—More than 3,000 railroad cars, loaded with an estimated $6,000,00 worth of fruit and vegetables, clogged railroad yards today as a result of a strike of union market truckmen, which went into effect yesterday.

So far as the public was informed, little apparently was accomplished toward reaching a solution of the strike. Truckmen demand an eight-hour day and increased rates of pay for overtime.

With approximately 700 additional cars of perishables due daily, observers expressed the belief that by Wednesday the strike will have created a minor food crisis in the city.

A market survey made by Dr. Arthur E. Albrecht of the state department of agriculture, showed that prices of several fruits had increased since the strike was called, with indications of a further rise as conditions become more acute.

Meanwhile more than 200 policemen were drafted for duty on the lower West Side to maintain order.

HON. JOHN SHARP WILLIAMS ADVISES ORGANIZATION

Yazoo City, Miss.—(Special to Modern Farmer).—In an address delivered at the annual session of the Afro-American Sons and Daughters which was held in this city recently, the Hon. John Sharp Williams, former U. S. Senator, advised the delegates to organize and purchase land and homes. These delegates were principally farmers.

The Afro-American Sons And Daughters is a fraternal organization. It was organized about four years ago and now has over forty thousand members. The organization is doing excellent work. It has just completed and opened a modern hospital for the benefit of its members. The hospital is located in Yazoo City and members in good standing receive treatment free of all charges.

COMMITTEE WILL BUY CATTLE FOR LEE COUNTY

Marianna, Ark.—(Special)— W. A. Owens, county agent, and George B. Cutting, secretary of the Chamber of Commerce, left Tuesday to buy a carload of dairy cattle for Lee County farmers. The Chamber of Commerce has decided to sponsor a dairy program for the coming year. The committee appointed by President Griffin Smith to work out the details of the program is composed of Col. E. C. Robertson, Hugh Mixon and W. A. Owens.

This Is A Machine Age And The Unskilled Had Better Get On The Farm

FARMERS' AIMS IN CO-OPERATIVE MARKETING TOLD

OREGON EDUCATOR'S BOOK IS COMPREHENSIVE HISTORY OF MOVEMENT

By Victor S. Yarros

Today co-operation is a blessed word. The farm relief problem is to be solved chiefly by co-operation. The high cost of living is to be reduced by co-operation. Big business talks of co-operation rather than of consolidation and merging. What are the facts about co-operation in America? What problems face the co-operatives, and how are the many difficulties in the way to be surmounted?

Prof. N. H. Comish of the Oregon Agricultural college has written a timely and comprehensive book on "The Co-operative Marketing of Agricultural products." He writes both as a student and a practical inside observer. He shows a remarkable

(Continued on Page 4)

Cotton Picker Is Big State Fair Feature

Hundreds of Hinds county and state farmers this week are viewing the American cotton picker on display at the Mississippi State Fair where Ward Lederer, factory representative, is in charge of the demonstration going on.

Monday afternoon, the first day of the fair, hundreds of farmers manifested a profound interest in the machine that, to them, seemed a solution of their labor troubles at cotton-picking time. It is one of the features of the fair and is demonstrated by actually drawing the cotton from the bolls.

Mr. Lederer has been recipient of numerous complimentary remarks on the machine.

Even business men are vitally interested in the machine as it seems it may prove the salvatiion of the south in its cotton-picking problems which means a lot to business men who finance farmers.

"Hundreds of so-called cotton pickers have been invented, patent-

(Continued on Page 5)

$3,550,000 AID FOR COTTON AND FRUIT GROWERS

FARM BOARD APPROVES THREE LOANS

(Chicago Tribune Press Service)

Washington, D. C., Oct. 9.—(Special)—Supplemental loans aggregating $750,000 to southern cotton growers cooperative associations and a facilities loan of $2,800,000 to the Florida Citrus exchange have been approved by the federal farm board. The Tennessee Cotton Growers' association, it was announced, will receive a supplemental commodity loan not exceeding $250,000 and the South Carolina Cotton Growers' Cooperative Association will be given not to exceed $500,000.

The $2,800,000 advance to the Florida Citrus exchange will be secured by first mortgages on packing plants of local units of the exchange, the properities to be appraised by a nationally known appraisal company and the individual loans will not ex-

(Continued on Page 4)

WHEAT SESSION HELD

(Continued from Page 1)

greater will be the bargaining power of the farmers.

Farmer May Gain Power.

"We plan to federate these cooperatives until there is one great national organization representing cotton. We believe that such an organization will have bargaining power with buyers, such that the farmer will have a considerable part to say in what the cotton price is to be. We also believe that such an organization can introduce many efficiencies into the production of cotton as well as into the marketing.

"We are working hard to get organization work started in all parts of the country," he continued, "not alone cotton but all other commodities and we believe that before long we will be able, through these organizations, to render the farmer aid that will be profitable to him."

ALBERT C. WILLIAMS IS CONFIRMED FOR FARM LOAN BOARD

Washington, D. C., Sept. 30—(AP)—The nomination of Albert C. Williams for reappointment as a member of the federal farm loan board was confirmed today by the senate.

Other nominations confirmed included those of Clarence M. Young of Des Moines as assistant secretary of commerce and William L. Cooper as director of the foreign and domestic commerce bureau in the department of commerce.

Young succeeds William P. MacCracken, Jr., and is in charge of aeronautics in the department.

The nomination of Brig. Gen. Ltle Brown to be chief of the army engineer crops with the rank of major general also was confirmed.

The senate also confirmed William Graham Everson of Indiana as chief of the militla bureau with the rank of major general.

NEA Service

ATLANTA, Ga., Oct.—14.—More plowing and less golf would help the tired business man.

That's the opinion of I. N. Ragsdale, mayor of Atlanta. And he isn't theorizing, either. He knows from experience.

Mayor Ragesdale owns a farm on the outskirts of Atlanta, and he drops by there shortly after daybreak practically every morning in the spring and summer, "shucks" off his coat, gets into a pair of overalls, and does the work of a dirt farmer while most city folks are still busy with their beauty sleep.

His farm labors occupy from one to two hours' time, then he shifts back to his white collar garb, motors down to city hall, and takes up the business of managing the city's affairs.

"There's nothing like plowing for exercising the muscles and resting the mind," declared Major Ragsdale "Plowing isn't hard, and you don't have to keep your mind much on what you are doing. It's about the most restful job I know of.

"But I understand with golf it's just different. You've got to stand just so, and grip the club exactly right and keep your eye on the ball, and, after all that, no golf player ever seems to be satisfied with his game.

"I grew up on a farm," continued the mayor, "and I like most things connected with farming, with one or two exceptions. Hoeing, for instance, doesn't come under the head of recreation, in my opinion; and if there's any harder work than picking cotton, I haven't found it.

"Farming," concluded the mayor, "has always struck me as a sportsman's fight against nature and prices. If the farmer comes out ahead in the fall he has put up a good hard battle, and he's done his part toward helping to feed and clothe the world, as well as himself.

"I haven't ever tried golf, but I know it can't touch plowing—not as far as I'm concerned anyway."

From Jackson, Miss.,—Daily Clarion Ledger.

Courtesy, The Universal Language

"Courtesy is the universal language that has never been revised."

The Arab host in the desert speaks it as readily as the prince of the palace.

It is the open mind the broad vision.

It is the sunshine that melts the snows of reserve and heals the wounds of antagonism.

The measure of business is dollars, but the by-products are courtesy, tact, openmindedness, fairness.

Business breeds courtesy and courtesy breeds business.

Courtesy disarms opposition and cements friendship.

"All doors open to courtesy," says an old German proverb with a great deal of truth.

The Scotch have an old proverb cynically admonishing all to give "less of your courtesy and more of your purse," and the tactful Danes express the same sentiment in their proverb "Put your hand quickly to your hat and slowly to your purse."

What a pity that this universal language is not spoken more universally.

All demand courtesy from thier fellows, and so few grant it.

The habitually discourteous usually demand the most courtesy from others, noting the lack of it in others without realizing their own deficiency.

In the millenium will traffic policemen and motorists be mutually courteous?

Will nothing but honeyed words pass between motorists, and between motorises and pedestrains?

Will courtesy be the lubricant eliminating the friction and vibration in human relations?

Is it because the rules of courtesy are difficult to learn that so few acquired this gentle, considerate, unselfish and polite bearing so admired by all?

JACKSON, MISS PLAN U. S. GRADING MARKET IN MAYFIELD

PARIS GETS OTHER KENTUCKY TOBACCO STATION

LEXINGTON, KY., Oct. 5.—Mayfield has been selected as one of two Kentucky tobacco markets in which the government tobacco grading service will be held this year, according to the experiment station of the University of Kentucky, which is co-operating with the United States Department of Agriculture in testing the grading plan in burley and dark-fired tobacco markets.

Negotiations are under way to install the service at the Paris market for burley tobacco. Farmers, warehousemen and other interested parties in the vicinity of Paris, with few exceptions, have expressed themselves as believing that the service would be beneficial. If all warehousemen and others interested in tobacco marketing will lend the experiment their support, the service seems assured for the Paris market, it is announced.

Have U. S. Grader.

The grading service, which was developed at Lynchburg, Va. provides for a government grader, on the warehouse floor, whose duty it is to examine the tobacco and place on the warehouse ticket the official grade in to which the tobacco falls. The auction is then conducted in the usual manner, except that the grade is announced before the tobacco is sold. The average prices paid for each grade are posted in the warehouse so that buyers and farmers can see how the tobacco is selling grade by grade.

This information, it is said, will be of advantage to farmers who are in doubt whether or not to accept the bid offered. If they receive a bid about equal to the average price for the grade and quality of their tobacco then they are getting about the prevailing market price. Buyrs, too will be benefited by the official grading, it is said, in that their opinion of each basket, made in the hurry and rush of the sale, may be either substantiated or refuted by the deliberate judging of the grader.

RUTHERFORD COUNTY FARMERS' MEETING

Farmers from Tennessee, in the main Rutherford County, held another meeting Saturday, Oct. 26th in Murfreesboro at the First Baptist Church. President T. A. Brown was prevented from presiding over the meeting because of illness, but seventy-five per cent of the membership of the Rutherford County Unit that has already joined the National Federation was present. They were jubilant over the fact that they had received such encouraging reports and such splendid instructions from the national headquarters.

"President Davis, said one of the members," had sent him blanks on how to apply for loans through farm banks, blanks showing how they could buy phosphate on the group plan and other printed matter that would guide in farm cooperative marketing. He had also sent U. S. Government statistics on cotton reports."

The President pro tem and the acting Secretary had prepared an unusually interesting program that included merely talks by active, wide-awake farmers on what they are doing just now to get the best possible prices for their produces, what they are doing with eggs, how they are handling their chickens, what they propose to do with their meat, whether it be hogs, sheep o rcattle during killing time.

The topics that came before the meeting were enlightening; they were every-day helps which every farmer needs. They are to hold these meetings twice each month during the winter, so that by spring they will have been so schooled and drilled that they will know how to cover up the losses that they have sustained in years gone by.

NEWS ITEMS

STORAGE ROOM SHORTAGE

Shortage of storage room for wheat, both in North America and in Europe, is having some effect on sentiment It is estimated that about 60 per cent of the Canadian wheat that will leave farms has already been marketed, while there is a total of 356,000,000 bushels now in store in the United States and Canada, including the amounts in country elevators in the three provinces.

While trade in corn was relatively small there was no material pressure, and the decline in prices was due mainly to scattered selling induced by the break in wheat. Considering the depressing influences, the market was regarded as having given a good account of itself.

Cash interests and houses with northwestern connections were on the buying side of rye and offset to a large also selling of May against purchases of December at four cents difference.

Commission houses were on the buying side of rye and offset to a large extent the break in wheat.

Good buying of nearby deliveries of and by cash interests, combined with ran purchases of distant futures by commission houses with all offerings well absorbed, made a stronger and higher market with closing around the top. The net gains on the near deliveries were 35c, and on the distant months 221-2 c. Trade in bellies was light with prices unchanged to 2 1-2 higher.

FILL ELEVATORS WITH WHEAT AS PRICES DECLINE

U S. Farm Board Gets Terminal Report

(Chicago Tribune Press Service)

Washington, D. C., Oct. 8.—(Special.)—Grain elevators in the northwest wheat growing sections have been filled almost to the limit of their working capacity since Sept. 1, according to a preliminary report made to the federal farm board today by the bureau of agricultural economics of the department of agriculture. The bureau, at the request of the farm board, is conducting an inquiry into the grain storage and terminal situation.

The fidings in the report appeared to lend strength to charges that the congestion of wheat storage facilities by speculators is depressing the prices of the incoming crop. Although the preliminary report did not analyze the causes of the condition, it showed clearly that elevator space is scarce, especially in Minneapolis, Duluth, Chicago and the other northwest storage centers.

The farm board requested the inquiry on Sept. 11, with a view to determining if the cause of the disparity between Canadian prices and prices in the northwest states is caused by crowding of wheat onto the market.

"In addition part of the bin space cannot be filled up. Thus on the average only from 80 to 90 per cent of the total rate of elevator capacity really is available, even in the case of elevators in good condition"

DRIVE FOR COVER CROPS IS OPENED

Twenty Demonstration Fields Sown In Shelby County, and Many Plants Already Up.

A winter cover crop campaign is being waged among farmers of Shelby County, W. M. Landess, agricultural agent, said Wednesday.

The county agent has been authorized to make winter cover crop demonstrations in every community in the county and 20 demonstration fields have been sown. Many of these fields have come up and started growing, Mr. Landess said.

"Cover crops add a great deal of nitrogen to the soil." said Mr. Landess. "The south is handicapped in that nitrogen is lost from the soil during high temperatures of the winter.

"Cover crops not only prevent this nitrogen escaping but take much more from the air and put it in the soil."

Rye, vetch and crimson clover are the chief cover crops advocated. Some farmers also are using Austrain peas.

Rye and vetch can be sown practically all winter. Closing days for the sowing of crimson clover are near, however, according to Mr. Landess.

The Auditorium and market commission is backing the project.

A Baby in Your Home

Doctor's Prescription Sent Free

Hundreds of married women, childless for years, suddenly find themselves in a state of the most blissful anticipation due to the influence of a doctor's most wonderful prescription that overcomes sterility in many cases when due to functional weakness. Mrs. Mary Etters of 5 Tenth St., Braddock, Pa., writes: "We are blessed with a fine baby boy. I congratulate you on your splendid prescription. I will be glad to recommend it to any woman." Every married woman who really wants children should write at once for a free trial of this prescription and a free copy of an invaluable book that tells how to use it and many other things every woman should know. Please enclose 10 cents for postage and packing. Address in confidence.

TOBACCO OR SNUFF HABIT CURED OR NO PAY
Any form, cigars, cigarettes, snuff, pipe, chewing. Full treatment on trial. Harmless. Costs $1.50 if cured, nothing if it fails. Over 500,000 treatments used. SUPERBA CO. NTS Baltimore, Md.

ASTOUNDING!

New Quick Action
BEAUTY BLEACH CREAM

Over-Night Results Guaranteed or Money Back

Newly Discovered Oxygen Treatment
JADORENE is the wonderful discovery of one of the world's leading chemists. It is totally different than any bleach cream you have ever used or even heard of. It acts at once. It is absolutely harmless to use—Does not peel or roughen the skin—Bleaching process depends on the liberation of purifying oxygen for its powerful bleaching action. Removes pimples, blemishes and freckles. You can notice results over night. Make your test right away and see how much whiter JADORENE will make your skin. Send no money. Mail coupon below today or write. Pay postman only $1.00 plus postage on arrival. Make overnight test. If not delighted with wonderful results, return it and get your money back. Mail this coupon now. Dept. R.

NATIONAL BAPTIST PUBLISHING BOARD

Nashville, Tennessee — Henry A. Boyd, Secretary

VEGETABLE

In the United States there are more than 5,000,000 boys and girls who are suffering from malnutrition. This was a report given by the federal department of labor.

In many of these cases it is not a matter of the amount of money spent on the diet of the child, but the choice of the diet. Some children are deprived of some of the necessary foods, but others will not eat them when they are supplied.

Vegetables, fresh and canned by the modern method, supply both vitamins and minerals, which are not foods in the sense of the word of calories but they give to the system substance which nourish the blood and stimulate an appetite. Many vegetables have duplicating values, but a diet of meat, potatoes and peas, and peas, potatoes and meat will not supply these necessary vitamins and minerals. Meat, potatoes and peas have mineral salts and iron but what of the necessary lime and vitamin supply?

Most people make a rule that one should eat at least two leafy vegetables a day with one starchy vegetable. Every one would fare far better if he ate four or five leafy and green vegetables each day. Canned vegetables will supply the same vitamins and mineral and the bulk which the fresh vegetables supply if the fresh vegetables are too expensive or are not on the market.

From time to time I have given suggestions by which vegetables may be worked into the diet. Of course the best way, when it is not a suitable vegetable to each raw, is to cook it a sufficient time to make it more edible or until the fiber is more tender. This seems to be the less acceptable to the average person. That is why we concoct so many recipes for vegetables to modulate their flavor.

Cabbage is a vegetable which is on the market the year round at a reasonable price. It is shunned by many people because it is so poorly cooked. I have a recipe which classifies as a surprise dish for all of the family.

Casserole Cabbage.

Use a firm head of cabbage and shred it, either with a knife, or, a easier way, with a vegetable shredder, Scald the cabbage a few minutes in a small amount of water. Grate enough dry bread to make a cup and a half of bread crumbs. The flavor of the bread crumbs improves this dish. Place the cabbage in the casserole in layers, alternating with a layer of bread crumbs, a sprinkle of salt, a few dots of butter, and a few tablespoons of the cooking water mixed with an equal measure of cream. Fill the dish in this way, topping the dish with bread crumbs dotted with butter. Cook twenty minutes in a medium oven. Cover the dish until the last few minutes, which time should be sufficient for drying and browning the top layer.

Casserole cabbage made by this recipe is delicate in flavor and tender in texture. Every member of the family will be delighted unless they realize that you are trying to force a health dish down their throats.

The value of the cabbage is not interfered with and the bread crumbs and cream soften the taste.

What I have said of the cabbage is true of many of the fresh and green vegetables which are used far too seldom by the average family.

Vegetables only have to be given a trial to demonstrate their value.
—Chicago Daily News.

SHIPPING FEVER LOSSES MAY BE CUT MILLIONS

By Frank I. Weller

(Associated Press Farm Editor)

Washington (AP)— Loses that sometimes have run as high as 8 per cent of the livestock shipped and are calculated to total millions of dollars annually may be materlally decreased by the application of methods recommended by a special committee on hemorrhagic septicemia, or "shipping fever."

The malady occurs in three forms of which the interic and pneumonic are chiefly conspicuous. It was on the latter that the committee, headed by E. C. Brown of the National Livestock exchange, did most of its work. Other members were Charles Traders' exchange; Dr. W. J. Embree, the Western Weighing and Inspection bureau, and the railroads; L. W. Kube, the public stockyards; and F. G. Ketner, the National Livestock Producers' association.

In many of its symptoms, the fever corresponds to influenza, or the more severe colds to which humans are subject. The organism that causes it apparently is ever present, ready to infect cattle, sheep and swine that suffer a lowered vitality. The spread of the disease seems to depend even more on the condition and susceptibility of the animals than upon its contagious nature, since thin, poorly nourished young stock must frequently become infected and die .

Dr. A. W. Miller, chief of the packers and stockyards division of the federal bureau of animal industry, whose scientific investigations were made the basis of the committee's report, says the principal loss to the livestock industry is not from the animals that die but from those that shrink and required curative treatment and additional feeding before they get back into marketable condition.

A perfectly normal animal, he explains, may undergo over-exertion or exposure on the farm or enroute to market and within a few hours become a victim of septicemia. Death may occur in from 1 to 8 days or the annual may linger in a fevered, dejected, and emaciated condition, refusing feed and staggering from weakness for an indefinite period before recovery is effected. Normally, individual losses approximate 3 percent of the stock shipped.

Heretofore numerous remedies have been sought and some have been effective, particularly vaccination with suitable biological products. The committee, after an exhaustive study of both the scientific and practical aspects of the question, is convinced that losses sustained in the past were largely preventable by improved methods of handling.

Since animals of normal vigor usually resist infection, Dr. Miller urges against devitalizing influences, such as exposure to severe weather, changes in the routine of feeding and watering, excitement and over exertion. Especially in shipping he says, hard driving and over-crowding should be avoided. In very severe weather, in northern latitudes, it is well to line the side walls of the stock car with heavy paper and bed the floors with soft fresh straw.

HOOVER'S FARM BOARD APPROVED BY SENATE GROUP

Wheeler Casts Lone Vote Against Legge

(Chicago Tribune Press Service)

Washington, D. C., Oct. 11—(Special)—Nominations of the eight members of the federal farm board appointed by President Hoover were approved today by the senate committee on agriculture. The committee's recommendation, it is believed, virtually assures favorable action by the senate.

All except three of the nominations were approved unanimously. One vote out of seventeen was cast against Chairman Alexander Legge and three votes were cast against Carr Williams of Oklahoma, who represents cotton, and Samuel R. McKelvie of Nebraska, the wheat representative. A roll call vote was taken on each board member.

Wheeler Opposed to Legge

Although the official roll call was not announced, it was understood that Senator Burton K. Wheeler (Dem., Mont.), whose criticism of the board was most severe during last week's hearing, cast the single negative vote against Mr. Legge, and also voted against Williams and McKelvie. Senators Ellison D. Smith (Dem., S. C.) and J. Thomas Heflin (Dem., Ala.) were reported to have joined in the opposition to Williams. Senators Smith and T. H. Caraway (Dem., Ark.) voted against McKelvie. Senators George W. Norris (Rep., Neb.) and Henrik Shipstead (Farmer-Labor, Minn.) were not present.

Opposition to McKelvie by the radical senators was based upon complaints against his testimony before the committee as to immediate action in wheat price control, while several southern Democratic senators condemned Williams' testimony regarding a fair price for cotton. In today's committee session, however, the opposition apparently had partially cooled off, although it may flare up again during speech making on the senate floor.

Chairman Charles L. McNairy (Rep., Ore.) submitted the committee's report to the senate and announced that he would seek action on final confirmation next Tuesday or Wednesday.

MILK PRODUCERS GET LOAN

The farm board at a session this afternoon stepped into the dairy situation, authorizing its initial loan to a milk producers' cooperative organization. It approved an application of the Ohio Farmers' Cooperative Milk association of Cleveland for a marketing and facilities loan of $600,000. The sum of $400,000 will be made available immediately and $200,000 retained pending an examination by the board into the association's auditing system.

The application of the association was presented by R. W. Strong, secretary-manger, and J. J. Prindel, president, with Harry Hartke, president of the National Cooperative Milk Producers' federation, also appeared in its behalf.

According to Mr. Strong, the Cleveland territory just now is in the throes of a milk price war, precipitated on Oct. 1, when the National Dairy Products corporation, described by him as a 150 million dollar combine, with agencies in 400 cities, cut the price of milk to eleven cents a quart. The result has been embarrassment for members of the cooperative, who appealed to the farm board for assistance.

At the farm board offices the action of the board in coming to the federation's relief in Cleveland sets a precedent which may be followed in other cases where farmers' cooperatives are engaged in a struggle with competitive combines.

WELL-FED PULLETS LAY WINTER EGGS

Give Them All They'll Eat, Says Authority

Lexington, Ky., Oct. 5.— Pullets should be in good flesh when they begin to lay, says the poultry department of the College of Agriculture of the University of Kentucky. Give them all the feed they will eat, and do not worry about their becoming too fat . Fat pullets will continue to lay during the winter, while those in poor flesh are likely to go into a winter molt.

Observing the following suggestions will help obtain more winter eggs:

Examine pullets closely for indications of worms. If worms are present, the birds should be treated before being placed in permanent quarters.

Dust the pullets with sodium fluoride or apply blackleaf 40 to the roosts.

Should Clean House

Thoroughly clean the house and disinfect it with a coal tar disinfectant before housing the pullets. Place clean straw in the house, to a deth of 12 inches.

Cull out all slow maturing, late feathering pullets. Put only well developed pullets in the laying house.

House the pullets in comfortable quarters, allowing ample room —3 1-2 square feet of floor space per bird for Leghorns and 4 feet for general purposes breeds. Regardless of the price of eggs, it does not pay to crowd birds. Sell some of them, if proper room is lacking.

When housing pullets keep them confined to the house two weeks, after which they may run out during favorable weather. Keeping the birds confined permits them to become accustomed to the house and encourages them to consume more feed.

If there is any indication of roup the pullets should be vaccinated. Detailed information on vaccination and worm treatment may be secured from the veterinary department, University of Kentucky

The Modern Farmer

Official Organ of the National Federation of Colored Farmers

Leon R. Harris - - Editor

Published Monthly by the Modern Farmer at Nashville, Tennnessee, and Chicago, Illinois.

"OUR SLOGAN"
STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT!

A DECLARATION OF INDEPENDENCE

The founders and organizers of the National Federation of Colored Farmers are all native Americans. Like all real Americans they believe in being independent. Independence is more than a great American ideal. It is a great American virtue. America has become prosperous and powerful, not because her citizens are the smartest people on earth, but because they are the most independent people on earth.

Ever since the World War, everybody who professed to know anything about the "farm problem" has been telling American farmers that they had hard luck because they were too dependent. Intelligent farmers knew this was the truth. The white farmers got together, in township, in county, in state and in the Nation. They began to speak boldly. They began to demand. When they got together they discovered their strength.

The National Federation of Colored Farmers has been organized for colored farmers because colored farmers need just such an organization. No white farm organization has ever made a public appeal for Negro members and few of them have accepted any Negro members. We do not and we will not oppose the entrance of Negro farmers into white farm organizations. Let them join if they can, and we wish them good luck. But, as we have said, WE BELIEVE IN BEING INDEPENDENT, and that is saying a big mouthful.

There are approximately a million Negro farmers in the United States and a fair sprinkling of farmerettes. Most of these are farm laborers and tenants but at least two hundred thousand of them are owners or managers of farms. In spite of our trend cityward, this number is not going to decrease. It will increase. We have a lot of respect and faith in the Negro's common sense and intelligence and we know that in the long run, he is going to use his common sense. Most of these farmers are going to stay on the farms,—their children are going to be farmers,—and many who have left the farms are going back.

A national Negro farm organization is essential. It is just as necessary as our national Negro church and fraternal organizations. We don't like poverty in the United States but we have it. We don't like intemperance but we have it too. And we don't like segregation either, but it is here with us, big and bold. We have to put up with a good many evils in this unfriendly world and make the most of conditions as they are.

If we Negro farmers in the United States ever get any direct benefit from a farm organization we will get that benefit from a Negro Farm Organization. We can not, and should not expect it from any other.

The voice of the Negro members in white farm organizations will be weaker than a whisper. It will be a mere grunt,—unheard and unintelligible. No sensible Negro farmers wants to be in an organization where his mode of expression is so limited.

The Founders and organizers of the National Federation of Colored Farmers are independent American Negroes. They do not believe in being the tail-end of anything. Your organization, which they have founded, will never be tied on to any other. True, they are willing, and you should be willing to cooperate with any other when such cooperation will benefit all.

Now let's get down to brass tacks. This is our Declaration of Independence. The National Federation of Colored Farmers is an organization independent of any other. It is the only National organization of Negro farmers in America. It is growing and it is growing fast. Call it a segregated organization if you want to,—we don't care. But thank your stars for this—it is segregated from the top on down. It is not like the American Legion and several other national organizations of which you know. It is not a "white" organization with a few Negro "chapters" or "units."

This organization merits your support. It is a National Organization for Colored Farmers. If you have any race pride you will know your duty. If you have any race-love YOU WILL DO YOUR DUTY.

"WORDS FITLY SPOKEN"

The Rev. B. W. Bryam of Mound Bayou, Miss., sends us the following letter.

Dears Sirs:

"I have already organized a unit of the Federation here. The farmers are very much interested in this movement I feel like this is the only hope of the farmers. When we look over the Modern Farmer and find that we can get a market for our produce, I am sure it will be the means of doing the farmers lots of good and help our people get back to the farm. It will also influence our girls to raise something and be more useful. I hope to see the time come when our people will be great men and women and do great things. They must learn to think, save, and do. They must not wait for great things to come to them but they must work out their own salvation. The thing we need is to live the life and be true to our word. When we do this we will be great leaders. We want men that mean to sacrifice to help others and when they are right we can be sure some one else will know it."

The race needs more such ministers and pastors. We need ministers who will teach their people to "be diligent in business" as well as "fervent in spirit." This unit of the Federation will succeed because thorough and honest leaders will not stand to see a good thing go down and organization is certainly a good thing for Negro farmers.

FARMERS' AIMS IN CO-OPERATIVE MARKETING TOLD

(Continued from Page 1)

grasp of the subject of agricultural co-operation in all its aspects.

The book contains a history and description of existing co-operatives and other farm organizations, a discussion of the law and ethics of co-operation, an explanation of the grievous failures of co-operatives and an exposition or the principles and methods necessary to success. The co-operatives are warned to avoid certain objectives, such as price control, and to make sure of the soundness and feasibility of the end they decide to pursue.

It is difficult to summarize the major conclusions of this informing book. It will suffice perhaps to give the author's final statement of the most important problems that co-operation has to master and solve. These are: Better correlation of production and sales, better management better publicity, better methods of keeping members informed, better standardization of products, greater centralization, lower marketing costs. Truly, a formidable list!

Yet co-operation is the coming system, and progress is certain—even if it has to be slow and not altogether steady. The author's views are hopeful, on the whole.

The book should be studied in colleges and agricultural schools, as well as by the advocates and friends of co-operation.

—Chicago Daily News

$3,550,000 AID FOR COTTON AND FRUIT GROWERS

(Continued from Page 1)

ceed 60 per cent of the appraised value of any unit. A further condition imposed is that an audit of the citrus exchange, now under way, shall disclose a condition satisfactory to the board.

CENTRAL BELT GAINS IN CROP PROSPECTS

DETERIORATION IN ATLANTICS OWING TO POOR CONDITIONS

WEST ABOUT UNCHANGED

Average Condition of Belt 54.5 Per Cent of a Normal, Pointing to Probable Production of 14,971,000 Bales Of Cotton.

By Geo. L. Fossick.

Reports to The Commercial Appeal indicate that the condition of the cotton crop, average for the belt, at October 1, was 54.5 per cent of a normal for the date.

The indicated probable production is 14.971,000 bales, 500-pound gross weight equivalents, exclusive of linters and repacks.

Alabama and the states touched by the Mississippi River appear to have improved their baleage prospects materially through the month of September.

Oklahoma and Texas appear to have about held their own with only limited prospects for a top-crop, and that dependent upon frost. One of the most severe droughts in the history of either state was broken early in the month but relief was received too late to help greatly. The staple in both states is said to be very poor, owing to the adverse effects of drouth.

Deterioration Is Heavy.

Heavy deterioration, both as to grade and ..baleage prospects, has occurred in the Carolinas and Georgia. The Atlantics were losing ground early in the month, owing to natural deterioration, weevil damage and, in some localities, unfavorable weather conditions. The last half of September was highly unfavorable. The weather, early in the period was cool and cloudy with intermittent rainfall; towards the close of the month, the three states, particularly a portion of the Piedmont section of South Carolina and most of Georgia, were afflicted with a series of heavy to torrential rains, and accompaniment of the Porto Rican hurricane.

TRUCK PROFITS HIGH ON NEW BERN FARMS

NEWBERN, Tenn., Oct. 7.—Beaure Townsend, chairman of the agricultural department of the Newbern Service Club, and a prominent merchant of this city, has made an interesting report in regard to Newbern's fall truck crops. Townsend states over 25 cars of canned tomatoes have been shipped from the Newbern Canning Co.'s plant this fall, also four carload shipment of beans to the northern markets, in addition to numerous express shipments. Newbern farmers have realized over $10,000 out of their bean crop, and the same amount from the tomato crop.

MISUSED COOKERY TERMS

There are few terms in the English language which are more misused than those borrowed from cookery and applied to the individual.

For instance, we speak of a man as boiling with rage, baked in the heat, or burning with love or jealousy. Sometimes he is buttered and well buttered at that; whilst he is often "cut up or devoured with a flame."

We cook his goose for him and sometimes he makes a goose of himself. Again we make a hash of him, and he at times makes a hash of something else. He gets into hot water and sometimes into a mess, is made into mincemeat, makes minsemeat of his money, and is often in a pickle. We are often asked to toast him, sometimes he gets well roasted and is sometimes set on fire, put into a stew, or is in a stew and no one knows why.

A "softie" is half-baked; one severely handled is well peppered; to falsify accounts is to cook or salt them; wit is attic-salt, and an exaggerated statement must be taken with a grain of salt.

Some are as cool as a cucumber, others as hot as a quail. A chubby child is a little dumpling, and a man or woman may be a cheese or a duck; a large, coarse hand is a mutton fist; a greedy person is a pig; a fat one a sausage, and a shy one sheepish; a coward is chicken-hearted; an irascible person crusty; and an ill-tempered old man is a crab. A walking advertiser between two boards is a sandwich man; two persons resembling each other are like as two peas. If a man grasps at more than his due from a customer he kills the goose that get the eggs; whilst if he makes an unfortunate change from a fair position to a worse one "he's out of the frying-pan into the fire."

PRESCRIBING FOOD

"You don't need medicine—all you need is the right kind of food," says the high-priced doctor to the banker.

"No, don't give the child any medicine—give him a tablespoonful of pineapple juice every 15 minutes until 10 doses are taken," the child specialist says when told his patient is suffering from nausea.

Thus the grocery store supplants the drug store and the cook often takes the place formerly held by the pharmacist. Food, or rather proper food, is given more attention today than ever before and yet some girls—not many, to be sure—are dumb enough to boast that they don't know how to cook.—Memphis Press.

BIG RATTLESNAKE WILL BE EXHIBITED AT MONTGOMERY

University, Ala., Oct. 20.—One of the visitors at Montgomery fair, schedule to open Monday will be a giant timber rattlesnake, which will be exhibited by the state geological survey and the Alabama Museum of Natural History.

The snake is said to be as large as timber rattlers become, being more than five feet in length. The maximum length of this species is about six feet. The bite of the timber rattler is deadly.

The reptile was caught by an Elrod lumberman and was brought into Elrod on the flat bed of a truck, the snake being kept in bounds by a man with a long stick, It was said to be about 20 years old and possessed nine buttons.

FARM BOARD PLANS COTTON SALES AGENCY

The Federal Farm Board hopes to reorganize and centralize the American Cotton Growers' Exchange into an unified selling agency before another crop year, Carl Williams, cotton representative of the Farm Board, testified before the Seuate agriculture committee.

TAILORING AGENTS! $5.00 and $6.00 Profit in Advance on every Sale ALSO BONUS

Competitors have no chance against this premier of all tailoring lines. Year in and year out our agents earn big and steady profits. Even beginners make as much as $100 per week, and up.

SELLING PRICE Fine ALL Wool Suits $23.50

Woods' Suits, topcoats under any other name would cost $35. Made strictly to measure in the latest fashions with tailoring that exemplifies the craft. Guaranteed linings and trimmings. Always a perfect fit. Complete outfit of large samples, fashions, tape measure, order blanks, etc. put up in beautiful carrying case FREE.

Write now for exclusive agency. Experience not necessary, but if you have had some, mention it.

OLIVER E. WOODS & COMPANY
Famous for 20 years
515 South Franklin Street
Department 61 Chicago, Illinois

CAN YOU USE $100 A WEEK AND UP

Make $100 a week and up selling our fine made-to-measure all-wool suits at $23.50—$29.50 and $36.50 retail, direct to wearer. Biggest values—positively sell on sight. Application For Membership
NATIONAL FEDERATION OF COLORED FARMERS
Vincennes Hotel, Chicago.

As a Farmer, I believe the time has arrived when the Colored Farmers should form a National Organization devoted to diversified production, grading, packing, shipping and marketing of farm products and to the purchase of needed farm supplies through co-operative methods, to the end that a more prosperous financial condition may result from their efforts as producers.

I herewith subscribe and forward $5.00 for membership in the National Federation of Colored Farmers for a period of 12 months from date.

COTTON PICKER IS BIG STATE FAIR FEATURE

(Continued from Page 1)

ed and promoted but this is the first machine, so far as I know, which has been placed in actual operation and offered to the public on a commercial basis," said Lederer Monday night.

"Weighing less than 300 pounds and selling for less than $500 the American Cotton picker offers to the southern farmer release from the most disagreeable feature of the industry. In the first place it takes the place of Negro and Mexican cotton pickers who are becoming more costly each year; in the second place it produces a better grade and a longer staple of cotton; and in the third place, it cleans the cotton as it is picked, effecting a big saving in the cost of ginning."

The American Cotton picker surprises most of those who see it for the first time. It is not too large to be handled easily in the field. Its power is furnished by a small gasoline engine using but a gallon of gasoline each 10 hours. It uses no air suction—the bugaboo of many inventors of the past—in picking the cotton from the boll, although it does make use of air to convey the cotton from the boll to the cotton bin. It is drawn along the cotton row by the two operators as they work and is light enough for this to be done easily. And, last, but possibly most important, it cleans the cotton of fully 90 per cent of all dirt and trash as it is picked.

Typical of the views of farmers in whose fields the American cotton pickers has worked are the statements of Jonas Weil, manager of Weil Brothers' farm near Corpus Christi, Texas. The American cotton picker picked two bales and 10 bales were picked the same day by hand pickers in the Weil field. Weil's statements regarding results show the real value of machine cotton picking over hand picking. In a letter to W C. Durant, who is actively backing the machine, Weil said:

"The hand-picked bales graded strict low middling while the machine picked bales graded strict middling—a difference which made the machine-picked cotton worth 1 1-2 cents a pound more money than the hand picked."

The machine-picked cotton averaged 55 pounds of trash to two bales while the hand-picked cotton averaged 327 pounds of trash to each two bales.

The Weil field of 400 acres never had been picked so clean of cotton by hand pickers as it was picked by the machines, Weil said. He declared it is a pleasure to see a way to get "all the cotton the farmer grows."

According to Weil's statement, and his figures are substantially borne out by those of the ginners, Thompson and McDonald of Corpus Christi and J. A. Hill, representative of the Texas Cotton Growers Finance corporation in that city, there is a direct saving of $7.50 per bale in the increased value of the machine picked cotton and of $2.70 in the cost per bale of picking and ginning the trash in the hand-picked cotton or a total of $10.70 per bale in favor of the machine picked cotton.

The machine as it operates in the field is little larger than a motorcycle. It rolls easily along the rows and when not in operation will occupy very little storage space.

"The American is a real cotton picker and will do the work," said Lederer. "All we ask is that the farmers and business men directly interested in the cotton industry come to the fair and see it in operation. We can prove in actual operation that this cotton picker is an economical success and a necessity on every southern farm.

"If it were not so, W. C. Durant, the man who made the Buick and Chevrolet cars and later the Frigidaire, would not allow his name connected with it. Durant is behind every claim made for the American cotton picker mainly because he believes it will release the American farmer from a labor bondage of many decades and make cotton picking the easiest and most pleasant feature of cotton growing."

HORSE TRADING DAY REVIVED AT MERCER

MERCER, Tenn., Oct. 14.—Horse trading day with all of its romance of glamor will be revived in Mercer at an early date.

In this modern machine age, it seems strange "Old Dobbin" should have a day set apart in his honor. Local merchant, however, plan to erect hitching posts for the conclave, which is to convene the second Monday of each month.

OUR COUNTY AGENTS

(Continued from Page 1)

years. This year he is studying for his B. A. degree at Hampton. It has taken him twelve years to save money enough to ayord one year off.

Twelve years ago he visited a little farm community where every farm had its "pine patch," its spring and spring-house, its exposed and leeching manure-pile,—its filth,—its flies,—its sickness, poverty and unhappiness. With his own hands he built the first modern, sanitary, out-door lavatory on a Negro's farm in the county. He solicited enough money to purchase screen windows and doors for a little rural schoolhouse. He persuaded a farmer to buy a fruit and vegetable spraying outfit,—taught him how to use it profitably,—and today that farmer is a wealthy man. Not long ago he was telling us how the white neighbors came in and "made over" a new improved kitchen cabinet which this Negro farmer had purchased for his wife. It was the best one in the county. We imagined we could see the water glisten in his eyes while he was talking. Was he thinking about those twelve hard years he had spent serving a too ungrateful people,—serving with patience and tact and unselfishness,—serving his race and ours? No, he was not thinking of himself but:—

We want YOU to think about these unsung heroes,—these Negro county farm and extension agents, who are giving their all for Negro progress and prosperity. It takes a man to be a Negro leader,—even acounty agent. Many are forced to walk long distances,—from farm to farm,— to the country churches, schoolhouses and lodge halls,—making talks and urging our farmers to "stick." They are useful servants. Some day the South will be proud of them,—perhaps will build a monument to them,—which she should do,—but:———

Why not pay them a decent, honest, living salary now? They are worth it. They earn it. They need it. They are underpaid. We whom they serve know it,—those in authority know it,—so why not do something about it?

The National Federation of Colored Farmers proposes to address a letter to the Governor of each state that employs these servants and to the Secretary of Agriculture, urging that more money be appropriated for agents' salaries. Members of the organization and readers of this paper are also requested to write. If we go after it we will eventually get for them what we request. You can't stop a good thing and this will be a good thing for these servants of ours and for all they serve.

MR. LOUIS V. IRVING TELLS OF AID GIVEN HIM BY FEDERATION OF COLORED FARMERS

Millstone, Miss., Oct. 26, 1929—The Modern Farmer, Nashville, Tenn.

Gentlemen: In July of this year I took six month's membership in the National Federation of Colored Farmers. About three weeks ago I was in "deep water" and needed both aid and advice. I wrote the President of the Federation and he promptly came to my rescue.

In one transaction I saved exactly one hundred dollars. I feel that it's my duty to tell our farmer the aid I have received through the Federation and this letter is written with the request that you publish same.

Every farmer of our race should stand behind this grand organization. The colored farmer needs organization.

Yours truly,
LOUIS V. IRVING.

I am also a subscriber to your interesting paper, The Modern Farmer. It is worth three time what you ask for it.

NEGRO FAIR TO OPEN

Opening day at the Colored Tri-State Fair Thursday will be Arkansas Day. A full program for the three-day celebration has been planned, L. G. Patterson, secretary announced yesterday. Gates open at noon Thursday.

More than 30.000 are expected to pass through the gates Friday, when Tennessee and Children's Day will be celebrated. All Negro schools in the city and county will close to permit the children to attend the fair that day.

Saturday will be Mississippi and Farmers' Day. Two features on the program for the day will be a cow and hog calling contest. The women will take part in the cow calling contest and the men will do the pig calling.

Exhibits have begun to arrive and from all indications there will be enough to fill three of the large buildings. Patterson expects the largest number of exhibits the Colored Trio-State Fair has ever had.

TO THE FARMERS:

The Modern Farmer contains information every month that you will not find in any other farm journal. It is the only journal paper published by and for our people that is devoted exclusively to the farmer and his family.

The price is in reach of every one—being less than 2 cents per week. During these times when the farming industry is undergoing so many changes, and there are so many advantages that can be had by our colored farmers if they are only aware of them, it is absolutely necessary that you should know what is going on. Three-fourths of the white farmers are subscribers to the white farm magazines and journals. They know just what is going on.

Fill out the blank—secure a money order for $1.00 and mail at once:

The Modern Farmer,

447 Fourth Avenue, North,

Nashville, Tenn.

Whitens Brown Skin
in only 1 minute or money back!

Test Amazing New Fluid Without Risk

If you want to quickly whiten and completely change the color of your skin in just one minute, you should make this simple test.

First, look carefully in your mirror and see just how dark your skin now appears. Then, give your face a one minute massage with Spanola—made from the newly rediscovered old Spanish Formula for instantly whitening skin.

In less than one minute you will see truly amazing results. A light, white-toned beautiful skin will appear that will be envied by all your friends and acquaintances—but it is not a matter of what your friends will say or think—your mirror will tell you the story. Instantly prove to yourself, without question or doubt, the effectiveness of Spanola. It is the greatest beauty discovery of all times.

It will give you the alluring natural skin beauty you have always wished for in a harmless, beneficial and instantaneous way. No matter how dark or unattractive your skin may be, you should test SPANOLA and see what a difference it makes.

Make Test at Our Risk

Would you like to test Spanola without risk? Would you like to see how much whiter and more beautiful it can make your skin? See what a remarkable improvement it makes in less than one minute, then if not simply delighted, your money will be refunded for the asking.

Send no money. Simply mail coupon or write. When package arrives, pay postman only $1.67 for the regular large size bottle. Test Spanola just once. Then if not delighted, return it and your money will be refunded, without comment. Mail coupon today. Dept. B.

That Baby You've Longed For

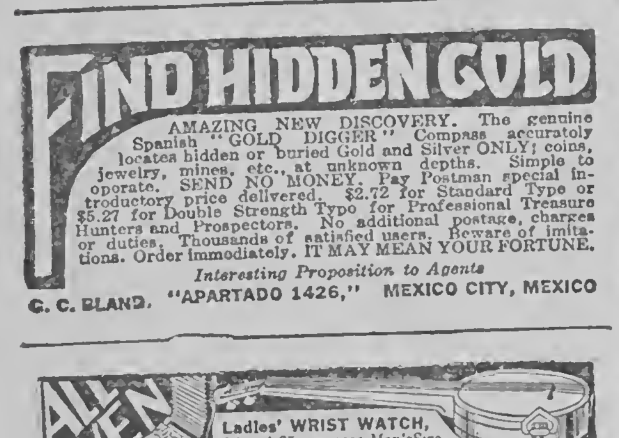
Mrs. Burton Advises Women on Motherhood and Companionship

"For several years I was denied the blessing of motherhood," writes Mrs. Margaret Burton, of Kansas City. "I was terribly nervous and subject to periods of terrible suffering and melancholia. Now I am the proud mother of a beautiful little daughter and a true companion and inspiration to my husband. I believe hundreds of other women would like to know the secret of my happiness, and I will gladly reveal it to any married woman who will write me." Mrs. Burton offers her advice entirely without charge She has nothing to sell. Letters should be addressed to Mrs. Margaret Burton, 263 Massachusetts, Kansas City, Mo. Correspondence will be strictly confidential.

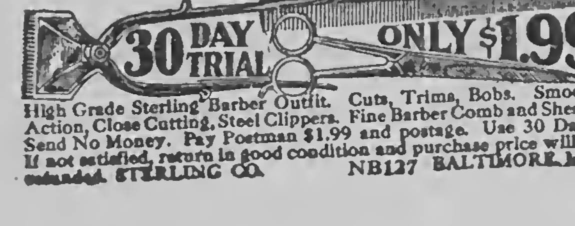
Stop Whiskey

AN ODORLESS AND TASTELESS TREATMENT

Any lady can give it secretly at home in tea, coffee or food, and it costs nothing to try! If you have a husband, son, brother, father or friend who is a victim of whiskey, beer or wine, send your name and address to Dr. J. W. Haines Co., 3351 Glenn Bldg., Cincinnati, Ohio, and they will send you absolutely free, in plain wrapper a trial package of this wonderful treatment. Write today and be thankful all your life.



EAST INDIA HAIR GROWER
Made in Oklahoma City
Sold Everywhere
Price one jar 50c; Catalog Free
S. D. LYON, 316 N. Central
Oklahoma City, Okla.



The Rosenwald School at Tchula, Miss., has just been completed and is filling a long-felt need. The good people of this community are pressed for funds to make a payment on the building but their diligence and determination are bound to be rewarded. Under the wise guidance of C. W. Johnson, prominent undertaker, and Mrs. Redmond, the principal, the school is giving excellent education and training to the colored boys and girls of Tchula.

John C. Cooper, of Belzoni, Miss., is an industrious farmer thoroughly up-to-date in his methods of farming and this year he has good crops Mr. Cooper is from one of the oldest resident families of Humphrey County. He says he will plant heavily in sweet potatoes and melons next year.

Rev. C. H. Kelly and grandson of Chatfield, Ark., have excellent crops this year. Rev. Kelly needs little instruction on how to farm.

N. J. Williamson a prosperous farmer of Tunica County, Miss., is very active in the interests of the Federation. He owns a large farm and his standing in the community among both white and colored is above reproach.

T. S. Nightingale and Rev. T. L. Walton, of Bartlette, Shelby County, Tenn, are prosperous and successful farmers. They are enthusiastic about the Federation and are very influential in the community.

Dr. Boyland, A. M. Westbrook and Mr. Work, of Ellendale, Tenn., say that organization is the only salvation for the colored farmers. Ellendale is one of the wealthiest settlements of colored farmers in Tennessee.

GENERAL NEWS

PRODUCTS OF COLORED FARMERS DISPLAYED AT MOBILE FAIR

Mobile, Ala. —Articles prepared by colored school children and pisplayed at the fair here recently won the highest praise from the many visitors who attended from all sections of the state. The displays were more numerous and were by far the best ever shown here. .

Dr. E. T. Belsaw, director of the colored department, made every effort to have a worthwhile exhibit and his work was rewarded handsomely . His tact, wisdom and untiring efforts are to be commended.

OVER TWO BALES PER ACRE

Grant McGill, a young boy about sixteen years of age, living three miles from Mound Bayou, Mississippi, has five acres of Hagar Big Boll cotton that will yield a little over two bales to the acre.

The land was prepared and cotton planted and cultivated under the supervision of Prof. C. L. Gibson, vocational teacher, Bolivar County. In talking with young McGill he said the land was well bedded before planting and the rows set three feet apart. One hundred and fifty pounds of Chilean nitrate per acre was used as side dressing and the cotton ploud once per week. There are from one hundred to one hundred and nineteen bolls to the stalk. Last year this same land without the nitrate yielded about one-half bale to the acre.

TERRACING CAMPAIGN PLANNED FOR STATE

Mississippi to Halt Terrific Soil Losses.

A. AND M. COLLEGE, Miss., Oct. 5.—A state-wide terracing campaign designated "soil saving weeks," has been announced by the agricultural engineering division of the extension department of Missisipni A. and M. College for Oct. 21 to Nov. 2.

County agents are formulating their plans for conducting terracing demonstrations in logical communities and for teaching farmers how to use the terracing level correctly in every section of the state where erosion occurs.

It is estimated that no less than 126 millions of pounds of plant food material is washed out of the fields and pastures of the United States annually. The south suffers a most severe loss because of the iceless and snowless winter with their heavy rainfall, and because of the farming practices with predominating clean cultivation and little or no winter cover crops.

Cost Equals Cotton Returns

Sol washing with its attending ill effects is said to be costing Mississippi the price of her annual cotton crop. This loss is attributed to the decreasing yield of the washed fields, to the clogging of drainage systems, and to the subsequent barying of the rich valley lands. uhnee

China today is subject to floods and ramines because of its land denuded of trees with no protection against a two-rapid drainage which cuts into the soil, impoverishing it on its swift journey to the outlet. It is not necessary, however, to look to China to see what the future of erosion will be for terrific washing of land taken place here in Mississipi within the memory of man.

The state is today learning the lesson of fertilizing for increased profits. Just as important, if not more so, is the conservation of the plant food which is the natural content of the soil and which is improved by the use of winter cover crops, manure, deep plowing and terracing.

TO OUR COLORED FARMERS:

The campaign for membership in the Federation is actively on, and will continue through September and October.

We plan to have our President visit several states, and aid in the organizing of units for the Federation. There is no charge for this service, and the only requirement necessary is for each community to defray the railroad expenses.

Any county or community that is desirous of having our President visit them while on this tour, and willing to guarantee the railroad expense, send in your name and approximate date and you will be included in the itinerary.

Vincennes Hotel, Chicago.

DAIRY CATTLE MAY THREATEN COTTON'S RULE

Crowley's Ridge in Arkansas Suited for Dairying

By United Press

Forrest City, Ark.,—The milk cow is threatening to usurp the throne of King Cotton in St Francis county, since dairying is rapidly becoming one of the leading industries here.

There is now at the disposal of farmers $100,000. This Livestock Finance Corporation was organized last year with about $5,000 capital Recently, however ,this has been increased, and arrangement made with the St. Louis banks for rediscounting so that $100,000 is now available to those interested in dairying.

Thru this corporation, cows may be purchased on small monthly payments with reasonable interest rates.

COTTON FAILS TO MAINTAIN ADVANCE

Reactions Under Southern Selling and Realizing Follow Gains.

New York, Oct. 5.—(AP)—Reports of the rain in the central and eastern belts and relatively firm cables led to an opening advance in the cotton market today, but reactions followed under Southern selling and week-end realizing. After selling up to 18.89, early, December eased off to 18.81, and closed 18.83 with the general market closing steady at net advances of 2 to 5 points.

The opening was steady at an advance of 6 to 12 points and active months showed net gains of 8 to 13 points during the early trading on trade buying, coving and some commission houses demand. It was felt that the rain in the central and parts of the eastern belt would delay the movement and probably lower the grade of open cotton and cable advices received here said that there had been buying in Liverpool on the rain news.

Southern selling supplied the early demand, however, and later in the morning the market was rather quiet until near the close, when there was a sprut in liquidation. This sent the price of March contracts off from 19.23. the high price of the morning, to 19.11 and that delivery closed at 19.12.

A private crop report was published, placing the condition at 52.1 and the indicated yield at 14.558,000 bales. This report also estimated that 5,736,000 bales of the crop had been ginned and 40 per cent picked up to the first of October. The figures appeared to be further evening up of account for over the week-end and government report scheduled for publication on Tuesday.

Up to the close of business today 11 private condition reports had been issued, of which nine included estimates of the yield. The condition figures range from 52.1 up to 54.8 and figures on the indicated yield from 14,505,000 up to 14,990,000 bales.

On the average, these reports have shown a condition of 53 1 and a crop indication of 14,690,000 bales, compared with the government's September 1 indication of 14,825,000 bales.

The amount of cotton on shipboard awaiting clearance at the end of this week was estimated at 136,000 bales against 97,000 last year.

—Arkansas Gayette.

MILK SICKNESS, CAUSED BY WEED, ATTACKS FAMILY

Dry Pastures to Blame; Farmers Warned

YVRP

An outbreak of "milk sickness," which attacked five members of a family was reported yesterday by Dr. W. E. Walsh at Morris, Ill. He warned that the disease may be prevalent this fall because the pastures have been burned out by drought. Dr. Walsh says the disease is caused by the drinking of milk from cows which have eaten the "white snake root" plant which remains green after pasturage is dried up. Although cattle often become poisoned from the plant, cows giving milk seldom show symptoms of the illness. Persons drinking their milk, however, become seriously ill.

Poison from Weed

The poison of the white snake plant has been separated and identified by Dr. James F. Cauch of the government bureau of animal husbandry, Dr. Walsh said. The sickness existed in the lowlands of the middle west and as far south as Georgia 50 and 75 years ago, he said, many early settlers giving up their land and going back eact because they did not know how to combat it.

The mother of Abraham Lincoln is known to have died of milk sickness, Dr. Walsh stated. Dr. William Osler, former authority of John Hopkins Medical school, named it "the most mysterious disease."

"The poison of "Milk sickness' takes hold of the liver, making the digestion of fat impossible," Dr. Welsh said. "The treatment consists in giving alkalis and injections of glucose into the veins.

Warn Farmers on Weed

"To be safe during this dry season, all farmers should have their county agents search for the white snake root plant in hollows and underbrush and along all streams of their land."

Because of outbreak of the disease near Effingham and Vandalia, the Illinois deartment of agriculture recently has put out "snake root bulletins," warning milk producers about the disease and telling them how to recognize the plant and eradicate it.

SEN. BROOKHART HITS FARM PLAN

Illegal to Loan Funds to Proposed Corporation, Iowan Declares In Senate Hearing

Washington.— (AP)— The right of the federal farm board to make loans to the proposed Farmers National Grain Corporation was challenged Wednesday by Senator Brookhart of Iowa during examination of Sam R. McKelvie, of Nebraska, wheat's representative on the board. by the Senate agricultural committee.

The Iowan said the Farm Act authorized the board to make loans to co-operative and not to corporations.

Informed by McKelvie that counsel had assured the board its program for creating the corporation was entirely within the law Bookhart said.

"I think the board has started out on an illegal basis right at the start. Maybe some of us will have to bring an injunction to test the right of your counsel to advise that."

While members are explaining its methods and intentions to the Senate agriculture committee, the federal farm board is broadening its organization to meet the increasing demands for farm relief.

Pursuing a policy of conservativeness in the hope of bringing permanent prosperity to agriculture, the board has taken steps to educate the farmers to the advantages of co-operative marketing and the disadvantages of surplus production.

A banking division to handle loans from the $500,000,000 fund has been created and the co-operative marketing division of the agriculture department has been transferred to the board by President Hoover to stimulate organization of co-operatives.

PRIZE SWEET POTATO

Mr. J. A. Applewhite, prominent white planter of Buckley, Ark., has on display in the Lee County National Bank a sweet potato twenty-eight inches in circumference one way and twenty-five inches in another. The potato weighs eight and one-half pounds. This is said to be the largest ever grown in the state. There are eighty-four white and three thousand three hundred and twenty-four (3324) colored farmers in Lee County. The average crop of sweet potatoes in this county is over fourteen thousand bushels annually.

SOUTH ALABAMA GALE HALTS FARM WORKERS

Fear Loss to Cotton From Frost, Cold.

Birmingham, Ala., Oct. 5—(AP.)—The hurricane scare and rains of the past week temporarily halted harvesting in South Alabama which has entered the final stages while scattered reports from other sections of the state told of completed harvest operations.

The cotton crop has returned a much larger yield than last year with some sections reporting fields in which the staple has opened with only first pickings having been completed. Additional pickers have been placed in the fields in order to have the crop removed before further damage is inflicted by rain, frost and cold weather.

Tuscaloosa County reported considerable cotton remaining in the fields with efforts redoubled to have the crop picked by the end of next week. The cotton leaf worm appeared too late to do material damage while late bolls were suffering from boll weevil activity. Hay cutting is almost complete with farmers turning toward preparations for winter crops.

Fair weather in Lamar County enabled rapid advance in cotton gathering with all labor employed. It was estimated that 75 per cent of the cotton crop had been harvested and 60 per cent ginned. The yield was better than expected with the best corn crop in years. Sugar cane, potatoes and peanuts will return satisfactory yields.

2,408 BALES OF COTTON ARE GINNED AT M'CRORY

McCrory, Ark. — (Special)— The three gins at McCrory ginned up to Oct. 1 a total of 2,408 bales. Last year on the same date the gins had ginned 1,744 bales. The continued favorable weather has been to the advantage of the farmers and the ginners. With another month of good weather most of the crop will be gathered. It is estimated that between 40 and 50 per cent of the crop has been picked. The crop is not as good this year as last.

CHAMPION COTTON PICKER

"Boll Weevil" Jackson who stands six feet in his socks and about thirty-five years of age is conceded the champion cotton picker of the United States. On a farm in West Tennessee he picked nine hundred and thirty pounds seed cotton in ten hours.

Talking with a representative of The Modern Farmer, Jackson said he was passing through West Tennessee from Arkansas and was hired by the owner of a large plantation to aid in gathering the cotton. They paid one dollar and a quarter pre hundred. The first day he picked nine hundred and thirty pounds and received eleven dollars and sixty-two cents ($11.62) for his day's work, but was told not to come back as he would demoralize the regular hands. Jackson further stated that he could easily average eight hundred pounds daily but found it difficult to get the work as the owners seemed to feel he was making too much money.

His real name is Albert Jackson but was nick-named "Bool Weevil" on account of his ability to clean a cotton patch so swiftly.

RICH TOMATO CROP GROWN IN 'GARDEN'

Newbern, Tenn., —Growing of tomatoes is profitable, according to J. H. Sturdivant, farmer, residing near Newbern. Sturdivant has already sold 630 bushels of tomatoes gathered from one acre and there are many more tomatoes in the patch. From the one-acre patch he has realized $230.

Sturdivant grew his own plants and believes the secret of a high yield is due to rich land, together with frequent and thoro cultivation.

Sturdivant says he feels the low guaranteed price for tomatoes is more profitable than to grow green wraps, with increased cost of production and the hazard of fluctuating markets.

PRIMITIVE PERUVIANS, 4,000 YEARS AGO, WERE GENTLEMEN FARMERS, AND THEIR MEATLESS DINNERS MIGHT WELL TEMPT A MODERN GOURMET

By A. HYATT VERRILL

There is nothing to show that the early Peruvian Indian ever faced a farm relief problem or had congressmen to send him free seeds in the spring. But he was a clever fellow when it came to agriculture, and three or four thousand years before exploring Spaniards and swaggering buccaneers appeared to upset his family circle the Indian raised a variety of fresh vegetables that would be the envy of the modern housewife.

In more ways than one the Chimu—for we are talking now of that period of Peruvian history long before the Incas, when the Chimus had conquered most of what is present-day Peru—had modern ideas.

He was primarily a vegetarian. Whether this was due to a scarcity of meat or to a fondness for gréen things we can not say. The fact remains, however, that there are few bones in the refuse heaps of the period to indicate that the Chimu was a meat eater. From these scrap piles we gather that he occasionally regaled himself and family with a Sunday chicken dinner or a tasty bit of dog meat.

The Llama, which might have furnished him with the counterpart of our mutton chop, was a sacred animal, not to be willfully slaughtered. A practical religion that, for the Chimu wisely reasoned that dead llamas meant less milk for babies and less hair for clothing.

After a hard day in the fields the weary Chimu came home to a well-cooked and appetizing vegetable dinner. Set by the fire to keep warm were several earthenware pots from which savory wisps of steam escaped. The lady of the house welcomed home her lord and master and proceeded to ladle a tempting repast from these crocks.

There was, perhaps, a piece of melon for an appetizer, for we know that the Chimus raised at least seven varieties, including three kinds of watermelon.

After the melon came a bowl of succotash. The Chimu cook could choose from several varieties of corn and nearly as many more of beans. No doubt it was in early Peru that house-wives first argued which kind of corn was best on the cob and whether Lima beans or string beans made the better succotash.

The piece de resistance was likely to be a huge baked potato. Whether, when the jacket was broken, it proved to be the white and mealy Irish variety or a succulent golden sweet potato or yam had been previously determined by the whim of the husband on that particular evening. The Chimus specialized in potato growing and developed more than 40 varieties of tubers.

As side dishes the Indian had a choice of peppers, eggplant, squash, tomatoes and peas. We do not find it mentioned that spinach was on the Chimu bill of fare, so we can not blame the Indian for that white man's burden on the modern menu.

For dessert, if there were still room for dessert, the well-fed Chimu could poke about in a basket of fruit until he found something to his taste, be it bananas, apple, peach, cherry or strawberry.

During the meal he undoubtedly drank mate, the South American substitute for tea, which in addition to being palatable has beneficent medicinal properties.

After the meal was over and the dinner things cleared away it is to be surmised the Peruvian ancestor indulged himself in chewing a few coca leaves, for the coca shrub, from which cocaine is derived, grows wild in Peru. Accustomed as he was to the drug in this mild form, it is probable that the leaves took the place of the post-prandial pipe or cigar. There is little evidence that the early Peruvians smoked tobacco.

The Chimu did not depend alone on the whims of nature to provide him with food. From the few types of vegetables which grew wild on the countryside he experimented in true Burbankian fashion until he had improved upon the strains and had developed numerous varieties of the species, each designed for a particular use.

To avoid the fever ridden swamps and river valleys the Chimu soon learned to remove to the uplands, which, though less fertile than the river bottoms, were far more conducive to normal health. The barren slopes, however, required artificial irrigation before they would produce foodstuffs, and the ingenious means the Chimu used to divert water to his terraced hillsides would do credit to modern engineering science. How well he succeeded may be gathered from the ascertained fact that in his fields he produced enough grain, fruit and vegetables to feed in the neighborhood of 20,000,000 people. From the ruins brought to light by archeological research we estimate the Chimu population at that number.

Most perplexing to modern science is the skill with which the Chimu worked in metals. In his furnaces he smelted gold, silver and platinum. Lacking iron for tools and weapons, he possessed the long-lost secret of tempering copper to use in its stead.

It is extremely doubtful if the Chimu had any knowledge of electricity and electroplating and it is difficult to believe that he could plate one metal upon another by chemical means. Yet plate metals he did, since excavations in Chimu ruins reveal vessels and ornaments of copper and silver which have been plated with gold so skillfully that they compare favorably with articles produced by the most modern electroplating methods.

In fancy we can conjure up pictures of the Chimu artisan in the midst of glowing forges and fuming vats. We see him throw a handful of powder into a seething caldron. We see him watch the mixture anxiously until it clears and cools. And then we see him lift out the copper bowl, and lo! it has been coated with the finest gold. By some subtle and mysterious alchemy he has united the metals.

All this we may see in fancy. It is a pleasing picture. But your scientist demands facts and formulas. For years he has tried to find out what the Chimu once knew. All in vain. The secrets are buried with the Chimu and the other ancient tribes of Central and South America.

The Chimu never thought of gold as money. He hoarded it in his treasure vaults, it is true, but he did so because it was beautiful, because it was immutable.

When the Spaniards conquered Peru they found enormous quantities of gold in the Chimu ruins. They carried tons of the precious metal back to Spain. Other tons fell prey to the pirates of the Spanish Main. And undoubtedly as many more tons of gold still lie buried, waiting for the inquiring archeologist.

There are no gold mines in Peru, however, and prospecting fails to show that there were ever gold-bearing strata there. Yet the Chimu had tons upon tons of it. Where did he get it? From what distant gold field was it brought? Did he exact heavy tribute from subject tribes far removed? More secrets that lie buried with the Chimu.

Four thousand years ago the Chimu performed minor and major surgical operations. Skeletons show that he performed amputations and abdominal incisions. He trepanned the skulls of his fellow tribesmen when they suffered from brain diseases. He removed eyes from their sockets and he put metal crowns and filling in his neighbor's teeth.

Crude though his instruments must have been, his patients often survived, for the skeletons show new bone growth over the old wounds.

Was he the first surgeon to operate with anesthetics? Close at hand grew the coca shrub, from which we get our cocaine. It is difficult to imagine even the stoical Indian enduring the pain of this crude surgery without something to deaden the senses.

The dry soil of the Peruvian uplands has been invaluable in preserving the relics of the Chimu era. Laces, woolens, feather costumes and pottery have come down to us remarkably well preserved.

The Chimu was an adept potter. He prided himself on the variety of his designs, and through his modeling in clay we learn more about his daily life and habits, his industries and his recreations than from any other source. Where other races have carved their hieroglyphics in stone the Chimu has left easily comprehensible and accurate pictures of himself in hard baked clay so that we, 30 or 40 centuries later, might marvel at the artistry of what we have been accustomed to think of as the primitive barbarism of the prehistoric South American Indian.

Eighty-one Thousand Seven Hundred Twenty-six Colored Farmers

Notes of Interest To Federation Members

PRESIDENT JAMES P. DAVIS WRITES FROM THE FIELD GIVING INTERESTING NEWS

One of our units in southern Alabama and two in Mississippi are negotiating with large wholesale flower shop in Chicago for the shipment of about 100 boxes smilax, bittersweet, juniper and mistletoe for Xmas trade.

This is something they had never attempted before.

J. N. Hoskin, Allen Louis, A. Weathersby and C. C. Richardson are very active members of the Trinity unit in Holmes County, Miss.

The Federation is arranging for them to get in position to figure with several large manufacturers where they can sell timber logs in carlots.

Nobile Calhoun of Talladega County, Alabama, one of the members of our Alabama unit is the owner of 600 acres of land. He is planning to enlarge his operations this coming year, and the Federation is aiding him in making his arrangements.

A member in Mississippi has written in for the Federation to secure best prices for a new tractor and riding plow. We are now figuring with the different manufacturers, and will be able to save this member quite a bit on his purchase.

Several units are now checking up their requirements for overalls for another year. The Federation has made contact with one of the largest and most responsible firms manufacturing overalls, who have agreed to give our members wholsesale prices which will be the means of saving them hundreds of dollars during a year.

The wife of a Mississippi member writes in that she will be able to make weekly shipments of eggs during November and December.

The Federation will assist her in marketing these eggs through a Memphis house.

While in Mississippi the latter part of October the President of the Federation was instrumental in securing 20 cents per pound for the cotton of one of the members living in Holmes County. This cotton was long staple and the best price he had been offered in his local market was 17 cents. We had the cotton shipped to another market.

During the month of October the Federation offices have received letters from 12 of its members asking for advice and instructions as to the filing of application for long term farm loans.

The Federation is assisting them to the fullest extent possible.

A member in Alabama has two hundred gallons of ribbon cane syrup for sale.

We are making an effort to place this lot of syrup with one of our largest colored colleges—boarding department.

Mr. John Cooper of the Humphrey unit has requested prices on a carload of corn and a car of hay. At a recent meeting the members instructed him to make the purchase. This is cooperative buying and the members will be able to save quite a neat sum by purchasing in carlots.

The Federation has two members who are desirous of purchasing 50 to 75 acre farms in the delta of Mississippi. Any members having such lands for sale, or knowing of such, kindly send in the data in order that we may pass it on to our prospective buyers for their consideration.

Since the flood in 1927 Mississippi

LEAFY VEGETABLES APPROVED

DIET SPECIALISTS RECOMMEND A LARGER CONSUMPTION

Diet specialists are urging the American public to eat heavily of leafy and green vegetables. As a result there is a good steady demand for them in practically all of the larger cities.

A few years ago turnip greens, mustard greens, collards, cabbage and kale were considered cheap foods. Today they are on sale in the finest groceries and markets and on the menus of our highest grade hotels.

Reviewing the vegetable market in New York and Chicago and several of the larger cities we find the wholesale prices of leafy vegetables to run about as follows:

Calif. asparagus, 5 to 10 dollars per dozen large bunches.

Green beans, $2.00 to $5.00 per hmpr.

Brussels sprouts 15 to 25 cents per quart.

Cabbage, $1.00 to $1.50 per crt.

Cauliflower $1.00 to $2.75 per crt.

Celery, $2.25 to $3.25 crt.

Collard greens, $1.50 to $1.75 per barrel.

Cucumbers, $1.00 per lug.

Dandelion greens 75 to $1.00 basket.

Endive, 15c to 25c per pound.

Kale, 50c to 50c per crate.

Okra, $1.50 to $5.00 per hmpr.

Parley per 100 bunches, $1.50 to $2.50.

Peppers (green) $3.50 to $5.25 per crate.

Onion, Green shallots, La. and Miss., $12.00 to $15.00 per barrell.

Spinach, 60c to $1.00 per brkt.

Watercress, 100 bunches, $1.50 to $2.50.

To the Southern farmers this opens the way for quite a little revenue to be coming in during the winter months when every dollar counts.

Watercress can be found in almost all Southern streams and dandelions grow wild in pastures and fields. The demand for fresh vegetables is here to stay, and the wide awake farmer will get his share of the business.

FARM LAND IN DEMAND

The Yazoo City Herald contains the following:

Improvement is noted in the demand for farm lands in many sections of the country, according to the presidents of several federal land banks, who have been attending a conference in Washington.

One of the bankers stated that there is now more interest in farm lands than at any time during the past four or five yeass. He added that this is a good time to purchase a farm, as valuations are still relatively low, although some strengthening of prices is noted.

There seems to be a belief that agriculture has seen its darkest days, and that improvement from now on will be steady and continuous. This improvement will be all the more certain if the farmers themselves will take advantage of the opportunities for cooperative marketing which are offered with the assistance of the new federal farm board.

If the influences now at work for the betterment of agricultural conditions accomplish this much desired result, it will be of tremendous benefit, not only to the farmers, but to every branch of business and industry.

TEXAS GROUP IS UNORGANIZED SAYS PRESIDENT

TWENTY-FIVE THOUSAND FIVE HUNDRED AND NINETEEN FARMS OWNED BY COLORED

By Bryan Mack

(REVIEW OF REVIEWS)

Just as one cannot be educated without reading the Bible and Shakespeare, one cannot know America without being acquainted with Texas. This state is unique. Size alone would not make it so, though goodness knows it is large enough to awe the most sophisticated globe trotter.

Nature was in a generous mood when Texas was created. Seemingly it has every item of valuable things thot is known to man, whether it be in, on, or above the earth; and the climate is of every variety. It may be freezing in the Panhandle of the state while bathers splash into the warm seashore waters and bask in the sunshine on the beaches. Mountain peaks are quite as typically Texas as are the plains or the fertile lands of the Rio Grande Valley.

With climate and terrain spanning the extremes it is natural to expect that plant life is no less diversified, and this is true. Only five things seem to be found in every section of the state in abundance—cotton, oil wells, figs, electric transmission lines, and a "hooray for my part of Texas" spirit. If any one doubts the last, let him speak disparagingly of the baseball team or the fire department of the town in which he happens to be.

Agriculture is the basis of wealth for Texas, even if it does not appear as spectacular as oil. But agriculture and horticulture are only making a beginning, even if their totals are staggering. Already, industries af various kinds are tying up with agriculture to such an extent that it is commanding attention.

Flour mills, cotton gins, and cotton oil mills, packing house plants, rice mills, sugar refineries, feed mills, fertilizer plants, canning factories, fruit preserving outfits, textile mills, creameries and condensaries, tanneries are all operating in Texas to use some of the raw materials. In addition there are farm machinery plants, box factories, bag mills and clothing plants operating especially to serve agricultural sections.

A few figures are necessary to acquaint the reader with the vastness of agriculture out here. The total area of the state is 167,934,720 acres, and the annual crop value ranges from $800,000,000 to $900,000,000. At the rate at which new projects and intensive cultivation are going forward. this amount will increase to several times this amount in early years.

Soils and crops and climate reach the extremes, and consequently the products of the lands are legion. No doubt readers will be amazed at their own amazement to learn what variety of things are grown here. Cotton, the great crop, will be saved until the last and others taken in alphabetical order. Apples are grown mostly for home consumption in the northern and eastern parts of the state. Barley, only slightly grown, yields $2,391,000; beans and peas, $1,000,000; beets, $882,000; broom corn, $200,000; blackberries and strawberries, $556,000; cabbage, $1,760,000; cantelopes, $125,000; citrus fruits, $2,000,000; corn, $77,346,000; cucumbers, $581,000; hay, $11,880,000; lettuce, $102,000; oats, $18,233,000; onions, $3,654,000; peaches, $2,096,000; pears, $488,000; peanuts, $3,900,000; pecans, $2,040,000; potatoes, $2,691,000; sweet po-

(Continued on Page 5)

Washington County Mississippi's Statistics

EIGHT THOUSAND ONE HUNDRED AND FIFTY-SIX COLORED FARMERS IN THE COUNTY

An inquiry, apparently anonymous, has been received by the Editor asking that we give statistics on Washington County, Mississippi. We have very little respect for anonymous communication, but in this instance we will comply.

Total white farmers in the county, 553. Total colored farmers in the county, 8,156. Total value of all crops produced in 1924, $8.022,153. Value of livestock, $1,436,338.00. Number of mules, 10,172 valued at $1,067,490.00. Number of cows in the county, 3784. Number of hogs in the county, 8192. Number of breeding sows, 1176. Average annual production of cotton, 57,441 bales. Number of farms in the county, 8714.

This is one of the best cotton counties in the state. The soil is strong and adapted to cotton growing.

For some reason farmers have not been planting any vegetables to speak of.

It is also of interest to state that Negroes own farms in them are county than whites.

According to the figures as above given there are about 16 colored farmers in the county to every white farmer, which also shows that colored farmers produce over 50.000 bales of cotton.

Sweet potatoes, bell peppers, okra and carrots could be grown to advantage in this county, and find ready sale for same in the larger cities.

The colored farmers are not organized in the county. By all means they should get together at once and form an organization for their promotion and protection.

The Editor ventures the assertion that if the colored farmers in Washington County were organized they could get at least 2 cents per pound more for their cotton, which would mean ten dollars per bale or about a half million dollars additional for the amount of cotton they produce.

TO CABBAGE GROWERS

Mr. Julius C. Miller of the Cornell University Agricultural Experiment Station finds that to avoid growing seed stalks in cabbage in lieu of good heads, the temperature must be watched very closely. One plant was kept at a constant temperature for nearly three years and in that time it grew six heads.

At the time the plant was moved to a colder house it was about 8 feet high.

Mr. Miller says plants kept at 60 to 70 degrees grow good heads but those kept 50 to 60 produced nothing but seed stalks.

Experiments also proved that with young plants—those planted earliest went to seed, and the latter planting in warmer weather grew more sound heads. Seed for one lot was sown in the early half of August and the seedlings were kept in cold frames then removed to a cool greenhouse where they produced about 60 per cent seeders, but the plants that were transferred to a warm greenhouse had only about 20 per cent to go to seed.

This experiment shows that it is not wise to plant too early. The month of February is early enough to start abbage plants for early spring planting.

There is a very interesting bulletin on this experiment which can be had by writing Mr. Robert Hall, Ithaca, New York, and ask for Bulletin 458. There is no charge for this. It is free for the asking.

LINCOLN ACADEMY CHAPTER

FUTURE NORTH STATE FARMERS OF KING'S MOUNTAIN

STATE COLLEGE LIBRARY JAN 31 1930

The honor of being the three outstanding chapters in the Future North State Farmers for the school year 1928-29 goes to the Lincoln Academy chapter, Kings Mountain, N. C., Robeson County Training School, Maxton, North Carolina, and Waters Training School, Winton, North Carolina. These chapters are important part of the state organization of Negro Vocational Agricultural students. The winning chapters will be given cash prizes by the Chilean Nitrate Soda Educational Bureau. The contest is conducted by the State Department of Public Instruction, Division of Vocational Education and Chilean Nitrate of Soda Educational Bureau. The contest has stimulated keen competition during the year among the 24 chapters in North Carolina.

A few of the high spots attained by the winning chapters which were responsible for their selection:

Lincoln Academy Chapter: The chapter sponsored the first community fair which proved to be a worthwhile achievement. The community exhibit was sent to the Cleveland County Negro Fair where it attracted much attention because of the large number of premiums won. The thrift club was very active. Most of the members saved or invested over $100.00 and all had bank accounts. The chapter played an important part in beautifying the school grounds, buildings, modern plant, establishing purc-bred poultry, hogs and cows in the community.

Robeson County Training School Chapter: Boys were largely responsible for their school winning the county loving cup for the best school exhibit at the County Commencment. The school won second prize for having the best kept school grounds in the territory. The boys sold lunches at the school at the noon hour for the purpose of securing funds with which to purchase of plants to beautify the school grounds. The chapter has the honor of having the most successful Father and Son Banquet conducted during the year. Every father who spoke told how his son had been helpful on the home farm and at home since he had become a member of the organization.

Waters Training School: This chapter has always been leader in worthwhile vocational agricultural activities. The first and the present presidents of the State Organization have come from this chapter. The chapter has turned out the largest number of members who are following the vocation of farming. Besides putting over the local and State objectives of the organization this chapter pooled its funds and purchased a handsome school bus which made its initial trip in bringing the entire chapter up to the state meeting last spring. Today the bus is rendering a great service in transporting many pupils to and from school.

Berry O'Kelly Training School has the honor of being the Superior Department of Vocational Agriculture for 1928-29.

The Second Annual Contest to determine the Superior Department of Vocational Agriculture is won by the

(Continued on Page 2)

LINCOLN ACADEMY CHAPTER
(Continued from Page 1)

Berry O'Kelly Training School, Method, North Carolina. Profs. C. E. Dean and C. L. Spellman the teachers of Vocational Agriculture played the major part in bringing the honor to the school. This department will receive a cash prize of $30.00, which is given by the Chilean Nitrate of Soda Educational Bureau.

The teachers of Agriculture felt that the campus should look as attractive as the school building. With that idea in mind they went to work on the project at the opening of school. Lawns were leveled off and sowed to grass seed. Shrubbery was planted along the drive and buildings. New and more desirable driveways were provided. These practices did not stop at the school. They were applied at the community church and many of the homes of the pupils. The demand for ornamental plants has made it necessary to begin a small nursery on the campus.

Prof. Dean saw the possibilities for poultry production soon after he arrived at Method. As a means of helping him realize his poultry dreams for the community, an electric incubator was installed. During the year 3500 chicks were hatched. Over 1000 were placed on the farms in the school district and county. They were raised under the supervision of the teachers of Vocational Agriculture and the pupils who took the course. In addition to placing pure bred birds in the community the Department was able to build eight model poultry houses.

As a means of supplying the patrons with desirable poultry stock the Department maintains a flock of two-hundred and sixty-five layers. During the first four months of this calendar year these birds produced 17,998 eggs. Trap nests are used to make certain that only producers are kept in the flock. The Junior Vocational Agricultural students are divided into small groups and assigned definite periods to take care of the layers, incubators and brooders houses. In the pursuit of such plans, the boys reached the "doing level" in the poultry enterprises.

Girls as well as boys love Vocational Agriculture. Forty-two rural high school girls requested Vocational Agriculture. They were given a practical unit course in gardening. Each girl was required to conduct small garden project. From those gardens the boarding department received a large supply of early spring vegetables.

In addition to the other achievements accomplished by the two teachers, they conducted five evening classes in different school communities. There were enrolled in these classes seventy-nine individuals. Unit courses were given in gardening and poultry production. These classes have been sold to the idea of cooperative buying of foods, seeds, and other material. Plans have been arranged for them to sell their products cooperatively.

Outstanding work has been done with the all-day pupils. The students carry a well planned practice program. The local chapter of Future North State Farmers ranks among the best in the state. Many of the boys take Vocational Agriculture make more than enough from their projects to pay their expenses at high school and while in college. This department leads all others in sending boys to college.

The story of the work of this department would be incomplete if mention is not made of Prof. E. C. Cox, the principal of the school, and Mr. Berry O'Kelly, the chairman of the local school committee. They demand the best in every way for their teachers of Vocational Agriculture and they have been successful in getting the best agricultural service in return.

BIG MAIL BOX LATEST MOVE IN "FARM RELIEF"

Inventor Designs Container To Protect Parcels From Rain.

(Chicago Daily News)

New York, Nov. 13.—(AP)—The latest contribution to farm relief is an oversize mailbox.

It won't relieve the farmer from trotting down to the crossroads to get the letters and papers, but it will save on his profanity when he finds his parcel-post package is dry instead of out in the rain, with the blue from overalls merging into the white chiffon dress ordered by the wife.

Col. Joseph C. Bonner, inventor and manufacturer of Toledo, had the inspiration last summer when, on a tour, he noticed clusters of unsightly galvanized iron mailboxes at crossroads here and there, with parcels too large for them on the ground.

Whereupon Col. Bonner invented his box and went to Washington to see the postmaster-general, Walter F. Brown, whom he had known all his life.

The postoffice department authorized trial of the new box at Bolles Harbor, Mich., where lives Mrs. William Bolles, daughter of Col. Bonner. The device was scheduled to be put into use Nov. 7, and the postmaster at Monroe, Mich., was instructed to report on the experiment.

The new box is designed for the crossroads use of fifteen persons or families. It looks like an elongated phonograph cabinet. On the right side are fifteen pigeon holes for mail and each box renter has his private key.

On the left side is a compartment for parcels. It will take articles up to ninety inches long, anything from a pitchfork handle to a single-tree.

Col. Bonner believes his mailbox, if adopted over the country by the government, would reduce the postal deficit by the rental from those using it. And it would, he says, add immeasurably to the beauty of the countryside.

FIRST CANNED ORANGES ARRIVE

Nov. 13, Chicago.—The first carload of canned oranges arrived in Chicago this morning over the Santa Fe railway from California. Canning of oranges is a new industry of the Pacific coast and the first time oranges have been successfully preserved. In test deliveries the product has met with success among baker supply houses and confectioners in the Chicago territory. Ice cream people have taken to it with unusual enthusiasm as it represents the nearest possible approach to fresh oranges that has ever been offered to them.

GROWS HIS OWN CLOTHES

Rev. H. W. White

His clothes are made from cotton produced in his own back yard.

Although Kansas is not generally regarded as a cotton producing state, the Rev. H. W. White, pastor of the Central Baptist Church in Topeka, has succeeded in raising enough to make himself a good suit of clothes. In 1925 he cultivated a patch of ground in his own back yard, and raised sixty pounds. Twelve and a half pounds of this furnished the necessary amount for the clothes.

The seed was separated from the lint by hand. The lint was carded into rolls and spun into threat on an old-fashioned wheel made about 1857 and now on display in the Kansas State Historical Museum. The thread was then reeled into hanks on an old-time reel and finally woven into cloth and dyed brown. The students in the tailoring department of the State Vocational School made up the garment to fit the Rev. Mr. White. He has appeared in it several times in his pulpit and it has won a premium at the Kansas State Fair.

In a recent report of his work among the colored people of Topeka, Rev. Mr. White gave this summary:

"In the spiritual field I have baptized 542 people. I have donated to my church $2,500; I have visited 150 sick persons, of which some were white people, some Christians, and some sinners; I have attended 85 funerals and married 80 couples."

In Topeka, the Rev. Mr. White is often known as "the man who grows his own clothes."

BRANDON NEGRO CAPTURES PRIZE

Utica Institute Also Takes Laurels at Colored State Fair Here

A. F. Fletcher of Brandon, was awarded first prize for the best collection of farm products at the Mississippi Negro State fair Thursday.

Wallace Berry of Pearson received second prize.

The Utica Institute won first prize in the educational exhibits, with second prize going to Jackson college and third prize to Lanier High school.

In the horse racing, Miles Star was first in the 2:25 pace, with Arqunty second, Dan Hal third, and Little Dock fourth.

In the 2:30 trot and pace, John Clark lead the field, followed by Country Boy, B. L. D., and Baby Doll. The half mile running race found Keriaku in front, trailed by Father.

Judging in agricultural exhibits still were under way Thursday afternoon and more prize winners will be announced Friday.

Friday's high spot will be an address by Lawrence C. Jones, president of the Piney Woods school.

Saturday will be the big day of the races, which are more popular at the Negro fair this year than ever before. The track has been put in good condition and the performers have come through splendidly.

Dodo and Princess Tiny, clowns and acrobats, give free entertainments in front of the race track stands. —The Pittsburg Courier.

MAN-MADE QUILT TELLS STORY OF NINTEY AND NINE

Philadelphia Man Displans Unique Piece of Handiwork at State Fair

A quilt made of 19,868 pieces of vari-colored silk depicting the Good Shepherd leading the Sheep and entitled "Ninety and Nine," is a contribution to the Fair made by one Charles Pratt of Philadelphia, Pa. Put together with the greatest ingenuity and combining all the colors of the rainbow, the quilt, when viewed at a distance of some thirty feet resembles a beautiful painting, and it seems incredible that it could have been the product of any needle-worker's hand no matter how deft.

The man who made this most unusual bedspread has exhibited this and other quilts at Fairs throughout the country and has taken 331 first prizes in every state but Nevada, and one in Edmonton, Alberta, Canada. "This quilt has been in consecrated buildings," said Mr. Pratt. "It has been the subject of sermons in churches."

Mr. Pratt states that the greatest thrill he ever had over his quilt-making was being invited to the Miami, Fla., Fair to spend an entire week, by people who refused to believe that the quilts were actually his product, until they saw him and heard him explain how they were made.

—The Pittsburg Courier.

THAT EVER POPULAR SWEET POTATO

Dieticians from all sections are praising the qualities of the sweet potato, and in some instances declaring that it has more energy giving qualities than any vegetable grown. The society girl, the slim housewife and the fat maids are all confining their potato eating to the sweet variety, because it is said they are non fattening.

Miss Edith Shuck has the following to say in a recent edition of the Chicago Daily News:

Conducted by Edith G. Shuck

Sweet Potato Clover Leaf Rolls

It is a common idea among the less experienced cooks that any recipe calling for yeast is a big task or much more difficult to make. I believe the only difference is in the time it takes yeast to act in comparison to the time it takes other leavening agents.

Sweet potato light rolls are sometimes made with baking powder and soda, but they do not compare with the light rolls made with yeast as the leavening agent.

Scald one cup of milk and allow to cool, add a moistened cake of compressed yeast, one tablespoon of sugar, one teaspoon of salt and one pint of flour, or enough flour to make a light sponge. Allow this to rise in a warm place until it is light and has increased one and a half or twice its origonal size. Then add two medium-sized sweet potatoes which have been boiled until tender, and either mashed with out any of stringy parts remaining or riced to remove the fibrous parts. And enought flour so you can lift the dough out of the bowl onto the canvas cloth. Knead it until is mixed and smooth. Roll out, cut into even sections and place three in a buttered muffin tin. Butter the tops and allow to rise until light. These may be made to this stage in the game and the muffin pan set in the icebox and chilled until an hour before dinner. Then place the rolls in the warmer and let rise for twenty or thirty minutes. This will be ample time to make a small roll light and puffy. Bake in a moderate oven for five minutes, then increase the heat for ten minuttes to 375 degrees Fahrenheit.

These may be hurried or made more slowly as the time and work demand. If you want to set the sponge and allow it to rise all night, giving a longer period for the yeast growth, then a half cake of yeast is sufficient for the above recipe. The whole cake will not change the flavor, and a larger amount will naturally make the action quicker. I use the whole cake of yeast when I want to start the rolls in the morning and serve them for luncheon or finish them so that at dinner time they are ready to let rise the second time and bake in the time which is necessary for the preparation for the remainder of the dinner. Chopped dates or seeded raisins and a few chopped nuts are not out of place in a sweet potato light roll when it is to be served with a luncheon menu. I should not care for the fruit or nuts when the bread is a bread for the dinner.

A well-baked roll makes a meal seem more complete though in reality it has no more food value. One can become spoiled very quickly to desiring a warm or hot bread with the dinner. This is not the best plan, considering it from a strictly dietetic standpoint. Hot breads which are well baked, though, are almost as quickly digested as cold breads.

GENERAL NEWS

WINNING CORN HUSKER PICKS 47 EARS A MINUTE

Crown Harold Holmes Illinois Champion

Galesburg, Ill., Husking at the rate of 47 ears a minute—the fastest nubbin picking ever recorded in an Illinois contest—Harold Holmes of Henry county won the state corn shucking championship, near here today. His total for the 80 minutes of the contest was 34,95 bushels.

Walter Olson of Knox county, state and national champion last year, came in second with 34.31 bushels. Both Holmes and he will represent Illinois in the national Contest to be held Nov. 15 at Platte City, Mo.

Officials ruled that Seiler's mark of 36.66 bushels made in the Knox county meet a week ago would stand as a world record. Until he turned in that unusual score then, Elme Williams' 35.8 bushels made in the national contest in 1925 had been the record.

A crowd estimated at 15,000 watched the contest today. Corn and weather were perfect for husking.

Holmes, the new champion, uses an iron hook to whisk the ears off the stalk. Although his total weight of corn, 2,510 pounds, was not as great as that turned in by some of the other huskers, he was the cleanest picker in the contest, being penalized less than any of the others because of nubbins missed in the field and husks left on the ears. He is a farmer, 51 years old, has been picking corn since he was eleven years old.

ARKANSAN, WHO GREW BIGEST MELON, FOUND DEAD IN BED AT HOME

Hope, Ark.,—Edgar Laster, 39, who produced the largest watermelon ever grown this year and thus gained the title of "Watermelon King" was found dead in bed at his farm home near here early today.

Members of his family found the body when they went to his room to arouse him. A heart attack was assigned as the cause of his death.

The Laster family is one of the oldest and best known in this section. Mr. Laster was the first to produce the large variety of watermelons which have made Hope famous.

The champion melon grown this year weighed 152 1-2 pounds.

A $25,000 Hobby

A Memphis capitalist makes a practice of dividing his investments into three groups—bonds, stocks and real estate.

A while back he thought an Arkansas farm within 25 miles of Memphis was the kind of real estate investment he wanted. He bought it for $75,000 and then spent $50,000 improving it.

Although it is worth much more, it cost him $125,000 as it stands.

Five days a week he sits at his desk. On the sixth he leaves at noon and spends a short half day riding a horse over the plantation. His friends look upon his investment as a hobby.

It is, but it is netting him this year $25,000, or 20 per cent on his investment.

HOUSTON COUNTY LEADS

Farmers in That Area Make Use of Federal Seed Loan of U. S.

Dothan, Ala.—Houston county leads all counties of the six states comprising the southeastern district that used the federal farm seed loan, in the matter of payment, according to figures received here by officials in charge of the collections. The figures released were as of September 20, and the collections here have maintained the same rate since that time.

Officials of the collection bureau state that they think that about 80 per cent of the loans have been collected, and that they believe the work will be accomplished before the time limit specified for repayment.

All persons who borrowed the government money have been notified that no loans will be extended and that payment is expected to be made on or before December 1 .

There are 700 colored farmers in Houston County.

FERTILIZER SALES IN STATE INCREASE

Average Mississippi Farmer Spends Over $100 Yearly, Department Says

Mississippi farmers purchased fertilizers, commercial feedstuffs and cotton seed meal to the extent of twenty-seven million dollars during the fiscal year just ended, according to a statement recently issued by the State Department of Agriculture.

The largest single commodity purchased was commercial fertilizers and during the past year farmers of the state exceeded all previous records by purchasing a total of 350,560 tons. At an estimated value of $36.00 per ton. Mississippi fertilizer bill for the present crop was approximately twelve million, five hundred thousand dollars.

Because of short crops of corn and other home-grown feeds the purchase of commercial feedstuffs continued on the high level of last year, totalling for the twelve months just ended 256,296 tons. At an estimated value of $45.00 per ton, the exenditure for feedstuffs totals approximately eleven million, five hunred thousand dollars.

The use of cotton seed meal continued at the approximate average noted in prior years, farmers of the state using 67,810 tons during the twelve months period. At an estimated value of $46.00 per ton, cotton seed meal was used at an expense of a fraction over three million dollars.

"The necessary farm purchases," says Commissioner J. C. Holton, "reach the substantial total of thirty-seven million dollars annually. There are approximately a quarter of a million farms in Mississippi, which means that the average farm spends approximately one hundred and eight dollars each year for fertilizers, commercial feedstuffs and cotton seed meal. It is the duty of the State Department of Agriculture to protect the farmers' interests in these transactions by insuring full weight packages, good physical condition, and the presence in every package of the manufacturers' guarantee of plant food content. We are pleased to state that thousands of inspections and chemical analyses during the past year, and care in regulating the registration and sale of these products, have resulted in an uniformity of quality that gives a high degree of assurance that every dollar expended will result in a full dollar's value."

CONGRESSMAN DE PRIEST ELIGIBLE

May Head Important Committee From House of Representatives

ONE HUNDRED THIRTY VACANCIES WHEN SPEAKER CALLED HOUSE TO ORDER THIS SESSION

Washington (CSN)—Just what committee assignment will be given Representative Oscar De Priest of Illinois' First District, is the question which looms as the first regular session of the seventy-first Congress opens.

When the regular session begins today only five committees organized in the special session, will be functioning. The rest will be organized later in the week, after the Republicans and Democrats have selected their committee slates and submitted them to the House. At that time the changes will be made.

The overwhelming majority of 102 members in the House forecasts a general shake-up in most of the committee memberships which will strengthen the Republican and weaken the Democratic representation. The House membership of 435 has 267 Republicans, 165 Democrats, one Farmer-Lobarite and two vacancies.

Republicans are demanding that some Democrats step aside and that they desire to inerease from thirteen to fourteen, their membership on the major committees, which have twenty-one members each. This would reduce the Democrats from eight to seven members and would necessitate the transfer of several to other committees.

With about 130 vacancies to be filled by both sides, scores of changes are expected. Many members have expressed a desire for changed assignments, while others are entitled to be elevated to more important bodies through seniority and demonstrated ability to handle specific legislation.

Representative Tilson of Connecticut the majority leader, has called a meeting of the committees for the second day of the regular session. At that time it will be decided whether to increase the Republican memberships, and the committee slates will be prepared.

De Priest has been mentioned in connection with a vacancy on the District Committee believing that he could be of service to the 125,000 Negroes who reside in the District of Columbia are denied the right of franchise and whose right of appeal is sometimes abridged.

There are at present one Republican and five Democratic vacancies on the committee. In the light of the tremendous influence which members of this committee have up the government of the National Capital it is problematic whether the fiery Congressman will be considered for one of those places, despite the activity of race leaders in his behalf.

There are one Republican and five Democratic vacancies on the appropriations committee, which was organized during the last days of the special session to prepare the annual supply bills. While there is considerable speculation as to who will fill them, DePriest, a first termer, could hardly be considered.

Republican leaders expect that the Illinois delegation will urge the selection of one of its members to fill the places vacated on the rules and agriculture committee by Thomas S. Williams of Illinois, when he resigned to become a justice of the Federal Court of Claims.

STUDENT'S ALL-NATION'S DINNER

Seventy-one Nationalities Dine at Hotel La Salle

PRESIDENT HUTCHINS SETS SPLENDID RECORD AS CHICAGO UNIVERSITY EXECUTIVE

From the news columns of The Chicago Daily News of November 22nd, there is clipped an advanced write-up and notice of a big dinner held at Hotel LaSalle, which is one of the outstanding hotels of that thriving metropolis, where all the nations were entertained at dinner in an "all nations" banquet, by President Hutchins, the new head of the University of Chicago. It was an affair that was educational in every respect.

A representative of this city was importuned to look in upon this unusual occasion, but due to the fact that he was rushing to New York to fill other engagements, could not accept the invitation.

The Chicago Daily News, in speaking of the dinner, said:

Students from seventy-one foreign countries who are attending the various colleges and universities in Chicago will be the guests at a unique "all nations" banquet tonight at the Hotel LaSalle under auspices of the of the Chieago area are giving the complimentary dinner to promote interational friendship among the 1.500 young men and women from abroad seeking their education here.

The principal address of the evening will be given by Robert Maynard Hutchins, newly installed president of the University of Chicago on "The Foreign Student and the City University." Other talks on behalf of the foreign groups will be given by Miss Margaret Ulloa of Chili, on the subject "Special Changes in South America," and by Mr. Akintunde D. Dipeolu of Nigeria, Africa, on the subject, "World Outlook in Africa."

Indian songs will be sung by Miss Satatyavati A. Chitambar of India and Mexican songs by Mrs. Milla Dominquez of Mexico. President Shailer Mathews of the Chicago Church federation will preside. The invocation will be given by Dr. Ralph W. Schloerb, the welcome by Dr. Ernest Bourner Allen, and the benediction by Dr. Melbourne P. Boynton.

This is the fifth annual dinner for foreign students to be given in metropolitan Chicago and they have at-church members act as hosts and hostesses to the students far away from home and every effort is made to establish a feeling of friendship for America by the foreign students.

In scores of cases in past years the introduetion of students from other countries to Chicago church members has resulted in invitations to spend rolidays and Sundays at the homes of the latter.

"The 'All Nations' dinner is one of the greatest events of the year in the lives of our 1,500 students from aboard," said Dean Shailer Mathews, "because it establishes new friendships for them, gives them real insight into American hospitality and helps to create o real international friendship.

"This is timely beeause the doors of all nations are ajar. Friendship between the nations and races is growing. We meet tonight to push the doors wider apart and help break down the walls of prejudiee. Some day we will be as scientific in dealing with our social problems as we are in industry."

LOUISVILLE BANK PAYS OUT $50,000

Louisville, Ky., Dec.—(By The Associated Negro Press) — The First Standard Bank, Joseph R. Ray, President, and The American Mutual Savings Bank, J. O. Blanton, President, have each issued this week checks amounting to $25,000 each for money saved in the Christmas Savings Fund. Mr. Ray said that in a New Account Campaign started in September that over eight hundred New Accounts had been added to the bank.

Gus Moore Wins Marathon in Deep Snow

Berwick, Pa. (CNS)—Running under the worst conditions that ever marked a marathon, Gus Moore, the University of Pittsburgh star, won the twentieth annual Berwick Marathon in 49 minutes and 42 1_2 seconds here on Thanksgiving day.

The mercury was well below the freezing point, the mountain roads were covered with ice and the start of the event was delayed more than half hour while a half dozen State highway patrolmen and State Troopers worked feverishly to clear the

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT!

EDITORIAL

The time draws near the birth of
Christ;
The moon is hid, the night is still;
A single church below the hill
Is pealing, folding in the mist.

Tonight ungather'd let us leave
The laurel, let this holly stand:
We live within the stranger's land,
And strangely fal.s our Christmas-eve.

—Alfred Tennyson.

CHRISTMAS CHEER AND SUMMER SORROW

Brother Farmer, how much money are going to borrow from your banker, merchant or landlord for Christmas? Do you just have to borrow that money or has the "borrowing for Christmas" habit got so tight a grip on you that you can't shake it off?

We would be the last one on earth to try and rob you of the Christmas cheer which is certainly your due, and which you so richly deserve, but we must suggest, frankly, that you make it less costly. Christmas cheer purchased at thirty cents on the dollar keeps thousands of colored farmers working and worrying year after year. If there is anything more worrisome than an unnecessary debt we have yet to discover it.

This Christmas borrowing is unnecessary. It is a habit and a bad habit. It is one of the reasons why we are always in debt,—why we ore always dependent on the other fellow. Most of the borrowed money is spent for eats. drinks, for presents and for making a "big show." We think nothing about it,—we kick up our heels and enjoy it, —but when the day of reckoning comes .....O Boy!

That day of reckoning comes in the good old summer time,—when there are no cooling breezes—when the daylight is sixteen hours long,— when the grass and weeds are growing so fast you can see them grow,—right then is the time we must work off that old Christmas debt. We don't remember the Christmas cheer then. We are burdened with summer sorrow.

Let's cut it out. Or, if we must borrow, let's get about a fourth as much as we usually borrow. We can have as good a time and the debt will be so much easier to pay. And another thing. Join a Christmas Savings Club next month and begin saving right away for Christmas, 1930. If you do not want to join at your home bank you can deposit by mail. Get the saving habit this Christmas and you will give yourself the finest present you have ever received. Stop borrowing foolishly. Stop paying for your Christmas cheer with summer sorrow.

* * *

"WAITING AT THE GIN"

We get some remarkable letters occasionally. This one is "rich" and is too tempting to keep. It's from Alabama. We pass it out. Take your slice.

Editor Modern Farmer,
Dear Sir:

The white farmers in this county held a meeting about a month or six weeks ago. It was talked in the community that all farmers whether white or colored would be invited. Several of us gathered at the gin and one of us asked a prominent white farmer about the meeting and that we would like to attend if there was no objection. He told us to wait at the gin and later on in the evening we would be notified. Several of us waited until about four o'clock and then a gentleman came by and told us that the meeting was over, but we could join their cooperative. We asked when would they meet again and he said it was not necessary for us to attend the meetings.

We are going to have a meeting of our colored farmers ond join your Federation."

Remember the old song our fathers and mothers used to sing so often: "O wait, sweetly wait and murmur not"? Well, we have been waiting at the gin a long time. We have not murmured. "All things come to him who waits?" Not in this day and age. All things come to him who works and co-operates with his fellows. You're right, Brother Farmer. Leave the gin. Call your meeting. Organize. This is a new day. A new sun is rising. And woe unto those who are asleep at sunrise!

* * *

WE TELL YOU AGAIN

That the federal farm board makes no loans to individuals. We are saying this again because a Georgia farmer writes:

Dear Sirs:

I see where the government has appropriated five hundred million dollars for the farmers. I am needing eight hundred dollars. Please have them send it by Saturday of next week."

Mr. Legge, chairman of the board, says that the purpose of the board is to help the farmer to help himself. The Farm Board will aid farmers' co-operative organizations. It is aiding them now. The individual farmer will get help from the board through his own organization and if he does not belong to an organization it's just too bad for him. That's all of it in plain mother-tongue.

The colored farmer has an organization. The farm board knows it and is willing to aid him through his organization. The National Federation of Colored Farmers is a cooperative organization. A co-operative organization is a "service" organization. You serve and help the other fellow and he, in turn, does the same for you. For instance,—at the present time we have letters from county units in Mississippi, the members of which wish to purchase corn. We also have letters from units in Tennessee and Georgia, informing us that they have corn to sell. We are putting these units together as buyers and sellers. The one will help the other.

The federal farm board wants every farmer to join a farm organization. It will help you through your organization. If you need relief Brother Farmer, the quickest way you can obtain it is by joining your organization—The National Federation of Colored Farmers.

PARTRIDGE AND QUAIL AREN'T ALIKE, IT SEEMS

By Bob Becker

(From The Chicago Tribune, Nov. 13)

Gary, Ind., Nov. 10—A friend and I have had a friendly discussion concerning quail and partridges. He maintains that a quail is exactly the same kind of a bird as a partridge while I claim a quail and a partridge are entirely different. Will you kindly settle the argument.

JOHN PETIGRAS.

Answer—Ignoring for the moment all local American names, which are commonly applied to our game birds and speaking strictly from a scientific point of view, the only true partridge in North America is the Hungarian partridge (perdi perdix), which has been introduced frmo Europe.

Therefore, you are right in your argument. The quail and the partridge are not identical, although our American quail or Bob White is related to the old world family of true quails and partridges, which are classified under the family Perdicidae.

However, we have a hunch that you are thinking of the ruffed grouse (called partridge in the north) and the American Bob White in your discussion. Strictly speaking, neither is a true quail nor are they partridges.

Confusion is added to this name business because in the east and the south the Bob White is usualy called "partridge." So in this county we have the ruffed grouse called a "partridge," the Bob White called a "partridge," and the Hungarian bird, gradually increasing in northern Illinois game coverts also gets the same name.

TRUCK MARKET REACHES PEAK

PRICES DECLINE FOR MANY PRODUCTS, U. S. WEEK REVIEW SHOWS

The Government report says that the Bureaus of Agriculutral Economic's weekly market review of fruits and vegetables states that shipments for the week October 13-19 reached the season's peak and that price declines for many products occurred.

"Late September found the potato situation somewhat unsettled following the sharp price advances of September 10 to 15. Prices were lower in the Middle West. Sweet potatoes, onions, cabbage and western lettuce also declined. California juice grapes were selling higher at shipping points.

"Tomato shipments decreased slightly to 690 cars, of which 570 originated in California, and most of the others in Indiana and Utah.

"String beans were coming largely from Louisiana, South Carolina and Virginia, and the total of 245 cars was more than twice as many as a year ago.

Potato Market Unsetled.

Potato prices apparently advanced too rapidly after the October crop report and considerable lower levels prevailed in the Middle West and North Central areas the past week. The eastern situation was still firm, in spite of very heavy shipments from Maine. Total carlot movement from the principal states increased further to 7,830 cars for the week. Maine reached the high figure of 2,430 cars; New York shipped only 355 and Pennsylvania 80. Combined total from the North Central States was 2,310 cars. Colorado decreased to 570, but Idaho increased to 775 cars. Washington shipped 415 and California 225, while the output of Nebraska, mostly Bliss Triumphs, decreased to 435 cars. Northern Colorado potatoes are small and rather dirty, but the appearance may improve in storage. The late crop shipments from Northern Colorado may total only 2,500 cars, or half as many as last season. San Luis Valley may ship 9,000 cars this season. The western New York f. o. b. market was firm on sacked round whites at $2.25 per 100 pounds. New York potatoes are of good quality, but medium size. Maine actually strengthened to a range of $2.35-$2.40 on sacked Green Mountains. Quotations from North Central States ranged $2.15-$2.20, which was below the preceding week's level at $2-$2.10 and Southern Colorado shippers were getting $2.10-$2.30. In southern Idaho, best Russet Burbanks were lower and the market was rather dull on warehouse re-graded stock at $3.35. Yakima Valley of Washington also declined slightly on Russet Burbanks at $42 per ton of combination grade stock, but best branded stock brought $44-$45. Eastern potatoes generally were jobbing in city markets at $2.70-$3.50 per 100 pounds, with Long Island Green Mountains bringing $3.45-$3.60 in New York City. The Chicago carlot market was lower on northern round whites at $2.25-$2.50 and on Red River Ohios at $2.40-$2.50, but higher on Idaho Russets at $3-$3.20. Colorado Brown Beauties sold in Fort Worth at $2.75-$2.80.

Sweet Potatoes Decline

"Sweet potatoes declined again last week nearly everywhere partly because of the rather heavy receipts. Shipments for the week decreased to 965 cars, but were still about 70 per cent heavier than at this time last season.

"Eastern Shore of Virginia originated 520 cars, New Jersey 110, Maryland 95 and Tennessee 90. Eastern Shore of Virginia yellow varities were jobbing lower at $2-$4 per barrell, and bushel hampers from Maryland or Delaware sold at 75c to $1.25. Arrivals from New Jersey ranged $1.25-$2 compared with Tennessee Nancy Halls at 90c to $1.25.

FARM BOARD VIEWS HELP COTTON RALLY FROM RECENT SLUMP

By George DeWitt Moulson

New York, Tuesday, Oct. 22.—The view expressed by the farm board that cotton prices have been unduly depressed by the heavy marketing movement had a decided effect on prices Tuesday. Under the largest volume of business in several weeks, quotations were advanced a half-cent and ended at the top.

Spots were advanced at 45 points to 18.50.

The offer of the farm board to advance funds on a basis of about 16c for seven-eights middling cotton, in order to permit more orderly marketing of the balance of the crop, checked the volume of offerings in the interior and diminished hedging pressure boarded New York quotations with an advance of 30 points or more.

A growing impression that last week's record breaking into-sight figures represented the peak of this season's marketing movement had created a more favorable attitude toward the market on the part of professional interests. Heavy rains in Atlantic sections, frosts predicted in northern Oklahoma. Arkansas and Texas and the view of the farm board on values were all steadying factors.

Under the largest volume of trading in some weeks, May rose above the 19-cent level and some months sold $2 a bale above Monday's figures during the morning. Scattered southern selling at the higher level of half a cent from low records at the close of the week caused a later setback of 10 to 15 points.

NEGRO MISSISSIPPI STATE FAIR BEST EVER HEILD

Exhibits Far Above Average

Jackson, Miss., (Special) The Negro Mississippi State Fair, held in this city from October 21st to 26th, was voted a huge success by its sponsors and by the hundreds of farmers and others from all over Mississippi and adjoining states who visited it. All the exhibits had been carefully selected and were far above the average. Cotton, the king of Mississippi's crops, was exhibited largely and specimens were of the finest quality.

Vegetables and poultry would all have graded U. S. number one. The canned fruit department displayed an excellent variety and also proved that the wives of colored farmers are acquainted with all the latest canning devices and improved methods. Special mention should be made of the display of field peas which attracted the attention of all and evoked much favorable comment. The best of order was maintained.

The officers of the fair association are the Rev. M. B. Brown, Jackson, president; C. A. Adams, Chrystal Springs, secretary, and Dr. R. L. Johnson, Jackson, treasurer. The association is three years old. It owns property valued at $50,000, located on the public highway. Messrs. Joe Byrd, John Taylor, F. H. Word and E. D. Jones were some of the prominent colored farmers of Rankin County who attended. The city of Jackson is located in Rankin County. In this county are 1270 colored farmers and 997 white farmers.

UNITED TRADING CALLED BIG NEED OF U. S. FARMERS

STONE OF FEDERAL BOARD ASKS LAND GRANT COLLEGES TO PUSH IDEA

Chicago Daily News.

Help in carrying the idea of co-operative bargaining to "the man in the hollow," who is "tender" on such subjects, was asked of the Association of Land Grant Colleges today by James Stone, Kentucky, vice-chairman of the federal farm board. He addressed the closing session of the association's forty-third annual meeting.

"The farmer cannot get a proper price for his commodity until he increases his trading power," Stone told the land grant college presidents, "not, in fact, until he can sit down and across a table bargain with those to whom he sells.

"The deans and the departments of home economics of the land grant colleges, the farm extension bureaus and agricultural experiment stations should help the federal farm board to carry out the provisions of the agricultural marketing act. They can do that by carrying this idea of co-operative marketing, to which farmers don't take readly, back to the man in the hollow.

"The farmer is an individualist. He has been exploited by his own leadership, and consequently he is tender about placing his products in the hands of an agricultural organization.

Hyde Blames Overproduction

"Whereas, formerly it took two sheep a year to clothe a woman, nowadays two silkworms can do it on a Sunday afternoon," Arthur M. Hyde, secretary of agriculture, said in ascribing the farmer's chief problem to overproduction. "When making two blades of grass grow where one grew before means that two sell for less than tthe former price of one; the benefaction is costly to the farmer's standard of living."

Anson Marston of Iowa, president of the association, in introducing Alexander Legge, chairman of the federal farm board, assured him that the association will co-operate with the board and announced that it has appointed a committee for the purpose.

Negro Progress Cited

Many of the Negro land-grant colleges which fifteen years ago were receiving state appropriations of less than $10,000 a year now are receiving appropriations up to $500,000 a year, J. S. Clark, president of the Negro Land Grant Presidents' association, reported.

"The changed attitude of the legislatures has been effected not by wire pulling, but because of the felt need of the state for a college of this type," President Clark said. The Negro group, which is affiliated with the main association, held its sessions in the Wabash Avenue Y. M. C. A.

NINE ACRES; SEVEN BALES

Fertilizer Pays Tippah County Farmer Well.

BLUE MOUNTAIN, Miss.,—Seven bales of cotton from nine acres of Tippah County land is the record of C. M. Sexton, Walnut farmer, this county. Sexton used for fertilizing his cotton land nitrate of soda and phosphate. He expects a yield of 100 bushels of sweet potatoes and 400 bushels of corn besides his cotton.

Fifteen bales of cotton have been ginned from a 20-acre Tippah farm and about three other bales are to be picked from the same acreage, giving a total of 18 bales from 20 acres in old Tippah.

Application For Membership
NATIONAL FEDERATION OF COLORED FARMERS
Vincennes Hotel, Chicago.

As a Farmer, I believe the time has arrived when the Colored Farmers should form a National Organization devoted to diversified production, grading, packing, shipping and marketing of farm products and to the purchase of needed farm supplies through co-operative methods, to the end that a more prosperous financial condition may result from their efforts as producers.

I herewith subscribe and forward $5.00 for membership in the National Federation of Colored Farmers for a period of 12 months from date.

Name .....

Address .....

City or P. O. .....

County .....

State .....

Date .....

If there is any further information desired, write.

Yours Truly,

THE NATIONAL FEDERATION OF COLORED FARMERS
Vincennes Hotel, Chicago, Ill.
James P. Davis, President.
Major R. A. Byrd, Vice Pres.
Leon R. Harris, Secretary.
S. B. Wilson, Treas.
C. R. Richardson,
Chairman Board of Directors

NOTES OF INTEREST TO FEDERATION MEMBERS

(Continued from Page 1)

has been short of swine, and especially pedigreed stock. If any of the members have high grade sows or pigs they will sell, let us have your prices and complete description.

Early in the new year the Federation will be in position to furnish the members with carlot whole sale prices on fertilizers, lo-2-2, 8-4-4, Chilean nitrate, and in fact any grades. Send in your requirements.

The Federation can likely place several hundred cabbage plants and potato plants early in the new year.

B. H. Swain, J. H. Guinn and J. L. Nicks of Talladega County are very active in their efforts to aid our group farmers and recently motored over two hundred miles to attend a meeting in the interest of farmers.

Mr. Mortimer Clark is the owner of a 350 acre farm in Honey Island, Mississippi. This is an all colored colony. They should have a larger membership. Rev. W. N. Johnson and Mrs. O. M. C. Joiner say they will see to it that Honey Island will be the largest unit in the State of Mississippi inside the next three months.

A member has requested us to secure for him some fine watermelon seed. Some that will aid him in producing 35 pound melons. He prefers the Dixie Belle's.

The Federation has perfected arrangements whereby the County Agent of each unit of the Federation is receiving regularly each week quotations on corn, hay, bran, middling mill feed, hog tankage, chicken feeds and conditioner. The units shoold by all means hold meetings regularly from now on and meetings regularly from now on and be in position to know intelligently just what the markets are doing.

These prices are mailed out from the manufacturer to these Agents direct.

Brother Louis Irving of Mileston, Miss., is evidently looking for several rainy days this winter. He has stored over 400 bushels of corn, 200 bushels, sweet potatoes, several loads of turnips and about a quarter of an acre in long legged collards, with 4 large hogs continually grunting. His efficient wife is seemingly somewhat apprehensive also, for she has over 500 jars of fruits and vegetables and a yard of chickens and geese, several bushels of peanuts, pecans and walnuts.

Rev. Willie Johnson of Honey Island, Miss., has about the finest lot of Porto Rican yam potatoes we have seen. He has something like a carload and says he may decide to sell them later on. They are certainly fine.

Mrs. Johnson has a flock of Tooluse geese that will carry off the blue ribbon in any fair.

Rev. J. W. Stepney of Madison County, Georgia, is strong for the Federation. He is from one of the oldest and best families in Northeast Georgia.

Pierce County unit under the wise guidance of Miss C. C. Washington, J. F. Washington, J. L. Avant and Rev. Mack promises to be the largest unit in the State of Georgia. Pierce is a very interesting county. The total colored farmers, 304 and white farmers 937. They raise almost everything in Pierce county but a fuss. The avgraders of tobacco our colored farmpounds per year. Wjth government graders of tobacco uor colored farmers will make a good showing another year. About ten thousand bushels of sweet potatoes are also produced in Pierce county annually.

EIGHTY-ONE THOUSAND SEVEN HUNDRED TWENTY COLORED FARMERS

(Continued from Page 1)

tatoes, $8,284,000; rice, $6,431,000; rye, $175,000; grain sorghum, $41,400,000; sorghum syrups, $2,380,000; sugar cane syrup, $2,000,000; spinach, $2,250,000; tomatoes, $3,748,000; watermelons, $1,407,000; wheat, $24,392,000.

Statistics quoted are for 1928, and some of them are obsolete today. Several highly profitable crops that are growing in importance do not seem to have figures compiled, the fig being specially noteworthy. Others are grapes, carrots, dates, tobacco and velvet beans.

Cotton is the mighty crop, despite attempts of the boll weevil, leaf worm, root rot, bool worm, pink boll worm, cut worms, and numerous other diseases and pests to annihilate it. Enemies of cotton today have to contend with efficient methods of fighting back. One airplane can dust 160 acres of cotton with calcium arsenate in 15 minutes. W. C. Mars of Corpus Christi owns a fleet of planes equipped for dusting cotton that keeps busy during the cotton growing season. He experimented six years before getting it worked out to a practicable and successful method.

From the 17,766,000 acres planted to cotton last year Texas cotton farmers received 5,150,000 bales valued at $450,625,000. In ddition they got a2,292,000 tons of cotton seed, which added $80,220,000 more.

It is quickly seen that Texas has more land planted with cotton than the total area of West Virginia; that it has planted with cotton half as much as the total area of either Albama, Arkansas, Florida, Kentucky, Louisiana, Mississippi, North Carolina, or Tennessee; and almost three times the total area of Maryland. Withal it seems that cotton planting in Texas is only beginning. New areas where diseases are less annoying and production is greater, are irresistable.

About 3 per cent of the cotton grown in Texas is manufactured in the state, which shows the opportunity for various kinds of mill operations. Cotton is nevertheless a great boon to the state. It is a money crop, all of it, for nothing goes to waste except the cottonseed hulls, which are used for feeding cattle or put back on the lands for fertilizer. Extensive investigations and experiments are under way with a view of utilizing the hulls for making paper and composition building boards.

Federal statistics for 1925 showed Texas with 465,646 farms. Two thousand four hundred and thirty-nine of them had more than 5000 acres, 7,562 were using from 1000 to 4999 acres, and there were 99,099 farms with from 100 to 174 acres. There are, however, farms with more than 100,000 acres in this state, and at least one with 20,000 acres of cotton. As a contrast, in the Valley and the Winter Garden sections small tracts of five acres are supporting families in luxury.

Iowa leads Texas in the value of live stock, though Texas is far ahead in total number. In beef cattle Texas is a leader, but lags behind in dairy cattle. Just the same it has the largest dairy in the world. Borden and Carnation have condensaries. There are numerous creameries, powder milk plants, and cheese factories, and dairy herds are being improved. It is unusual that a state so adapted to make this a leading industry. Incidentally the first condensed milk plant in America was at Galveston many years ago.

Texas goes ahead of any state in number of sheep and wool production, and practically produces all of the mohair from Angora goats in this country. At present it does not produce as much pork as the state consumes, but leads all states in the number of mules and is well up toward the top in horses. Poultry too is highly profitable, and increasing annually.

Sheep and goat raising in Texas is extensive. There are 4,593,000 sheep valued at $37,040,000. Last year they produced 34,000,000 pounds of wool, worth $14,000,000. Angora goats number 2,750,000 and are valued at $12,600,000, while the mohair crop from them in 1928 was 10,250,000 pounds and brought nearly $5,000,000. With this extensive production of wool and mohair there is not a scouring plant nor a mill to manufacture these products.

Swine raising is on the increase, with better breeds. This industry fell off noticeably following the War, when cotton prices mounted, pork was low, and feed crops scarce. Last year there were 1,375,000 swine in the state, valued at $16,500,000.

The Rio Grande Valley of Texas is different from the rest of the state, so different in fact that all of Texas is proud of it, and unhesitatingly says the Valley grapefruit are without equal and permit of no arguing the subject were one inclined to do so. This valley is more than 400 miles south of the southern border of California, and Brownsville at its tip is about in line with Miami, Florida. Overflow of the Rio Grande River for hundreds of years has made these valley lands exceedingly fertile, and now that they have been irrigated, this section of the state, until twenty-five years ago a jungle, has grown into a bright spot of tropical fruit orchids, vegetables flowers and staple crops.

It must be said, however, that the valley has many acres of land not suitable for cultivation, but already half a million acres have been irrigated and planted, and an equal amount is susceptible for irragation and cultivation

This section of Texas also has a new port with a bright future—Port Isabel The federal government has approved it and a bill in the present Congress carries a large appropriation for its improvement and maintenance. Port Isabel will serve the Rio Grande Texas territory, as it will northern Mexico, and the tonnage from the Monterrey mining sections is calculated to make the port an active one.

If the present development continues in the valley, there will be one large city with a single main street. At present along this fifty-mile paved Main Street are cities of several thousand population at close intervals. They are Brownsville, San Benito, Harlingen, LaFeria, Mercedes, Weslaco, Donna, Alamo, San Juan, Pharr, McAllen, and Mission. To the north of Pharr is Edinburg, and to the north of Harlingen are Sebastion and Raymondville. Port Isabel is at the sea.

Valley lands will produce winter vegetables and then give ample time for cotton. This year that small section yielded $11,000,000 of cotton as a side-crop. For the winter season 1927-28, carload shipments of fruit and vegetables included: grapefruit, 1610; oranges, 28; mixed citrus, 106; cabbage, 6253; lettuce, 63; potatoes, 1662; onions, 394; carrots, 2499; beets, 957; beets and carrots, 1509; green corn, 1025; tomatoes, 1906; turnips, 23; cucumbers, 31; mixed vegetables, 5215; escarole, 8; cantelopes, 3; watermelons, 137; anise, 43; broccoli, 38; chicory, 1; dandelions, 23; endives, 3; parsley, 151; radishes, 5; romaine, 3; shallots, 15.

This season the citrus will largely increase because many previously planted acres are coming into bearing, and all of the trees increasing in yield. More vegetable lands are planted, or will be planted for the coming season.

One should not pass this way without taking a trip to the valley, nor for that matter should one fail to see each section of the state. It takes all sections to make the one great whole.

Prosperity has also brought an increase of culture to Texas, which adds to the pleasure of residence here. Ample educational facilities for higher learning are provided through state-supported and endowed colleges. Texas University at Austin, most likely will some day be the wealthiest college of America, and is already on the way. It owns valuable state lands on which oil has been found, and the permanent fund is daily increasing, for none but the interest can be used.

In addition to the University, which has a medical branch at Galveston and School of Mines at El Paso, there is the Agricultural and Mechanical College at Bryan, the Texas Technological College at Lubbock, the State Women's College of Industrial Arts at Denton, and eight state teachers colleges; John Tarleton College at Stephenville, the North Texas Agricultural College at Arlington, a junior branch of the Agricultural and Mechanical College, and the Normal and Industrial College for Negroes at Prairie View. The state also maintains schools for the blind and deaf, for whites and blacks.

The writer of the above interesting article overlooked these facts concerning Texas. Number of colored farmers in the state, 81,726. There are 23,519 farms in the state operated and owned by colored farmers, with an acreage of 1,793,127 acres valued at over 67 millions of dollars. There are 54,955 farms in the state with a total of two and a half million acres operated by colored tenants.

There are six counties in the State where colored farmers outnumber white farmers. There are seven exclusive colored colonies in Texas.

The Texas colored farmer is not organized.

SHOULD PLOW GARDENS

Otherwise Insects Will Spend A Very Happy Winter Waiting.

The home gardener should plow his garden deeply this fall or at least burn all the trash left after frosts if he expects to have a good garden next year, states W. C. Pelton, extension horticulturist University of Tennessee.

Here are the names of some of the garden insects that will spend a happy winter in the garden if it is neither plowed nor trash cleaned off and burned: Cabbage worms including loopers; cabbage aphis and other of the aphis family; Harlequin cabbage bug. Tarnished plant bug, Irish potato leaf hopper, Irish potato flea beetle, Irish potato stalk borer. Striped cucumber beetles, squash bug and asparagus beetle.

TO THE FARMERS:

The Modern Farmer contains information every month that you will not find in any other farm journal. It is the only journal published by and for our people that is devoted exclusively to the farmer and his family.

The price is in reach of every one—being less than 2 cents per week. During these times when the farming industry is undergoing so many changes, and when so many advantages can be had by our colored farmers if they are only aware of them, it is absolutely necessary that you should know what is going on. Three-fourths of the white farmers are subscribers to the white farm magazines and journals. They know just what is going on.

Fill out the blank—secure a money order for $1.00 and mail at once:

The Modern Farmer,

447 Fourth Avenue, North,

Nashville, Tenn.

ALL ARE AMERICANS REGARDLESS OF RACE OR COLOR

Maj.-Gen. Smith of West Point Emphatic

UNITED PRESS ARTICLE ON ALONZO PARHAM WHO BREAKS ONE HUNDRED YEAR RECORD

"This young man is absolutely on his own, exactly as every other Cadet, and to single him out merely because he is colored is un-American", is a statement attributed to Major General William R. Smith, superintendent of the West Point Military Academy and United States Training School at West Point, N. Y., where Alonza Parham is serving as a Cadet, through the appointment of Congressman Oscar DePriest, of the First Illinois Congressional District.

Cadet Parham has broken a one hundred year record, says the United Press Dispatch, because he has been allowed to publish an interview touching upon his life, his reception and the treatment that has been accorded him as the first Negro to enter the Military Academy in more than a quarter of a century.

Another statement attributed to Major General Smith, for which he is being commended, was to the effect that no orders had been issued restraining Cadets from talking to Parham, and that if he discovered any officers or Cadets issuing orders or joining any movement or clique to do so, he would immediately bring the offenders before a general court martial. He said that if Cadets were involved in such a movement, he might interpert it as hazing, which under the law is ground for peremptory dismissal.

The exact news item which is dated from West Point on Dec. 3, and which appeared in The Nashville Banner Tuesday of this week, says:

West Point, N. Y., Dec. 3—(AP)—In the first published interview permitted a West Point undergraduate in more than 100 years, Alonza Parham, Negro cadet, Tuesday spiked rumors that he has been ostracized at the United States Military Academy.

Parham, who was appointed to West Point by Representative Oscar dePriest, of Chicago, said:

"Published reports that cadets never talk to me or that my relations with them are strained are absolutely false. I realize that orders cannot be issued governing friendships and that such a matter is purely personal. Statements to the effect that cadets have been ordered not to talk to me are false.

"Since July 1 when I entered, my treatment at the hands of officers and cadets has been fair and never under any circumstances has there been any sign of discrimination or prejudice. All the officers are giving me a square deal.

"I have participated in every activity with other fourth classmen from the minute of my arrival and at the football trips to Boston, New Haven and New York City, I have marched with my company and sat in the stands exactly as the other cadets,"

He said that mathematics had given him considerable trouble and that he had asked for and received extra instruction on two occasions after he had been posted for being deficient in the subject. He said he also had been required with several others to attend one-hour conferences for extra work in mathematics four times a week. He had not asked for cadet coaching, he said.

Parham objected to publicity given him and said that it was "discouraging to see my position so badly misrepresented and to be singled out as an object of pity."

Major General William R. Smith, superintendent of the academy, said:

"This young man is absolutely on his own exactly as every other cadet and to single him out merely because of his color is un-American."

He said no orders had been issued requiring cadets to refrain from talking to Parham and that if he discovered any officers or cadet issuing such orders or joining a movement or clique to do so, he would immediately bring the offenders before a general court martial. He said that if cadets were involved in such a movement he might interpert it as hazing, which under the law is ground for peremptory dismissal.

"Parham's academic standing in mathematics has been commented on in the press" General Smith continued.

"While he is deficient in that subject, at one time there were eighteen other cadets with lower marks than his and at the present time there are ten below him. In Parham's class at present a total of 42 cadets are deficient in mathematics while in the third class there are 61 cadets below our required standards.

"To predict that any or all of these cadets will be discharged this December is impossible as invariably a large number of the deficient cadets make passing marks. Last year 140 cadets were examined and only 70 failed to pass and were honorably discharged. Parham's daily marks show that he is failing to pass only by a few tenths."

General Smith was asked if Parham was isolated from the other cadets in any way outside of rooming alone.

"He is not" was the emphatic reply. "If you could spend a few days here you would see him marching all formations, participating in every activity and in every way treated like other cadets."

WEALTH FROM PEANUT SHELL

The chemist turns waste into wealth. From common peanut shells high grade cellulose worth $4,500,000 may be produced annually, according to Charles H. Herty, noted New York chemist.

There are almost 600,000 wild horses in Arizona.

Deer have been known to beat ducks swimming in swift water.

ATTENTION COLORED FARMERS

The National Federation of Colored Farmers is receiving hundreds of letters from Colored farmers requesting all kinds of aid and information. We are willing to do everything we can for all the Colored farmers of America. It costs money, however, to maintain offices and our expenses are becoming so heavy that we are compelled to discontinue supplying information to those who request it who are not members of the Federation. If you have faith enough in the organization to believe that it can aid you, then you should be willing to join it and help support it. Isn't that so?

Several County units have organized and elected officers but have not sent in their membership dues. These units are eligible to membership in the Federation until dues are paid. Be helpful. Co-operate. Pay up. "All for each and each for all."

DRYING OUT BASEMENT IS SUBJECT OF A NEW BULLETIN BY UNCLE SAM

Wetness of basements and cellars is experienced by many home owners, but comparatively few know what to do about it. The U. S. Department of Agriculture has just issued a bulletin on the subject, Farmers' Bulletin No. 1572-F, "Making Cellars Dry." In some cases wet cellars can be made dry by gravity drainage of the site and in other cases better ventilation will improve conditions.

Water-tight construction and waterproofing are good preventives of wetness. The bulletin makes suggestions regarding the prevention of wetness and dampness. It tells how to avoid the trouble when building a house and how to remedy it in old cellars. Lighting and ventilation important factors, are discussed.

Dryness in the cellar promotes comfort and health in the home, lengthens the life of the houses, furnishings and plumbing and increases the usefulness of basements for storage, workshop and laundry purposes. While the supply lasts, the bulletin may be obtained free from the office of information. Department of Agriculture, Washington, D. C., upon request.

WINTER IS BEST TIME FOR FIGHTING WEEVIL

Little Early Damage Possible If Insects Are Killed.

By E. H. Ropee On Memphis Press

The prevalence of the boll weevil next year in any cotton field depends largely upon the number of weevils which pass winter in protected situations near it. It is true that weevils may appear in some numbers in a field arly in the season, and yet, if weather conditions are unfavorable, may not cause damage.

However, even if the summer season is favorable to the weevil, early damage is never caused in fields if weevils must migrate long distances to them.

This fact makes destruction of boll weevil in winter the most important factor in control, states Dwight Isely, of University of Arkansas College of Agriculture.

Winter control of the boll weevil is most effective when land is relatively level and where high, well-drained spots are small in proportion to other farm land. This should begin with burning of trash and dead vegetation in fields along fence rows, turn rows, ditches, and terraces, and around stumps. If the vegetation is a thick growth like Johnson grass, cultivation of fence rows or ditch banks may be necessary to make the clean up effective.

Cleanup Is Necessary.

Winter or late spring plowing of cotton fields is also of some value but is an unusual part of farm practice. It is of more importance in the control of insects other than boll weevil. A thorough cleanup can be carried out most satisfactorily on plantations where adjacent fields can be consolidated and where a large area is under one management.

Where this has been done on plantations of several hundred acres, the boll weevil problem in the early part of the season has practically disappeared. The infestations which occur annually late in the season on these plantations come from other cotton fields. Where holdings are small, community co-operation is necessary for successful winter clean up.

Situations which furnish unusually favorable hibernation quarters for the boll weevil are responsible for early infestations which appear year after year in certain fields. Such situations are a liability not only to the owners of adjacent land, but to the entire community.

Cotton fields adjacent to hibernation quarters must be unusually productive to overcome the losses from weevil attack throughout the season. These fields, which are first injured, become a source of infestation for the surrounding country. Even losses in those fields which are not attacked until late in the season must be charged against hibernation quarters.

PEANUTS MAKE FORTUNE FOR FARMER BOY

Columbus, Ga.,—From a poor farmer boy 15 years ago to a millionaire now is the road traveled by Tom Huston—all because he wore his fingers to the quick by shelling peanuts on his father's farm in Texas.

While the ordinary lad 15 years ago relished peanuts, Tom hated the sight of "goobers." Like all boys on a peanut farm those days, Tom had to hull them. And the rough hulls cut his fingers his hunting was interrupted by hulling activities and, all in all, Tom didn't care whether his father grew peanuts or not. But his father did, nevertheless, as an insurance against want when the boll weevil ravaged his cotton crop.

So Tom decided to invent some sort of machine that would hull the peanut and leave him time to hunt and grow new skin on his sore fingers.

First Customers Were Neighbors

His first effort was crude, but it did the work and it wasn't long before farmers in the neighborhood were coming to Tom and getting similar machines made.

His trade grew until he decided there weren't enough goober raisers in Texas to warrant his making the hullers commercially, so he came to this city, the center of an extensive peanut raising industry. Here he built a factory with the aid of a farmer and began manufacturing the machines commercially.

But the one fault of the machines was that they lasted a lifetime. There was no repeat orders. And soon the shop was idle for want of business.

Huston thought of another idea. He would enter the peanut business himself and sell people peanuts by the bag.

Peanut raising at the time was not as highly specialized as it is now. On the market the product was not as delicious and digestible as now, according to Huston. So he perfected a method for cooking peanuts that made them a rich brown in color and so seasoned that the salt was in the peanut.

Bag For "Drinking" Goobers.

Then he wanted a bag that was original. He went to a manufacturer with his design and finally got a bag that was three times as much as an ordinary bag. In this bag the consumer was supposed to open the end and eat peanuts right out of it, just like drinking water from a bottle.

Then he produced a patented display unit. This display was so arranged that it had to be hung over the edge of the counter or showcase so that the slogan card holder was always in prominent display.

Huston began his peanut factory in a small way in 1925. His business grew rapidly and today the Tom Huston Peanut company employs 400 people at its plant here and has 150 representatives distributing its products. Its sales are running at the rate of $2,500,000 annually in 22 states.

Like Dime Novel Hero.

Aside from its remarkable growth, his company is interesting in that it was started on a "shoestring," took a commonplace article which had never enjoyed wide popularity and created a unique five-cent package which now has become widely familiar.

Sales of the company during 1928, in units of five-cent bags, amounted to seven and one-half million pounds. At the first of this year the company was selling about 2,250,000 bags of nuts every week.

Huston recently refused an offer of $4,400,000 for his company. He declares that his business is still in its infancy and that there still are millions in it.

The company was incorporated last October with 100,000 shares of no par value common stock and 4,000 shares of perferred stock at a par value of $100 a share.

Not a man in the organization is over 40, and not a man on the payroll is known as a "Mister."

FEDERAL FARM FACTS

Total storage capacity devoted to cold storage in the United States is set at about 700,000,000 cubic feet, according to the U. S. Department of Agriculture. More space is used for the storage of eggs than for any other product except apples. Frozen poultry ranks fourth.

* * *

Prof. Henry Gise, of Iowa State college, will direct a research study of farm structures being conduced by the U. S. Department of Agriculture. The survey will cover farm buildings and their requirements and the best methods of meeting them.

* * *

The southern pine beetle destroys more pine timber in the south than any other pest, according to the U. S. Department of Agriculture. During a single period it has destroyed timber valued at $2,000,00 and its present toll since 1891 is about $50,000,000.

* * *

Plenty Of Wheat.

Preliminary estimates set the total wheat crop for the United States this year at about 774,000,000 bushels.

CLIMATE NO BARRIER TO NEGRO FARMER

It is often said by many that the Negro cannot stand the rigors of the north. This statement is disproved by the fact that in the state of Maine there are three farmers owning farms and doing well.

In Vermont there are two farmerettes who own and operate maple sugar groves.

In New Jersey there are several large vegetable farmers who grow potatoes on a large scale.

The largest greenhouses in Montana are owned and operated by a man of our race. His pansies are shipped into 31 states.

A chicken ranch with something around ten thousand hens is being successfully operated by its owner—a farmerette in the state of Utah.

Wyoming has six colored ranchmen who are succeeding in livestock. They own their ranches.

Iowa has a grain farmer who owns and operates a 700 acre tract, while Kansas has several large potato kings.

Rev. D. E. Beasley of Duluth, Minn., a member of the Federation is a success as a farmer in that state. He is now about to enter the fruit and produce business This is in Minn.

Wisconsin has over one thousand colored farmers who know their cabbages and onions.

In the marshes of Florida, the Delta of Miss. and swamps of Alabama, Georgia, Louisiana and South Carolina where the thermometer continually gives vent to its feelings the colored farmers are producing 60 per cent of the crops.

The Negro can rightfully be termed "The Thermos Farmer."

SPECIAL DEPUTY FOR THE ORGANIZATION

C. C. Jordan of Mileston, Miss., has been appointed as special deputy for the National Federation of Colored Farmers. Mr. Jordan was born on a farm and has never lived any other place but on a farm. He drinks water out of a gourd and roasts potatoes in the fire-place.

Mr. Jordan is well up on farming and perfectly "wild" about the Federation. He was the first farmer in the state of Mississippi to apply for membership.

He will be among the farmers just as soon as he can gather his crop and pack his grip, and we are expecting the farmers to take him in for shelter and aid him in getting to his next stop.

MOUND BAYOU, MISS.

This thriving little community is more than interesting. With a population of something over a thousand inhabitants and headed by Hon. B. A. Green, Mayor, it has everything except a jail and a very, very small cemetery.

Two large cotton gins are in operation—often running up until midnight. The Agent for the Illinois Central Railroad at this point is a man of our race, and when it comes to the handling of freight and waybills he is perfectly at home. Two real drug stores that would be a credit to Chicago and a large office of cotton factors owned and operated by Hon. E. P. Booze who is considered an authority on the fleecy staple.

The Post Master is giving more than satisfaction and we predict that his services will keep him Post Master the rest of his days.

One of the most prosperous farmers in the community has a grist mill. He is T. Granger and a real hustler. The Federation will make a strong effort to place his meal with some of their connections.

There is a large oil mill in the town that should be in operation. The bank should by all means be reopened. Mound Bayou can easily do without a jail, but we cannot see how they are getting along without a bank.

Some of the leaders in the community who are responsible for the success of Bolivar county are Rev. B. W. Bryam, T. S. Granger, Hon. E. P. Booze, I. S. Frank, Prof. C. L. Gibson, Prof. Powell, the manager of the Farmer's Gin and Rev. Suttles.

U. S. CORN CROP ESTIMATE

A corn crop of 2,621,451,000 bushels is the November estimate of the Department of Agriculture. Last year's crop was 2,835,678,000 bushels. The average acre yield of corn is estimated at 26.7 bushels. Last year it was 28.2 bushels.

The merchantable quality is placed at 80.2 this year and 82.9 last year.

On November 1st there were only 2.71 per cent of the old corn left on the farms. This is getting pretty low.

Tennessee has an average of something over 25 bushels to the acre this year, while Mississippi and Arkansas have 20 and 14 bushel per acre average respectifully.

Our Tennessee members should bear this in mind, for they can find a good market in Mississippi and Arkansas for their surplus corn, and the freight rate from Tennessee into these adjoining states is very favorable.

Preliminary estimates of other crops, with comparative figures for last year, are:

Buckwheat, 11,900,000 bushels, compared with 13,100,000.

Flaxseed, 16,100,000 and 18,700,00.

Rice, 39,200,000 and 41,900,000.

Grain sorghums, 104,000,000 and 142 500,000.

Beans, 18,600,000 and 16,600,000.

Peanuts, 902,000,000 pounds and 809,000,000.

Apples, 140,000,000 bushels and 186,000,000.

Pears, 20,800,000 and 24,000,000.

Potatoes, 354,000,000 and 464,000,000.

Sweet potatoes, 82,900,000 and 77,700,000.

Tobacco, 1,481,000,000 pounds and 1,378,000,000.

Sugar beets, 8,470,000 tons and 7,100,000.

GIANT CYPRESS MAY BE OLDEST TREE IN AMERICA

Florida Professor Believes It May Have Lived 2,800 Years.

Special to The Chicago Daily News.

Tallahasse, Fla., Nov. 13.—A giant cypress with a trunk over fifteen feet in diameter may be Florida's rival to the big trees of California for the recognition as America's oldest living thing. Prof. Herman Kurz of the Florida State College for Women here, has made a study of the gnarled and battered veteran, and estimates that it may be 2,000 years or more old. It may be as much as 2,800 years old, he thinks.

If this does not exceed the age of the great trees that are the pride of California it is at least a highly respectable antiquity, and Prof. Kurz feels that Floridans owe it to themselves to call public attention to the picturesque grandeur of their remaining groves of big cypress, and at the same time insure their protection against thoughtless vandalism.

Before studying the big tree, Prof. Kurz examined the stumps of number of recently felled seven and eight foot specimens. One sample seven-footer proved by iits ring count to be about 700 years old. It was, therefore, already a veteran when Ponce de Leon discovered Florida and was a lusty young tree even when Chaucer wrote the Canterbury tales.

Saw Ancient Storms

Conmenting on the fifteen-foot giant, Prof. Kurz said:

"The stubby top and relatively short trunk hark back to many and ancient violences. Sometime before Christ this tree, probably solid and sound, had already attained a diameter of several feet. Then the peck cypress fungus gnawed into its heart-wood; maybe it was when Cicero orated for the cause of Rome. A hollow and weak trunk ensued. Next a violent storm wrenched off a large limb or two, so that the tree became stunted in appearance and growth. Just when the limbs crashed is also a conjecture. It could have happened when Caesar was in Gaul (55 B. C.) or during the time of Constantine, about 300 A. D. During the Norman conquests or the Crusades it may have suffered the loss of another limb or two."

Threatened by Tourists

After surviving all these damages and dangers, the great tree is now in real peril. And, ironically enough, its life is threatened by mere penknives. Thoughtless tourists by the hundred inscribe their initials and more or less silly sentiments in its trunk, and these constant little wounds are endangering the life of the tree. Prof. Kurz advocates surrounding it with a high fence to protect it from its admirers; and he would also have Floridans undertake a campaign of public education designed to secure both a fuller appreciation of the interest and value of the big cypresses, and their preservation for future generations.

VALUABLE FARM HINTS

In a recent issue of the Macon County (Tenn.) Times, County Agent W. E. Hix offered some suggestions, which, if followed should make poor farms rich and poor farmers richer. The suggestions follow:

Terrace your washing land.

Sow your rough land and your thin land to pasture, using a good seed mixture.

Do not cultivate land in corn more than one year in three.

Sow winter cover crops on bare fields.

TRIPLE WEED MIGRATION IS IS SWEEPING OVER IOWA

Ames, Iowa, Oct. 22—(AP)—Three distinct migrations of weeds are occurring in Iowa.

One wave is sweeping from the southern counties northward, another is traveling from northern counties southward, and a third is advancing from the west to the east.

Horse nettle and shoofly, a weed troublesome for years in Texas cotton fields, are northern migrants.

Canada thistle, quackgrass and sow thistle are pushing southward, while sunflower, buffalo burr and marsh elder are traveling in an eastward direction.

In time, marsh elder is expected to be common to all parts of the state.

HARVEST POTATOES

Shubuta, Miss., Oct. 24.—The farmers of this county are in the midst of potato harvesting. Reports from different sections indicate a splendid yield. If proper marketing facilities could be arranged several carloads could be shipped from Shubuta and Quitman. Weather conditions are favorable for curing and caring for the potatoes.

SPUD KING OF COLORADO

Mr. L. G. Shutte of Monta Vista, Colorado, is considered the spud king of the state, and in all probability the United States.

He raised 1,145.17 bushels of white potatoes on one acre of ground this year. The potatoes were harvested in October, and the quality perfect. The average annual production of white potatoes for Colorado is around 10 million bushels. The colored farm population is a little over three thousand.

There is a very thriving colored farm colony in the state known as Deerfield. Our colored farmers should be organized in Colorado.

THE MODERN FARMER

Vol. I. Nashville, Tenn. and Chicago, Ill., January 15, 1930. No. 11.

Dearfield, Colorado, Townsite and Settlement With Farm Lands

WESTERN TOWN CLAIMS IDEAL LOCATION

WELD COUNTY AN AGRICULTURAL AS WELL AS RESIDENTIAL PLACE

Dearfield was established on May 5, 1910, primarily as an agricultural community for colored people. It was the first step in a program of self-help for the Negroes of the United States planned by its founder, O. T. Jackson, who felt that the people of his race should be given an opportunity to achieve a degree of independence through agriculture which they could not experience as long as they continued to sell their services to others for a daily wage.

Almost from the first the project flourished. There were lean years in the early days of the settlement because the men and women who came to take up the land were not experienced in farming methods and knew little of the problems of agriculture. Year by year, however, their efforts counted for more, and within a comparatively short time the colony was an outstanding example of what can be accomplished by hard work and devotion. They learned the best methods of conserving the moisture on the non-irrigated plains, and the crops which are best adapted to culture in that region.

Attracted by their success, white farmers began moving into the territory to take advantage of the cheap lands offered for sale, and today there are both white and colored farmers working harmoniously together in the region, striving for the independence which successful farming brings to the people of both races.

Location—Dearfield is located in Weld County, Colorado, seventy-two miles northeast of Denver and about twenty-five miles southeast of Gree-

Maiden Speech Of Congressman Oscar DePriest

MEMBER FROM ILLINOIS MAKES INITIAL APPEARANCE

STAUNCH FRIEND OF THE FARMER AND NATIONAL FEDERATION APPLAUDED

Washington, D. C., Dec. 20.—Through the courtesy of the Washington Tribune, the Capital News Service is enabled to send in print to our subscribers the full text of Representative DePriest's maiden speech made in the House of Representatives, Wednesday, December 18, on the President's Haitian resolution:

Mr. DePriest said: "I occupy a peculiar position on this particular question. There have been so many contradictory statements on both sides of the House, it does appear to me that we should all vote to appoint this commission.

Want Enlightenment

"Most members of the House are not familiar with the conditions in Haiti, like myself, and we all want enlightenment from a commission that will make an impartial investigation.

"I was very much pleased at the suggestion made by the gentleman who recommended that one or two from New York (Mr. Fish) when members of the commission should be from the racial group that I am identified with and I am not surprised to hear other gentlemen object to it.

"The Haitian people consist of about two and a half million black people and about 125,000 or 130,000 belong to the educated class, and what the people of America wish is that the opinion of the great mass of the common

Common Sense Farming Negro Famers' Salvation

MAJOR HERBERT ALLISON PRESENTS FACTS

FORMER NASHVILLE MAN TELLS OF THE FRONT LINES

Describes the Action of His Company During the World War's Tragedy

Several years ago the American Battle Monument Commission at Washington, D. C. began a movement to correct the records and to make new maps of the various lines and battle fronts during the recent world war Commissioned and non-commissioned officers who saw this service and who were active in the recent world war were called upon to give facts and figures.

Major Herbert L. Allison, who is now connected with public schools of Montgomery County, was a lieutenant at that time and the majority of his company was made up of Nashville and Davidson County individuals. Late in 1927, during the month of November, to be exact, he began to furnish this information. It had to do with the movement of several of the companies presented the facts to Major presented the engineer corps of the United States Army, in the following concise and yet definite manner:

(Continued on Page 5)

THE "ONE-CROPPER" AND THE "OUTSIDER" MUST GO

SMALLEST FARMER NEEDS A BIG MIND SAYS EDITOR

I am acquainted with a Negro farmer who is a money-maker. He owns only thirty-two acres of land,—is what we call a "small farmer." But he has a big, broad mind, and that sensible head he carries on his shoulders keeps him traveling the easy road while many of his neighbors, who have larger farms and more help, remain stuck in the mud envying his prosperity.

This farmer raises a "money-crop" every year just as all of his neighbors do. He raises seven acres of tobacco. But when he sells his tobacco he is able to bank every penny he gets for it. When most of his neighbors sell, by the time their debts are settled they have hardly enough left to buy clothes for the winter.

But this man is not a "one-cropper." He doesn't depend on tobacco alone. He makes his small farm [illegible] bring him in some cash money every month in the year. He always has something to sell. Let me give you an illustration of his shrewdness, of how he works his head.

This year he had a patch of sweet peppers,—Chinese Giants,— big fine fellows. They were selling slowly and he was afraid they would go to waste. He got some small paper sacks,—cut out one side and tied

A TWENTY-FIVE YEAR PROPHECY

COLORADO MAN SAYS SOUTH WILL BE PARADISE

"Your issue of Dec. 15th backs up my statement for the past five years, that the South will be the Negro's paradise within the next twenty-five years," is a statement made by Mr. O. T. Jackson of Colorado, who is the husband of Mrs. O. T. Jackson of Dearfield, Masters Post Office. Mr. Jackson not only made this statement in a personal letter to The Modern Farmer, which was dated Dec. 27th, but he congratulated The Modern Farmer when he said: 'The Modern Farmer is doing a wonderful work in the way of information, organizing marketing and buying for the farmer. You are proving your real interest in the colored farmer by your interest in his future, by getting him organized properly for co-operation and self-help."

Mr. Jackson is connected with the state of Colorado in the government's office. It is said that he is one of the leading men out in Denver. He says they have spent thousands of dollars and a great deal of time in the establishment of the settlement of colored farmers and in the establishment of a town for the care of

Six-Sevenths of Miss. Cotton is Produced by Colored Farmers

FACTS FROM THE U. S. DEPARTMENT OF COMMERCE SHOWS NEGRO A FACTOR IN THIS STATE

Report of the cotton ginned in the principal Delta counties of Mississippi for the year 1928, recently issued by the Department of Commerce revealed some interesting facts.

The Negro farmer is actually producing almost six-sevenths of the long staple in Miss.

We give below the statistics by counties:

Bolivar with 11,314 colored farmers and 1559 white farmers 127,115 bales.

Coahoma with 7,673 colored farmersand 912 white farmers 76,311 bales.

Humphreys with 2,973 colored farmers, 490 white farmers 37,396 bales.
ers 37,396 bales.

Isaquena with 1,405 colored farmers and 96 white farmers 5,991 bales.

LeFlore with 5,933 colored farmers and 949 white farmers 78,827 bales.

Quitman with 3,130 colored farmers and 979 white farmers 34,622 bales.

Sharkey with 2,440 colored farmers and 455 white farmers 29,863 bales.

Sunflower with 7,888 colored farm-

Co-operative Buying By Mississippi Units Proves Help

OWNS TWO HUNDRED FIFTY MILK COWS

HOLMES COUNTY, MISSISSIPPI MEMBERS ARE PROGRESSIVE

The members of the National Federation of Colored Farmers living in Holmes County, Miss., own two hundred and fifty milch cows. This is exclusive of the calves and heifers. All farm owners and many of the tenant farmers have discovered that a cow is a necessary member of the farm family and during the past year more cows and calves have been purchased by colored farmers than ever before.

These members are now considering the idea of purchasing cream separators and shipping their excess cream to Jackson. Should they do this they will have cash checks coming in to them every week. At the present time the Jackson supply mostly comes from North Carolina and Missouri.

Twenty Percent Saved

ORGANIZATION PROVES NEED OF PROMPT ACTION

Shortly before the holidays a letter was received from the secretary of a County Unit of the National Federation of Colored Farmers in Mississippi, informing the National office that his Unit desired to purchase some family supplies co-operatively and requesting information and aid. The following cash order was enclosed:

15 Bbls. Flour
1000 lbs. Lard
200 lbs. Coffee
10 bxs. Soap
500 lbs. Rice
100 lbs. Tobacco
2 Cartons Snuff
6 Cases Baking Powder
6 Cases Soda
5 lbs. Black Pepper
10 lbs. Sage
50 Gallons Vinegar
10 Doz. Overalls
4 bxes. Oranges
4 bxes. Apples
10 bxes. Cheese

The National office knew that this Unit meant business. The members knew what they wanted as a

Georgia Colored Farmers Have Organized

DOOLEY COUNTY STARTS OFF WITH REAL LIVE UNIT

OUTLOOK FOR A GOOD YEAR —SOME FIGURES WORTH THE WHILE

The colored farmers of Dooley County, Georgia are organizing and our February edition will carry a complete roster of the officers recently elected. We welcome the good, progressive farmers of Dooley into the fold. A fine type of people both white and colored inhabit Dooley County and we know the Unit will succeed.

This county is in the southern part of the state. The soil is excellent and is adapted to the production of both cotton and vegetables. Some of the finest watermelons grown in the south come from Dooley county. The total value of all crops will average three million dollars annually and the colored farmers are producing one half of them. Below, we give some very interesting statistics

Number white farmers, 1170.
Number colored farmers, 1080.
White farm population, 5,557.
Colored farm population, 7,520.
Average cotton production, 12,635 bales.

CONGRESSMAN OSCAR DE-PRIEST'S MAIDEN SPEECH

(Continued from Page 1)

people be ascertained, so that the President can more correctly carry out the program of America in wishing to help these people become capable of self government.

Appreciates Work

"I appreciate also the great work that has been accomplished since we have occupied that country since the year 1915, along general improvements in every respect, and I am very glad to see the gentlemen on the minority side of this House so very solicitous about the condition of the black people in Haiti. I wish to God they were equally solicitous about the black people of America. We in America would like in some of the States of this country to have the right of self-determination also. The people of Haiti should have the right of self-determination under the broad principles laid down by our Constitution and under the theory adopted durthese black people down there than for them to know that they have one at least who can sympathize with them through bonds and ties of blood and kin; and I shall not make any special recommendations as to who the Negro on the commission should be, but I do hope the President will see to it in his wise judgment to get some men of outstanding ability, capable and competent, especially representing the group I am identified with, that will be a credit to America and do justice to both America and Haiti. We have no right to ask for anything more.

ing or about the time of the settlement of the World War, when every group of people in the world, it was stated, should have the right of self-determination.

"This should apply to Haiti and also to every other class of people that God's sun shines on, and I am glad to see the gentlemen on the minority side of the House converted to the right way of thinking, for once in their lives, because I appreciate the condition of the black Americans, where they are denied the right of self-determination in almost every State south of the Mason and Dixon's line, and I congratulate the gentlemen for starting in right in Haiti and conceding the common people the right of self-determination and hope it will be spread to every State in America and that we will all enjoy the same rights and privileges.

For the Commission

"I stand and shall vote for the appointment of this commission. I shall vote against both amendments when offered, for I have the utmost confidence in the present Executive in the White House. (Applause.) I think he is one of the best-qualified Presidents this country has ever had (applause), and I am perfectly satisfied that he simply wants to give the people of Haiti the best that this administration is capable of giving them and he wants the enlightenment that such a commission can bring to him.

Asks for Negro

"I appreciate the benefit of appointing a commission to investigate conditions in Haiti that will have the utmost respect and confidence of all the people of that island, and I know of nothing that will instill more confidence in

"I shall not, perhaps, take all the time yielded to me, but I am carrying out the wishes of the people identified with my racial group all over this country. I have received hundreds of telegrams asking me to support this resolution and to sustain the President in his desire and wish to appoint this commission.

For Face Value

"I further wish to call the attention of the House to the fact that the President made this request in his message before the unpleasant incident that just happened down in Haiti. So he knew conditions were not like he would wish them, and he evidently wanted information outside of the military channels that we have there now, so that he could view the thing from the broad standpoint of a humanitarian, and I am satisfied that every Member of this body wishes to do the thing that is going to do the greatest good to the greatest number of people in Haiti whether they vote for this resolution or not. From their talk I am led to believe they want to help the Haitian people and I am going to take it at its face value, and I have confidence that the gentlemen who are talking against this resolution believe that the Haitian people should have a square deal so far as America is concerned.

"I know our Government is not there to exploit that island Republic, like every other Member of this Congress ought to know. They were not sent there for that purpose. They were sent there by a President who was a member of the minority party now and because he thought conditions warranted occupation. Of course, the marines in Haiti may have committed some wrongful acts, I do not know; but that was done individually, it was not the purpose or policy of the American Government. I know that military rule at the best is harsh, not only there but every other place in this world; but this commission after making its investigation, I am satisfied it will consist of men of such caliber that they will bring in an impartial report whether it is with America or against America. (Applause).

"Mr. Chairman, I am going to ask permission to extend my remarks in the Record by publishing an article I saw in last Sunday's New York World, which I think explains the situation better than I am capable of explaining it. I ask unanimous consent to do this, Mr. Chairman."

In the members' gallery while Mr. DePriest spoke were his wife, Mrs. Garnet C. Wilkinson, wife of the first assistant superintendent of public schools in the District of Columbia, and Morris Lewis, secretary to Mr. DePriest. It was the first time in 28 years that a colored person had spoke on the floor of the House. His remarks were applauded from the Republican side of the House.

REDUCED RATES TO CHICAGO

Excursion Fares Announced for the Sunday School Congress, June 11 16, 1930.

Railroads In Nearly Every Section of the United States to Assist Sunday School Congress Messengers and Dependent Members of Their Families, on the Identification Certificate Plan Rate.

Chicago, Ill.—(Special)— Farther encouragement to the Sunday School Congress messengers for their meeting here June 11-16, was announced this week when it became known that the various Passenger Association Bureaus had promulgated an excursion rate of one and one-half fare for the round trip. It is understood from Secretary Henry A. Boyd, of the Congress, that this concession is made especially for Congress messengers and dependent members of their families, and that he will issue from his office at Nashville these Identification Railroad Certificates to those who are entitled to represent their various religious organizations at this Summer Sunday School of Methods.

The date of sale of tickets will begin June 6 and 7, and the return limit will be June 21 and 22. "There is further inducement of a longer layover on the tickets." said Secretary Boyd, "which can be made with the local railroad agent at the time of the purchase of the tickets on a different basis." He promised to give public notice relative to these improved fares and longer extension of tickets, upon application of any who will write him.

COMMON SENSE FARMING

(Continued from Page 1)

these over the peppers, leaving the south side of them exposed. The result was that in course of time the exposed side of the peppers was tinted by the sun a brilliant scarlet. The shaded side remained green. They were the most beautiful peppers his customers had ever seen and he got a fancy price for them.

As a rule, the colored farmer does not realize how far the American who wants a certain something to eat will go to get what he wants. The American appetite is demanding what we call "luxuries." But this food is not so luxurious after all. It is only real good food,—healthy-giving food,—necessary food. The ordinary workman who wants apples and tomatoes and lettuce and greens in mid-winter wants them because he has found out that they keep his body healthy,—his mind clear, and his disposition sunny. He is earning good wages and is able to purchase them. Farmers who can furnish what is wanted, when that particular food product is wanted most of all are the farmers who are making money.

There is little excuse for any colored farmer nowadays remaining a "one-cropper." We know that some landlords will not allow their tenants to produce any but the "money-crop" but these landlords are few and in a little while they will all pass out simply because they will be unable to get tenants. He is a poor landlord who wants to keep his tenants poor. County agents and agriculture teachers have been preaching diversification of crops for so long that nearly all of us know what the big word means and we know that it is good gospel. But most of us have just heard of one-half of the benefits of diversification. We have only learned that we can save money. We have yet to learn that we can also make money by practicing diversification.

But colored farmers will not learn this as long as they are 'outsiders." An "outsider' is a farmer who does not belong to a farm organization. The "outsiders" stay in debt and barely exist. The "insiders" make the money and have banking accounts. The "insiders" soon get wise to the demands of the American appetite and they profit by their wisdom. Last year the farmers of California sent 184,225 carloads of fruits and vegetables to eastern markets. Florida sent 57,895 carloads. Ninty per cent of the farmers who produced the fruits and vegetables that made up these carloads were "insiders,"— they belonged to co-operative producing and shipping organizations. At one time, these farmers of California and Florida were just as unorganized as the colored farmers of America are today. But they got tired of poverty,—of hard work,—of a bare existence.

Unless colored farmers learn the importance of organization—of co-operative production, shipping and marketing, there will soon be few colored farmers left. Most of them will be only farm hands and farm laborers,—totally dependent on the fellows who are inside these organizations. But if they will grow more vegetables and fruits, learn how to pack and grade correctly and then market them through their own co-operatives, they will have money coming in almost every month in the year,— they can avoid debt,—can avoid paying twenty-five and thirty per cent interest and "time prices" in addition. They will be able to save the profit from their "money-crop" and can use it to purchase the luxuries they deserve and should have.

The "one-cropper" is not engaged in common sense farming and neither is the "out-sider." They are both in the same old boat and the boat is sinking. Not long ago a southern farmer said to me,—"Suppose our farmers in my county would organize. What crop could we get anything out of except cotton?" "How about sweet potatoes and watermelons," I replied. A majority of the farmers in his county belong to our racial group. Chicago alone would pay them thousands of dollars every year for their watermelons and sweet potatoes for I know that no finer grow than those they raise and eat and also waste. Organized colored farmers could almost control the watermelon and sweet potato markets if they would go after them. These food products are rapidly growing in favor in the north and the demand for them is increasing. Right now I have on my desk a letter from a resident of a mid-western city who ask me where he can get "hold of some good Georgia collards." He says, "We can't even get any kale here now and I can't find a collard within a hundred miles." Another opportunity some good colored farmers is letting slip.

Distance from the chief consuming centers means nothing nowadays. Freight trains which make as fast time as the passengers and good roads and auto-trucks provide the way to transport all perishable quickly and safely. Those who consume our food products do not care where they come from or who does the producing. But they want what they want when they want it.

It would not take colored farmers long to learn the methods of co-operative production, shipping and marketing. Farmers of other groups are succeeding. Co-operation makes farming a business instead of drudgery and a means of livelihood. The colored farmer who will succeed and make money will be the one who has the courage to leave the old road and venture out on this new one. He will be an "insider" and will be banking money while the "outsider" is worrying over his debts.

A TWENTY-FIVE YEAR PROPHESY

(Continued from Page 1)

farm produce and business. He states further that they have abandoned the idea of the project as an exclusive Negro settlement, as he says: "We have learned from our experience that the northern Negro is not cooperative in Negro movements that carry with them the slightest tinge of segregaion; yet the northern Negro is self-segregator, to be with the crowd and for imitative show-on; but when it comes to segregation for material interest to support that show-off he would rather hold a menial job than to be self-supporting from the soil in a prosperous community composed of colored people."

The letter further goes on and makes favorable comment upon the December issue of The Modern Farmer, when he said: "If the statistical statement of farm activities in Texas, Mississippi and other southern localities are true, back to the land in the south is the opportunity for the young Negro who is ready to organize and cooperate."

The Modern Framer, in presenting the facts and some of the excerpts from the letter, is doing so merely to show to its thousands of readers what one man connected in the state department of Colorado out in the far west, thinks of the publication.

CO-OPERATIVE BUYING BY MISSISSIPPI

(Continued from Page 1)

co-operative organization and they had the cash to pay for it. The order totaled around $600.

This business of buying farm and farm-home supplies co-operatively is not a new thing but it was indeed a new thing for this particular unit to enter into. Most of the units of the Farm Federation (white) in the north buy supplies co-operatively. They have been well organized for several years and they know that such a method of buying is good business for the farmer. It was up to our national office to prove to this Unit in Mississippi that they also could save.

It was easy for the National office to put the secretary of the Mississippi Unit in touch with a wholesale house that delights to deal with co-operative organizations. The result was that the Unit saved nearly twenty per cent on the transaction, —to be exact, they saved $160. From now on they will boost their organization.

GENERAL MARKET NEWS

Seed Potatoes Will Bring High Prices

A very interesting situation in regards to seed potatoes. There is a very strong demand for Irish potato seed stock.

The Department of Agriculture in their December statement of statistics says that the forecast of the Irish potato crop this season wil hardly run over 357 million bushels, while the final estimate for 1928 was over 465 million bushels.

Many farmers will be tempted to enlargen their acerage this year, and they will find that choice seedstock will in all probability sell as high as 5 and 6 dollars per hundred pounds by planting time.

The best selected northern seed stock, which is used in the southern states is now selling at over double the prices last year.

Seed stock from Maine and New Hampshire is best suited for the southern states, while the Idaho, Montana or Minnesota potato is recommended for the middlewestern states.

It is best in buying seed potatoes to see that the stock is certified, and the yield will undoubtedly be much larger. Scabby and diseased potatoes should not be planted. Its simply a waste of time and energy.

Nashville, Tennessee — Henry A. Boyd, Secretary

CONGRESSMAN OSCAR DEPRIEST DELIVERS SPEECH IN CONGRESS

RAISES VOICE IN BEHALF OF HUMANITY'S RIGHTS

ADMIRATION ON ALL SIDES SHOWN FOR HIS COURAGE, STATESMANSHIP AND ELOQUENCE

Breaking a silence that he had maintained with dignity and poise during the extra session of Congress, called for agricultural relief, Congressman Oscar DePriest, of the First Congressional District of Illinois, delivered his maiden speech in the halls of the United States Congress two weeks ago. His first utterances, his initial appearance on the floor, were in the defense of humanity as he addressed himself to the proposed investigation and special commission to be appointed by the President concerning Haiti, the Republic nestling in the Caribbean Sea. It was the first time in twenty-seven years that the voice of a member of the race had been heard in the law-making body of the United States known as the Lower House.

He prefaced his remarks with language that was chaste, copious and yet convincing. Every eye was directed toward him, every ear was attuned and attentive, and it is said that a death-like silence was noticeable as the tall distingiushed, gladiator-like member from the First Congressional District arose from his seat, addressed the speaker and was given recognition. He proceeded then to enlighten the four hundred members who are his colleagues, on certain conditions that obtain, not only in Haiti but throughout the United States. His convincing argument, his positive proofs, his clear enunciation and his manner of presentation elicited favorable comment, even from the minority side of the house. He held his audience, consisting of members of the house, spellbound, because he was master of the situation, he was conversant with his subject, clear and concise in his declaration.

In speaking about this affair the Associated Press sent out the following news item:

DE PRIEST IN HAITI DEBATE

Negro Congressman Supports Hoover Plea for Commission to Republic.

The Courier-Journal Washington Bureau

Washington, Dec. 18—Oscar De Priest, Republican of Illinois, the only Negro in Congress, made his first speech in the House Wednesday shortly before the chamber, after four hours' debate, passed viva voce a resolution to review and investigate the situation in Haiti. He was applauded both during his speech and at the conclusion by colleagues on his own side of the aisle.

Action was taken on the measure at almost the time a report was received that the 500 marines ordered by President Hoover to Haiti to reinforce the 700 stationed there during recent disorders were being returned to this country without having gone any farther than Cuba.

It had been twenty-eight years since the House of Representatives had listened to an address by a Negro. Back in 1901, the late George Henry White represented the State of North Carolina. He was, until the election of De Priest, the last Negro to sit in the chamber.

DePriest showed little or no embarrassment during his maiden speech Once he stopped long enough to sip from a water glass but other than this and slight pauses caused by two out bursts of applause when he spoke highly of President Hoover, he spoke fluently.

DePriest did not hesitate to accept the racial issue as one of overwhelming importance. In expressing approbation of the desire evinced by most gentlemen on the minority side of this House were equally solicitous about of the House to help the Hatians, he declared that he "wished to God the the black people of America."

"We in America," said DePriest, "would like in some of the States of this country to have the right to self determination also. We are denied this in every State south of the Mason and Dixon line, but I hope the time will come when the privilege we enjoy in the North spreads to every State.

"I appreciate also the great work that has been accomplished since we occupied the country in 1915, resulting in general improvement in every respect I have every confidence in the White House to appoint a commission that will make an impartial investigation. There never has been a more qualified person in the Executive mansion." It was here the scattered applause was heard.

There was little opposition to the resolution on either side of the chamber. although various recommendations were made as to the composition of the commission. Chief of these was that of Representative Hamilton Fish, Jr., New York Republican, who said it should include at least two Negroes and that one of them might well be J. Emmett Scott, president of Howard University.

The resolution carries with it an appropriation of $50.000 to carry out the work. An amendment offered by Representative William B. Bankhead, Democrat of Alabama, which would instruct the commission to report the results of its study to both Houses of Congress and the President, was accepted by the Foreign Affairs Committee and passed with the resolution.

Opposition to the Porter Resolution was led by Democratic Floor Leader Garner and Representative Huddleston, Democrat, Alabama, who contended a a commission can supply no information on Haiti which is not already available to the President. His real purpose in asking authority to appoint a commission is to shift responsibility for the Haitian situation to Congress, they charged.

Republicans were almost unanimous in their support of the resolution and a few Democrats deserted their leaders to advocate its adoption.

—Nashville Globe.

GENERAL MARKET NEWS

(Continued on Page 2)

With the crop short by over 100 million bushels in comparasion with last year, early Irish potatoes should sell well during the spring months provided the production does not exceed the demand.

SWEET POTATOES AND ONIONS

The sweet potato market declined in price during the past month or six weeks due to the heavy yield.

The 1928 crop was about 77 million bushels while the 1929 December estimate by the Department of Agriculture shows about 85 million bushels. Georgia's yield is almost 1 1-2 million bushels over 1928 yield. We do not look for any great improvement in prices over present notations.

The onion crop is also much heavier than last season. 1929 crop is estimated at 18 1-2 million bushels while the 1928 crop was only 12 1-2 millions bushels.

New York's yield was the largest of any state, being almost 3 1-2 million bushels. The 1928 crop was only 1 1-4 million bu. in this state.

SEED CORN

Good seed corn is scarce and we fear will become a serious problem by planting season. Owing to the freeze which followed a wet spell last fall, a vast amount of seed corn in Illinois and adjoining states will not germinate.

All corn that is to be used for seed should be tested. This is a protection against a poor stand.

Leafy Vegetables

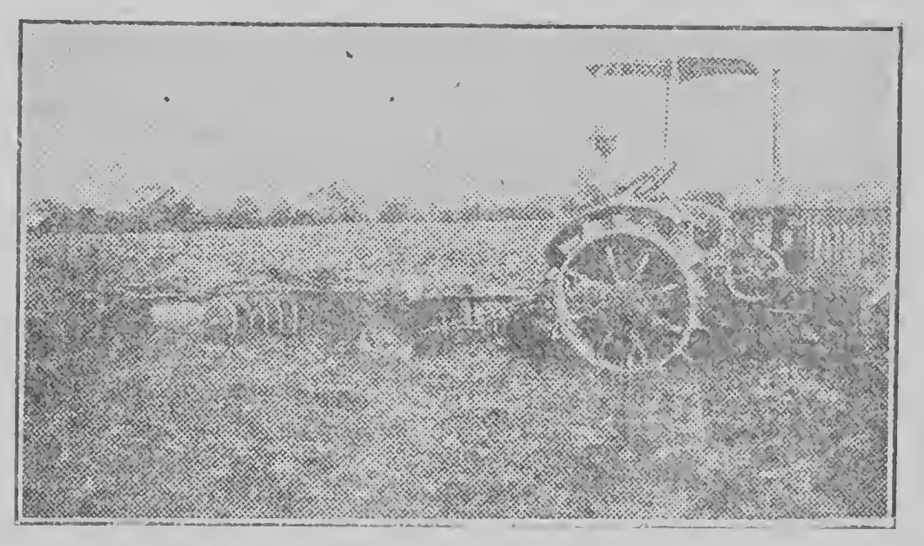
All leafy vegetables are bringing good prices in the large terminal markets, and since the consumer is favoring the fresh vegetables instead of the canned stock, we believe the demand will continue good.

Wheat

Owing to bad crop reports from Argentine coupled with the activities of the Farm Board in buying wheat, the market has assumed a very strong position, and it looks as if there will be no more real bad breaks the rest of the season.

Pig Crop

The fall pig crop, shown by report from the Department of Agriculture as a result of a survey gathered from 75,000 farmers, shows that the 1929 crop will be about 5 per cent less than the 1928 crop.



Mr. Thos. Blackmear, farm demonstrator. Montgomery, Ala., operating ing a Farmall machine in Johnson Gross with two-row cultivator.

ATTENTION COLORED FARMERS

The National Federation of Colored Farmers is receiving hundreds of letters from Colored farmers requesting all kinds of aid and information. We are willing to do everything we can for all the Colored farmers of America. It costs money, however, to maintain offices and our expenses are becoming so heavy that we are compelled to discontinue supplying information to those who request it who are not members of the Federation. If you have faith enough in the organization to believe that it can aid you, then you should be willing to join it and help support it. Isn't that so?

Several County units have organized and elected officers but have not sent in their membership dues. These units are eligible to membership in the Federation until dues are paid. Be helpful. Co-operate. Pay up. "All for each and each for all."

The Modern Farmer

"OUR SLOGAN"
STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT!

EDITORIAL

SAY "I WILL" TO 1930

I will be an industrious, thoughtful, progressive farmer this year. I will work hard for hard work keeps my body healthy, my mind free from worry and my conscience clear. I will plan my work,—I will save my time and energy,—I will accept advice from those qualified to teach me. I will join a co-operative organization of farmers in my neighborhood or attempt to build such an organization. I will imitate the work and methods of those who are succeeding around me. I will read more and will strive to originate something myself.

I will be a thrifty farmer this year. I will not borrow more than I can reasonably hope to earn. I will make a budget,—I will start a banking account,—I will spend wisely and not foolishly.

I will be a good American farmer this year. I will have faith in my country,—in her institutions,—in her opportunities. I will be proud of my citizenship,—I will pay my taxes, — I will vote, and I will take an interest in public affairs so I can vote intelligently.

I will be a good Christian farmer this year. I will remember the faith of my fathers. I will be true to my family and to friends. I will speak the truth,—I will be honest,—I will be courageous. I will keep the Ten Commandments and the Greatest Commandment. I will be a good man for a good God has promised to bless only those who do right and serve.

MISSISSIPPI'S LUCKY ELEVEN

In an article in this issue some startling facts about the eleven principal Delta counties of Mississippi are stated and figures are given which back up the facts. Most of the long-staple cotton grown in Mississippi is grown in these counties. Last year they produced almost three quarters of a million bales. Colored farmers outnumber the white farmers in these counties five to one and six-sevenths of this crop was produced by Negro farmers. Delta cotton sells at a higher price than ordinary cotton and it is always in demand.

These colored farmers are lucky but we are afraid they do not know it. They are native to the section in which they live. The climate agrees with them,—they are familiar with the local customs, and they have had an opportunity to purchase much of the soil they cultivate. Approximately two thousand farms are owned by colored farmers in this section which compares favorably with the two thousand five hundred farms owned by white farmers.

Right now, these Delta colored farmers have an opportunity to become the wealthiest and most independent group of Negro farmers in America. Delta cotton is used almost exclusively in the manufacture of rayon silk and this product is growing in popularity. Rayon manufacturers are always in the market for Delta cotton and the farmers have no need to fear over-production. In some sections of the Delta farmers are making money growing early vegetables and during the past year, some have discovered that they can produce and ship cream to nearby cities and realize a handsome profit.

The colored farmers of the Delta are in luck. If they do not prosper and progress during the next decade they will have no one to blame but their own selves. At the present time they should take advantage of every opportunity to improve their condition, for, if they do not do this, others more foresighted and more shrewd are going to find the Delta and they are going to possess it. The fittest not only survive in this world. They also take what they want.

First of all, these farmers should join up with their organization, the National Federation of Colored Farmers. They should join up one hundred per cent. Four of these counties are already organized and the Federation is helping them make and save money in many ways and through many channels. The other seven counties are asleep but we are glad to say that they show signs of awakeniug and, in all probability, they too will organize before spring.

And too, right now these farmers should buy up every acre of Delta land offered for sale. This land sells all the way from seventy-five to two hundred and fifty dollars an acre. It is worth it. It it was not worth it there would not be such a good demand for it. In a few years it will be as hard for a Negro to buy an acre of Delta land as it is now for him to buy an acre in Manhattan.

Get in your organization and work together for progress and prosperity. Get hold of some of the soil you cultivate and get in a hurry to take both of these progressive steps.

"LET THERE BE NO STRIFE"

Old Abraham chief stockraiser and farmer of his day and age, once got into a squabble with his neighbor and nephew, Lot, who was also a prosperous stockraiser. And Abraham said unto Lot, 'Let there be no strife.' " Abraham "gave in" for the sake of peace. Lot accepted Abraham's advice and he also "gave in." Both were big men and wise men and they knew well there could be no progress for either when there was jealousy and strife.

The leaders of a county unit of the National Federation of Colored Farmers in Alabama are at loggerheads. They are squabbling. They are not pulling together. This is the only unit iu which there is strife. Men, forget it. Big men do not squabble. They "give in." We have never been able to understand why colored folks should squabble and quarrel with each other anyhow. We have enough trouble getting along with the other fellow. Why quarrel among curselves?

And another thing it is wise to remember. If you are doing a good work, you may be hindered but you cannot be stopped. You are doing a good work when you are working for and with your organization. Its founders, officers and leaders have been kicked about some too but the organization is growing and growing fast. The work is so large there is plenty of space for us to be kicked about in it, but we cannot be kicked out of it.

If we should, we also are willing to "give in" for the sake of peace, prosperity and happiness for America's colored farmers. "And Abrahaun said unto Lot 'Let there be no strife.' " Good advice for us today.

PLANT "WEBER 49"

Weber "49" cotton is scheduled to be the best seller in 1930 and it will certaiuly pay our cotton-belt members to consider putting part of their acreage in Weber "49" sed provided the gin in their locality can handle this variety. Buyers from the east will pay a big premium for Weber "49." Don't forget this.

FOR SHIFTNESS SUSANS

Before you marry a wife it is best to have some kind of a house in view to which you may take her. Before you buy a valuable piece of machinery, Brother Farmer, it is best to have some place to put it where it will be protected from the weather. We have heard of a successful farmer,—a member of the Federation,—who, right at this time of the year, has over a thousand dollars worth of implements standing out in his field. Some of these implements were purchased this year.

The sight of such willful waste would make a Yankee farmer shed tears. They are not so careless. They cannot afford it. The Illinois Central even houses their locomotives when not in use. They cannot afford to let them rust out. Can you afford it? A little more foresight,—a little more industry and a little more thoughtfulness will save you many dollars on farm machinery. Get the saving habit as well as the wasting habit. Build a house for your valuable farm machinery and take care of it.

FOR BLIND BOBS

We read of a white Georgia farmer who bought a mule for one hundred and five dollars and sigued a blank note covering the cost of same. When he was ready to pay for the mule he discovered that the note was for two huudred dollars aud had been sold to the local bank. The farmer was helpless. He had the note to pay.

We have no idea how many colored farmers have been caught in such traps. Usually, when a Brother is so bit or burnt he keeps his mouth shut about it. But it is very foolish to put your John Henry on any paper or document which you have not read and which you do not fully understand. Somebody is always looking for a sucker and they say that America is full of them.

Before you sign anything it is best to talk the matter over with your wife. If possible, let her see what you are signing. The average colored woman is hard to fool. Her intuition is unsurpassed. She is an expert at smelling the rat." If you will rely more upon her judgment you may be able to keep a tighter and a fuller pocket-book.

NOTES OF INTEREST TO OUR FARMERS

Letters Commending the Federation Pouring In— Members Reaping Great Benefits.

Colored farmers who have joined the Federation are beginning to wonder how they ever managed to get along without such an organization. These two letters, recently received at the National office, tell the whole big world just how organization will help the average colored farmer.

President James P. Davis,
Chicago, Ill.,
My dear sir:—

Your letter of inquiry reached me safe today and I'm glad to say I also received a letter today, quoting me prices on eight bales of cotton at 19 1-2c which is 3 1-2c more than I could have gotten had I not been trading with the assistance of the National Federation of Colored Farmers. But I did not accept 19 1-2 cents. I was advised by them to hold my cotton until after the holidays and that I might get a better price. I borrowed 65 per cent of the amount at the present price and by so doing I am able to meet my notes and also stand a chance of getting 20c for my cotton or more. This letter you may publish for I owe my success to the National Federation of Colored Farmers. I have been taught to "render unto Caesar things that belong to Ceasar and to God things that beloug to God." God blessed me, giving me health and strength while I was cultivating and harvesting my crop, but President J. P. Davis assisted me in getting the price for it and I'll do my part in upbuilding the National Federation of Colored Farmers and helping others to find the way as I have. I beg to remain,

Your Brother in Union,
Allen Lewis,
Lexington, Miss.,
R. 2.

NOTES OF INTEREST

The Modern Farmer,
Nashville, Tenn.,
Gentlemen:—

I am the owner of a 599 acre farm. I made an effort to send in an application for a loan from the Federal Land Bank. I was put off from time to time. The President of the National Federation of Colored Farmers while on a visit to this section carried me with him to a city nearby and in less than three hours my application was made out and signed. The following day,—in less than 24 hours,—the appraisers were on my farm. This is what organization has done for me. Every Negro farmer in the United States should stand squarely behiud the Federation and the Modern Farmer.

Yours truly,
Nobile Calhoun,
Rt. 2 Alpine, Ala.

EDITOR'S NOTE.—If you have been a skeptic, the above letters should couvert you. The N. F. C. F. is doing all it can do to make the lot of the average farmer an easier one. Its officers and leaders are business men of experience. They know where the help is and they know how to get it to the colored farmer. They will never knowingly abuse the faith or confidence of any Negro farmer. All they request is your cooperation. They are experienced men and they promise to make few mistakes.

DIET CURE SUGGESTED FOR PYORRHEA

Dr. Milton T. Hanks, professor of pathology at the University of Chicago says the chief cause of pyorrhea and likewise tooth decay is the insufficiency of vitamiu C in the average American diet. Lack of this vitamin causes tissmues in the mouth to disintegrate, he says.

Dr. Hanks recommends the following diet:

One pint of orange juice, including the juice of one lemon daily, half at breakfast and half in the evening, half head of lettuce daily one or two eggs a day, depending on a person's age, two cooked fresh vegetables daily, one glass or more of milk.

In addition to this, plenty if fresh fruits and whatever else may be desired.

Dr. Hanks further stated that in experiments with about 300 persons none of them failed to respond to the diet treatment. In every case, he says pyorrhea conditions were improved and in many instauces the patients were cured.

CATCHES LARGEST 'POSSUM

Everett Lawson of Anderson, Ind., caught an o'possum weighing twenty-five pounds. The animal was prowling in the rear of a garage in the very heart of the business section of Anderson.

Over half a bushel of yellow yam sweet potatoes were served at the "possum" dinner— the potatoes being knee deep in gravy.

ONION ROT

Mr. Paul Potter in a recent edition of the Chicago Tribune says:

"When we purchase onions in the grocery store and find white ones priced higher than the colored ones we do not give a thought to the reason for the difference in price," says J. C. Walker, a plant pathologist, "but scientists at the Wisconsin college of agriculture have found that there is a real reason back of this difference in price."

That the color of onions is associated with their keeping qualities or ability to resist rots known as onion smudge and neck rot is the first definite discovery of scientists which shows a relation between chemical constitution of plants and their resistauce to disease.

How the Badger specialists are able to arrive at this conclusion is an interesting story, according to K. P. Link, agricultural chemist. A chemical compound that enables colored onions to resist the smudge disease was isolated by treating chemically colored portions of the onion bulbs. White onions, the scientists point out do not contain this compound, so they do not resist disease.

This compound will protect onions from the rot damage is known as "protocatechuic" acid. It has been found in and obtained from onions that have red and yellow color, and at the same time was found to be absent in white onions.

That the presence of the acid where the coloring pigment exists prevents smudge rot is verified by the fact that even in colored onions the rot often causes slight infection around the lower end of the stem or "neck," where there is an absence of coloring matter.

KNOW YOUR COTTON

Key to Class And Grade Here Given

Approximately ninety per cent of American farmers know very little about the grading of cotton. When he desires to sell his crop the average farmer today follows the same routine his father and his grandfather followed. He carries his cotton to the market without knowing its grade, asks the buyer what he will give and hands in his sample. After laboring from April til October producing the crop, another tells him just what it will grade and what he may expect to get for it.

For the benefit of our subscribers and members of the National Federation of Colored Farmers, we are giving herewith a key to both class and grade. Readers should file this edition for future reference.

FOR STAPLE

Number one is 7-8 inch.
Number two is 1 inch.
Number three is 1 1-16th inch.
Number four is 1 1-16th inch.
Number five is 1 1_16 to 1 1-8th inch.
Number six is 1 1-8 inch.
Number seven is 1 1-8 to 1 3_16th.
Number eight is 1 3-16th.
Number nine is 1 3_16 to 1 1-4.
Number ten is 1 1-4.
Number eleven is 1 1-4 to 1 5-16th.
Number twelve is 1 5_16th.
Number thirteen is 1 5-16 to 1 3-8th.
Number fourteen is 1 3_8.
Number fifteen is 1 7-16 to 1 1-2.
Number sixteen is 1 1-2.

FOR GRADE

A is strict Good Middling.
B is Good Middling.
C is Strict Middling.
D is Middling
E is Strict Low Middling
F is Low Middling
G is Strict Good Ordinary.
H is Good Ordinary.
I is Ordinary.
J is Inferior or better known as "Dogs"

FOR COLOR

O is White.
1 is Wax.
2 is Vim.
3 is Blue.
4 is Spotted.
5 is Stained.
9 is Extra White.

FOR PREPARATION

A is Excellent.
B is Good.
C is Fair.

Application For Membership
NATIONAL FEDERATION OF COLORED FARMERS
Vincennes Hotel, Chicago.

As a Farmer, I believe the time has arrived when the Colored Farmers should form a National Organization devoted to diversified production, grading, packing, shipping and marketing of farm products and to the purchase of needed farm supplies through co-operative methods, to the end that a more prosperous financial condition may result from their efforts as producers.

I herewith subscribe and forward $5.00 for membership in the National Federation of Colored Farmers for a period of 12 months from date.

Name .....

Address .....

City or P. O. .....

County .....

State .....

Date .....

If there is any further information desired, write.

Yours Truly,

THE NATIONAL FEDERATION OF COLORED FARMERS
Vincennes Hotel, Chicago, Ill.
James P. Davis, President.
Major R. A. Byrd, Vice Pres.
Leon R. Harris, Secretary.
S. B. Wilson, Treas.
C. R. Richardson,
Chairman Board of Directors

D is Gin-Cut.

For instance if a ticket covering the grading of your cotton says:

16-B-9 your cotton is as follows:

1 1-2 inch staple—Good Middling and Extra White.

Beginning with the fall of 1930 the Government will in all probability control the selling of cotton and this information will be very valuable.

DEARFIELD, COLORADO

(Continued from Page 1)

ley, the county seat of Weld county. It lies in the valley of the Platte river, between the Burlington and Union Pacific railroads, the townsite being about three miles north of the former and two miles south of the later. The presence of both railroads with stations at frequent intervals, guarantees acceptable trans portation facilities during the entire year, while good highways leading to Denver, Greeley, Fort Morgan and other large nearby markets are always kept in excellent condition and provide a reliable outlet by trucks for the more intensive crops raised in the district.

Located originally in Weld county because of the fact that at that time there were large areas of government land to be had at nominal prices, the settlement has spread from its original boundaries and now covers considerably more than the acerage included at first. Conveniently located with reference to the surrounding farming territory, the townsite of Dearfield consists of 480 acres platted to blocks and lots suitable for business and residence purposes The purpose of the townsite is to provide a central gathering place for the people of the district, to provide them with the necessary business houses, as well as residences for those not desiring to occupy the farm lands. There are also non-platted lots of from five to ten acres surrounding the townsite, adapted to dairying, poultry raising and truck farming. There is always a good market for the products of these tracts within easy reach from the settlement. These tracts also are suited for those who prefer to do farm or machanical work by the day in the settlement or on the neighboring farms, and to make their homes in or near the community of Dearfield.

Weld County—Weld county, in which the Dearfield settlement is located, is in itself, an agricultural empire. Ranking third in area among the 63 counties of Colorado, it is easily first in the value of its agricultural products. Its altitude varies from 4,400 feet on the eastern boundary, near Dearfield, to about 5,000 feet on the higher benches along the western boundary. It is crossed by the Platte river and by many of its tributaries, which come down to the plains regions from the mountains to the west. Its principal industries are farming, stockraising, stockfeeding, coal mining and manufacturing, the manufacturing institutions consisting largely of plants constructed for the manufacture of beet sugar, flour, condensed milk and other products whose raw materials are to be found among the farm products of the county. It is the greatest sugar beet county in the world, that crop being grown extensively on the irrigated lands along the Platte and its tributaries, and is one of the richest stockfeeding regions in the West.

Agriculture—Although many other crops are grown on the irrigated lands, the lands of the Dearfield settlement, lying in the non-irrigated section, are best adapted to the production of beans, wheat, oats and other small grains, corn, forage crops and melons. The district is noted for the splendid quality of the watermelons and cantaloupes which it produces, and because of its proximity to good markets, it is always possible to find a ready sale for these products.

Weld county maintains an agricultural agent whose duty it is to work among the farmers, advising them as to the best methods of farming and the care of livestock.

Reference

For references as to the founder of Dearfield and its present representatives, or as to the quality of farm land, present development, etc., anyone who is interested may write to any of the following:

Colorado State Board of Immigration, 130 State Office Bldg., Denver, Colo.

E. D. Foster, editor the Weld County Farm News, Greeley, Colo.

County Agricultural Agent, Greeley, Colo.

The State Board of Immigration is equipped to give to inquirers full information concerning the farming development of Weld county, the average yields of crops and similar matters. In co-operation with the Bureau of Crop and Livestock Estimates of the United States Department of Agriculture it prepares and publishes authentic information concerning the acerage and production of crops, which may be had without charge on application.

The State of Colorado has no funds from which to pay the railroad or other traveling expenses of farmers or others who desire to come to the state, and the founder of Dearfield is not financially able to do so, but all inquiries will be answered promptly and all possible information will be mailed on request.

STATISTICS OF WELD COUNTY

General Information

Area in acres	2,574,080
Acres of irrigated land..	362,000
Acres of non-irrigated farm land	730,000
Acres cultivated in 1928 .	626,600
Number of farms in 1928	3,334
Total farm acerage, 1928	1,181,000
Population, 1925 census .	62,489

MAJOR HERBERT ALLISON

(Continued from Page 1)

717 Main St.,
Clarksville, Tenn.,
November 22, 1927.

The American Battle Monuments Commssion, Washington, D. C.
Attention: Major X. H. Price, Engineer Corps, U. S. Army:
Sir:

After going over the records and attached map of the action of 327 Infantry in the Champagne offensive, September 26 to Oct. 6, 1918, and getting options from most of the surviving members of my company, I have the following bit of information to offer which does not differ materially from your record, and yet may result in a correction of our regimental lines as of September 28th.

Our company (Co. K.) led the attack of the 3rd Battalion of our regiment on the 28th of September when we were sent in to close the gap existing between the 371st Infantry and the 163rd Division (French). During this attack all of our officers except myself became casualities, and I assumed command of the outfit and continued the attack and advanced until we reached some enemy trenches just south of Bussy. Farm, which is the extent of our advance indicated on the attached map, for that day. After 'cleaning up' these trenches, we were joined by some units of Co. L., and a little later, by the battalion commander and his head quarters. These units took up position on our left. At this time the enemy began a retirement from a strong point situated on a knob," beside a road which was screened partially by what appeared to be burlap strips of cloth.

With Major Johnson, the commander of the battalion, in the lead we began another advance—the units of Co. L and some of my own Company (K) led by the major charged the Germans, and they veered to the left of what I understood to be the direction of our advance. As the members of my unit who were near me continued in a northerly direction we eventually lost laiason with the battalion commander.

As our advance progressed, we came to the edge of the plateau where the positions which we had just reduced were located and descended to a level plain. We could see the little town of Sechault off to our right oblique, and began an advance in skirmish formation towards that town, which I thought was our battalion objective. Encountering a heavy machine-gun fire from that direction, and having failed in our attempt to establish laiason with units on our flanks, we decided to dig in and wait for our troops to come abreast of us. Although we could hear voices and some firing on the edge of the plateau which we had just quitted—and I learned later we had overlooked some enemy troops that had probably taken refuge in some dugouts under the plateau and opening in the direction of our advance—no troops came up to us and we were an isolated group and darkness drew on.

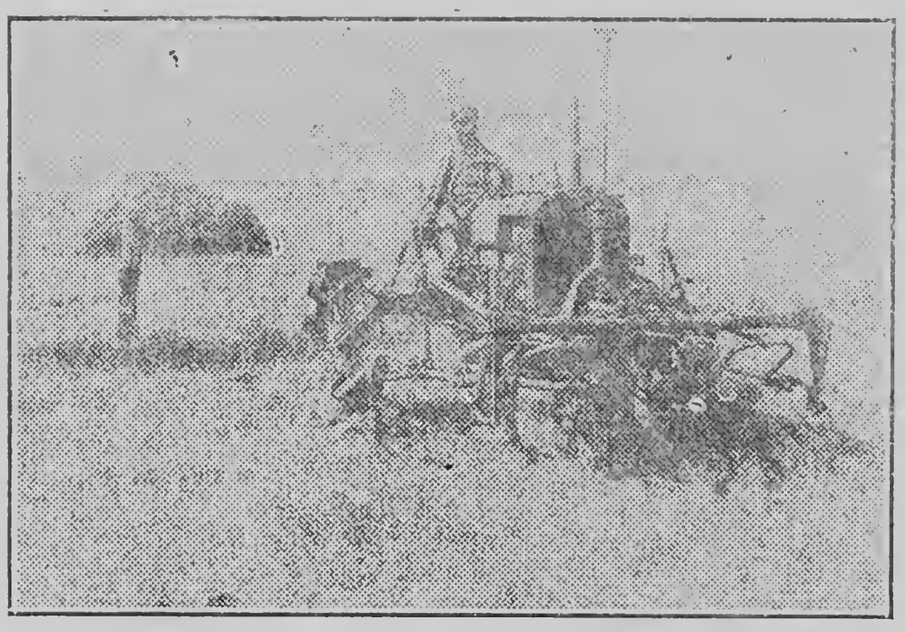
Realizing that our position was known to the enemy to our front, and fearing a possible attack later on, we moved out of this new postion and advanced to the cross-roads just west of Sechault under cover of darkness. Here we dug in for the night. We had appropriated six enemy machine guns and sufficient ammunition and these, we set up in our new position and waited for the attack which came at dawn the next day, September 29th.

The Germans attacked in force, using a gas gernade which I had not seen before, with rather telling effect on our comparatively small force, but the machine guns which we had set up proved to be our salvation for a time. Just as they appeared to get wise to our real situation, and began to flank us, we heard firing off to our right and some of our troops were seen advancing on the town to our right. These troops proved t be of the 369th Infantry, and their timely appearance is all that saved us.

The enemy then began a gradual withdrawal, and a squad of my company under Corporal William Stewart charged a group and took some prisoners, about 20 in number. Mechanic Eddie Hill of my company, and myself—both of us suffering from the effects of the gas—escorted these prisoners to the rear and found the battalion first-aid station in charge of Lieut. Janifer Med. Corps which was situated on Bussy Farm. Here we turned the prisoners over to some soldiers from Co. I, and received first aid from Dr. Janifer. We spent the night there and rejoined our battalion the next day, Sept. 30.

Therefore, our regimental line as of the 28th should extend from Bussy Farm, in a north by east direction just south of the road shown on the map to the confluence of the two roads almost due west of Sechault. I remember that a large sign—black letters on a white background—bearing the legend "Verboten" was posted there.

(Continued on Page 6)



Mr. Thomas Blackmear operating a tractor with disk harrow and culti-packer preparing ground for soy beans, on a farm near Montgomery, Ala.

TO THE FARMERS:

The Modern Farmer contains information every month that you will not find in any other farm journal. It is the only journal published by and for our people that is devoted exclusively to the farmer and his family.

The price is in reach of every one—being less than 2 cents per week. During these times when the farming industry is undergoing so many changes, and when so many advantages can be had by our colored farmers if they are only aware of them, it is absolutely necessary that you should know what is going on. Three-fourths of the white farmers are subscribers to the white farm magazines and journals. They know just what is going on.

Fill out the blank—secure a money order for $1.00 and mail at once:

The Modern Farmer,

447 Fourth Avenue, North,
Nashville, Tenn.

Find enclosed order for $1.00. Send me the Modern Farmer for one year.

MAJOR HERBERT ALLISON

(Continued on Page 5)

There was some other lettering on the sign which I have forgotten, but I do remember that the translation was to the effect that no passing should be done during the day at that point.

Now I know this is a rather large regimental front, but if you are sure of the units of the 372 nd Infantry being posted at the position indicated on the map, I am sure of the position of a portion of my company near Sechault.

Further, this information is authenticated by all the survivors of the action herein, and Sergeant Collier (Croix de Guerre) whom I left in charge when I departed with the prisoners informed me that he continued with the men in the advance of the 369th throughout the 29th, or at least until they halted and dug in after reducing Sechault.

I have indicated the corrected position on the map by lead pencil. We did not occupy all this stretch, but we did clear it of enemy soldiers.

Trusting that this information may be prove of value to you and the Commission, and pledging our fullest cooperation as the survivors of our unit, I am

Respectfully yours,
Lieut. Herbert L. Allison,
Comd'g Co. K, 372 Infantry

Lieutenant Herbert L. Allison,
409 10th Street. South.
Nashville. Tenn.
Dear Sir:

The American Battle Monuments with accuracy the front lines of all American divisions during the World War. This information is for historical purposes as well as for use in connection with monuments which the Commission intends to erect in Europe to commemorate the services of the American Expeditionary Forces.

There is enclosed a map showing the front lines of your division as determined after most careful research. In addition to organization histories, all records and maps of the division which are available in Washington have been consulted. In plotting these lines, considerable reliance has been placed upon reports and messages of commanders of small units.

Inasmuch, however, as there is a scarcity of material in some instances upon which to plot lines with accuracy, and in order to provide a further check, it is desired to secure the comments of officers and men who were physically in contact with the front line elements. It would be appreciated therefore, if you would comment on the accuracy of the lines as traced upon the enclosed map, distinguishing between information which is the result of your personal observation and that of hearsay or data prepared by others. Do not consider any change too minor to suggest. Suggested changes should be indicated by pencil lines drawn upon the map.

If, in your opinion, the lines as shown are correct, please so state in your reply, indicating on the map that portion of the line concerning which you have accurate, first hand, knowledge.

Definitions of front lines decided upon by the Commission are as follows:

(a) In a stabilized warfare situation, the front line will be considered as a line which encloses the most advanced strong points in the defensive organization. These lines have in all cases been determined from trench maps of about the date in question.

(b) In mobile warfare situations, the definition of a front line used by G. H. Q. in France has been retained: "the most advanced line held by a division with an organized force will be considered as the front line. It is, in general, the line which would be protected, in case of an attack, by the divisional artillery barrage. A line joining points reached by partols will not be given as the front line."

It is desired to invite your attention to the fact, indicated on the legend of the map. that the front lines shown are only those as they existed at MIDNIGHT of each day, except where the line of relief was different from any mid night line. For this reason, in your comments particular attention should be given to the exact hour events happened, especially in cases where the line moved just prior or following midnight.

Your comments are also requested on the historical accuracy of the enclosed summary. This summary is for the purpose of supplementing the information given on the map, and the map and summary together will constitute our record of the operation.

In addition to pointing out any statements in the summary which you believe to be in error, please indicate by underlining or otherwise those parts concerning which you know from personal observation to be correct.

A narrative of your experiences (specific as to dates and map co-ordinates), which will give information concerning these operations, together with any original documents which you may have on the question, would be appreciated. If original documents are forwarded, please state whether you wish trem returned or not. If you do no desire them they will be incorporated in the official records of the Commission. If their return is desired, photostatic copies will be made here and the originals returned promptly to you.

An early return of the enclosed map summary, together with your comments, will be appreciated.

Very truly yours,
X. H. Price.

March 29, 1927.

SUMMARY OF OPERATIONS 93rd DIVISION (LESS 370th INFANTRY IN THE CHAMPAGNE

September 26—October 6, 1918

The 369th Infantry upon its relief on July 15th from the 16th Division (French) was assigned to the 161st Division (French) and went into support position in the 161st Division area north of Minaucourt. On July 23rd the 369th Infantry took over the subsector Calvaire and held this sector until August 19th (as shown on attached map). Upon the relief of the 469th Infantry from this sector it was moved to the rear for a short training period at St. Ouen and on returning to the front occupied the Bleausejour sector from September 11th-15th as indicated on attached map.

The 371st and 372nd Infantry attached to the 157th Division (French) were moved from the Argonne sector into the rear area of 9th Corps on September 13th.

The general plan of battle in which these regiments were employed was the drive of the First American and Fourth French Army on the line Mezieres—Sedan. The 9th French Corps was a part of the Fourth French Army and consisted of the 157th and 161st Divisions (French) and the 2nd Moroccan Division (French). In the general attack for September 26th the 9th French Corps plan of employment of troops called for an attack by the 2nd Moroccan and 161st Divisions(French) abreast with the 157th Division (French) as corps reserve. The final objective in the corps zone of advance was the line Triers Ferme—Sechault and upon attaining this line movements of exploitation were to begin.

Preliminary orders of the 161st Division, (French) issued September 21st. directed the 163rd and 363rd Infantry Regiments (French), from left to right, to advance abreast within the divisional boundary, (as shown on attached map for September 26th), and the 369th Infantry to act as divisional reserve with one battalion following behind each assault regiment and one battalion reld in divisional reserve.

SEPTEMBER 26th: At 5:25 A. M., following a heavy artillery preparation throughout the night the French attack was launched and encountering no resistance in the German first position continued to the second position where determined resistance was encountered. During the advance a gap was opened up between the 153rd Infantry (French) and the 2nd Moroccan Division and the 3rd Battalion, 369th Infantry, following in rear of the 163rd Infantry (French), and its own initiative, pushed forward to the left and closed this gap.

From this time on the 3rd Battalion, 369th Infantry, in assault, advanced with the 163rd Infantry (French) on its right and the 2nd Moroccan Division on its left and together with the 163rd Infantry (French) captured the town of Ripont. In this engagement the 3rd Battalion, 369th Infantry, surprised a battery of 77 s while limbering and captured two guns and twenty-six prisoners. The line was advanced beyond the Dormoise River, as shown on attached map.

The attack was ordered to be continued at 5:15 a. m. the next day with the 3.d Battalion, 369th Infantry, in assault between the 163rd Infantry (French) and the 363rd Infantry Infantry, in support. The 1st Battalion, 369th Infantry, in divisional reserve was moved up to the region of Calvaire.

The 371st and 372 Infantry were moved forward with the 157th Division (Corps reserve) to the vicinity of Ruisseau de Marson.

SEPTEMBER 27th: The attack did not begin until noon of September 27th due both to delay in troops reaching their position and delayed orders. The 3rd Battalion, 369th Infantry, as center assault battalion, advanced and meeting heavy resistance at all points pushed slowly forward to a line as shown on attached map.

The advance this day was far short of the final objective ordered and at 1:30 p. m. orders were issued placing the 157th Division in the line on the left of the 161st Division and giving new divisional boundaries for September 28th. (see attached map).

During the night September 27-28 the 3rd Battalion, 369th Infantry, was relieved by the 2nd Battalion, 369th Infantry, and placed in support.

In the 157th Division sector, the 371st Infantry with one battalion of the 333rd Infantry (French) was ordered to enter the fight between the 2nd Moroccan and 161st Divisions, but not catching up with the advance during the day halted for the night on the northern slopes of the Dormoise River. The 372nd Infantry, less the 2nd Battalion in reserve, was pushed forward to enter the fight of the 371st Infantry and reached Ripont on the morning of the 28th.

The 9th Corps order of attack for September 28th had the 161st, 157th and 2nd Moroccan Divisions (French) in the line and each division was to employ their three regiments abreast within their zones of advance.

SEPTEMBER 28th: The attack of the 161st Division began at 4:30 a. m. with regiments abreast and the 2nd Battalion, 369th Infantry, as center assault battalion. The progress of the advance was slow due to the meeting of heavy resistance and successive countering attacks against the three assault battalions were launched by the enemy but were driven off and the advance continued almost foot by foot until by nightfall the 16st Division (French) had gained a position on the crest of Bellevue Signal Ridge, as shown on map.

On the morning of September 28th the 1st Battalion, 371st Infantry, entered the assault by leapfrogging the right assault battalion of then 2nd Moroccan Division and advancing over the high grounnd of the Gratreuil reached a line 400 meters south of le Pied. During this advance a gap occurred in the morning between the 371st Infantry and the 161st Division (French) and was promptly closed by putting in the 3rd Battalion, 372nd Infantry, with the 1st Battlaion, 372nd Infantry, in support. The 3rd Battalion, 372nd Infantry, continued in the attack and reached a line on railroad track south of Bussy Fme-f4-6.m
of Bussy Fme., as shown on map.

The attack was ordered continued the following day with the mission of the 161st Division, to clear the remainder of Bellevue Signal Ridge, including Mt. Cuvelet, and to continue in the general direction of Lles Rosiers Fme. The 157th Division was to cover the right of the 2nd Moraccan Division and to facilitate its progress over the Marflanking the projecting spurs of the plateau from the plains and to advance in the general direction of Monthois. A new left boundary was ordered for tre 157th Division (French) as shown on map for September 29th.

SEPTEMBER 29th: The 161st Division after completing the occupation of the Bellevue Signal Ridge was ordered at 1:45 p. m. to advance on Sechault with the 1st Battalion, 369th Infantry, leading the assault and followed by he 2nd Battalion in support and the 3rd Battalion in reserve.

The 1st Battalion, 369th Infantry, launching its attack from the heights south of Sechault, captured the town after some severe house to house fighting and continued its advance to a line north and west of Sechault. (as shown on map.) In this fighting a platoon of Company K, 372 Infantry, was picked up by the 369th Infantry, they being the remainder of an unsuccessful attack on Sechault carlier in the day by the 372nd Infantry.

In the 157th Division (French) zone of action the 1st Battalion, 372nd Infantry, after relieving the 3rd Battalion in the assault position (3rd Battalion becoming the support) advanced and getting off its axis of advance, the 1st and 3rd Battalions, 372nd Infantry, made an unsuccessful attack against Sechault. This attack caused a considerable gap to exist between the 371st Infantry and 161st Division (French) and the gap was closed by putting in a battalion of the 333rd Infantry (French) during the night. The 1s and 3rd Battalions, 372nd Infantry, were withdrawn during the night and organized into a provisional battalion, in reserve position south of Bussy Fme.

The 3rd Battalion, 371st Infantry, advanced abreast the 333rd Infantry at 10:00 a. m. (this advance was on the 3rd Battalion's own initiative as no orders had been received at that time and verbal orders for an advance finally reached them at 10:05 a. m.). Their left flank becoming exposed and under fire due to the 333rd Infantry (French) not being able to advance, Company K, 371st Infantry, was sent to the west out of the regimental zone of advance and overcame this resistance, allowing the 333rd Infantry (French) to advance and come up abreast of the 371st Infantry. The advance of the 3rd Battalion, 371st Infantry, continued over the level plain and capturing the town of Ardeuil and Montfauxelles, reached a line in the railroad station and yards north of Montfauxelles, as shown on attached map. The 371st Infantry was in contact with the 333rd Infantry (French) on their left and their right flank was exposed during the day.

The attack was ordered to be continued on September 30th throughout the 9th Corps with the same areas of advance for divisions as on Sepember 29th.

SEPTEMBER 30th: In the 161st Division the 1st Battalion, 369th Infantry, continued as the center assault battalion, 369h Infantry, in support, and encountering dettrmined resistance advanced abreast of the 163rd and 363rd Infantry (French) to a line south of les Rosiers Fme., as shown on map.

During the night of September 30-October 1st, the 369th Infantry was leapfrogged by a regiment of the 74th Division (French) and was withdrawn to vicinity of Sechault, where it was held in reserve until the 161st Division (French) was withdrawn from this front October 6-7.

In the 157th Division the 3rd Battalion, 371st Infantry, with the 2nd Battalion, 371st Infantry, in support, advanced as center assault battalion and by 9:30 a. m. had taken Trieres Fme. and encountering heavy fire from the northeast the advance was halted here (see map) and the 2nd Battalion, 371st Infantry, was echeloned to the right to protect that exposed flank. The right flank of the 371st Infantry was later in the day covered by a battalion of the 333rd Infantry (French), but a considerable gap continued to exist between the 161st and the 157th Divisions (French) due to the flooded area of the Avegres River, as shown on attached map.

The 371st Infantry remained on this line until relived at 5:00 a. m., October 1st by the 2nd Battalion, 372nd Infantry, when the 371st Infantry was withdrawn and held in reserve until the 157th Division (French) left this front on October 6-7.

OCTOBER 1st: The 2nd Battalion, 372 Infantry, with the provisional battalion 372nd Infantry in support, relieved the 371st Infantry in line on the morning of October 1st and made no advance during the day but employed the day in taking better positions from which to begin the attack of October 2nd.

The attack of the 157th Division for October 2nd was ordered against the Monthois-Challerange line and was contingent on the capture of the heights of Croix des Soudans by the 120th Division (French). (which had relieved the 2nd Moroccan Division). Upon a signal from the 120th Division (French) showing that Croix des Soudans had been captured the 157th Division was to advance on their objective.

SIX-SEVENTHS OF MISS. COTTON

(Continued from Page 1)

ers and 2,104 white farmers 123,189 bales.

Tallahatchie with 4,538 colored farmers and 1,276 white farmers 47,982 bales.

Tunica with 4,660 colored farmers and 417 white farmers 28,545 bales.

Washington with 8,156 colored farmers and 558 white farmers 74,839 bales.

Yazoo with 4,647 colored farmers and 1,491 white farmers 37,975 bales.

Total 64,757 colored farmers and 11,286 white farmers, 701,755 bales.

Statistics further show that in these 11 counties there are about 2,50 white farmers owning their farms and two thousand colored farmers owning theirs.

The Delta produces the finest cotton and it is in better demand than that from almost any other section. A contract was made not very long since on a round lot of 1,000 bales Delta long staple that brought 34 cents per pound.

In four of the eleven counties of the Delta the colored farmers are already organized. Early in the year the other 7 counties will no doubt have their organizations perfected.

GEORGIA COLORED FARMER

(Continued from Page 1)

Average sweet potato production, 52,000 bushels or 110 ears.

Average in watermelons 2,043.

Average annual grain harvest, 494,387 bushels.

Peanuts, 367,294 bushels.

Tobacco, 53 756 pounds.

Peaches, 107,018 bushels.

OVER TWO HUNDRED FIFTY COWS

(Continued from Page 1)

There is good money in the dairy business provided the farmer has good cows and combines them with a good cream separator. It is very foolish for the modern farmer to follow the old method of hand skimming. The cream separator will give him better cream and it takes much less time and labor to get it.

If the colored farmers of Holmes county have discovered that they can make money selling cream they should enlarge their herds and go after it. A farm that will support one cow will support two or three. Members in adjoining counties will watch the Holmes county experiment and its sucess wil be a good thing for thousands of colored farmers in the state.

CHICAGO'S YARDS NOW MEDICINE CHEST OF WORLD

Europe Seeks Products to Cure Disease

By Arthur Evans—Chicago Daily Tribune: Wednesday, December 25, 1929.

Chicago's stockyards have developed into one of the world's great sources of medicinal products. As a token of the changing age, the slaughter and packing houses which in early days gained the title "the cow and hog butcher for the world" have become recognized centers of science for the relief of suffering humanity.

From London THE TRIBUNE recently received word that Armour and company have become an established standby for the medical profession of England and Europe as suppliers of rare animal extracts. The science of glandular products is still in its infancy. Two packing houses, Armour's and Wilson & Co., have research laboratories operating in a commercial way. Now medical men the world over look to Chicago's yards as a leading producer of medicinal preparations that are the equivalent of therapentically active fresh glands.

Important to World's Medicine

It's one of the things about Chicago which do not often get into print, being less exciting than gunmen and gang wars. Besides, medical ethics frown upon much publicity. But to the doctors of the world, Chicago has become a producing center of important medicines of animal origin.

For thirty years, the Armour laboratory, which is located in one of the largest abbatoirs in the world, has been keeping pace with scientific discoveries. For the medical profession only, no less than 51 preparations are made, glands and membraines being used while fresh in the plant laboratories. Among the medicinal agents produced are liver extract, pepsin, pancreatin, extract of red bond marrow and pituitary liquid. For 24 years, Dr. Fred Fenger, who used to be city chemist of Chicago, has been heard of the laboratory.

Down at the yards, the scientists speak of "the romance of liver." It indicates the difference between the meat industry of forty years ago and today, and the great transformation science has worked in the ultilization of the by-products of meat packing.

The liver used to be one of the waste products. It used to be given away. The surplus to be dumped in trenches on the prairie. It was a food supply for sea gulls from the lake. One market was the state, which brought quantities for next to nothing for feeding fishes. Now that is all changed due to experimental work by the scientists. The liver has become a source of medicine for building up red blood corpuscles. The doctors of the world are calling for the extract faster than it can be distributed.

Effective in Blood Cases

Some years ago, Dr. Whipple of Rochester university discovered that use of liver as a food was effective in blood regeneration in secondary anemia. Then in 1927 two noted scientists at Howard university, Doctors Minot and Murphy, after years of diet work in clinics and hospitals, announced that of all foods, liver is one of the most effective in the relief and cure of pernicious anemia. They proclaimed liver as the most efficacious food in building red blood.

Later at the University of Chicago, the late Dr. K. K. Koessler and his co-workers, Drs. M. T. Hanke and S. Mauer, originated a process of making a liquid extract of beef liver that was found very potent in pernicious anemia. That is what Armour's is now making commercially and marketing to the medical profession. It is made from livers inspected by the government and put into process while the tissue still retains its animal heat. The despatch from London said some of the greatest English medical specialists have been using it with success in the last seven or eight months, and that the demand is such that the supply is scarce and the product difficult to get.

This extract, it is pointed out by way of warning, is nothing for the layman to prescribe. Properly used under direction of a physician, it is said to be working out as well incases of pernicious anemia as the profession looked for although the doctors point out it is wrong to expect it to work magic.

The liver extract is also being made in laboratories in other cities, and in recent months has come into much demand professionally. When the discovery was first announced a year or two ago, it started what was called a "liver fad" and liver was made part of the daily diet by many and prices went up almost as high as sirloin, and the sales indicate it is still growing in popularity as a meat.

The laboratory specialists declare the medicinal properties of liver have not been exhausted. They are still experimenting for qualities still to be discovered.

Become World's Medicine Chest.

The research men declare the medicinal use of glands is only in its incipiency. Experimental work goes on in the hospitals and universities and medical schools and clinics, and when a process is discovered, then to get a commercial supply the world has to come where the supply of raw materials fresh, and, the world's abbatoirs have developed into the world's medicine chest.

Besides the more recent preparations from the liver, many other medicinal agents are being made at the yards from the membranes and glands of hog, cow, and sheep. Pepsin is from the lining of the pig's stomach, and is used as an aid to digestion. Pancreatin comes from the hog's belly sweetbread, and is used to peptonize food for infants and invalids. Thyroid glands of sheep are made into powder and tablets, for use in diseases due to a deficiency of thyrod secretion, such as goiter.

Suprarenal preparation are made from the glands that are located just above the kidneys. Suprerenalin, which is a powerful astringent and heart stimulant, is worth more than $5,000 a pound, but to produce that pound 135,000 sheep are needed. It is used in bloodless operations on the eye and nose, and it has been on the market for nearly a quarter of a century— made in "the yards.' In India it is used for cobra bites—the snake poison curdles the blood until the heart cannot normally pump it and the medicine stimulates the heart action.

THE MODERN FARMER

Vol. I. Nashville, Tenn., and Chicago, Illinois, February 15, 1930. No. 12.

Southern Shippers Profit Growing Vegetables

STATISTICS FROM AGRICULTURAL BUREAU SUPPORT STATEMENT

The United States Department of Agriculture Bureau of Agricultural Economics statistics show the following cars of fruits and vegetables arrived in Chicago during the month of December.

Alabama—46 cars oranges; 41 cars peanuts.

Arkansas—1 Car spinach.

Florida—7 cars peanuts, 105 beans, 25 cukes, 1 egg plant, 5 Escarob, 25 peppers, 12 cabbage, 130 grapefruit, 25 tomatoes, 25 mixed vegetables, 8 strawberries.

Georgia—66 cars peanuts, 1 turnips.

Kentucky—10 cars sweet potatoes.

Louisiana—1 car carrots, 3 Escarol, 19 mixed vegetables, 2 shallots, 2 oranges, 1 sweet potatoes.

Mississippi—4 cars sweet potatoes.

North Carolina—6 cars peanuts.

South Carolina—1 car cabbage.

Tennessee—96 cars sweet potatoes, 1 peanuts.

Texas—1 car sweet potatoes, 9 tomatoes, 10 mixed citrus, 14 beets, 1 carrots, 2 cauliflower, 1 greens, 75 mixed vegetables, 4 radishes, 2 turnips, 104 spinach.

Virginia—4 cars greens, 7 kale, 12 spinach.

Total—927 cars.

This averages over thirty cars per day.

Shippers who shared in this volume of business had an income which increased their bank account and not that they are wholly dependent upon their cotton crop.

LOUISIANA SHIPS CHRISTMAS TREES

Louisiana shipped into Chicago for the Christmas trade 21 cars of Christmas trees. The stock brought good prices and netted satisfactory returns.

The total number of cars Christmas trees shipped in Chicago from all sections of the country for Holiday trade totalled 196 cars. Vermont led of the states with 69 cars.

OWNS FIVE FARMS

Mr. Charles H. Jones of Winston-Salem, N. C., who is rated as North Carolina's only colored millionaire, is the owner of five valuable farms, four in North Carolina and one farm of 445 acres in Cumberland County, Virginia.

Mr. Joues is also the owner of 180 dwellings and two gas stations.

Mr. Jones was born in Wake County, North Carolina, and about thirty years ago he moved to Winston-Salem at which time he had no capital to begin life. His first purchase of real estate was a half of block of city property from a white gentleman who sold him the property for $13,500 without any down payment. This was the beginning of his success.

Mr. Jones is a firm believer in organization.

COTTON CENSUS ISSUED BY THE UNITED STATES

Washington, Jan. 23—The Census Bureau today issued the following report showing the number of bales of cotton ginned to January 16, from the crops of 1929 and 1928 respectively: Total running bales (counting round as half bales), 14,187,779 and 13,888,972 round bales included 560,815 and 646,396 American-Egyptian, 25,457 and 25,426.

Number of bales of cotton ginned from the growth of 1929 prior to January 16, 1930:

United States, 14, 187,779, Alabama 1,296,078, Arizona 140,443, Arkansas, 1.351,514, California 228, 189, Florida 29,830, Georgia 350,168, Louisiana 798,144, Mississippi 1,813,762, Missouri 198,314, New Mexico 84,335, North Carolina 738,088, Oklahoma 1,104,630, South Carolina 809,587, Tennessee 472,918, Texas 3,763,840, Virginia 45,855; all other states 7,084.

36,190 Bales Imported

The statistics in this report include 560,815 round bales for 1929; 646,396 for 1928 and 530,190 for 1927. Included in the above are 25,457 bales of American-Egyptian for 1929; 25,426 for 1928 and 20,722 for 1927.

Cotton consumed during the month of December, 1929, amounting to 453,892 bales. Cotton on hand in consuming establishments on December 31 was 1,844,248 bales, and in public storage and at compresses, 5,914,422 bales. The number of active consuming cotton spindles for the month was 29,060,510. The total imports for the month of December, 1929, were 36,190 bales and the exports of domestic cotton, excluding linters, were 910,321 bales

Over 25 Mission Bales Used

The estimated world's production ot commercial cotton, exclusive of linters, grown in 1928, as compiled from various sources, is 25,611,000 bales and counting America in running bales, and foreign in bale of 478 pounds lint, while the consumption of cotton (exclusive of linters in the United States) for the year ending July 31, 1929, was approximately 25,782,000 bales.

The total number of spinning cotton spindles, both active and idle, is about 164,000,000.

FARMERS REFUSE TO O. K. GRAIN PLAN

Omaha, Neb.—(AP)—Delegates to the annual meeting of the Farmers Educational and Cooperative Union of Nebraska today voted down a suggestion of the organization's marketing cominttee that it officially endorse the grain marketing plan being developed by the Farmers National Grain Corporation. Fear that cooperatives, built up in this state through years of effort, might lose their identity by joining an organization controlled by a federal board was expressed by delegates opposing the indorsement.

NATIONAL FEDERATION TO AWARD VALUABLE PRIZES

(Special)

The National Federation of Colored Farmers and the Modern Farmer announce that valuable prizes will be given this year to members and subscribers for diligent efforts made to increase and improve the yield of various farm products and livestock. These prizes have been contributed by public-spirited corporations, manufacturers and individuals and will be distributed to the deserving next fall. Complete information will be given in our March issue. Join, subscribe and get in line for these prizes.

RAISING OF CROPS IN FROZEN SOIL NOW POSSIBLE

RESEARCH IN LABRADOR TO ASSIST THOSE IN COLDER CLIMATES

(Special to the Christian Science Monitor)

Amherst, Mass.—Research to promote successful farming in a country where winter holds sway eight months or more of the year and the frost never leaves the substratum of soil, is the purpose of seven agricultural substations recently extended in Labrador. Tests on growth of both ornamental and commercial plants, as well as fertilizer, acidity tests, the raising of alfafa, drainage and the improvement of garden vegetables are being made.

Prof. Fred C. Sears has returned to his work as head of the department of pomology, or orehard eulture, at the Massachusetts Agriculaural College here, after a summer spent in the interest of agricultural development in connection with the Grenfell Mission. At Northwest River, the most northern point visited by Professor Sears, a 10-acre field has been cleared of its native fir, spruce and hackmatack, and is ready for alfalfa seedings or other experimental work. This station has a sandy soil, easily cultivated, and success is anticipated in the growing of asparagus, strawberries and raspberries and potatoes.

The rapid growth of vegetation in the few short weeks of warm weather is almost unbelievable, Professor Sears said. Potatoes planted on July 28 were on October 1 sufficiently grown for use in the four weeks during which Professor Sears was at the extreme northern point to which he carries his experiments, the cabbage at St. Anthony's grew from spindling transplants to fully developed heads. Northwest River, he said, is practically never dark during the summer season, which promotes almost continuous growth.

Following his investigations of the summer of 1928, the professor shipped to St. Anthony, apple, cherry, crabapple and plum trees and found them making excellent growth. Chief among the apple varieties were the Wealthy, the Yellow Transparent and the Oldenburg. In addition to productive plants, experiments in shrubs and vines, principally those bearing red berries, or flowers, are being carried on.

Just why there is such prolific growth with the blue larkspur and delphiniums, while red flowers are practically nonexistent in Labrador, is yet to be explained, Professor Sears said. It is hoped to prove that the brilliant red plants will thrive along, with the blue. Bittersweet growing on electric light poles offers a real possibility. Red dogwood and woodbine are also being planted. Also cardinal flowers, hollyhocks, dianthus, peonies, phlox and Oriental poppies.

Menus at most of the stations are made up of fish, salt pork, potatoes and white bread, and it is expected that the addition of fresh vegetables will be very welcome. The problem of growing the vegetables is simple, however, compared with the problem of educating the people to their taste. It is hoped to make asparagus a main crop, since it is native to the colder climates. Beets, lettuce, cabbage and turnips are being tested.

Professor Sears believes that he made his biggest "hit" as an agricultural investigator among the local populace with a soil tester which was furnished him by the department of agronomy at the state college. The soil in most places is extremely acid,

(Continued on Page 2)

Four Million Dollars Crop Yield In Georgia

INTERESTING INFORMATION ABOUT APPLES GIVEN TO FARMERS

The Modern Farmer is in receipt of a very interesting bulletin giving statistics on apples, issued by the Dept. of Agriculture.

There are over 500 different varieties of apples. The average annual crop is around two hundred million bushels. They grow in every section of the United States but the following states produce over three fourths of the crop every year. The states in order of their producing importance are as follows: Washington, New York, Virginia, California, Michigan, Oregon, Illinois, Pennsylvania, Idaho and West Virginia.

Apples are on the market throughout the entire year. Early varieties from states such as Tennessee, Georgia, Illinois, California and Delaware begin to arrive in June, while the late-keeping varieties from the previous year's crop are still on sale. The heaviest movement of apples is in October. Many large markets receive their supplies of apples from an average distance of more than one thousand miles. Transportation charges are a considerable item in the cost of apples to the consumer. The freight on a box of apples from the state of Washington to Chicago is 74 cents per box. Refrigeration or heater charges are in addition to this freight item.

Some markets show pronounced preference for certain varieties. New York prefers the Winesap and Baldwin. Philadelphia likes the Stayman Winesap, while Baltimore demands York Imperial, Ben Davis and Jonathan. Cleveland and Toleda section prefer the Baldwins and Jonathan. The Indianapolis section likes the Grimes Golden.

In Chicago which is the second largest market the Jonathan is far in the lead. In the intermountain area as represented by Denver and Salt Lake City the Rome Beauty, Delicious and Yellow Newton are the favorites.

California reigion demands Yellow Bellflowers and Rome Beauty. Nineteen southern cities with a combined population of nearly 2 and 1-2 million asks for the York Imperial, Yates and Stayman Winesap.

CANADIAN HEN PRODUCES EGG WITH THREE YOLKS

Regina, Sask.—A hen owned by Harry Bowers, Swift Current farmer, performed an extraordinary feat yesterday when she laid an egg with three yolks. Two of the yolks were as large as a walnut and the third the size of a marble. The bird is a last year's pullet.

CAMPAIGN TO CUT COTTON ACREAGE

Washington—(AP)—A national campaign to reduce the American acreage of 6,000,000 acres was launched tonight by directors of the American Cotton Coperative Association, who named a supervising committee and gave it full power to act.

In announcing the committee C. O. Moser of Dallas, Tex., vice president and secretary of the association, said the cotton acreage had been totaling approximately 46,000,000 acres and that to conform to the Federal Farm Board's warning against excessive planting directors had decided to take immediate steps to lop off at least 6,000,000 acres.

TERRELL COUNTY, GEORGIA'S ONE YEAR RECORD

Dawson, Ga.—(Special) The value of products grown in Terrell county farms in 1929 was $4,000,000 according to information furnished by A. E. Gibson, county farm agent.

The cotton yield was slightly less than 23,000 bales, valued at $2,227,550, with corn second in quantity and value. The best corn crop in the past 10 years was harvested, production being 468,bushels, valued at $221,2000. The average yield was 18 bushels, from a total of 26,000 acres. The peanut yield was 229,400 bushels, with a market value of $226,300. The average yield of this crop was 24 bushels per acre.

The production of wheat was 4,000 bushels, valued at $6,000; tobacco, 20,000 pounds, valued at $4,000; sweet potatoes, 48,987 bushels, valued at $40,000; Irish potatoes, 6,000 bushels, valued at $10,000; hay (including peanut hay), 3,115 tons, valued at $4,375; pecans, 90,000 pounds, valued at $25,975; asparagus, 5,000 crates, valued at $16,275; miscellaneous crops, such as velvet beans, cow peas, soy beans, fruits other than peaches and pecans, $197,350.

The above was taken from the Atlanta Constitution, January 4th.

Records from the Census of Agriculture at Washington show there are 614 white farmers and 1561 colored farmers in Terrell county that produced this four million dollar crop.

Records from Washington also snow that the total farm population of Terrell county to be 2717 whites and 9107 colored.

In 1924 the total value ot crops raised in Terrel county was only 2,687,640 dollars.

This heavy advance reflects progress on the part of the Negro farmer in Terrell County. If the white farmers in Terrell who are far in minority see the wisdom of organization in order to protect and promote their interests, how can the Negro farmer expect to make any headway, and again what of the future of the 2218 colored children under 10 years of age in Terrell if the white farmers through organization are laying a strong foundation for their 661 white children in the county.

Terrell County colored farmers wake up. Organize.

FARMERS WARNED TO WATCH THEIR SEED CORN

Tennessee farmers are warned to select their seed corn with care next spring.

Due to an early wet fall and a cold winter it is believed that the germination of much seed corn has been damaged and that bad stands of corn are likely to result from the planting of dead seed unless farmers use unsual care in selecting seed, crop specialists of the University of Tennessee state.

Information regarding seed selection and testing methods is being prepared by the crop specialists and will be given wide publicity through the press of the state at an early date. Farmers desiring information on the subject are advised to consult their county agents or write the Agricultural al Extension Service, University of Tennessee, Knoxville.

NORTHINGTON HEADS AMERICAN COTTON CO-OPERATIVE ASSOCIATION

Washington, Jan. 14—(AP)—Allen Northington of Montgomery, Ala., was elected president of the American Cotton Co-operative Association today by the board of directors. Northington is a member of the Alabama Farm Bureau Cotton Association.

RAISING OF CROPS IN FROZEN SOIL NOW POSSIBLE

(Continued from Page 1)

and the visible reation to the tests proved of great interest.

It was observed that where wood ashes had been thrown out, and where lime had been used, vegetation made the best growth. Ammonium sulphate had been used as a fertilizer, and since this only makes the soil more acid, it is hoped to teach the gardeners the use of other chemicals. Alfafa is being introduced, and although it requires an alkaline soil, it may be made to thrive if mixed with other grasses. The Mission supports a considerable number of live stock, principally sheep and hogs, with enough dairy cows to supply dairy products for the use of the stations.

Professor Sears has had 30 years experience in investigational work, 10 of which were spent in Nova Scotia. His investigations have also carried him into Canada and eastern and western United States.

REFORESTATION ONLY METHOD OF REALIZING A PROFIT UPON SOME LANDS IN MISSISSIPPI

Soil of Apparently No Value Can Be Made to Produce Naval Stores of Timber From Pine in Few Years.

A. and M. College, Miss. One of Mississippi's foremost leaders in agricultural development recently declared that "approximately one-third of the land area of the state is furnishing the income from farms, while nearly 60 per cent of the land area has even proven to be unprofitable for the cultivation of crops," and his remarks were based upon reliable statistics.

Then the problem arises as to what these lands, which are seemingly of no value to their owners, can be made to produce that will return a remunera tion to justify their keep and attention, even though the evaluation may be a minimum consideration.

Two ways in which the remedial measures should be applied have been suggested: The reforestation of lands, and the growing of live stock. Many counties have long ago realized the economy of the latter method, where marketing facilities and soils and seasons were favorable, but the matter of reforestation of these otherwise unproductive areas has been found by experiment to be sound, and in many such instances the only applicable remedy.

Demonstration at Ellisville.

The extension department of A. & M College through its forester, D. E. Lauderburn, is attempting to get all the facts regarding forestry culture and the losses from failure to recognize its importance, and the educational campaigns being conducted are aiming to show the heavy losses resulting from woods fires. Actual demonstrations are pointing the way for increased income for the farmers who own or are able to acquire productive forest land.

A typical planting demonstration is to be found on the farm of Morgan Walters, Ellisville, where 735 one-year-old slash pines were planted to a half acre on a barren, gullied hillside in the spring of 1926. Trees were planted five and one-half feet apart each way. After four seasons growth the average tree height is near 13 feet. With a few years the growth will be thinned to provide spreading room for the branches, if the production in naval stores is being sought. Or, if a crop of timber is the objective, no thinning will be done, so the slender saplings will be aided in tall growth.

So satisfactory have been the results on the Walters farm so far that more young trees have been started, and early next spring some 1,400 one-year-old trees are to be planted to another of these unproductive hillsides.

"Eventually," Mr. Walters resolves, "we are going to turn all of our waste land into growing timber."

HEN SETS NEW MARK

Kentucky Biddy Lays 302 Eggs in 365 Days

Laying 302 eggs in 365 days, a hen owned by E. I. Hunt, a Meade County farmer, has set a new Kentucky record for single comb Rhode Island Reds. This is an official trapnest record made in record performance work, under the inspection of C. J. Maupin, field agent in poultry improvement for the experiment station for the University of Kentucky.

This high laying pullet is from a hen that laid 244 eggs in her pullet year and 170 eggs in her second year. Her sire is out of a hen that laid 280 eggs in her pullet years, 239 eggs in her second year and 199 eggs in her third year.

A SHEEP'S AGE

An expert can tell the age of a sheep by its teeth. First the bay teeth appear. Then the two permanent front teeth come in when the lamb is from 12 to 14 months old. A tooth comes in on side of these at about 22 or 24 months. The third pair appears a year later, and at the age of four the sheep has a complete set of teeth. Even as the animal grows older experts can tell their age by examining the teeth. The teeth gradually spread and show signs of wear.

THE OLDEST COTTON FIRM TO LIQUIDATE ASSETS

Boston, Jan. 21—Stockholders of the Boston Manufacturing Company of Waltham, the oldest cotton manufacturing concern in the United States today authorized the directors to liquidate the company's assets.

The company was established in 1813 and now employs about 1,600 persons.

AMERICAN APPLES DOMINATE MARKET IN RIO DE JANEIRO

Imports by Brazil in Year Are $200,000 Cases—Fruit Brings $1 to $2 a Dozen

(By the Associated Press)

Rio Janeiro, Dec. 7—Apples from Washington, Oregon and California are delicacies in Brazil and thousands of cases come here yearly. Only a small quantiy arrives in barrels.

In the small fruit stands these American apples sell by the dozen at the equivalent of $1 to $2, according to quality. Apples also are shipped here from New Zealand but the United States fruit has a virtual monopoly of the market.

Just as the inhabitant of the temperate zone in the states longs for pineapples, avocado, orange, papaya, and other tropical friut so does the Brazilian long for the apple, pear, peach and plum of a northern clime.

In the last year the imports of apples from the United States amounted to 200,000 cases valued at more than $500,000. In one month 120,000 cases arrived.

GROWERS OF TURKEYS URGED TO USE PENS

Modern Methods Oust Old Range and Tree-tops

The turkey has lost its privilege to range over the farm and roost in tree-tops, in the light of recent developments in the art of raising the holiday bird, 300 persons from 30 counties were told at the recent meeting of turkey raisers at the experiment station of the University of Kentucky.

Modern methods decree that the big bird should be raised in pens, protected from parasites and diseases which have caused heavy losses in the past and even threatened to destroy the industry. By hatching them in incubators and raising them in brooders and pens, away from chickens, they are kept free from worms, lice and mites, and the fatal blackhead disease is avoided.

Use Disease-Free Pens

Dr. W. A. Billings, a Minnesota turkey expert, described the confinement plan of raising turkeys, now used in many states. Only clean, uncontaminated ground is used, where no chickens have run for at least two years. The pens are rotated from year to year. They should be located at least 200 yards from the farm buildings.

Speakers stressed the fact that turkeys and chickens cannot be raised together because of the blackhead menace, which is spread by chickens.

According to figures presented at the meeting, it costs 8 to 10 cents a pound to feed a turkey to market condition.

This fact, speakers said, makes turkeys one of the most profitable farm side-lines, when methods are employed to prevent losses from disease and parasites. Feeding balanced rations was considered an important essential.

Robert White, a Bourbon County farmer, told of his experiences raising 500 turkeys by the confinement plan this year. He considered it the only successful way to raise the birds.

NEW COMPANY EXPECTS PROFITS IN CORNSTALKS

Building Material to be Manufactured

BY PAUL POTTER
(Chicago Tribune)

Industrial scientists of the middle west who for more than two decades have been prospecting for the economical utilization of farm wastes, particularly cornstalks, announced yesterday that they believed they had at last struck "pay dirt."

The announcement included the names of prominent farm leaders and Chicago business men who have advanced a half million dollars to develop processes of conveying cornstalks into cheap yet exceptionally high quality thin lumber substitutes. Other by-products of corn, the result of experiments in synthetic production at Iowa State College, may be added to the list of lumber materials later.

Take Over Dubuque Plant

This new corporation, capitalized at $1,000,000 is known as the National Conrstalks Processes, Inc., and will maintain headquarters in Chicago. Its plans announced yesterday provide eventually for a chain of cornstalk mills scattered throughout the corn belt, which are expected to provide a market for the farmer's cornstalks at $3 a ton or more.

The physical properties of the Maizewood Products coroporation at Dubuque have been taken over, and farmers in eastern Iowa and western Illinois are already being paid on the basis of $10 per ton baled and delivered in Dubuque. Patents, owned by the state of Iowa, on processes of converting cornstalks have been leased for a period of five years.

The nineteen stockholders of the new company, which has assured the Iowa patent holders it would not engage in stock promotion, but develop its rights for the benefit of the middle west agriculture, are as follows:

Joseph E. Otis, chairman of board, Central Trust Company, Chicago.

Eugene V. Thayer, chaiman executive committee, Central Trust Company Chicago.

Frank O. Lowden, former governor of Illinois, Oregon, Ill.

Herbert F. Perkins, president International Harvester Company, Chicago.

William V. Kelley, president Miehle Printing Press Company, Chicago.

George A. Ranney, vice-president and treasurer, International Harvester Company, Chicago.

A. E. McKinstry, vice-president, International Harvester Company.

Charles D. Wiman, president, Deere & Co., Moline, Ill.

Burton F. Peek, vice-president Deere & Co.

Charles N. Stone, manager harvester works, Deere & Co.

George N. Peck, Moline, Ill.

Chester C. Davis, executive vice-president, Maizewood Products Company, Chicago.

Frank H. Woods, Woods Bros., Lincoln, Neb.

Bernard M. Baruch, New York.

George M. Bechtel, president George M. Bechtel Company, Davenport, Ia.

Col. G. W. French, Davenport, Ia.

Joseph L. Hecht, Davenport, Ia.

Henry A. Wallace, editor Wallace's Farmer, Des Moines, Ia.

H. B. Hurd of Pam and Hurd, lawyers, Chicago.

The commercial development of farm wastes which has culminated in this enterprise was first started under the direction of James (Tama Jim) Wilson, secretary of agriculture in 1900. It has been centralized in the Iowa State college since that time, so far as the corn belt products were concerned.

While Dr. O. R. Sweeney has developed the processes through some fifteen years of research, greater momentum was given his work at Ames, Ia., some five years ago, when the state erected a modern testing plant, costing about $150,000, on the college campus.

Hoover Aids Movement

Since then the federal bureau of standards has lent assistance with men and funds appropriated at the insistence of President Hoover while he was secretary of commerce.

Some fifteen or twenty industrial by products have been succesfully produced synthetically under Dr. Sweeney's direction. His preliminary results were described in THE TRIBUNE of July 26, 1928. Not until this week, however, have the Iowa authorities seen fit to lease their valuable patents.

"We regard this development of farm wastes into profitable uses one of the custanding achievements in Iowa research," said George P. Baker of Davenport, president of the Iowa state board of education, yesterday. "It is the first big result of Iowa's foresight in erecting an agricultural chemistry laboratory, and we want all the farmers of the middle west to benefit."

Cheaper Than Growing Trees

President Raymond E. Hughes of the state college told THE TRIBUNE that this practical utilization of cornstalks was the most important research on the campus at the present time, and that Dr. Sweeney was regarded as the most able man in the field in developing synthetic products from farm wastes.

"We have proved that certain building materials can be produced more cheaply and of better quality synthetically than in producing trees over many years," said Dr. Sweeney in describing the significance of his experiments.

There are about 150,000,000 tons of cornstalks produced annually in the United States, Dr. Sweeney says. Not only can this enormous natural resource become cash when the farmer ordinarily requires financing to hold his crop for better prices in the fall and winter, but it furnishes an outlet for his labor in collecting and baling the stalks during otherwise slack times.

Predict Increased Consumption

There is potential annual consumption for 11 billion square feet of insulating or wallboard such as the new process will produce, he said. Chicago bankers indicated yesterday that their research shows that this new product might mean increased use of all insulating materials whether made from gypsum, wood, or other raw materials. Particularly, they say, it means increased revenue to the grain farmer of the middle west.

Engineers of several firms have reported investigations showing lighter weight, more tensile strength and resistance to warping, with economical production, for the thin boards turned out in the laboratory at Ames and the industrial plant at Dubuque. Not until the product had been tested in practical conditions of manufacture and use had the financing plan announced yesterday been consummated.

Economical methods of gathering stalks from the cornfield have also been developed, but considerable study is still necessary, it was said. The farm equipment manufacturers and agricultural engineers at state experiment stations are working on this problem. Prof. J. B. Davidson and Mr. Collins at Ames have produced a cutter and picker from present farm tools that serves fairly well.

HARVESTER CO. WILL ASSEMBLE IN MOLINE

International Harvester Company will start assembling combine machines at its East Moline plant soon. Shipments of parts are arriving daily and it is expected that several hundred men will be employed after operations are started.

PLAN REVISION OF FARM LOANS

By William S. Neal, International News Service Staff Correspondent

Washington—Congress will consider a complete revision of the federal farm loan system as a result of the insistent demands in both Senate and House and the receivership of some joint stock land banks, it was predicted today.

A half dozen proposals now are pending, including bills by Senator Brookhart (R.) of Iowa, Representative Dickinson (R.) of Iowa and Rainey (D.) of Illinois. Part of the latter's program is based upon proposals made by president of joint stock land banks throughout the country.

Announcing his determination to push legislation, Representative Rainey declared today "a national scandal is brewing unless Congress takes a hand in the situation."

The Illinois representative will propose a merger of the federal land banks conducted by the government and those private joint stock land banks that desire to change the character of their organization. This proposal is not presented as a united program of land bank heads, Rainey said.

"I am planning to urge complete federal control of both systems by providing for the issuance of federal land bank merger bonds in a maximum total of $689,000,000," explained Rainey.

"These bonds would be accepted in lieu of the stock and bonds issued by the joint stock land banks whenever two-thirds of the shareholders vote to surrender their charters. Stockholders and bondholders would receive bonds up to the amount paid for their securities, but not more than par.

NATIONAL BAPTIST PUBLISHING BOARD

Nashville, Tennessee — Henry A. Boyd, Secretary

"The law at present operates against joint stock land banks which are private institutions under government supervision. Twenty-seven are active at the present time and twenty-two have suspended.

"The law permits them to issue bonds in amount fifteen times their stock, while the federal land banks can issue twenty times their stock. The joint stock land banks for the most part have issued bonds to the limit, and cannot help the farmer by extending more credit. Stock cannot be sold under present conditions.

"This land bank system has been in operation in Europe for 300 years and has operated satisfactorily. Our system, like the European, was intended to operate in times of farm depression as well as prosperity.

Adopt Sound Policy

"But the federal farm loan board has adopted what is called a 'sound business' policy. If a farmer is in arrears ninety days in interest and a mortization payments he is to be foreclosed. If the government takes his farm it immediately tries to sell it at distress prices, depressing the price of farm land in that locality. That is one of the troubles with the farm situation today.

Would Aid Farmer

"This system also prevents the holding of wheat, cotton or other grain to bring about orderly marketing. In Europe foreclosure can not be started for two years, and even that period may be extended. As a result the farmer who has a poor crop and cannot pay interest may wait until he gets a good crop and can then do so."

The operating joint stock land banks are perfectly solvent, but their assets in some instances are in farms instead of mortgages, Rainey said. It will take time to free these "frozen lands," he said.

Rainey expects to gain a hearing for his bill soon after the Christmas holidays.

POULTRY AND DAIRY FARM PROFITS HIGHER

Creamery Manager Reports Gain in Hog Sales Also; Eggs Set Record at $570,000,000.

If you are a farmer and specialize in cows, hogs, or hens, you had a profitable year in 1929.

That is the statment of H. C. Darger, general manager of the Blue Valley Creamery Company, who yesterday announced the result of his analysis of the prosperity of the industry during this year.

"The records show", Mr. Darger pointed out, "that the cash income from dairy products was close to the record year of 1928 when $1,510,000,000 went into the pockets of the farmers.

Egg Revenue Rises

"Farmers sold 49,100,000 head of hogs, an increase of a million head for which they received $1,138,000,000. Farmers' money for eggs in 1929 set a record, the total being $570,000,000, or some $10,000,000 more than the record of 1928.

Total incomes from the sales of poultry in 1929 broke the record of $280,000,000, set in 1928, the best previous year in the poultry industry."

More Butter Churned

Mr. Darger declared that during the fist ten months of this year 1,329,000,000 pounds of creamery butter were produced as compared with 1,307,000,000 pounds in the corresponding period of 1928.

The receipts from fluid milk and cream, he said would be about 2 per cent greater than in 1928, and the output of evaporated and condensed milk increased nearly 8 per cent.

"Farmers have greatly improved their feeding practices as well as grading up their herds by the use of better sires" he said, "so that the output per cow is considerably greater than it was five years ago.' '

Hog Supply to Fall

Looking into the future, Mr. Darger declared that the supply of hogs in 1930 will probably be smaller than in 1929.

The pig survey of last Spring suggested a reduction of about 4 per cent in the corn belt crop," he said. "Outside the belt the reduction was more pronounced, so that market supplies up to late Spring in 1930 will be reduced even more.

—Constitution.

THE VALUE OF CERTIFIED IRISH POTATO SEED

Tests show certified Irish potato seed conducted for three years at the University of Tennessee Agricultural Experiment Stations resulted in an average yield of 183 bushels per acre. The yields from commercial, uncertified seed grown under the same conditions for three seasons, averaged 102 bushels per acre. This last average was 22 bushels per acre more than the ten-year average for the State, and indicates that somewhat better than average soil was used. But the fact that under the same conditions certified potato seed produced 81 bushels per acre more than uncertified seed shows the marked superiority of certified seed, states Prof. J. A. McClintock, Horticulturist for the Station.

The experiment station has issued Circular No. 25, "The Value of of Certified Irish Potato Seed," which contains full details of this experiment. Copies can be secured by writing the Station at Knoxvile.

COTTON CROP OFF TO GOOD START, LEGGE ASSERTS

Washington, D. C.—(AP)—With approximately $800,000 of the $30,000,000 authorized capital stock subscribed within a few hours after incorporation at Wilmington, Delaware, the American Cotton Cooperative association got away today to what Chairman Legge of the federal farm board declared to be the "finest start" made by any of the national commodity marketing associations.

Selection of a headquarters city and election of officers still troubled the national organization committee, which automatically became the cotton corporation's first board of directors Frank Buford, attorney for the committee, said it had laid the question of selecting officials aside until tomorrow.

Chairman Legge expressed gratification for the harmony with which state and regional cotton cooperatives were coming into the new association.

"The cotton men," he said, "have put this organization over with less delay and difficulty than any group with which we have worked. They made the finest start of the three national agencies."

The other two are the Farmers' National Grain Corporation and the National Wool Marketing association. A fourth, the National Live Stock corporation, will meet soon to prepare a final draft of its plans.

Stock subscribed today was on the basis of cash or 10 per cent down, and the remainder in five annual installments, co-operatives subscribing for each share of stock at $100 for each 100 bales of cotton handled.

CALL FORD IN COTTON QUIZ, SENATE URGED

Hear Rosenwald Also, Suggests Witness, Who Proposes New Remedies

(Chicago Herald-Examiner)

Washington—Proposed remedies for the depressed cotton market were placed before the Senate agricultural sub-committee today along with a suggestion that Henry Ford of the Ford Motor Company and Julius Rosenwald of Sears, Roebuck & Company, be called to give their views.

The committee took no action on the suggestion, however, and agreed to close the hearing unless other important developments occur within the next few days to warrant summoning additional witnesses.

The remedies for the depressed market were proposed by Arthur R. Marsh, a former president of the New York Cotton Exchange.

Recommend Changes

They included imposition of a tariff, improvement of packing by using cotton duck for wrapping bales, a progressive excise tax on cotton production and prosecutions by the Department of Justice of companies which may seek or are seeking to control the price.

W. L. Clayton of Anderson, Clayton & Co., Houston, cotton merchants, whose name has figured frequently in discussions of the situation, testified denying statements made yesterday that his firm and three others dominated the market.

Others Are Named

The statements were made by Marsh.

The suggestion for calling Ford and Rosenwald was made by Marsh, who told the sub-committee their buyers were "remorseless" in driving down the prices of cotton fabrics they purchased.

He also named Montgomery Ward & Co., Woolworth's and independent dry good stores, which he said have organized buying syndicates. All were attempting to throw the price risk back on the farmer, he asserted.

ICE USED TO DELAY MATURITY OF FRUIT

Atlantic City—Ice placed about the roots of peach trees toward the end of the bloom period will delay maturity of the fruit several weeks, George A. Pardee, refrigerating engineer of Louisville, Ky., told members of the Eastern Ice Association at the twenty-third annual meeting of the organization just held here. Experiments conducted over a period of several years, Mr. Pardee, said, had definitely demonstrated that peach growers through the practice may prevent early maturity of their crops and thus avoid shipping to an "overloaded" market. The experiments, he said, had been carried out successfully in several sections of the country.

OKLAHOMAN PLOWS UP $125 IN TIN CAN

Andarko, Okla.—S. M. Powell, while plowing on his Indian lease, eleven mile northwest of here, struck something hard with his plow. On investigation he discovered he had cut the top off an old tin can, disclosing two glittering $10 gold pieces and 105 bright, shiny silver dollars, all dated 1884. He immediately took the $125 to the Kiowa Indian Agency at Andarko and asked if the agency had any claim to the money. After being assured that it did not, he went to an Andarko banker and asked if he would accept the money on deposit.

ATTENTION COLORED FARMERS

The National Federation of Colored Farmers is receiving hundreds of letters from Colored farmers requesting all kinds of aid and information. We are willing to do everything we can for all the Colored farmers of America. It costs money, however, to maintain offices and our expenses are becoming so heavy that we are compelled to discontinue supplying information to those who request it who are not members of the Federation. If you have faith enough in the organization to believe that it can aid you, then you should be willing to join it and help support it. Isn't that so?

Several County units have organized and elected officers but have not sent in their membership dues. These units are eligible to membership in the Federation until dues are paid. Be helpful. Co-operate. Pay up. "All for each and each for all."

The Modern Farmer

Official Organ of the National Federation of Colored Farmers

Leon R. Harris - - Editor

Published Monthly by the Modern Farmer at Nashville, Tennnessee, and Chicago, Illinois.

Nashville, Tenn., Office: 447 Fourth Avenue, North.

Chicago, Ill., Office: Vincennes Hotel, 36th and Vincennes Avenue.

Devoted to the interests of the Farmer, Truck Gardener, Livestock and Poultry Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 447 4th Avenue, North, Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT!

EDITORIAL

AND NOW GEORGIA

There are approximately twelve thousand colored farmers in the state of Georgia who own their farms entirely and have been the possessors of their farms for as long as ten years. Approximately another two thousand colored farmers are part owners of their farms. These farmers are as intelligent and progressive as average Georgia farmers are, and we know that they are thoughtful enough to realize just what they are up against at the present time.

We are at a loss to understand why they are so backward about organizing. The Georgia white farmers are organizing rapidly. Organization leaders and experts have been unusually busy in Georgia during the past two weeks and they report abundant success. It is high time that colored farmers wake up and also organize.

These fourteen thousand farmers who own their farms should lead the seventy thousand colored tenant farmers of Georgia into the organization. The National Federation of Colored Farmers would like to hear more and better news from Georgia next month.

THE NERVE OF SOME PEOPLE

We got a letter last week from a colored brother farmer who lives in Mississippi and the said brother asks us for more relief than any other one farmer has ever asked for at one time. He wanted us to help him sell some turkeys,—borrow some money,—tell him where he could get twenty-two cents for his cotton,—tell where he could get a good price for some hardwood logs, and also wanted us to help him sell an eighty acre farm. We were glad to hear from him. We are glad to hear from all the farmers at any time. We want to help them all we can and we are helping all we can. But what got our goat was this,—the brother who wanted so much has never joined the organization, and he has never even so much as subscribed for the paper! That's what we call plenty nerve!

We cannot understand how anyone can believe that he can receive aid from an organization when at the same time he proves that he has not faith enough in it to become a member of it. The brother knows very little about co-operation. He wants help but he is unwilling to help others. He want a hundred dollars worth of service but is too "tight" to turn loose five dollars for a membership fee or even one dollar for a subscription. There are scores of white farmers in Mississippi who have given as much as a bale of cotton to their organization. We have been free long enough to know that the best way to get out of the mud is to walk out of it ourselves,—not stand still and wait for someone else to pull us out of it. A little more independence and manhood would work wonders for our race.

WE BACK UP OUR SLOGAN

When a colored friend of ours was asked to join the "Reds" during the recent cotton mill trouble in North Carolina, he replied, "I won't join up with no folks who don't believe there's a God, and I don't care nothin' about the mills nohow. That hain't our kind of work." Well it isn't. We are naturally a good-natured people. We can be happy most anywhere and under any conditions. But the mills and the shops are too far from the sunshine. Our laughter is shaded.

We back up our slogan, "Stay on the farm if you're on it! Go back to the farm if you're off it!" Too many of us are getting nervous breakdowns. Too many of us are dying from heart diseases. The worry is too much. The competition is too keen. We don't hear enough bird songs. We don't see enough green things growing. We don't feel enough open air. We back up our slogan. We are going to write an article about it next month. Look for it.

HOLD LAND FOR HIGHER PRICE, FARMERS TOLD

Back to Soil Movement Gains; Rural Values on Advance; Rental Acreage in Demand

By Calvin C. Bowsfield

Farmers are advised to refrain from selling their land by bankers and railroad officials who understand present conditions.

Even those who desire to sell in order to change location for persoanl reasons should hold their property for at least another year. Land values are advancing in all parts of the country and improved farms will reach their proper level next fall or not later than 1931, according to impartial judges.

H. L. Ford, Burlington Railway vice president, has had farm surveys made in different parts of the company's territory and is confident the present upward tendency of values will continue strongly for another year.

City Loses its Lure

One of the most interesting developments, according to Mr. Ford, is the fact that more city men are looking for farms than for many years. People of character, usually with some capital, who have been in business or holding positions in Chicago are buying or renting farms in the Middle West and the Far West.

This movement is due to a slowing down of industries, the high prices of farm commodities and the low price of land, with a reasonable certainty of an advance. City families believe they have a good chance to prosper in the agricultural districts.

Rent Farms in Demand

The demand for farms on a rental basis exceeds the supply perhaps two to one. City families in many cases prefer to rent land and try country life before investing too heavily. They will stick if they experience prosperity and comfort. In some cases families with farm experience are renting because they lack capital to buy a place and equipment. Uniformily high prices for grain, livestock and produce have stimulated this movement back to the soil.

The above was taken from the Chicago Herald Examiner of January 19th which is food for thought.

Every colored farmer who has a farm should hold it and buy more if it is possible, and every tenant who does not own a farm should by all means make an effort to get a small farm.

Further proof of the value of farm land is reflected in the prices of Federal Loan Bonds.

The stock market shows the following quotations:

5s May 1st, 1931-41 bid 99 1-9 and 100 asked. These are bonds owned by Federal Land Banks, and at these quotations it shows conclusively that farm lands are a good investment, and we again say that in about two years farm lands will be at least 25 per cent higher than present values. Another evidence of the confidence in farm land loans is shown by the fact that the Joint Stock Land Banks in several of its regions who a few years ago withdrew from the market are again accepting applications for 34 year farm loans at their usual rate of interest—about 5 1-4 per cent.

COTTON CO-OPERATION URGED

The importance of cotton in the world trade, and analysis of the 1928 crop, statistics and tables on consumption are some of the features of the year-book of the New York Cotton Exchange, just off the press.

This is a very interesting book and if any of our readers would like to have a copy, we will be glad to furnish same. Our supply is limited.—Editor.

34 BILLION EGGS A YEAR, YET U. S. IS EATING FEWER

Although 32,408,000,000 eggs were consumed in the United States last year, people today are eating fewer eggs per capita than they ate thirty years ago, Paul Mandeville of Rock Island, secretary of the United States Egg society, said today at the annual meeting of the association at the Hotel Sherman.

This decrease, Mr. Mandeville attributed to the great variety of foods served now, and, perhaps to the rapid development of the can opener.

"Another reason for the smaller per-capita consumption of eggs is the automobile," Mr. Mandeville said "The garage to house the car has displaced the henhouse in the back yard."

GOOD NEWS

We have the following letter:

Miss., January 14, 1930.

National Federation of Colored Farmers. Chicago.

Gentlemen:

We are making a strong effort to get our unit sufficiently strong in membership to consider the idea of operating a small cannery this fall. Our section of the state is adaptable to both tomatoes and beans and we figure that we could each plant an acre or more of these vegetables and market our product in the cans. Recent news items from the National Negro Business League thru its Secretary, Mr. Holsey, says the Colored Merchants Association now has over 500 stores in their organization, and this alone would give our unit a market for all the tomatoes and beans that we could can.

Will you kindly give us complete data as to approximate cost of a small cannery and such other information that will enable us to intelligently discuss this matter.

Yours truly.

This is good news. A very fine thing to consider. The National Canner's Association of the United States happened to be in session in Chicago this week, and we spent a part of two days making complete investigation in order that we could give the desired information. We find that a cannery capable of turning out twenty thousand cases of tomatoes and beans per season can be purchased for a thousand dollars. The machinery all new and the manufacturer's guarantee complete satisfaction. This unit is located in one of the heaviest colored farm sections of Mississippi, and if they can get their membership up to 500 and each member pay in the small sum of three dollars they would have an amount sufficient to purchase the machinery and a working capital of five hundred dollars in addition. We have gone a little farther and made inquiry as to fertilization of tomatoes and find that best results and heaviest yields are obtained by using 1-12-6—about 500 pounds to the acre.

In the state of Indiana there is a Ten Ton Tomato Club and they have over three thousand farmers as members. They own a cannery and the entire output is taken by one wholesale house in Chicago.

MARKET CO-OPERATION URGED FOR FARMERS

Athens, Ga., Jan. 21—Co-operative marketing was urged upon Georgia farmers today by Dr. Theodore Macklin, of Washington, representative of the federal farm board, and Dr. J. E. Purks, of Cedartown, president of the Georgia Education Association, in addresses before the farmers' conference at the State College of Agriculture here.

Mr. Macklin described the agricultural act of last year that created the farm board as "a Magna Charta of agriculture" if it is taken seriously and backed up by courageous action.

"For the first time in American history," he said, "agriculture has an opportunity to help itself on a vast scale and in a most vital manner. Probably no legislation affecting agriculture has ever before been intended to be so helpful as the agricultural marketing act of June 15, 1929.

"The authority of the act, the powers conferred upon the federal farm board, the character of the men chosen to constitute the board, the language of the act itself and the opinions rendered concerning it, are all encouraging evidence bearing out this conclusion. The act was essentially designed to provide a new opportunity for agriculture in general and for farmers in particular who cared to take advantage of its offerings."

Dr. Purks told the conference that this was an era of widespread consolidation and farmers must join together to hold their own. Through co-operation, he said, costs were lowered and protection was accorded to all.

Several session devoted to the growing and marketing of fruits and vegetables were held today at Camp Wilkins, near the college. A home demonstration section also assembled at the camp and Miss Lulu Edwards, district supervisor, described homes in Denmark.

About 500 farmers and farm workers are attending the conference. W. T. Anderson, editor of the Macon Telegraph, was scheduled to speak today, but was ill.

J. W. Firor, head of the division of agricultural economics and marketing at the State College of Agriculture, told the afternoon session of the conference that wherever co-operative marketing has failed it his been due to misunderstanding of its purpose on the part of the farmers.

Mr. Firor discussed with county agents how they could induce farmers to become interested in co-operative marketing, and said that if one plan failed another should be tried.—Taken from **"The Atlanta Constitution."**

BUDGET BUREAU URGED TO APPROVE DIXIE LOAN

Georgia Representatives Appear in Behalf of $6,000,000 Farm Fund.

Washington—(Special)—The bureau of the budget was urged today by a delegation of southern congressmen to approve the $6,000,000 fund proposed in a bill already passed by the senate which is intended as a relief measure for farmers and fruit growers of the southeastern section in financing the purchase of seed, fertilizers and feed in connection with this year's crop operations.

The delegation was headed by Representative Charles R. Crisp, Representative Thomas M. Bell and Representative W. W. Larsen, of Georgia, the latter a member of the house agricultural committee which has the measure in charge.

Already the house committee has conducted hearings on the senate bill, but a reluctance on the part of republican leaders to grant a favorable report caused the delegation to call on budget officials today. Majority leaders had intimated that the appropriation would be held up unless the budget approved it. Secretary of Agriculture Hyde gave his indorsement before the fund was acted upon in the senate and ordinarily this would be interpreted as sufficient administration support, but further assurance was wanted in the house.

Members of the Georgia group said after the conference today that while budget officials failed to make a definite commitment, promising to take the matter under advisement, indications were that at least a part of the fund would be recommended. Probabilties are, it was stated that the budget will recommend an appropriation equivalent to the amount that has been repaid under a similar bill passed at the last session. Last reports were that something in excess of $5,000,000 out of the original $6,000,000 fund has been repaid.

The fund is intended as temporary relief to farmers of Georgia and the other southeastern states who suffered injury to crops because of flood conditions of 1927 and 1928.

KNOW YOUR COTTON

Key to Class And Grade Here Given

Approximately ninety per cent of American farmers know very little about the grading of cotton. When he desires to sell his crop the average farmer today follows the same routine his father and his grandfather followed. He carries his cotton to the market without knowing its grade, asks the buyer what he will give and hands in his sample. After laboring from April til October producing the crop, another tells him just what it will grade and what he may expect to get for it.

For the benefit of our subscribers and members of the National Federation of Colored Farmers, we are giving herewith a key to both class and grade. Readers should file this edition for future reference.

FOR STAPLE

Number one is 7-8 inch.
Number two is 1 inch.
Number three is 1 1-16th inch.
Number four is 1 1-16th inch.
Number five is 1 1_16 to 1 1-8th inch.
Number six is 1 1-8 inch.
Number seven is 1 1-8 to 1 3_16th.
Number eight is 1 3-16th.
Number nine is 1 3_16 to 1 1-4.
Number ten is 1 1-4.
Number eleven is 1 1-4 to 1 5-16th.
Number twelve is 1 5_16th.
Number thirteen is 1 5-16 to 1 3-8th.
Number fourteen is 1 3_8.
Number fifteen is 1 7-16 to 1 1-2.
Number sixteen is 1 1-2.

FOR GRADE

A is strict Good Middling.
B is Good Middling.
C is Strict Middling.
D is Middling
E is Strict Low Middling
F is Low Middling
G is Strict Good Ordinary.
H is Good Ordinary.
I is Ordinary.
J is Inferior or better known as "Dogs"

FOR COLOR

O is White.
1 is Wax.
2 is Vim.
3 is Blue.
4 is Spotted.
5 is Stained.
9 is Extra White.

FOR PREPARATION

A is Excellent.
B is Good.
C is Fair.
D is Gin_Cut.

For instance if a ticket covering the grading of your cotton says:

16-B-9 your cotton is as follows: 1 1-2 inch staple—Good Middling and Extra White.

Beginning with the fall of 1930 the Government will in all probability control the selling of cotton and this information will be very valuable.

Application For Membership
NATIONAL FEDERATION OF COLORED FARMERS
Vincennes Hotel, Chicago.

As a Farmer, I believe the time has arrived when the Colored Farmers should form a National Organization devoted to diversified production, grading, packing, shipping and marketing of farm products and to the purchase of needed farm supplies through co-operative methods, to the end that a more prosperous financial condition may result from their efforts as producers.

I herewith subscribe and forward $5.00 for membership in the National Federation of Colored Farmers for a period of 12 months from date.

S. B. Wilson, Treas.
C. R. Richardson,
Chairman Board of Directors

COTTON TRADERS UNLOAD; CLOSE AROUND BOTTOM

Announcement from Washington that the Cotton Co-operative association with $30,000,000 capital had completed its organization and that cotton planters generally agreed to reduce acreage. failed to stimulate new buying and advance prices yesterday. It was said that only $800,000 had been subscribed to the capital stock of the new company. This was used by cotton traders, who were bearish, to do a little selling, and by longs to unload. Although business in all was not heavy, traders lacked enthusiastic interest and the close was arround the bottom, with losses on futures in Chicago 15 to 24 points and in other markets 2 to 21 points. New York showed the smallest loss.

For the present traders have ceased to be scared by government announcements, which have apparently lost their effect. The government report on consumption is due early today and is expected to be bearish. Traders, discussing the probable movements of the government, said expectations were that when buying by the association started bids would probably be for round lots of spot cotton, which might have a strengthening influence on prices.

Liverpool was higher early with spot sales 6,000 bales. Spots in New York were 10 points lower at 17.45c, with no sales. New Orleans was 20 points lower at 17.05c; sales, 896 bales; Galveston, 17.45c, and Houston, 17.35c; sales, 546 bales. Prices follow:

Chicago Market

	High	Low	Close	Prev. Yr. Close	Last Year
Jan....	17.10	17.05	17.05	17.20	19.60
Mar...	17.48	17.31	17.31	17.54	19.68
May..	17.72	17.55	17.55	17.79	19.72
July...	17.85	17.68	17.68	17.88	19.63

ROLAND HAYES, NEGRO TENOR, SINGS IN ATLANTA

Roland Hayes, famous Negro tenor, made his third concert appearance in Atlanta, January 29th. He appeared under the auspices of the Southern Musical Bureau.

Hayes was born in Georgia. His mother was an ex-slave and he was one of a large family that made a bitter struggle for existence on a north Georgia farm. Today he is acclaimed all over the world as one of the most perfect singers, technically, on the concert stage, while he is gifted with a tenor voice of charm so pure that it is ranked as one of the three greatest living tenors today.

With all his success Hayes is popular with his own race and with white people alike and wherever he goes his audiences are composed of leading representatives of both races. He is now on his sixth concert tour of the United States and reports from all cities where he has appeared state that he is attracting larger crowds than ever before.

U. S. COURT OUTLAWS NEGRO TENANT BAN

Richmond, Va., Jan. 14—(INS)—Richmond's city ordinance barring Negroes from establishing homes in certain residential areas was declared unconstitutional today by the United States Court of Appeals. Today's action grants Negro families the right to move to and live in any so-called "white neighborhood" if they can obtain leases or deeds.

CO-OPERATIVE FAVORED IN DARK TOBACCO BELT

Hopkinsville, Ky., Jan. 12—Whether sentiment among growers of the dark-fired type of tobacco favors organization of a co-operative marketing association like those already formed for wheat, cotton and other products, is being sounded out in this district by representatives of the Federal Farm Board and the Federal Bureau of Agricultural Economics.

J. V. Jones, representing the Farm Board, and J. B. Hutson, of the bureau, following conferences with western Kentucky growers and at Clarksville, Tenn., reported today they found conditions and sentiment favorable thus far. They said they expect to make a similar survey later of the Burley tobacco belt in central Kentucky and nearby territory soon.

SYMPATHETIC THOUGHTS ABOUT THE FARMERS AND THEIR SALVATION NEEDS

Sage of Georgia Gives All Farmers Sound Advice

By Sam W. Small

(In The Atlanta Constitution)

There was a lot of mighty plain speaking in Atlanta the past week by men who knew their onions and had the courage to talk turkey about what are the real ailments of the farm industry in Georgia.

No one of them dicounted to a degree the fact that farming is not only the basic industry in Georgia, but in the whole world of civilized mankind. It is an essential vocation of human creatures, ordained for them by their Creator, and incapable of being monopolized by any tribe or country. Adam and Eve were gardeners, Cain was a tiller of the ground and Abel a shepherd—and it is curious that the farmer got the better of it in "the survival of the fittest."

Who Are The Cains of Today?

But we are little concerned now about what happened to "righteous Abel." The supreme issue, is, What is happening now to Friend Farmer out on the broad acres of every really agricultural state of this vast union?

There are about 6,000,000 of him and he has 21,000,000 others living with him as family or farm hands. While all of them do not constitute one-fourth of our 122,000,000 population, they are the most important part, for it has been axiomatic since the city of Enoch was founded by Cain, when he shifted from farming to town-planning, that "the farmer feeds us all!"

As Bryan told the democratic national convention at Chicago in 1896. when you wipe out the farms of the nation you leave all its other concerns on shifting sands. Then all the people become dependents for life on other nations and the decay of the republic and its civilization has begun.

Farming Must Be Preserved

That fundamental fact of national economic life compels us as a people to resolve that farming in the United States must be preserved as a paramount industry and made profitable to those who are willing to engage in it.

If the complexities of our domestic vocational structuce and our relations with world commerce have so affected normal agriculture in this most favored country of the world as to render it unprofitable, then undoubtedly it must be aided and stabilized by the general power of the whole people, legislative and financial.

Legislation to that end is not "class legislation" in the common sense, but is legislation for the consequent welfare of the whole people; and the use of the whole people's money to establish a profitable status for the farm industries is not "subsidy," or "gratuity," but investment by the nation to preserve its independence and self-support.

What National Farm Aid Implies

When we reach that decisive point there come to the front certain reciprocal things that cannot be left out of the great equation.

In the first place is the reasonable fact that when the government finances farming it should have the right to say how much farming it will finance, and refuse to finance palpable overproduction—the creation of huge annual unmarketable surpluses of whatever crops.

Secondly, the government should have the right through its expert agencies to select, as in the civil service, those who are competent farmers and worthy to be aided in their operations.

The indiscriminate financing of farmers notoriously incompetent, sloven in their methods, and always coming out of the year "in the red," will bring all farm relief measure into discredit and leave the majority of the people to kick vigorously against such vain wastage of their money.

Making Claims Isn't Making Proofs

This wild business of claiming that all the farmers in America are experts and that none of the ills they complain so dolorously about are of their own creation, is getting tiresome and disgusting.

That transportation rates are often prohibitive to farmers in some areas is certain; that marketing processes absorb the farmer's profits in other regions is also certain; that the spread between the farmer and the consumer is too great, we all know; and that millions of farmers farm poorly, prepare their produce slovenly, neglect their soil, seed and implements, is notorious.

Some of these evils can be minimized by proper legislation and farmer co-operations, but the loafers, laggards and wasters will always slow down the procession and prohibit the general profits.

The Case of Cotton Exemplified

We do not need to go outside of Georgia to see those hard facts exemplified. Many letters come to me telling of the pitiful plight of Georgia cotton growers. God knows there is no man in the sate more anxious to see our farmers the most prosperou and happy that the nation contains.

But, in spite of my good old pal Martin Amorous, and some others, who claim that the Georgia cotton farmer is the best farmer in the world and in the worst fix of any, I am convinced that whoever of them is in a bad fix is largely the author of his own ills.

High freight rates, government grad standards, the manipulation of future contracts, points of delivery, do no create poor seed, eroded soil, scant fertilizer, insufficient cultivation, and a crop of bumble-bee, stained and untenderable staple in any Georgia man's field. And that's that!

There Is a Way Out

That there is a way out of such doldrums is known to all careful, thoughtful students of the situation. But the federal government, it appears, cannot drive the farmers into it and keep them in it.

Labor was once in a worse fix in this country than farming is, or ever has been. But labor had the gumption to organize for its own protection and profit, and today it is generally the most independent and prosperous element of the national population.

The farmers can do the same thing. There are 3,275,000 organized Free Masons in America. Farmers can organize with less ceremony and expense than the Masons and 3,000,000 compactly organized farmers could absolutely control their industry in the United States and make it yield more richly than all the gold and silver mines of the globe. But they won't do it.

DISTRIBUTORS OF THE NATIONAL AUTO MOTOR VEHICLE RIGHT AND LEFT FRONT AND REAR TRAFFIC SIGNAL DEVICE R. F. DOYLE, INVENTOR, PATENT PENDING

A device destined to save life and damage to cars, a device that is simple and easily operated by switch on steering wheel.

If drivers only could tell by some National Signal just what the driver ahead has in mind, to turn to the right or left by signal, ninety per cent of the loss of life and property by accidents could be prevented. That is just what prompted this inventor to invent The National Auto Motor Vehicle Signal Device.

Seventy-five per cent of drivers drive faster through towns, cities, and traffic than should be permitted, where streets are intersecting every 600 to 1000 feet, and it is at these and other intersections where most accidents occur.

The New National Auto Vehicle Signal Device does away with that very deceptive method of signal now putting out the hand or opening a door. Drivers often put out their hands to knock ashes from their cigarette, many times a door is opened and a driver following does not know if the door is voluntarily opened or the driver is going to get out. Those two signals are at many times very conflicting and confusing.

A car equipped with The Auto Motor Signal Device on steering wheel or by switch on dash board will not be misleading in any manner, for all cars should be equipped with The National Signal and when familiar with the distinct signal from rear and front, there will be no danger of a collision if the driver properly operates signal of their intentions in due time of a turning, parking, or stopping point.

The green lights signal that the driver intends to turn to the right or park his car. The red lights signal that the driver is going to turn to the left, or that his intentions are to pass the car that he is following, or that he is backing in a parking place, or that he is coming out from a parking position. These lights are simply operated from the steering wheel, and the operating will soon become so systematized with your other methods of operating a car, that you will soon be signalling automatically, just as you operate your clutch, brake, and gas by foot.

TO THE FARMERS:

The Modern Farmer contains information every month that you will not find in any other farm journal. It is the only journal published by and for our people that is devoted exclusively to the farmer and his family.

The price is in reach of every one—being less than 2 cents per week. During these times when the farming industry is undergoing so many changes, and when so many advantages can be had by our colored farmers if they are only aware of them, it is absolutely necessary that you should know what is going on. Three-fourths of the white farmers are subscribers to the white farm magazines and journals. They know just what is going on.

Fill out the blank—secure a money order for $1.00 and mail at once:

NUMBER OF COWS ON TEST SHOW BIG INCREASE

Three thousand and fifty-six cows were on test during December in ten dairy herd improvement associations throughout the State as compared with 2,391 cows in five associations in December 1928, according to records submitted to C. A. Hutton, Extension Dairyman, University of Tennessee. The average production of 3656 cows was 397 pounds of milk and 19.9 pounds of butterfat, as compared with 411 pounds of milk and 20.3 pounds fat for December 1928.

Three hundred and forty-six of the 3,656 cows on test during the month made the honor roll by producing 40 pounds or more butterfat by 800 pounds of milk per cow, as compared with 222 cows in December 1928. Owners culled 30 cows from their herds as unprofitable producers as a result of tests, making a total of 697 cows eliminated from the herds as unprofitable producers in 17 months.

A herd of Jerseys owned by T. B. Haynes, Rutherford County, led the State with highest average milk production with an average of 838 pounds per cow. A herd of Jerseys owned by O. T. Smith, Shelby County, led the state with the highest average butterfat production, with an average of 38.6 pounds per cow.

A grade Holstein cow owned by Masonic Home, Davidson, Co., led in milk yield by producing 1,638 pounds of milk and 67.2 pounds fat. A grade Jersey owned by Jarrett Bros., Rutherford County, was the high cow for the State in butterfat production, producing 1,256 pounds of milk and 70.3 pounds of butterfat.

REV. W. H. POPE COMPLIMENTS THE MODERN FARMER.

PASTOR, TEACHER AND PRACTICAL FARMER DECLARES NEWSPAPER IS A GREAT HELP

From every section of the United States encouraging letters are coming in to The Modern Farmer, complimenting it as a publication that fills a long-felt want along the line discriminating helpful news to those of rural districts as well as to those who conduct truck gardening in and about large cities. This letter accompanying was received from a Kentucky farmer, preacher and teacher. Its speaks for itself:

"Hopkinsville, Ky., Dec. 24, 1929.
Dear Bro. Harris, Sir:—I came across a copy of your paper and it certainly made me "sit up and take notice." It was a farm paper—and the best I have seen, (and I have seen many) and printed by colored men. I am a farmer, (also a preacher and a teacher), and the motto, you have viz: "Stay on the farm," was my text to the farm boys and girls of the Green River District during the 25 years that I was District Sunday School Supt.

I see that the present issue is the 10th and I regret that I did not get the other nine. But from now on I shall try to keep up with it. Your Objective—the organization of the Colored Farmers into a great Federation is a great Goal which I hope, will be crystalized into a Reality in the near future.

Your editorial "Christmas Cheer and Summer Sorrow," cannot be surpassed and I wish every colored farmer in the U. S. had a copy of it to paste in his Scrap Book, for reference during the hour of temptation "to plunge." "Marse" Henry Watterson the matchless editor of the Courier Journal never wrote anything to beat it in my estimation. This 10th issue settled the question of "Quail and partridge" argument that has been with us for a long time.

The account of the Negro Mississippi State Fair injected Optimism all through my system and made me hopeful of the future of our race and convinced me that the achievements of the colored people of these U. S., will some day convince the most skeptical that his friends of yore did not dare and do in vain. But I do not want to "bore" you and though there are many other features of your paper that, that entertain, or I may say enchant me yet I will desist. Send me your paper, I intend then to join the Federation and become a permanent subscriber.

Yours for success of Modern Farmer

REV. W. H. POPE,
Hopkinsville, Ky.,
No. 1010 2nd St."

NEW RECORD IS SET BY NASHVILLE COW

Producing 537.23 pounds of butterfat and 10,375 pounds of milk, Fair Margaret du Coin, a purebred Jersey cow owned by Herbert Farrell of Nashville, Tenn., recently set a new high record for Tennessee Jersey cows more than twelve years old tested for 305 days. She was started on this 305—day test when twelve years old and for seven months produced more than fifty pounds of butterfat per month. Her total yield during the time of the test is the equivalent of 671 pounds of butter and 4,825 quarts of milk.

The record supersedes the record of Tycoon's Kerry Girl, purebred Jersey cow tested by Henry Waters of Tycoon's Kerry Girl, purebred Girl held the State championship for aged Jersey cows tested 305 days with a record of 487.32 pounds of butterfat and 9,990 pounds of milk, the equivalent of 609 pounds of butter and 4,646 quarts of milk.

Mr. Farrell owns one of the leading Jersey herds of the South, comprising about 150 purebreds. The herd is located at Crievs Hall Farms, near Nashville, owned by Mr. Farrell

SOUTHERN COW WINS

Newton, N. C.—Red Lady, the south's most noted dairy cow by virtue of her exceptionally high production records has stepped into the distinguished circle of world champion Jerseys with her latest official test yield.

Now in her fourteenth year, she has just completed a record of 951.94 pounds of butterfat and 17,434 pounds of milk, the equivalent of 1,189 pounds of butter and 8,108 quarts of milk, in 365 days. During the quarter of a century in which official test yields have been recorded by the American Jersey Cattle Club this is the highest record ever made by a Jersey cow over 12 years of age.

In addition to this remarkable production record, Red Lady has completed four other official tests, each for 365 days. During these five tests she has yielded a grand total of 4,209.44 pounds of butterfat and 80,425 pounds of milk, the equivalent of 5,251 pounds, or more than two and a half tons of butter, and 37,406 quarts of milk.

1,028 Pounds of Fat.

One of these five tests brought Red Lady into international prominence when with her yield of 1,028.51 pounds of butterfat in 365 days she became the first cow south of the Mason and Dixon Line to make a 1,000-pounds butterfat record. All of her records have been outstanding. Three successive times she has been awarded the coveted Medal of Merit, highest medal award of the American Jersey Cattle Club, and honor achieved by only two other cows in America.

Red Lady was bred and raised on the farm of R. L. Shuford Newton, N. C., where all of her amazing records were made under ordinary herd care. In 1927, shortly after the completion of her 1,028-pound record, she was exhibited at the National Dairy Show at Memphis, Tenn. Her appearance there was the sensation of the show and the occasion of a history making ovation.

Started in 1891.

"Bob" Shuford as Red Lady's owner is known throughout North Carolina, started his purebred Jersey herd in 1891 with two cows, developing it as circumstances permitted. Today it is considered one of the south's most important dairy herds. It has probably won more medals for high production than any herd of equal size in the United States, and two world championships are counted among its honors.

As a business enterprise, Mr. Shuford's herd has been exceptionally successful, the sale of dairy products assuming such importance that during a single year 40,000 gallons of ice cream have been manufactured and sold at "Oakwood Farm." Diversification is practiced and the farm has made an enviable reputation for itself for super-yields of corn, cotton and feed crops from its 500 expertly cultivated acres.

ILLINOIS TENANT FARMERS TAKE TO TEST TUBE TO AID THEM IN LOCATING FERTILE SOIL

Special To The Christian Science Monitor.

CHICAGO—Not often does one hear of a tenant farmer making use of chemistry in selecting a farm.

Henry Pitstick, a farmer of La Salle County, Illinois, as often happens among tenant farmers, had to move, but this time he went at it differently. In his various migarations there had come to him the conviction that good land can be rented as cheaply on share rent as poor land and that the renter's chance of making money on low-producing land is rather slim.

What he wanted was a farm that would grow the clover which his dairy herd required. There were a number of La Salle County farms available, but Pitstick proceeded with caution. He knew that all farmers are not the same; in fact, that soils differ not alone on different farms, but even on the same farm.

So Pitstick brought out his testtubes and, after tests of the soil on several farms, he finally found one that would grow sweet clover on practically every acre.

The part that the test-tube can play in farming operations had been taught him by the extension service of the college of agriculture at the University of Illinois, in co-operation with C. E. Gates, La Salle County farm adviser.

By mixing a sample of soil from a field in a standard solution in a testtube there is revealed the secret of whether the soil is "sweet" or "sour" and what quanity of ground lime stone is required to correct the condition.

La Salle County farmers tested 5,000 acres the past year and made maps showing the conditions of their soil, so that they know definitely how much limestone their fields rquire and where to apply it.

CO-OPERATIVES JOIN TO IMPROVE HANDLING

BIG FEDERATIONS CAN CUT COSTS, SAYS U. S. EXPERT.

The tendency toward federation of local farmers co-operative marketing units into large-scale organizations, for more effective control of the merchandising or agricultural commodities, is growing says Chris L. Christensen, secretary of the federal farm board, in a circular just issued by the U. S. department of agriculture, which was written by Mr. Christensen while he was in charge of the division of cooperative marketing bureau of agricultural economics department of agriculture.

"In developing co-operation among co-operatives." says Mr. Christensen, "the agricultural co-operative business associations are following the trail blazed by industry, commerce and banking. In the past, many small business enterprises, whether owned individually or jointly by a number of individuals, have become parts of large corporations. Similarly, co-operative marketing and purchasing associations among farmers were a first local movements. The assembling and shipping of livestock, the manufacture of butter, and the grading and packing of fruit, are typical of the functions performed by these local associations.

"These local co-operative unit performed, and are still performing, valuable and necessary services to the individual farmers in the community in which they are located. Experience has demonstrated, however, that local associations cannot give their member complete marketing service, such as adequate financing, transportation and central-market warehouse facilities, complete market information, technically trained and skilled personnel, and the necessary managerial servics.

"There are certain functions with respect to distribution, selling making the market contact, controlling the rate of shipment to market, allocation to various markets, standardization, and merchandising under common brands which are and must be under centralized control if there is to be the highest efficiency in distribution.

"The trend among agricultural co-operative is toward the federation of local units and the consolidation of existing association in order that a more complete marketing service may be rendered to the original producers of agricultural commodities. There is for instance, the California Fruit Growers' Exchange, a large-scale organization composed of 201 local packing-house units, federated into one central selling and distributing agency. A more recent development is the federation of 450 cooperative creameries in Minnesota, Wisconsin, Iowa, and the Dakotas all selling through one cooperative agency. The records of the U. S. Department of agriculture show that in 1928 200 large scale cooperatives in the United States handled about one-third, or approximately $800,000,000 of the total business done by cooperative associations."

HOW TO KEEP WELL
By Dr. W. A. Evans.

DIET ON THE FARM

People who live on farms and in towns, villages and cities do not eat enough green vegetables, fruits, milk, whole grain cereals and butter. On the other hand, they eat too much meats, milled flours and cereals and foods made from them, and sweets. Most of them eat too much potatoes. The grownups suffer from constipation and are obese, both the result of overeating or wrong eating. The average daily cost of food could be reduced with advantage. On the other hand, the children two years of age and older are undernourished. This is the substance of the three-year study of food habits made in Cattaraugus County, New York. The conclusions would hold true of rural and small town populations in all parts of the country.

Farmers do not raise enough vegetables and fruits. Town people, converted into suburbanites, rarely use the ground around their houses for growing vegetables. Even where vegetables are raised there is little or no provision for carrying them over into the winter season. Therefore, the mid-winter diet consists, almost altogether, of meat, bread and canned foods.

The suggestion is made that people who live in the country set aside more ground for gardens and spend more time working them. That they provide themselves with old-fashioned cellars and dry wells in which vegetables can be kept or, better still, they make use of cold storage at creameries or at cooperative cold storage plants. If homes were equipped with coffee mills or other simple grinding machines thy could grind whole grains for cereals with advantage to health.

The grocers in the towns and small cities of this country did not carry green vegetables and fruits generally. Their facilities for keeping them were inadequate. They would get in a supply every now and then but there was not enough demand to warrant them in carrying an even dependable supply.

The Cattaraugus demonstration spent considerable effort during three years in improving the diets of both adults and children with resultant improvement in health.

FAIR EXHIBITS SHOW NEGROES ARE MAKING DECIDED PROGRESS IN GEORGIA

Atlanta, Ga., Oct. 18—That the Negroes of Georgia are making decided progress educationally and economically was evident to the thousands who visited the colored exhibit at the Southeastern Fair in this city last week. Covering 2,000 square feet of floor space in the Agricultural Building, it offered a striking evidence of ambition in the face of discouragement, achievement against odds, and effect to use to the best advantage every opportunity for progress. Cooperating in putting on the exhibit were the Negro home and farm demonstration agents, the "Smith-Hughes" agricultural teachers, the "Jeans" supervising teachers, and the various schools.

The Negro farm demonstration agents, of whom there are fourteen now employed for work in nineteen counties, were responsible for a remarkable display of farm products of every character, including 8,000 ears of excellent corn and hundreds of pieces of bacon scientifically cured and perfectly preserved. Through agricultural institutes, farm and livestock demonstrations, club work, etc., these agents, who are employed jointly by the counties, by the state, and the government are teaching Negro farmers to be more intelligent, efficient and prosperous. They reached directly last year no less than 7,638 persons and doubtless many times that number indirectly.

The Negro home demonstration agents, of whom there are twenty-one at work in the state, are well-trained women who are teaching thousands of colored women and girls the arts of making their home more attractive, efficient and wholesome. In the 4-H Clubs alone these agents have enlisted more than 5,000 girls in a four-year course in cooking, canning, sewing, nursing, and other home-making arts. Hundreds of cans of fruits and vegetables, perfectly packed and preserved, and thousands of pieces or artistic needlework testified to the effectiveness of this part of the extension program. In a sentence it may be said that the purpose of the farm demonstration agent is to teach Negro farmers: how "to make a living," on the farm, while that of the home demonstration agent is to teach Negro farm women and girls how "to make a life."

The "Smith-Hughes" teachers of agriculture, likewise supported jointly by local, state and federal funds, are conducting classes in forty-three schools, and last year enrolled 1,745 pupils in farm projects which produced crops and livestock valued at $112,301. These classes sent fine displays of agricultural products and also some beautiful examples of cabinet making and other manual arts.

Most important of all because most fundamental were the school exhibits proper, which were amazing in variety and beauty.

MISSISSIPPI LOSES 25,000 BALES COTTON

Clarksdale, Miss.—Rain, snow and ice have all conspired to put a crimp in the completion of cotton picking in the Mississippi delta. There are from 15,000 to 25 000 bales of cotton remaining in the fields that will be allowed to rot and will be plowed under as fertilizer.

Every delta county has from 1,000 to 5,000 bales of cotton remaining in the fields that was left over from the first part of the season and cannot be picked on account of weather conditions.

Some fields remain white with cotton badly weather stained.

Ginning reports from delta counties show that region has already produced a larger amount of cotton than last year.

COTTON SEED PRODUCTS SAVING THE COTTON FARMER

By E. E. Elliott,
Kansas City, Mo.

In The Rock Island Magazine.

The lowly cotton seed, once burned as worthless, will produce $413,540,000 for the industry in 1929, according to current prices of cotton seed products. This will be obtained from the seed of 11,500,000 bales, and early estimate of production. Cotton seed oil alone will

bring $246,340,000
Cotton seed meal and cake
will bring 111,238,000
Linters will bring 36,500,000
Hulls will bring 19,373,000
Labor will be paid 75,000,000

Cotton seed products may be divided into two classes, those having food values, and those having scientific values. For example, "linters" has only scientific value. This is the very first product taken from the cotton seed. It is obtained by ginning the raw seed a second time. The first ginning removed the staple cotton, which has a fibre usually from one half inch to an inch in length, which permits it being spun. "Linters" is more like felt and cannot be spun like staple cotton. It is used in pads, cushions, comforts, horse collars, mattresses, and upholstery. It makes good absorbent cotton for professional and hospital usage, is mixed with "shoddy" (dead wool) for clothing, and with live wool for felt hats and the like. When mixed with lamb's wool, linters becomes fleecelined underwear. Linters make good lamp and candle wicks, twine, ropes, and even-carpets. As cellulose, linters are turned into writing paper, guncotton, smokeless powder, varnishes, coating for metals, artificial leather, waterproofing, celluloid, artificial silk, and photographic films.

Uses of Seed Hulls.

Cotton seed hulls have both food and scientific values. Fertilizer, fuel, potash, packing, household utensils, fiber for paper stock, and so forth, constitutes the scientific values in hulls. The food values are bran and other cattle foods.

The meats or kernels of the lowly cotton seed also produce this combination food and scientific value. Even some of the food products are used in science, such as dyestuffs, cosmetics, soaps, putty, washing powders, glycerine, and others, used in the manufacture of roofing materials, linoleums, insulating materials, oilcloths, waterproofing, cheap paint base, phonograph records, and a large list of other articles and commodities.

The food value in the meats are cake or meal, which in turn may become feed for cattle, horse, poultry, swine, sheep, or man. The oil which is squeezed out of the meats under great pressure after cooking, becomes animal compound lard, cooking oil, or salad oil. It is made into a substitute for lard, and vegetable compound lard. This oil is used in setting olives, packing sardines, and is a prime constituent of margarin. It is made into an emulsion for medical purposes, and a substitute for the well known sweet oil.

Science Came to Rescue.

This is a brief explanation of the results obtained by science in aiding the cotton industry. Society changed quickly from cotton to silk, and from many clothes to fewer garments. The cotton industry, threatened with extinction turned to science. And science has saved the day. Throughout the South, cotton-oil mills are located at points convenient for the assembling of vast quantities of seed. One such is at Chickasha, Oklahoma. There are others at ..Fort Worth, Dallas and elsewhere on or near the Rock Island Lines. A visit to a cotton-oil mill repays for time spent. Your informer saw the seed pouring in at one end of the mill, and the products pouring out at the other end. He saw the farmer collecting money for his seed and the mill collecting money for its products sold back to the farmer. The mill is full of wheels, belts and pulleys, with conveyors running here and yonder, to dust piles, sorters and cookers. A battery of hydraulic presses squeezes the yellow oil from the ground kernels, and the residue is called "cake."

Packers of pork products save every thing but the "squeal" of the hog, but the cotton-oil mill saves the "squeal" in addition to everything else in the cotton seed. The process is interesting. The big thing and the most important is not the process, nor the products obtained, but the outstanding fact that the cotton industry has actually been saved by this economic process of salvaging the products from cotton seed. For every bale of cotton ginned the farmer sells half a ton of seed for from fifteen to twenty-five dollars. But for the cotton-oil mill the cotton farmers of the South would be threatened with financial disaster.

HOPE TO MAKE ARTIFICIAL SILK OF CORNSTALKS

CHEMISTS EXPERIMENT ON FARM WASTES

WASHINGTON, D. C.—Experiments now being conducted on a semi-commercial scale hold out the promise of utilizing cornstalks, together with their tassels anl leaves, in the manufacture of artificial silk for stockings, cravats, dress fabrics, and other products.

Nearly 300,000,000 pounds of artificial silk, known as rayon among silk manufacturers, is being made yearly from cellulose, the fibrous substance of which all vegetation is composed. Up to the present time the rayon manufacturers' chief source of cellulose has been wood or cotton linters.

Hopes of Chemists.

The re-search workers expect to make from three tons of cornstalks a quanity of cellulose equal to that now obtained from two tons of wood. Instead of trees being chopped down to produce the delicate threads for artificial silk, it may be made worth the farmer's while to bale and sell cornstalks that would otherwise be burned in the field.

If the chemist achieves this a new source of revenue would be opened up for the farmer, which would help in the solution of his economic problem. Conservationists, too, are rejoicing at the prospect, for if the experiments prove to be commercially economical; it means the saving of countless trees.

Other Uses of Cellulose.

Not only silk is made from cellulose. Artificial leather, lacquers, wallboard paper, and a hundred other products also, depend on it in their manufactures. So it is suggested if the production of cellulose from cornstalks is made possible, we may be wearing garments of transformed cornstalk and using it for wrapping and printing paper and for upholstering library chairs and automobiles with it.

An entire industry has been erected on the utilization of cottonseed, once regarded as nothing but a waste. So the vision of cellulose factories springing up in the corn belt may not be over opmistic.

HEN RETIRED ON PENSION AFTER 17 YEAR SERVICE

CLYDE, N. Y.—(U. P.)—In her old age and infirmity, a hen which laid a goodly supply of eggs regularly for Henry Lauster for nearly 17 years has been "retired."

The hen is blind now. Lauster refused to kill her when she stopped laying, rewarding her faithfulness with an extra large daily ration of corn, instead.

Lauster, a retired butcher, bought the hen in 1912.

LEADS IN GARDEN WORK

Coahoma Woman Gets $279 Worth of Vegetables From Half-Acre.

Clarksdale, Miss.—Mrs. D. T. Carter, of Dublin and Fairview communities, led Coahoma County in garden work. Mrs. Carter sold $160 worth of vegetables from a half-acre garden, canned 380 quarts and 215 pints of vegetables, fruits and preserves. Mrs. Carter states that in addition to the amount she canned that she had at least two vegetables from her garden on her table each day.

Miss Eudie Kavanaugh, home demonstration agent, estimates that Mrs. Carter's pantry store is worth that she sold.

Mrs. Carter states that on Nov. 22, $119 in addition to the $160 worth she still had eggplants, peppers, lettuce, collards, turnips, onions, butter beans, tomatoes, carrots, and potatoes.

CANTON (MISS.,) FAIR ATTRACTS THOUSANDS

Canton, Miss.—The Madison County Colored Fair which was held here Oct. 29th to Nov. 3rd attracted thousands of visitors and was by far the best fair ever held in this locality. All the exhibits were exceptionally fine and they were many and varied.

The officers of the fair association are: Jos. Caldwell, Pres.; S. L. High, Sec.; and S. H. Whisenton, Treas. These officers are to be commended for their ability to put on such a fine and orderly affair and they merit the success of the undertaking.

Madison County is heavily populated by colored farmers. There are 4218 colored and only 871 white farmers. These colored farmers are not organized.

FARMER SHOULD KNOW BUSINESS

By Associated Press Leased Wire

Urbana, Ill., Jan. 4—It's nothing short of folly for the farmer of today to believe that he does not need to use modern business methods just because his grandfather was successful without them, in the opinion of R. R. Hudleson, extension specialist in farm organization and management at the College of Agriculture, University of Illinois.

The most obvious need in the way of better business methods on many farms today is a suitable system of accounts, he said. This is the time of the year, he advised to choose a system of financial record which will measure the efficiency of the 1930 business.

"The typical central Illinois farmer of today gets as much money in one year as his grandfather had invested in his entire business. Furthermore, the farmer of today borrows more money than the entire business of his grandfather was worth.

"This does not mean that accepted business practices of other industries can be transferred bodily to the farm. Farming, because of its relatively slow capital turnover and its dependence on weather and other peculiarities, is fundamentally different from other industries. With all of its perculiarities, however, it still is a business having large investments and large operative costs as compared with former years and it has for its primary purposes the making of a net income."

LEAVES CHICAGO TO LIVE IN MISSISSIPPI

From Chicago Defender.

A year ago Kellie Bennett, age 47, of 622 E. 36th St., went to Cary, Miss., and purchased 120 acres of farm land. The original owner had been flooded by the high water and fled to Chicago. He wanted to sell. The enterprising Mr. Bennett paid him $4,500 after inspecting the soil and location, and title to it passed into his hands.

Bennett, his wife, Eather, and two other persons tilled the newly acquird land last year. Cotton, corn and potatoes were the principal products grown.

Last week, it was learned that the Bennetts, who spent the Christmas holidays here, are leasing their property here and are moving—bag and baggage to Mississippi.

The yield for the past year, Mr. Bennett said, is merely an indication of what he will do in future years if the Mississippi river behaves. From 36 acres the four hands were able to gather 18 bales of cotton, which sold from 19 to 22 cents a pound; 79 bushels of sweet potatoes and nine wagon loads of corn also were harvested, he said.

Originally from Pine Bluff, Ark., Mrs. Bennett, a native of Benton, He bought the property on 36th St., two years later.

Mrs. Benntt, a native of Benton, Miss., owns 40 acres of farm land there.

NAME BEST METHODS TO REGAIN FERTILITY

MANURE, COVER CROPS BEST FOR THE SOIL

The first step in improving soil fertility is to stop the washing of hill lands. Land can never be built up as long as plant food is washed away into the ditches, creeks, rivers and out into the ocean. When the farmer has stopped the washing of his land by building terraces and through proper crop cultivation and rotation methods he is ready to build up the fertility of his land as it will then retain what he puts on it.

The use of barnyard manure commercial fertilizers, plowing under of summer legumes, liming and the growing of clover and alfalfa and the growing of winter clover crops are steps recommended by good farmers and the Tennessee College of Agriculture for building up the fertility of wornout soils.

Manure is one of the best of soil builders if the farmer has a liberal supply for use on his land. That is why the farm should have some livestock on it. The limited amount of livestock kept on the average cotton farm means that a small amount of manure is made.

The amount is so small that building soil by this method would be extremely slow. It is good as far as it goes, but it does not go far enough. Commercial fertilizer is in many cases necessary, but this will not give a permannt effect.

Plowing under crops of soybeans, peas, etc., is sometimes recommended, but with the usual scarcity of feed this is not practical for the average farmer. These crops should be fed to livestock and the manure put back on the land. Lime and clovers with the growing of winter crops offer the real opportunity for building soils. Practically all of our lands are acid, and with the application of lime clover can be grown. This means real soil fertility. The growing of crops on the land during the winter months will be much assistance. Such crops as vetch crimson clover, etc., put much fertility in the soil.

ROSENWALD FUND LISTS $4,000,000 GIFTS IN YEAR

SCHOOLS, RESEARCH WORK GIVEN AID.

(From Chicago Tribune.)

Four million dollars of its capital assests of $3,000,000 were appropriated during 1929 by the Julius Rosenwald fund for the establishment of schools and libraries, philanthropic and research activities of several national committees, medical clinics, and Negro higher education. The expenditures of the fund, created by Julius Rosenwald "for the wellbeing of mankind," were detailed yesterday in the annual statement of Edwin R. Embree, president of the fund.

Mr. Embree's statement showed that one-tenth of the year's expenditures were devoted to the building of 553 Negro school units making a total of 1,729 Rosenwald schools established in the south. The schools are located in 818 counties and 14 southern states.

All Must Be Spent.

Under the terms laid down by Mr Rosenwald for the handling of the fund, both the principal and any interest that may accure must be entirely expended within twenty-five years after his death. The $4,000,000 appropriated during the last year included both capital and interest from the $30,000,000 capital fund.

A statement was made public through the Associated Press showing the following principal expenditures during 1929:

"The sum of $100,000 to the national advisory committee on education appointed by Secretary Wilbur to survey the relations of the federal government to education; $200,000 for demonstrations of county library service in southern states; $85,000 to the national illiteracy crusade and to a campaign against illiteracy in Louisiana; $62,500 to the Canadian mental hygiene committee for studies of child growth in Toronto; $50,000 to the social science research council for southern fellowships in the social sciences; $37,500 to the new school of social science research in New York City; and $50,000 to the International Association of City Managers.

Thousands for Medical Funds.

"For medical services, the fund appropriated $250,000 to the University of Chicago clinics; $150,000 to the Massachusetts General hospital for a pavilion for patients of moderate means and $40,000 to the national Committee which is studying the cost of medical care.

"In addition to the $400,000 appropriated for the building of Negro rural schools, other gifts included: $250,000 to Howard university for biological research work and for additions to physical plaints: $200,000 to Fisk university; $100,000 each to Morehouse and Spelman colleges in Atlanta; $50,000 to defray fellowships for advanced study by Negroes, chiefly to train teachers, physicians and nurses and in addition appropriations for four Negro hospitals and to colored public health nurses in sixteen counties of five southern states."

RAILROADS TO LOAN BULLS FOR FARMS

Bulls for Alabama and Georgia farmers who desired to go into the dairying business or wish to improve their herds are to be furnished by Central of Georgia Railway, President A. E. Clift announces. Authority has been given General Agricultural Agent J. F. Jackson to purchase the bulls to be loaned farmers in the two states.

The Central of Georgia believes, says President Clift that there are great possibilities for profit in raising of livestock in Alabama and Georgia, a policy the railroad has advocated for years. This work was begun in 1912.

"The Central of Georgia feels that the time has now come," says President Clift when special attention should be paid to dairying. Dairy cattle bring in a steady cash income and also materially increase soil fertility. Pure bred stock is more profitable than scrubs, but good herds can be built up from native cattle and pure bred bulls. Markets have already been stablished for more sour cream and milk than is now being produced. The equipment needed to produce sour cream is inexpensive. The requirements are only the cows, a few cream cans, a cream separator, the feed and a willingness to work."

A NEW WRINKLE WITH CUCUMBERS

The past spring I took up an idea that I would try an experiment with cucumbers, as the vines make such a rank growth and run so far. The result from this experiment was entirely satisfactory.

After they began to run and got about 36 or 40 inches in length, I took a sharp knife and cut a short piece off the end of vine, and after every runner got about the above length I did the same.

I find this made them blossom more prolific in bearing, and fruit of a much better quality, and I wasn't bothered with the vines running among the other rows of vegetables near them.

I hereafter expect to use this method with watermelons and muskmelons as I believe it will work eqaually as well as with cucumbers.

THE MODERN FARMER

Vol. II. Nashville, Tenn., and Chicago, Illinois, March 15, 1930. No. 1.

"We Back Up Our Slogan" Says Editor Harris In Recent Utterances

From Seventy-five Cents A Day On A Farm To A Harmon Medal

STORY OF JOHN C. CLAYBROOK WILL HELP INSPIRE YOUTH

Subject Finished From School of Hard Knocks Says Writer

(Special To Modern Farmer)

A few months ago John C. Claybrook was unknown. Today they are talking about him in every community where his people reside. The Harmon Foundation heard of his achievements and decided that they merited a bronze medal. His success should be an inspiration to every young man, no matter how poor or illiterate he may be. Read his story.

John C. Claybrook was born in Florence, Alabama, June 11, 1871, and lived there until the death of his mother. He never knew the care of a father during his youth—his father having left his mother when he was a baby.

At the unlucky age of thirteen years, young Claybrook ran away from home and came to Mississippi, stopping, he knew not why, at Commerce. But, what was supposed to result in bad luck turned to be good luck, for it was here that he learned the lesson of self-reliance, spent the teens of his years, and took to himself his first bride.

Mr. Claybrook's business life began as a laborer for Colonel R. E. Abbey at seventy-five cents per day. Here he worked until he had saved up $75 and with this sum he bought a mule, harness, feed and other necessary equipment and rented his first land as a farmer. The fifteen acres rented resulted in such a success that Claybrook decided to rent on a bigger scale and moved from Commerce to Robinsonville near the Pork plantation where he contracted for fifty acres. Success continued to smile upon him. His experiences at Commerce where he had worked by the day and hired his brother to work his crop, thereby furnishing himself, had made him some kind of a manipulator, and though he could not write his name or read a line, his enterprise and exercise of common sense brought to him many friends and admirers.

Among these was Mr. L. J. Thomas, a conductor on the Y. and M. V. railroad. Mr. Thomas offered Claybrook an opportunity to make his first large sum of money. He turned over to him a section of land consisting of 640 acres to sell out in plots of 40 and 80 acres at $5.00 per acre. He sold it in six months at $6.00 per acre, thereby making a commission of $640.00.

Upon the completion of the sale, several of the purchasers of the land fell down on their contracts and Claybrook had the foresight to buy the contracts which resulted in his own-

(Continued on Page 4)

BALANCE FARM PRODUCTION

DEPARTMENT OF AGRICULTURE ISSUES WARNING TO TILLERS OF SOIL

Washington.— (AP) —The Department of Agriculture today warned farmers of the imminent danger of overproduction of many products and cautioned them to adjust expenditures carefully in order to maintain farm incomes during 1930.

This advice was embodied in the yearly report on the outlook for agriculture, prepared by governmental agricultural economists with the cooperation of farm experts from forty-five states and of members of the federal farm board.

"The domestic market may improve later in the year, but it is unlikely that the demand for farm products in the Summer and Fall of 1930 will be as good as during last Summer and Fall," the report said.

EFFECT ALREADY FELT.

"Demand for some farm products already has been affected by the decline in industrial activity since last June. Butter, cotton and wool have been noticeably affected, and apples, potatoes and grains have failed thus far to make the usual seasonal price advances."

The report, described by department officials as "probably the most important of its yearly economic statements," is made for the purpose of helping farmers to gauge production to the prospective demands for their products.

"The outlook for farm mortgage financing and for marketing credit is more favorable than a year ago, but the outlook for production credit appears less satisfactory in most of the South," the report said.

BROWN ROT OF PEACHES DISCUSSED

The season of 1929 was one of the worst in history for the Tennessee peach grower. Brown rot took a havey toll. Prof. J. A. McClintock, horticulturist for the Tennessee Experiment Station, has an article in the February issue of the American Fruit Grower magazine on the Brown rot situation in 1929. He has a limited number of copies of the magazine which will be sent to peach growers upon request. Address him, University of Tennessee, Knoxville.

STUDENT IS COTTON KING

Brunswick, Tenn.— Elisha Gray, vocational student, produced last year 2,900 pounds of seed cotton on one acre leading the cotton belt. The project netted him $178.71, and a first prize of $25 awarded by a fertilizer company.

NATIONAL FEDERATION TO AWARD VALUABLE PRIZES

(Special)

The National Federation of Colored Farmers and the Modern Farmer announce that valuable prizes will be given this year to members and subscribers for diligent efforts made to increase and improve the yield of various farm products and livestock. These prizes have been contributed by public-spirited corporations, manufacturers and individuals and will be distributed to the deserving next fall. Complete information will be given in our March issue. Join, subscribe and get in line for these prizes.

FARMERS HOLD MEETING AT ALPINE

TALLADEGA COUNTY UNIT HEARS INTERESTING TALK BY PRESIDENT

Alpine, Ala. —(Special)— The Talladega county unite of the National Federation of Colored Farmers held their regular meeting at Alpine Wednesday night, January 15.

The officers are B. H. Swain president; J. L. Nicks, secretary-treasurer; and Noble Calhoun, county marketing agent. The meeting was called to order promptly at 7:30 and a large group of colored farmers were present. Much interest and enthusiasm was manifested in the meeting.

Letters of recommendation and encouragement were read by the secretary from James P. Davis, chairman of the National Federation, located at Chicago.

The chairman outlined plans for the organization and read market quotations from national headquarters. The farmers were requested to outline their most urgent needs for the year. The subject of loans was discussed and the fact brought out that a number of applications for loans had already been filed with the federal land bank at New Orleans, and that favorable reports had been received on a number of them. Several of the farmers filled out applications for loans at this meeting and a few new members were taken in.

J. D. Bridges, of the International Harvesting company, made a talk on the needs of the colored farmer and stressed the proper kind of implements to be used on the farm.

R. A. Daly, dairy field worker, made a talk in which he stressed the milking of dairy cows as a means of diversification, advising the farmers

(Continued on Page 4)

ALL FARMERS URGED TO READ THE PAPER

"Valuable farm information published in The Modern Farmer cannot be obtained from any other Negro publication in the United States, and all farmers, wherever they may be located, should become subscribers and readers of "The Modern Farmer," said Mr. O. T. Jackson out in Dearfield, Colorado, in a letter that was recently written to the secretary and treasurer of The Modern Farmer. He not only supports this by sending in for fifty additional copies of the January issue, but he says further: "Had there been a real farm paper like The Modern Farmer in existence when Dearfield, Colorado was established in 1910, we would probably have by now a farming population in eastern Colorado of 10,000 of our people doing well."

Knowing these things to be true, the promoters of The Modern Farmer and those who are working in the National Federation of Colored Farmers have decided that the time is now at hand to use the advantages at the command of the Negro of the United States in the tilling of the soil and in the development of the rural communities.

The Modern Farmer is inviting these discriminating sons of toil to accept its service, and to peruse its columns from month to month.

PRODUCE MAN BUYS ALL

MERCHANT CONTRACT FOR PRODUCE FROM TWO COUNTIES

Whitevile, N. C.—Assisted by his wife who does a deal of the grading of his products, William Spaulding here, Produce Merchant, sells hundreds of crates of vegetables and fruits every week.

Besides the products he buys directly from farmers, Spaulding has many acres of land leased and cultivated for himself. Because his work necessitates his traveling he does not do his own farming.

Seventy-five Per Cent

"This year,'" Mr. Spaulding said, "I bought 75 per cent of all the beans sold in Columbus and Brunswick counties. One week I sold twenty seven hundred crates of beans.'"

"This is not so much tho," he continued, "when you consider the large amount of produce that the large warehouses and companies need. I work strictly on contract so that there is no danger of my losing in case of falling prices. Among my customers are the North Carolina Sanitarium at Sanitarium, N. C., and Pinehurst, incorporated.

Contracts

"If my present negotiations turn out well, I will have contracts with farmers from whom I buy which shall also assure them of fixed prices. According to this contract, their products are sold to me at stipulated prices.

"Therefore if prices soar, I am safe. If they fall, the farmer has no fears."

Over to Cuba

His itinerary to buy his fruits and vegetables includes points as far as Georgia, Florida, and Cuba. On some of these trips he is accompanied by his wife, Mrs. Mable Spaulding, but usually she stays here and superintends the grading at his packing house.

Among the produce which he handles are strawberries, oranges, bananas, grapes, apples, beans, Chinese cabbage, sweet potatoes, corn, broccoli, kohl rabi, spinach and eggplant.

Man-like Mr. Spaulding emphasizes his part of his thriving business, but he has to break down and confess that his wife is more than a silent partner.

SCIENCE PRODUCES FROSTPROOF CORN

New Haven, Conn.,—Mr. and Mrs. Canada Yellow Flint, the later the former Miss Leaming Dent, who were united sometime ago by Dr. Donald F. Jones, today announced the birth of a sturdy son, Canada-Leaming.

Dr. Jones of the Conencticut Agricultural Experiment Station, declared the new crossed corn will resist early frosts. The scientist says the new corn matures in 100 to 110 days and often may be out and shocked before then.

In addition, it pushes up a stalk eight to nine feet high and produces a grain ear. The corn will be placed on the market this Spring.

Chicago Herald, Feb. 2.

STRIKES BACK AT PAY ROLL AND MIGRATION

Tells Why Colored Farmers Should Keep on Farming

Recently a Negro orator, politician, lecturer, singer and preacher— he claims to be all these,—took us sharply to task on account of the slogan which is printed at the head of the editorial columns in the Modern Farmer. He was talking to a group of our people in a northern industrial center and he told them: "A movement is on foot to get your names off the weekly pay-rolls. They want you to go back to the mule and the cotton-patch,—to the cabin and the overseer,—to debt and proverty. They want you to leave the freedom of the northern and southern cities and sell yourselves into slavery. They want to throw you into the hands of the mobs. And the rich landlords are backing them up!" All this and a lot more blah-blah.

It's just too bad, isn't it. The good brother's applesauce got plenty of applause,—plenty of "Amens,"—and all we could do was grunt. But nevertheless.—

We back up our slogan! Here it is:—"Stay On The Farm If You're On It! Go Back To The Farm If You're Off It!" We are squarely behind that slogan and we appeal to every fair-minded— hard-headed,—deep-thinking, — far-sighted, — progressive Negro man and woman in America to get behind it too. And this is why:—

The American farmer,—be his color black or white,—is the most independent human being on the face of the earth. He may be poor in purse but money can't buy some things, and these very priceless things are just what a growing, restless, impatient, ambitious, frisky and fruitful young race like ours needs the worst. These things that build character and bring success and happiness are produced on the farm,—these essential things like independence and patience and "stick-to-it-iveness." That's the very reason why a majority of the biggest city men were born and reared in the country. If they had not been born and reared and trained on the farm they never would have become the "biggest city men." They wouldn't have had the stuff in them that make men big and successful.

NOT ALL, BUT MOST

Don't think for a moment that we are foolish enough to believe that all of our people should leave the cities. As Dr. George E. Haynes has so truthfully said, "He cannot keep out of it (the city) if he would, and he would not be out of it if he could." Many of us are being pushed toward urban life and we should not resist the pushing. It's the life we are best fitted to live. But a huge majority of us who are on the farms now should stay on them and a majority of those of us who got impatient and restless and discouraged and left the farms ought to go back. Factory and mill labor is not "our kind of work,"—we know it,—and the sooner we stop thinking it is and fooling ourselves the better. The voice from heaven said unto Saul of Tarsus: "It is hard for thee to kick against the pricks." The whistles of the mills and factories are saying that same thing to thousands of Negro laborers every morning and night.

WHERE IS THE SQUARE DEAL?

Generally speaking, the American workman, white or colored, is fairly well off. But of all American workmen the colored laborer is the least

Nashville, Tennessee Henry A. Boyd, Secretary

SOUND ADVICE

By LeRoy A. Wilkes, M. D.

Director Division of Medical Service

Everywhere today through one means or another people are generously offering their advice. Some of them have a particular hobby or pet subject which they deal with exclusively while others more versatile are willing to help the general public on any subject. An unusual feature of all this is that they give freely of their knowledge without solicitation or charge.

Don't think these people are not clever. They know that in order to be popular advice must be disguised and so they do it artfuly, skillfully, and sometimes even artistically. A clever slogan that wins popular approval, a cartoon or a friendly little talk over the radio are all effective forms of advising the public.

The only standard of judging the value of a person's advice for us would be to know from what authority he speaks, or what his training or background in regard to his particular subject has been.

Doubtless some of these people 'mean well" but what a chance we should take in following their advice. When the baby of the family acquires measles or whooping cough or any of the countless diseases of babyhood do you follow the advice of little Mrs. Henry across the way—"because that's how Mary got better." That might be true and Mrs. Henry undoubtedly wants to help but the treatment for Mary will in all probability not apply to baby at all.

Each individual case of the same disease differs and necessitates special attention. This over-simplified advice which is being given is often dangerous and is seldom effective because of the other factors concerned.

It would be an unusual but very convenient system if we could cure our ills and prescribe for ourselves by merely tuning in on the radio and getting a concise description of our disease and a prescription for it. It would be handy too if when we saw the picture story in the evening paper of Mrs. Howe of Blanktown before and after taking some remarkable new tonic we would go right away to the nearest druggist, purchase a bottle of the magic fluid and cure our ailment, whatever it might be. Unfortunately this ideal situation does not exist and the old-fashioned idea of consulting the doctor still seems to be the wisest, the most effective and the most economical means of getting substantial advice.

—Southern Christian Recorder

THE DOCTOR LOOKS AT CHILD LABOR

Fifteen physicians of outstanding repute recently agreed that child labor is a national menace—from a health standpoint. They condemned it as a major cause of physical unfitness among children and as the foundation for much illness, maladjustment and inefficiency among adults. A child's strength should be used for growth and development. A symposium of the opinion of these physicians will be published under the title, 'The Doctor Looks at Child Labor."

Child labor during the adolescent period puts an undue strain on the child at an age during which, even under normal conditions, the tax upon him is greatest. On this the fifteen health authorities are agreed.

Over fatigue brought about by unregulated child labor is one of the chief reasons why many Americans are still physically unfit in spite of the tremendous increase in health work and health teaching "Laborious occupation is harmful for any growing child," said Dr. Joseph St. Bainton, member of the Heart committee of the New York Tuberculosis and Health Association, "but for the cardiac its effect may be disastrous."

Child labor contributes directly to the increase in three of the most serious diseases affecting American people today—heart disease, nervous diseases, and tuberculosis. "The fact that more people are suffering from nervous diseases today than from all other diseases combined can not be separated from the question of child labor," is the opinion of Dr. Louis I. Harris, former Commissioner of Health of New York City.

The evils of child labor, however, are not limited to the city worker as Dr. Richard A. Bold pointed out when he stated that "the industrialization of agriculture, the use of machinery on the farm, and the unsanitary conditions make the work of the farm laborer as hazardous as that of the city worker."

Dr. C. Floyd Haviland points out that childhood is the period during which types of adult personality are determined and he says that child labor tends to warp, distort, and inhibit personality growth.

The only solution to the problem according to Dr. Shirley W. Wynne Commissioner of Health of New York City, lies in increased social responsibility. Child labor constitutes not only an injustice to the weakest member of society but it weakens the foundation of the social structure itself. "We would not permit the exploitation of a child that is precious to any of us. Let us not therefore, as citizens, tolerate the exploitation of other people's children. Vigilance in our legislative halls, a social point of view in industry, and an abiding love for children wil restore to children their just birthright."

VITAL FOODS AND THE NERVOUS SYSTEM

It is sometimes unfair to blame children for disliking certain foods. This is pointed out in 'Safeguarding Children's Nerves," by Dr. James J. Walsh and Dr. J. A. Foote. These tastes are generally developed and encouraged by unwise parents. The responsibility of the father and mother in training their children in self-control and simplicity of diet is one which cannot be neglected or it will be the frequent cause of worry to the parents and misery to the child in after life.

When a normal child refuses certain foods he should be ignored. The food should be removed but brought to him again in a day or two.

Setting a good example is an important factor in training a child's eating habits. If older members of the family are enthusiastic about foods that are good for a child, the child will generally imitate them.

Behavior clinics have been organized in some cities where a typed slip is prepared for the mother whose children has acquired food dislikes and a student worker follows up the child at home to see that the proper routine is followed.

Teaching children to eat requires patience and firmness. Show the child that you expect him to eat certain foods. The older members of the family should agree upon a method and adhere strictly to it or the child will do just as he pleases. If every one carries out this method the family mealtime will be a happy one.

ATTENTION COLORED FARMERS

The National Federation of Colored Farmers is receiving hundreds of letters from Colored farmers requesting all kinds of aid and information. We are willing to do everything we can for all the Colored farmers of America. It costs money, however, to maintain offices and our expenses are becoming so heavy that we are compelled to discontinue supplying information to those who request it who are not members of the Federation. If you have faith enough in the organization to believe that it can aid you, then you should be willing to join it and help support it. Isn't that so?

Several County units have organized and elected officers but have not sent in their membership dues. These units are eligible to membership in the Federation until dues are paid. Be helpful. Co-operate. Pay up. "All for each and each for all."

The Modern Farmer

Official Organ of the National Federation of Colored Farmers

Leon R. Harris - - Editor

Published Monthly by the Modern Farmer at Nashville, Tennnessee, and Chicago, Illinois.

Nashville, Tenn., Office: 447 Fourth Avenue, North.

Chicago, Ill., Office: Vincennes Hotel, 36th and Vincennes Avenue.

Devoted to the interests of the Farmer, Truck Gardener, Livestock and Poultry Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 447 4th Avenue, North, Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT!

WHEN GOOD FELLOWS GET TOGETHER

We are publishing in this issue a report of a weekly meeting of the King's Mountain Unit of our Federation at Alpine, Ala. Because this is a rather detailed report of a meeting of a very progressive Unit, and because it is the first report of a meeting we have been able to publish, we desire to call to the attention of our readers to some important facts relative thereto.

First of all, this was a regular meeting, held at the appointed time, and it was called to order promptly. Evidently, the officers of this Unit believed in system, order and punctuality,—three good business principles. A co-operative organization is a business organization any how, so why not carry on the meetings in a business-like manner? The officers are to be commended for so doing.

The president read letters of recommendation and encouragement from the National office and also market quotations. The National office keeps in close touch with the Units and is always ready and able to serve them. In the one matter of aiding its members in securing loans from federal land banks, the National office has been able to get action on applications which had been on file for months. All Units and members get conscientious service from the National office.

And then we are told that a representative from a large farm implement manufacturing company,— a dairy field worker and a college man were present. All thinking people are ready and willing to help a group of farmers who prove that they are progressive and want to help themselves. The manufacturer's represenative told the farmers that they could make more money if they would purchase and use improved machinery. The dairy field worker told them that they could make more money if they would mix up a little dairying with their cotton raising. The college man told them that organization was a good thing and commended them for being wise enough to organize.

Good fellows got together, had a good meeting and all departed encouraged and helped. This is co-operation. Each was willing to help the other. Each got help from the other. We are told further that the white farmers of this county, who have long been organized, have shown a ready willingness to aid and co-operate with their colored brother farmers. We knew it would be that way. White and colored farmers have been getting along together for years unorganized so what is to prevent them from getting along well together when all are organized. Naturally, the white and colored organizations will co-operate to a certain extent. All are farmers and must rise or fall together. White farmers have nothing to fear from a national organization of colored farmers. Our real friends—our best friends are glad we are organizing and wonder why we have not had sense enough to organize long before now.

THE FOLLOWING ARE EXCERPTS FROM THE CONSTITUTION OF THE NATIONAL FEDERATION OF COLORED FARMERS:—

"Its main object is CO-OPERATION."

"The organization is devoted to the practice of diversification of crops,—correct methods of grading, packing, shipping and marketing of livestock, fruits, vegetables and grain, and also to the purchasing of needed farm supplies cooperatively."

"It will be one of the main purposes of the FEDERATION to see that better cattle, hogs, sheep and poultry are raised by the members because the best grades bring the best prices."

"The use of improved farm machinery will be encouraged because machinery saves man-labor and increases production."

"The problems of the farmer's wife will not be overlooked."

There are approximately 275,000 colored farmers in the United States who own their farms, the total acreage of which is more than forty-five millions and the value of which is more than two and one-half billion dollars. There are also more than 700,000 colored farmers in America who are managers and tenants. Most of these farmers live in the southern states. In the state of Georgia alone there are forty-five counties which have a larger population of colored farmers than white farmers. In more than two hundred southern counties the colored farmers outnumber white farmers two to one. At the present time Negro farmers ownership of land is increasing by 16.2 per cent compared with a white ownership increase of 4.8 per cent.

The average amount of principal farm crops raised yearly in America by colored farmers is as follows:—

Cotton—four million bales or 37 per cent of average crop.

Corn—one hundred million bushels or 3.5 per cent.

Rice—twenty million pounds, or 9 per cent.

Wheat—four million bushels, or .5 per cent.

Sweet potatoes — twelve million bushels, or 21 per cent.

Tobacco—ninety million pounds, or 10 per cent.

Watermelons—32 per cent.

THE NATIONAL FEDERATION OF COLORED FARMERS is the organization for one million American farmers, who with their families constitute one-third of the Negro population of the United States. Units of the FEDERATION are organized and at work in all southern states and in all northern states where there are settlements of Negro farmers.

The MODERN FARMER— the official organ of the Federation—circulates in every state in the Union and reaches a Negro farm population of more than one hundred thousand. Its circulation is growing rapidly.

WE BACK UP OUR SLOGAN

(Continued from Page 1)

well off, and we must remember that nearly all of our people who work in the mills and factories are just laborers,—nothing more. Because it is so hard for them to become anything more than ordinary laborers is the main reason why we back up our slogan.

It is almost impossible for the colored laborer to get a square deal,—a man's chance,—as a mill or factory worker. Employers know this to be a fact as well as we ourselves know it. Many employers are fair and just,—they sincerely desire to treat us right,—but they cannot over come some conditions nor destroy certain prejudices that work against us. It is well understood that a Negro workman can go just so far,—he can rise just so high,—and right "there" he must stop and stay. Nothing less than a miracle will move him any further or higher.

We are acquainted with a machinist of our group,—a Tuskegee graduate,—who entered the employ of a large cement company during a serious labor disturbance. This man is the best machinist in the plant and everyone knows it. He has served the company well and the management owes him a debt of gratitude which they can never pay. But as long as he worked in the shop with his fellow machinists there was trouble. Eventually, the management put him on "nights" by himself. He is satisfied but, Why?

American race prejudice is a funny thing, but alas, it is a very real thing. No one knows this better than does the ambitious Negro workman who enters the mill or factory as an employee. He cannot learn a special trade because he is barred from serving an apprenticeship,— he cannot hope for promotion to a foreman's position,—he cannot serve as a clerk or stenographer,—he cannot be a delegate to any employee's meeting or convention,—he cannot be any thing but a Negro workman. He is usually the last one to obtain employment and the first one laid off when the lean times come.

Leaders of national labor organizations know that their members mistreat, blackball and ostracise Negro labor but what can they do about it? Nothing but talk. They cannot compel a local carpenter's union to admit a Negro carpenter to membership. They cannot prohibit a group of white union bricklayers from refusing to work along side a colored union bricklayer. They cannot compel their members to do any thing to assist a Negro craftman unless they want to do so. The constitutions of some of America's largest labor organizations bar Negroes from membership outright. The only labor organizations that give Negro workmen half-a-chance are a few of the so-called "hard job unions" like the miners' building laborers' and longshoremens' and his chances are getting slimmer in these every year.

The Negro workman's status in the "company unions" or employees' associations, is little better. These in the main have become merely social organizations and Negroes are barred from active participation for social reasons. The apprenticeships and best jobs in these mills and shops always go to relatives or close friends of foremen and other employees. The few jobs left for the colored brother are those no one else desires.

COMPETITION AND THE SPEED-UP

When it comes to having a "lifetime job," the colored mill or factory employee cannot claim it. The Brother knows that if he has a job of any importance whatsoever he must be the very best man for that job and such he must continue to be. To hold his job he must stick to it tighter and he must produce more than any other person could possibly do. Competition is keen. Today there are no "Negro jobs." There are still plenty of hard jobs but there are plenty of others who are willing to "get hard with them" besides the colored workman. So in order to hold his job the colored workman must pray often,—work every day,—and watch all the time.

Orientals and Filipinos are getting what we used to call "our jobs in the middlewest and even in Chicago. Many of the western railroads are now Mexicanized as far as common labor is concerned and many of the southern roads will also be in the near future unless legislation is enacted to restrict Mexican immigration. It seems peculiar that we, who are Americans by birth, blood and nature, have to stand still and see our jobs "copped" by these little brown men, when at the same time their government will hardly let an American Negro light across the Rio Grande to make a visit,—much less to live. But it is so.

The speed-up system in many mills and factories is fast speeding colored workmen to early graves. More of us are dying of heart diseases than ever before. More of us are having nervous breakdowns. We always did like to gallop and chase around at night and we simply cannot do that and hold down a hard job in the mills and still live. But neither can we live and be happy unless we can enjoy our church and social life as we have always enjoyed it. It is as essential for us as the sunshine.

THE BIG PAY

Not what the Negro laborer earns is the proof of his progress. The proof lies in what he saves. High wages is the mirage that has drawn more of us away from the farms than anything else. With us, however, high wages have meant high living and as a result we find ourselves harder up than we have ever been before. And it is not altogether our fault. Everybody is after the fellow who makes big money and we cannot resist the temptation to spend.

We have not yet learned how to save money because we have had so little to save. The big pay goes,—we know not where,— and should sickness or a shut-down come, we find ourselves as poor as ever we were on the farm, and what is worse, we get ten times hungrier. (Concluded in next month's issue).

FROM SEVENTY-FIVE CENTS A DAY ON A FARM

(Continued from Page 1)

ership of 200 acres of the land previously he had sold to others.

More than that he was wise enough to contract for timber rights on the land he had sold as well as on land adjacent to this section and surrounding it Claybrook had heard that a railroad was to be run through that territory to Tutwiler and he had learned a deal about logs and the handling of them from a former employer, so here he used his wits to lay the foundation for his future success.

The Yellow Dog Railroad was put through the territory; the lumber mills began to make bids for the timber along the right-of-way; and doing business became a part of the life of Claybrook. He made enough money on the timber he controlled to pay for his two ox teams he brought to haul his timber, to pay the balance due on the 200 acres he purchased and to build himself a house and a barn.

Later he sold the 200 acres at $20.00 per acre, making a profit equal to more than three times the original cost.

The land was sold to Mr. H. M. Spain, now a Timber Cruiser with an office in the Bank of Commerce Building, Memphis, Tenn., for cash and Mr. Claybrook then become established in the business world. But, "I never worry about what I have done already," says Mr. Claybrook, "my biggest worry is about what I have not done and what I want to do."

So, having a natural adaptation to the logging business, he accepted a contact to move twenty million feet of timber which resulted in his leaving Mississippi for Arkansas.

He established himself in Crittenden County in the midst of a canebrake so dense as to be the home and rendezvous of bears. Here he felled and cleared away the thicket, lifted tents for himself and his men and laid the foundation for his splendid plant.

What was a cane-brake twenty years ago, is now the thrifty little station of Claybrook, nestled on the northern side of the Missouri Pacific, with its 800 acres of fertile lands, its Saw-Mill, Cotton Gin, General Store, Farm buildings, and other necessary farm equipment. More than one hundred employees work regularly, including clerks, book-keepers, stenographers and agents, while a large number of tenants rent and cultivate land on the 1-2 and 1-3 basis.

The Achievements of Mr. Claybrook have been more than ordinary and yet no success of his has ever caused him to become abnormally big or to lose the common touch. He is modest in his speech, plain in his language, and true in his purpose.

The conferring upon him of a Bronze Medal by the Harmon Foundation is not more than he rightly deserves and in his acceptance of it, the people of Memphis and its surrounding territory feel complimented and deeply appreciative of the honor it brings to both him and his race.

FARMERS HOLD MEETING AT ALPINE

(Continued from Page 1)

to supplement their cotton crop with a few dairy cows.

Demus Frazier of Talladega college made a short talk commending the colored farmers for the interest shown in the movement and pointing out to them the good that will be derived from the organization.

The above report of the meeting at Alpine, Ala., of the King's Mountain Unit of the National Federation of Colored Farmers, was secured and published by the leading daily paper of Talladega, Ala. The article should be an inspiration to every Unit of our Federation in the country and to every Negro farmer who believes in organization.

This Unit promises to be one of our largest and most active. They meet every Wednesday night and the interest is growing. The white farmers of Talladega County have long been organized and have shown every willingness to aid and co-operate with our unit.

There are 1994 white farmers in the county and 1932 colored farmers. The county produces 18,371 bales of cotton, 17,514 bushels of sweet potatoes and 11,594 bushels of peaches per year— average production. It is a good dairying county. Number of dairy cows in the county, 5092.

This report is very encouraging to the national office and is proof that colored farmers are beginning to realize the necessity of organization. See editorial on page 4.

BULLETIN ON BURLEY TOBACCO CULTURE ISSUED

The Agricultural Extension Service, University of Tennessee, has just issued a new 20 page publication on Burley Tobacco Culture. New growers of this crop will find this publication of great value as it deals with every step in producing, from the plant bed to final preparation for market.

Copies of this publication can be secured from county agents or by writing the Agricultural Extension Service, University of Tennessee, Knoxville. Call for Publication 161, "Burley Tobacco Culture."

MR. JOE NICKSON'S LETTER

Rondo, Ark., Jan. 27, 1930, to the Editor of The Modern Farmer, Dear Sir:—The more I read your paper the better I like it. I find more business in that paper than in all the rest put together. I really love The Modern Farmer. I want to be in the organization. Tell me what it will cost to join.

I own a little farm down here, about 90 acres, and I want to be in some organization that is in the interest of the farmer. Let me hear from you.

Joe Nickson.

Application For Membership
NATIONAL FEDERATION OF COLORED FARMERS
Vincennes Hotel, Chicago.

As a Farmer, I believe the time has arrived when the Colored Farmers should form a National Organization devoted to diversified production, grading, packing, shipping and marketing of farm products and to the purchase of needed farm supplies through co-operative methods, to the end that a more prosperous financial condition may result from their efforts as producers.

I herewith subscribe and forward $5.00 for membership in the National Federation of Colored Farmers for a period of 12 months from date.

Leon R. Harris, Secretary.
S. B. Wilson, Treas.
C. R. Richardson,
Chairman Board of Directors

FARMERS ADVISED TO PLAN PRODUCTION IN VIEW OF OUTLOOK FOR PRICES NEXT FALL AND TO AVOID EXPANSION IN MOST LINES.

The Tennessee Agricultural Outlook for 1930 which has just been issued by the Agricultural Extension Service, University of Tennessee, indicates that there is need for further adjustments in most types of farming in the State.

Farmers are advised to plan production of both crops and livestock in accordance with the outlook for prices during the next marketing season and to avoid expansion in most lines.

The outlook was prepared by specialists of the Extension Service in cooperation with the College and Experiment Station staffs and the Bureau of Agricultural Economics, U. S. Department of Agriculture and is based largely on the national outlook issued by the U. S. Department. A brief summary of the outlook for Tennessee for the leading crops and livestock follows:

COTTON

There is nothing in sight that indicates any radical change in the present cotton situation. Tennessee growers are advised to continue their program of reducing acreage as they increase the yield per acre.

BURLEY TOBACCO

Burley production is expected to exceed consumption this year. Increased acerages are advised only where Burley can be profitably grown at prices lower than those of the 1929 season.

DARK TOBACCO

A decreased acerage of fire-cured tobacco is advised. Where marketing facilities are available strawberries and sweet potatoes appear to offer better opportunities for profits except for growers favorably situated for the production of snuff and wrapper tobacco.

CORN

There is little change in the outlook for corn. Tennessee growers are advised to continue their program of reducing the acreage and working for larger yield per acre.

SMALL GRAIN

Small grains are advised for soil protection and pasture purposes. Wheat prices may not be materially better than last season.

HAY AND PASTURE

The outlook is better for legumes than grass hays. As alfalfa and clover are increased more and more of the grass lands that have been used for hay production should be thrown into pasture.

PEACHES

Plantings in full bearing, if properly protected from inspects and diseases and if located on desirable sites, are as promising of profits as ever before. Growers are advised to destroy old plantings that have not proven profitable during the past few seasons.

STRAWBERRIES

The outlook for Tennessee Strawberries for 1930 and 1931 is favorable. Increased planting are advised where improved cultural methods are used and good land is available

TOMATOES

Only experienced growers are likely to find early tomatoes for shipment profitable this season.

IRISH POTATOES

Tennessee farmers who plant early potatoes this year may expect prices lower than last season. Plateau growers who use certified seed and fertilize well have a fair chance to profit, although prices will probably be lower than last season.

SWEET POTATOES

Tennessee sweet potato growers who can produce high yields economically are in good position to profit this year.

CABBAGE

Early cabbage growers who use good land healthy plants and handle the crop well may expect better returns than last year.

FORESTRY

Since the local supply of timber continues to decrease, Tennessee farmers should use every opportunity in 1930 to improve their woodlands by removing crooked, unsound, slow growing trees for firewood and other farm uses. Poor lands with promising young growth of trees should not bo cleared and should be protected from livestock and fire.

BEEF CATTLE

Farmers producing cattle of quality may expect a firm undertone to the market this year. The lower grades will probably suffer some in price. Since there is a tendency to increase beef cattle numbers, farmers already established in Beef production are cautioned against further expansion.

HOGS

In view of the prospective higher prices for Hogs farmers who feed their fall and spring pigs by the Ton Litter Method and get their fall pigs on the March and April markets and their spring pigs on the July, August and September markets will likely reap good profits this year.

SHEEP

While prices of both lambs and wool is lower than last season are probable, Tennessee growers who produce lambs of quality economically may expect favorable returns as compared to others farm enterprises.

DAIRYING

The dairy situation is not as bad as would appear from present milk and butterfat prices. The price of butter has recently been materially reduced by retail distributors, and consumption has likewise increased. Dairymen are already culling low producing cows, and further culling which will undoubtedly be done, should still further reduce production, yet milk and butterfat prices will likely be slightly lower during the year than during latter half of 1928 and the first half of 1929.

POULTRY AND EGGS

With a prospect for lower prices for poultry for the first half of 1930 and with egg prices only slightly under the prices received in 1929, Tennessee poultry raisers should feed for increased egg production this year and avoid the unusual heavy spring selling of laying hens.

TURKEY

The outlook for turkeys in 1930 is favorably for growers who use improved methods, which make for lower morality, faster gains and improved quality.

MILD WINTERS KEEP FRUIT TREES FROM NEEDED REST

Severe winters in the North usually means short crops, but with peaches in Georgia and apples southward from Virginia, the rule works just the other way. This is because temperate-zone fruit trees require a definite amount of cold weather during which certain changes are carried on which prepare them for growth in the spring. This period of "rest," which is so definitely required for many trees and plants, is really therefore a period of slight but important changes in the trees.

Dr. M. B. Waite, of the United States Department of Agriculture, observed many years ago, that our northern fruits such as the peach, when cultivated too far south in Georgia, frequently exhibit symptoms of delayed growth in the spring, attributable to lack of sufficient resting period. Dr. Lee M. Hutchins, of the same department, has recently observed the same phenomena and points out that as a rule, in about one year in five, the mild winters of Georgia do not give peach trees the required amount of resting period, and the result is what peach growers call "prolonged dormancy." When this happens, peach trees in the lower portion of the State fail to bloom at their regular time. Finally they bloom, from a week to several weeks late.

This disturbance may interfere with the setting of the fruit, and the ripening of the gruit may also be thrown off schedule and come in with the crop in other parts of the State farther north, which tends to make an overcrowded market.

Albany is given by Doctor Hutchins as about the southern limit for the commercial production of our standard varieties of peaches. South of this limit the trees during most winters do not get enough cold weather for maximum production. The same prineiple applies to apples in a zone much farther north.

Faith in the Negro Proves Justified

The Granting of the William E. Harmon Awards for Distinguished Achievement Among Negroes for the fourth year should serve to call attention to some most significant facts about our American culture. A few well-informed people have known for some years that the Negro group of citizens, comprising about one-tenth of our population, has great potential power of contributing to the material and spiritual culture of our common life. The general public, however, has known little or nothing about the matter except possibly the contribution of folk music.

The range of these contributions as shown by the accomplishments in the fields in which these recipients of the Harmon awards have been accorded recognition is illuminating, sufficiently so as to surprise their friends and confuse the scornful. In four years the roster of those given awards for achievement in the seven major fields of human endeavor furnishes evidence of productive power that will stand the scrutiny of the most critical. In music, in literature, in fine arts, in science, in education, in religious service and in business 55 awards were conferred upon distinguished Negro Americans. In addition, this year a Negro has been given a gold medal and an honorarium of one thousand dollars for outstanding achievement in improving relations between white and colored people in America, the first time such a distinction has ever been accorded to a colored person.

In estimating the significance of these achievements one should bear in mind that the recipients of the awards have overcome barriers of poverty, ignorance, previous condition of servitude and unreasoning prejudice such as no other element of our American population has faced. Viewed in relation to the depths from which they came, the heights to which they have climbed take on an extraordinary impressiveness.

These distinguished Americans who have received such recognition from their white and colored fellow-citizens are only the advance guard of larger possibilities, of greater achievement of larger numbers in the future. These achievements over so wide a range and of such a quality should encourage all those who in the darker days of the past have believed in the human possibilities of these people and should stimulate many today to hold out brotherly hands of encouragement. Especially should the churches be gratified; some of the men and women who have been recognized by these awards received practically their entire training in some of the schools and colleges supported by the churches, and some of the Negro educators who have achieved distinction are carrying forward the work begun by the missionary teachers of a generation ago.

As the Negro population shifts to urban centers and as conditions change in both town and country, more and more there is need for greater emphasis by the churches upon equality of opportunity irrespective of race or color. With the barrier broken down we may expect larger contributions from Negroes in all the other fields of our varied culture and civilization.—Federal Council Bulletin.

Young Man Gets Grandfather's Watch

Presentation Made in National Baptist Publishing Board's Plant

A watch formerly worn by the late Dr. R. H. Boyd, founder of the National Baptist Publishing Board's Plant in this city, was presented to Richard Henry Boyd, III, at the chapel service of the National Baptist Publishing Board's Plant on Saturday morning.

R. H. Boyd, III, is the son of the late J. Blaine Boyd, who was the second son of the late R. H. Boyd. The presentation was made by Henry A. Boyd, the oldest son, and the present secretary of the Plant who succeeded his father.

The watch was left in trust to be presented to the grandson at a stated time. The delay in the presentation was due to the fact that Henry Allen has been constantly on the go, and this was the first opportunity to make the presentation.

TO THE FARMERS:

The Modern Farmer contains information every month that you will not find in any other farm journal. It is the only journal published by and for our people that is devoted exclusively to the farmer and his family.

The price is in reach of every one—being less than 2 cents per week. During these times when the farming industry is undergoing so many changes, and when so many advantages can be had by our colored farmers if they are only aware of them, it is absolutely necessary that you should know what is going on. Three-fourths of the white farmers are subscribers to the white farm magazines and journals. They know just what is going on.

Fill out the blank—secure a money order for $1.00 and mail at once:

The Modern Farmer,

447 Fourth Avenue, North,

Nashville, Tenn.

Find enclosed order for $1.00. Send me the Modern Farmer for one year.

Leaders Of Both Races Pay Honor To Pres. W. J. Hale

President of the State A. & I. College Given Harmon Foundation Award For Outstanding Service Rendered Race In Field of Education.

Dean William F. Russell of Columbia University Presented Gold Medal—Governor Henry Horton Speaks—Telegrams from U.S. Senators and Congressmen Read

Winner of the William E. Harmon Foundation award, President William J. Hale of the State A. and I. College, yesterday returned to the progress of his race the $400 honorarium bestowed upon him as the nation's outstanding educator of the Negro race.

PROF. WILLIAM J. HALE,
President of State A. and I. College, who was honored Tuesday by leaders of both races.

Dean William F. Russell of Columbia University, a member of the committee selecting Prof. Hale for the award given for the first time to a Tennessee Negro delivered to President Hale the gold medal emblematic of his outstanding service to his race, and in turn the head of the Negro institution retained unto himself only the honor of the reward and with the $400 honorarium and $400 of his own, contributed that fund to the work of the interracial League of Tennessee.

Leaders Pay Tribute

Education, white and Negro, from every section of Tennessee, officials of the nation's oustanding institutions of learning, the governor of Tennessee, and leading citizens of the commonwealth gathered to honor the president of the institution and to pay tribute in his recognition as one of the outstanding creative and administrative leaders of the Negro race in America, recognition which the national awards carries with it.

"It wasn't intended for me alone. But it's yours, ours, as well as mine, emblematic of achievement through cooperation of the races, white and black," Prof. Hale declared and turned to hand the check for $400 to Prof. P. L. Harned

To the honorarium of the Harmon fund, President Hale added $400 of his own funds.

Horton is Speaker

"Men of the character and outstanding ability of Prof. Hale have brought about the uplift of the Negro race more than any other factor," Governor Horton said in expressing the sentiment voiced generally throughout the ceremonies.

"The story of the boy who fought hatred, adversity, and the prejudices of his race is the story of Moses, the story of Napoleon, of Lincoln, of Franklin, and the noble characters of history," Dean Russell said in awarding on behalf of the commission of Race Relations, Federal Council of Churches, the Harmon award.

Hundreds of telegrams from leaders throughout the nation from U. S. senators, congressmen, bankers, educators, statesmen, were flooding the offices of Prof. Hale in praise of his achievement and his honor therefor, while the ceremonies was being held.

Throughout the program, the spirit of cooperation between the races, the revelation of the common aim of progress and improvement of citizenship were the keynote sounded by Negro and white. The rise of the A. and I. from a two-building plant to a million dollar state institution, recognized by the nation's leading universities, and all under the direction and through the genius and effort of President Hale was recalled by the state's educators including: Prof. P. L. Harned, state commissioner of education; Governor Horton, Dr. W. F. Russell, City Attorney J. Washington Moore, representing the mayor; Speaker Charles H. Love, the Rev. Prentice A. Pugh, S. L. Smith of the Rosenwald Foundation, Prof. C. B. Ijams of the state board of education; Prof. R. L. Jones of Memphis and members of his own race; W. L. Porter, editor of the E. Tennessee News of Knoxville; Dr. R. T. Burt of Clarksville; Dr. C. V. Roman, editor of the National Medical Journal; Dr. A. M. Townsend, member of the commission of race relations, federal council of churches; Dr. H. H. Walker, president of the Nashville Negro board of trade; Dr. J. A. Lester, registrar of Meharry Medical College; J. C. Napier, former register of the U. S. treasury and others.

Presented by Russel

Dean Russell, in the presentation of the award, paid tribute to the efforts of such men as Dr. Hale in setting up a new standard of citizenship and education through which all citizens were offered the opportunity of improvement.

He denied the theory that all men were created equal, or that all were offered equal chances to succeed, but proudly boasted of the nation's achievment in giving every citizen a chance to educate and improve his condition.

"We have set up in our society, regardless of race, regardless of birth, regardless of conditions, the opportunity for every man to improve his condition and advance with civilization," he declared.

Governor Horton declared it a service of honor to one of Tennessee's distinguished educators.

"This institution does as much for the uplift of our citizenship as any other in the state," said the governor. "Its growth and development are attributable to one man—Prof. Hale." He praised President Hale's leadership in the progress of the institution.

Memphian Pays Tribute

Prof. R. L. Jones, surerintendent of Memphis schools, and former superintendent of public instruction for the state, told of his experiences in the start of the school, of Prof. Hale's early life and struggles in Chattanooga, and the rapid development of the institution through his guidance.

"The award exemplifies hope that the colored youths may hereafter take their place in the world," he concluded.

Commissioner P. L. Harned recalled the history of the school, its steady growth, the early boyhood of President Hale who carried water for a railway crew and later loaded coke and coal or a living to support his mother and family in a little home in Hamilton county.

"This great institution is the growth f his mind, and the development of .is conception of a great institution for the education of his race." Commissioner Harned declared.

W. L. Porter, editor of the Knoxville Negro daily explained that the friends of the colored race in the North and East could not realize the cooperation and common aims of the two races in the South. He introduced Governor Horton as the "Elisha" upon whim the mantle of the great Governor Austin Peay has fallen.

Dr. R. T. Burt, Negro leader of Clarksville, accompanied here by the Mayor of Clarksville and several leading citizens, in introducing Commissioner Harned, a fellow townsman gave him credit for the "present high standard of education in Tennessee."

Special Musical Nnmbers

Music and special numbers by the A. and I. orchestra, the Fisk glee club and individuals of the Negro race were given.

The program was broadcast over stations WTNT of the Tennessean and WLAC.

Included in the group sending letters of appreciation and telegrams were:

Ex-Governor Tom C. Rye, U. S. Senator W. E. Brock, Congressman J. Will Taylor, L. G. Walker, editor of the Chattanooga Times; Ex-Governor Alf Taylor; Dr. George Stoves, Col. Luke Lea, Chancellor J. H. Kirkland, of Vanderbilt; Dr. Bruce R. Payne of Peabody College, Dr. W. F. Powell of the First Baptist Church, Julius Rosenwald of Chicago, T. R. Preston of Chattanooga, Judge John H. Dewitt of the state court of appeals, who presided over the ceremonies; Rogers Caldwell of Nashville, Bishop Thomas F. Gailor, Mayor Hiliary E. Howse, President H. A. Morgan of the University of Tennessee, Thomas Elsa Jones of Fisk University, Dean W. F. Tillett of Vanderbilt University, J. B. Watson, president of Arkansas A. M. and N. College; Alice Dunbar Nelson of American Interracial Peace Committee; J. S. Zeigler of the Austin Peay Normal; R. S. Wilkinson of A. and M. College of South Carolina; N. B. Young president of Lincoln University of Missouri; C. H. Tobins of the National Council of Y. M. C. A.; Dudley Tanner, state agent of the Rosenwald fund; Clement Richardson of Kansas Vocational School; H. Alvin Russell of St. Paul Normal and Industrial school of Virginia; W. A. Robinson of Austin High of Knoxville; William M. Kelley editor of the Amsterdam News of New York; Dr. Mabel Carney of Columbia University; John M. Gandy, president of the Virginia Normal and Industrial school; Paul E. Baker of the Greater New York Federation of Churches and Mordecia W. Johnson of Howard College of Washington.

PROTECTION FOR FUR BEARERS

Added protection for fur-bearing animals was afforded by some States in 1929 through Federal legislation Foxes, civet cats, and opossums were added to the protected list in Iowa; muskrats in Nevada; raccoons in New Brunswick; and lynxes in the Northwest Territories. In Arizonia a closed season was provided on muskrats, raccoons, opossums, and others, except from November 1 to March 1.

NEW SPRAY PROMISES CONTROL OF BACTERIAL SPOT OF PEACH

A new spray containing zinc and lime which promises to give commercial control of bacterial spot of peaches has been developed by the United States Department of Agriculture. This discovery is especially important, since this is the first time, so far as known, that a bacterial disease of fruits has been brought under direct control by spraying.

Bacterial spot has been known to plant disease specialists for about 20 years, but it is only within the past 10 or 12 years that the disease has become seriously destructive over extensive areas. It occurs in practically all peach sections of the eastern half of the country, but causes serious loss mainly in sections in which the soils are light and comparatively low in fertility.

Tests carried on in Southern Indiana and in Arkansas have shown that six applications of the spray at intervals of two weeks, beginning at "petal fall," greatly decrease the effects of the disease with no injury to fruit or foliage. In addition there was a stimulation which resulted in larger and darker green leaves. It was found also that lead arsenate might be used in connection with this material, thus reducing labor coasts. or costs.

The spray solution is prepared by using 4 pounds of zinc sulphate, 4 pounds of hydrated lime, and 50 gallons of water. One pound of aluminum sulphate may be added where agitation is poor or entirely lacking, as this helps to keep the material in suspension.

One of the first recommendations in the control of bacterial spot of peaches is to keep the orchard in a high state of vigor through good cultivation, pruning, fertilizing, control of borers, etc. In spraying it is necessary to cover the fruit and the under side of the leaves thoroughly.

COURT RULES BUSES MUST CARRY NEGROES

North Carolina Supreme Court Sustains Contention of State Interracial Committee.

Raleigh, N. C., Feb.—The decision just handed down by the North Carolina Supreme Court, ruling that buses are common carriers and hence that they must provide accomodations for Negro passengers, brings to a satisfactory end a case that has been under negotiation and in the courts for many months.

Discovering that Negroes were being denied transportation on many of the bus lines, the State Interracial Committee first took the matter up with the bus companies more than a year ago, but without success. The Committee then appealed to the Corporation, requesting that the Commission issue a ruling that buses were common carriers and must make the desired provisions. The Corporation Commission in turn failed to act and, as a last recourse, the interracial group took the matter into the courts.

TWO HUNDRED COLORED ALABAMA FARMERS

Montgomery, Ala., Jan. 31—Having as his inspiration the presence of more than 200 substantial colored farmers of Montgomery county and the attractive exhibit of 2,500 pounds of homegrown pork and 105 dozen of eggs, Pres. Benjamin F. Hubert of the Georgia State College was the feature speaker at the third annual conference of Montgomery county's colored farmers held today at the Alabama State Teachers' College, H. Councill Trenholm, President.

Presented as a recently appointed member of the Advisory Committee of the National Illiteracy Commission, President Hubert began by urging every farmer to learn at least to read. In a most practical and appealing fashion, the speaker emphasized the importance to every farmer of (1) getting some land that he can love, (2) finding out what that land can best produce, (3) getting first class stock and everything else that can work for the farmer, (4) recognizing that not only capital labor but sense as well is necessary for successful farming, and (5) participating in all the efforts at cooperative marketing that are sent up by the proper county officials.

Other speakers at the morning session included Supt. W. R. Harrison, of the Montgomery School, Messrs Simon Roswald of the State Fair, and D. C. McInnis of the Royal Mills. The conference devoted the opening hour to community reports on the work of these units during the year.

For the afternoon, an interesting demonstration in the cutting and trimming of a hog as done by a representative of the local Armour agency and an extended address by Mr. T. M. Campbell, Regional Supervisor of the Southern states were the chief features. Ten prizes—five for the best exhibits of homegrown pork and five for the best three-dozen-egg displays—that totalled $225.00 were announced by Mr. Haygood Paterson, Chairman of the County Board of Revenue. The prize winners in order were Messrs. William Phillips, William Lewis, I. D. Tolos, J. P. Phillips and W. P. Puckett for the meats and Mr. W. H. Hardman, Mesdames Ellen Denard, Rosa Lucas, Mr. J. W. McCree and Miss Fannie Jackson for the eggs. These prizes had been contributed by Montgomery merchants in response to the appeal made by the county agents—Mr. J. T. Alexander and Miss A. M. Boynton.

The officers of the Montgomery County Colored Farmers Association as re-elected are Mr. O. C. Crowe President; Miss Sadie Jordan, Secretary; Mr. Dan Isaiah, Treasurer; Mr. W. C. Campbell, Chairman of Executive Committee and Mrs. Emma Jordan, Chairman Woman's Division.

Among the visitors in attendance at the conference were Messrs. T. M. Campbell, E. C. Dobbs, V. C. Turner, C. H. Gibson and Miss L. C. Hanna of the Extension Division with headquarters at Tuskegee Institute; President J. F. Drake of the A. & M. Institute at Normal; Messrs. J. P. Phillips, M. L. Blackwell and Mrs. L. R. Daley who have been county agents in Montgomery County in previous terms; Mr. L. M. Edmondson and other representatives of the demonstration division of Montgomery county; and a representative group of the Colored ministers of the city.

HEAVY CROP OF STRAWBERRIES

(Special to the Modern Farmer.)

With acreage of Florida strawberries about 30 per cent greater than last year and an average yield of 2,300 quarts per acre indicated this season, the Florida crop may amount to the high total of 18,400,000 quarts, or about one-third more than in 1929 This would be a record for the state, but recent cold weather may cause some reduction in the final crop estimate. January movement has been heavier than during the same period in any previous season.

Shipments last week increased to 120 cars, compared with 12 a year ago. Shippers were getting mostly 17 cents a pint or 33 cents per quart cash at loading points Receipts in large consuming centers were bringing 15-23 cents on a pint basis.

STARVING BABY CHICKS IS FOUND UNNECCESSARY

The popular belief that baby chicks should be starved for the first 48 or 72 hours to prevent bowel trouble has finally given way to scientific knowledge. It is now known that early feeding is not harmful. However, neither, does delayed feeding seem to be harmful.

Experiments conducted by Burt W. Heywang and Dr. M. A. Jull, poultry specialists of the United States Department of Agriculture, to determine the effect of early feeding on the absorption of the egg yolk which is usually present in the body of the chick when hatched show that early feeding actually tends to stimulate slightly the rate of yolk assimilation. Feeding scratch grain caused more rapid assimulation than feeding mash.

As a result of these experiments, Doctor Jull points out, poultry raisers now have unbiased facts to guide them in the management of baby chicks. Under normal conditions the best thing to do is feed them early. If there is some special reason for withholding food for the first two or three days, this can be done without running the risk of stunting the chicks. Baby chicks shipped by parcel post or by express probably should not be fed before being shipped, Doctor Jull says.

HORTICULTURAL ODDITIES SAMPLED

American grown dates, tangelade, and persimmon ice cream were three unusual delicacies served to the members of the Batanical Society of Washington at the December meeting when Dr. Walter T. Swingle, of the Bureau of Plant Industry, United States Department of Agriculture, delivered an address on the department's work introducing the date palm into the Southwest. He exhibited motion pictures and lantern slides illustrating comparative conditions of date culture in the Old World and in California, and then offered samples of the American grown fruit.

Tangelade is made from the juice of the tangelo, a hybird offspring of the grapefruit and tangerine orange.

The persimmon ice cream, made by mixing with the cream the pulped fruit of the Oriental persimmon, much the same way that peach ice cream is made, reflects another activity of the United States Department of Agriculture in its effort to introduce and develop superior varieties of persimmons.

COTTON GINNED PRIOR TO JANUARY 16 IN TENNESSEE: CROPS OF 1929 AND 1928.

The Department of Commerce, through the Bureau of the Census, announces the preliminary report on cotton ginned by counties, in Tennessee, for the crops of 1929 and 1928. The total for the state was made public Thursday, January 23, 1930.

(Quantities are in running bales. Linters are not included.)

County	1929	1928
The State	473,015	404,656
Benton	2,358	2,107
Bradley	1,888	1,950
Carroll	17,582	12,839
Chester	10,355	9,391
Crockett	24,477	19,927
Decatur	4,966	4,100
Dyer	31,677	26,605
Fayette	27,967	22,904
Gibson	32,552	26,755
Giles	8,889	8,781
Hardeman	19,867	16,806
Hardin	7,193	5,684
Haywood	25,687	21,479
Henderson	16,639	15,733
Henry	2,683	2,204
Lake	21,745	16,435
Lauderdale	26,776	24,129
Lawrence	18,709	18,634
Lincoln	7,904	9,252

McNairy	20,399	17,693
Madison	28,171	22,829
Obion	11,330	9,027
Polk	2,557	2,743
Rutherford	7,287	7,073
Shelby	41,979	34,462
Tipton	35,041	30,661
Wayne	1,656	1,719
Weakley	5,666	4,542
All other	7,650	6,828

RAILWAY WILL RUN SOIL IMPROVEMENT CAR

Tour of West Tennessee Counties to be Made Last Half of February.

Farmers along the lines of the N. C. & St. L., Railway west of Nashville will have an opportunity to have their soils tested for acidity without cost, through the cooperation of the N. C. & St. L. Railway and the Agricultural Extension Service, University of Tennessee, in operating a soil improvement car during the last half of February. Besides a Chemical test of soil for acidity by experts, the car will be equipped to offer practical suggestions for the improvement of undesirable soil conditions and for building up soil fertility through the use of lime.

The car has been equipped with a Laboratory specially designed for practical testing of soils for acidity. The University is providing an experienced agronomist to have charge of the car throughout its entire trip, in addition to the district and county agents and home demonstration agents who will be with it in their respective territories. The car will also carry exhibits and literature dealing with the advantage and methods of improving soil so as to get more economical farming results.

The Railroad will operate the car on a schedule allowing stops of several hours at principal station in each county, where all soil samples brought in by farmers will be tested for acidity in their presence. Every farmer in the territory served is invited and urged to take advance of the service, offered without cost. County Agents and home demonstration agents in the various counties through which the car is to run will be able to provide farmers or gardeners with diagrams for taking soil samples, and advise with them as to just how and where these samples should be secured.

Counties through which the car is to be operated are Shelby, Fayette, Hardeman, Madison, Henderson, Decatur, Carroll, Henry, Weakley, Obion, Humphreys, Dickson, Hickman, Lewis and Cheatham. County Agents and home demonstration agents in these countries will be in position to furnish detailed information about the car. Railroad agents at N. C. & St. L., stations in the counties will be informed of the schedule of the car.

SEED CORN SITUATION ALARMING SAYS CROP EXPERT

The Tennessee corn grower has not faced a proper prospect for home grown seed of high germination since the winter of 1918 states Prof. O. W. Dynes, Agronomy Department. University of Tennessee.

The late fall rains and early cold weather caused untold damage to seed corn in many sections of the State. The farmer who selected his 1930 seed corn in the field from standing stalks and stored it in a well ventilated place has no reason for worry, However. Germination tests of corn from certified fields just completed by the Agronomy Department of the State University shows a high germination in almost every case.

Most Tennessee farmers still select their seed corn from the crib. The danger of securing of low vitality is therefore great. The only way to be sure that such corn will germinate is to conduct a germination test. The following simple method of selection and germination is recommended.

SELECTION

Select seed corn from the top and sides of the crib. Discard all ears where the kernels are loose on the cob and where the cob itself is discolored or damaged. Discard any ear with dull, dark kernels or where the germ is a dark yellow or blackened. Remove all kernels from the tip and but of each ear.

TESTING FOR GERMINATION

Shell about a hundred of these selected ears mix the seed thoroughly and select at random 100 Kernels. Secure a pie pan or dinner plate and place in it a clean damp cloth. Arrange the kernels in such a way that each grain will have full contact with the cloth. Cover with a similar damp rag invert another pan or plate of the same size on top and place behind the stove or other warm place where the temperature does not exceed 110 degrees F., or drop below 70 degrees F. Watch the moisture condition from day to day, adding water but allowing no free water in the germinator. In five or six days the test should be complete.

If 90 per cent or more of the kernels sprout the corn can be safely utilized for seed. If the sample becomes Moldy and drops below 90 per cent it will be advisable to secure seed from a certified field. Addresses of growers of certified seed will be sent, upon request to the Department of Agronomy, University of Tennessee, Knoxville.

NEGRO FARM ASSOCIATIONS

Eight years ago the farmers of Florida organized what was known as the **Negro Farm Association of Florida.** H. H. Williams of Hastings was made president, Prof. A. A. Turner, of Tallahassee, secretary, S. H. Hendley, of Gainesville, Treasurer. It was soon observed that body could do very little toward helping the farmers—other than to act as an advisory agent. The organization was chartered under the laws of Florida.

FARM UNITS ORGANIZED

These officers got busy. They organized Farm Association at Shipping points where ever they group 15 to 30 farmers. Alachua county has 4, Marion county 4, Sumter county 1, Columbia county 1, Suwannee county 1, Jackson county 1.

These farm associations have been shipping in car lots to the northern and wastern markets ever since. The **Florida State** Marketing Bureau at Jacksonville financed by the state of Florida for the benefit of all farmers, has been of untold benefit to Negro farmers. This Bureau co-operates with the bureau of agricultural economics at Washington.

I was farm demonstration agent of Alachua county for 8 years—resigning two years ago. In making my round I would make a survey of 1 The number of acres of the various crops to be sure the acerage was large enough to insure car lot shipment from that point. 2 Uniformity in the time of planting. Uniformity in kind of seed fertilizers.

GEORGIA FARMERS

Five years ago 40 farmers—led by Prof. Williams, formed a motorade and visited our shipping to get points on grading and car lot shipping. We were glad to show them through.

FARM RELIEF BILL

After the passage of the Farm A the number of associations rose 10 to 20 in the hope of getting Federal aid. At the Ocala meeting 3 months ago nearly every agricultural county was represented.

S. H. Hendley,
Ex. Dem. Agent.

THE MODERN FARMER

Vol. II. Nashville, Tenn., and Chicago, Illinois, April 15, 1930. No. 2.

COOPERATIVE PRODUCTION AND INTENSIVE FARMING URGED

Better Farming Contests Are Announced By Federation

Will Award Prizes of Considerable Value

RULES GOVERNING THE CONTEST AS ANNOUNCED VERY SIMPLE

Right this way, Brother Farmer: We want to tell you about a contest that cannot help but interest you and every member of your family. It is our great "BETTER FARMING CONTEST" which starts right now and ends December 1, 1930.

The National Federation of Colored Farmers and The Modern Farmer are sponsors of this contest and every member and subscriber is welcome to enter. Any member of your immediate family is also welcome. No strings are attached. There are no fees. Some valuable prizes will be given away December 1st and you will not have to be "lucky" to win one. You will only have to enter the contest and do some real, sure-enough, "BETTER FARMING" this year for that is why the contest is being held. We want to encourage those who are ambitious enough to attempt to be better farmers.

You can be a better farmer and you can win a prize. And too, your better farming will pay you much more than the prize will be worth. There is no reason why you should not enter the contest.

In this issue we are going to tell you about some of the prizes. Not about all of them. Neither are we telling you who all the donors are. We will announce the names of the donors when the prizes are awarded. We will add to this list from month to month. You have until the fifteenth day of June to enter.—to get your name enrolled. Now here are some of the prizes:—

To the farmer who submits the best itemized statement showing the cost of producing any chosen crop,—livestock included,—and the profit derived from same,—a prize of ten dollars will be given.

For the best and largest watermelon,—a prize of ten dollars.

To the farmer's wife or daughter, for the best can of peaches exhibited at any state or county fair,— a prize of ten dollars.

To the farmer who markets the first bale of 1930 cotton,— a valuable dictionary.

To the farmer who exhibits the best display of vegetables from his own garden,—a Planet Jr., No. 17 Single Wheel Hoe.

For the best letter received telling "Why The Colored Farmer Should Organize,"—a year's subscription to a prominent agricultural publication.

For the second best letter received, —a year's subscription to a prominent household magazine.

For the best display of poultry any breed, —exhibited at any state or county fair,—a valuable incubator.

The Rules are Simple

We have mentioned just a few of the prizes to be won by "Better Farmers." To be eligible you must notify us that you desire to enter the "BETTER FARMING" Contest,—not later than June 15, 1930. Simply write,—"I wish to enter the "BETTER FARMING" CONTEST,"—sign your name, and address your letter to Secretary, National Federation of Colored Farmers, Vincennes Hotel, Chicago, Ill. There is plenty of room. There are lots of prizes. Write today.

Sou. Carolina Farmers Grasp Opportunity

Federal Land Association Great Aid

Federal Land Bank Will Give Assistance

LEXINGTON, MISS., ORGANIZATION IS DOING GREAT PIECE OF WORK

One of the most successful Federal Land Bank Associations in the country is the one organized by a group of colored farmers at Lexington, Miss., in 1911. The members of this Association are all Negro farmers of the county. C. C. Richardson is Chairman and Prof. U. S. Donellson is Sec.-Treas.

This Asso. has passed on and secured over a quarter of a million dollars in Federal land bank loans for colored farmers. There are at the present time 154 of our farmers in the county who have borrowed money on their farms from Federal land banks. During 1929 four farmers paid up their loans in full.

Thirty-five years Federal farm loans can be paid out in full any time after the fifth year. The interest is only five and one-fourth cents on the dollar per year and colored farmers in any county can form a Federal Land Bank Assn. The officers of the Lexington Association are to be commended for their good work. It should be an inspiration to our farmers in all the counties of the south especially.

Your organization,—ever ready and willing to serve you,—will send you full particulars about how to start a Federal Land Bank Assn. if you desire to start one. Write to the National Federation of Colored Farmers, Vincennes Hotel, Chicago, Ill.

FARMERS ORGANIZE AT LOUISE, MISS.

March 15th the farmers of Humphrey county near Louise held a most enthusiastic meeting and organized—with 50 red blooded farmers giving their names for membership.

The following officers were elected:
Harrison Tyler, Chairman.
H. L. Montgomery, Secretary.
Miss Martha Chalmers, Market Agent.

Roosevelt Huddleson, Treasurer.

The next meeting, which will be held about the first of April, will bring their membership to something over one hundred.

Plans were discussed for the purchase of a tractor and based on a membership of one hundred the initial payment would be about three dollars for each member. The tractor when not being used by its members could be rented out to non-members and earn its second payment. With the ownership of a tractor several of the members could sell off a mule and thereby save the cost of feed and reduce costs on the farm.

FEDERATION NEWS NOTES

Activities of President as Reported to Paper

MUCH TIME HAS BEEN SPENT ORGANIZING UNITS IN MISSISSIPPI

The President of the National Federation of Colored Farmers is now in Mississippi and aiding in the organization of several new county units. Mount Olive unit will build a modern order for 21 tons Nitrate of Soda at a saving of over 6 dollars per ton to its members. They are also making up an order for 12 dozen pairs of overalls. Isaac Randall, a member of this unite has recently purchased a tractor and is sawing on an average of ten thousand feet of lumber daily. Mr. Randall secured his tractor thru the National Federation officers and says if the membership fee was $25.00 per year, it would be worth it.

Mr. Booker another member of Mount Olive unit will build a modern poultry house with capacity for one hundred hens. He has a large flock of very fine chickens.

C. C. Richardson and Winkler Moore, of the Trinity unit with Nick Hoskins have set their goal for five hundred members by first of September, and at the rate of present activity they will not be disappointed.

Beginning with the cotton season next fall they will open up an office in Lexington for the transaction of business for members—handling of cottan and shipping of produce as well as purchasing of supplies.

R. B. Payne, Chairman of Honey Island Unit, is holding meetings regularly now and new life is injected in his unit. This is an all colored settlement and some of the finest farm lands in the south.

Mr. Payne is now negotlating for an acre of land and plans to erect a building to be used for headquarters of his unit and look after the handling of their cotton and other farm products this fall.

Recently the County Commissioners and the State Highway Commission have appropriated one hundred thousand dollars for improving levee work and graveling the roads in Honey Island section. This will increase farm value considerably.

Good Hope unit has placed their second order for groceries and supplies. The members are well pleased with the saving by purchasing co-operatively. On one order alone they saved nearly one hundred dollars.

Clarance Jordan, Louis Irving, Tom Stewart, Calvin Winston are a few of the big moguls behind this unit.

Mt. Herman unit is just beginning to grow. They are holding meetings regularly and new members are coming in at each meeting.

Products Doubled in Value In One Year

OVER HALF MILLION COLORED FARMERS WHO OUTNUMBER THE WHITES

(Special to Modern Farmer)

South Carolina, The "Palmetto State," but long known among our people as the "state of abandoned hope," has come to the front and recognized her one million Negro citizens in a way that will bring due credit to her and to her officials, and will cause every colored person within her borders to be proud to be called a South Carolinian.

Mr. William N. Jones, writing in the Baltimore Afro-American, tells us all about it, and we are indebted to him for this interesting news. Mr. Jones says:—

"South Carolina is one of the states below the Dixie line that finds it impossible to get along without the Negro. During the week Governor John G. Richards appointed twenty-two race men and one woman as members of the South Carolina Natural Resource Commission with Seymour Carroll of Columbia, Southern field secretary of the American Humane Education Society of Boston as the chairman of the commission.

The commission carried with it a budget for $10,000. Governor Richards also approved of an appropriation of $120,000 for the State Agricultural and Mechanical College.

Iodine in Fruits

It was discovered that the fruits, vegetables and milk produced in South Carolina contain a sufficient quanity of iodine, in its natural state, to prevent or cure goitre and other conditions due to the lack of iodine. The discovery was made by Dr. William Weston, white, widely known scientist and medical specialist.

Large manufacturing interests from all parts of the United States are rushing to South Carolina to establish plants for the purpose of canning the vegetables and fruits of the state.

Canning Factories

Many thousands of Negroes will be given employment in the canning

(Continued on Page 2)

SPECIAL DEPUTIES FOR NATIONAL FEDERATION COLORED FARMERS

Misses Martha and Fannie Chalmers of Louise, Miss., have been appointed Special Deputies for the National Federation of Colored Farmers, and in about three weeks will begin their duties of visiting different sections of Mississippi and organizing units among our farmers.

The Misses Chalmers are well known throughout Mississippi, Alabama and Texas and are from one of the most prominent and highly respected families in the south.

They are well educated and fitted for this work. Any section needing assistance in organization work kindly write in for your dates.

Advocated by Georgians—Wants Ways Changed

EIGHTY-FIVE THOUSAND COLORED FARMERS REPORTED IN THE STATE

Recently the Atlanta Constitution has published articles by two prominent citizens of the state of Georgia, who have commented upon the condition of southern agriculture generally, and have given some very sound advice which should interest and help the Negro farmers of the south in particular. In one article Mr. Charles Haden advocates co-operative production of cotton as a relief. He tells all of his brother farmers that the low wage countries of the world,—mainly Russia, Brazil and India, are about to take the production of cotton, the master industry of the South, away from us, and that if we do not get together and work together the future will be black indeed. Mr. Haden says:—

"So much public attention," has been directed lately to the one phase of marketing as to overlook things of equal or greater importance.

"The people of the south" "should know that our master industry is challenged. If we hold our place we must adopt labor-saving methods and thrift."

"Co-operative marketing with federal financial aid at best is only a partial relief for cotton. As much or more can be saved in co-operative growing. Modern tractor-drawn farm equipment, which may be used especially on plantations, will reduce the cost of production from 2 to 4 cents per pound. This equipment costs more than the average individual farmer can pay and has as a capacity often beyond his individual requirement. The difference between fuel oil and mule muscle in the operation of a plantation is just what it is in the operation of transportation in the city. Big business can and should join with the farmers in furnishing this labor-saving equipment on an equitable basis. It can be done in mass production just as in ginning or wheat thrashing.

"Add to this the great saving through the buying of fertilizers as separate chemicals in carload quantities, to be mixed on the spot and distributed among groups of farms.

Important Things Overlooked

"So much public attention has been directed lately to the one phase of marketing as to overlook things of equal or greater importance. For example, while the foreign production of cotton is steadily increasing in volume, the production in the south is slipping back. A few decades ago the south produced nearly 80 per cent of the cotton crop, but now we produce barely more than 50 per cent. The competition has become acute with the lands of low wages, particularly in Russia, Brazil and India. In Russia within the past few years the output of cotton has grown from near zero to the enormous yield of nearly one and one-half million bales, and this production is by men and women who work for the soviet government for their board and clothes.

"The people of the south should know that our master industry is challenged. The fight is not local, but a contest with the world outside to maintain what we have heretofore believed to be a birthright monopoly. If we hold our place we must adopt labor-saving methods and thrift."

The second writer, Mr. Harvie Jordan, advocates intensive farming. Mr. Jordan says:—

"Thirty years ago with much less acerage planted to cotton and more

(Continued on Page 2)

Farm Board of Government To Aid All Agriculturists

ARTICLE CLIPPED FROM PITTSBURG COURIER

By Robert A. Pelham

Washington, D. C.—(C. N. S.)—Economic emancipation of the Southern Negro farmer is one of the objectives of the Federal Farm Board, which has looked into the situation in the South and stands ready to grant substantial loans to this group of needy farmers when they have organized themselves into cooperatives and are eligible for the loans, it was indicated here.

The Farm Board has investigated conditions in the South, as they affect this group of American farmers to discover that the Negro farmer has never been able to obtain aid from any of the s urces and agencies which give help to white farmers in financial straits. Excluded from membership in the national farm associations which were set up under the farm loan system, the colored farmers of the South, no matter what their legal rights may be, have in the past been able to secure no help from these groups. Organized by white men, these associations have white men for their appraisers and white officials to administer applications for loans. As the Federal loan system requires that money which is advanced be secured on valuable land of other tangible property, and unfavorable report by the appraiser automatically makes loans of these Federal funds unavailable to Negroes. The Negro tiller, although responsible for the production of more than 40 per cent of the agricultural products of the South is denied even 1 per cent of the aid from Federal moneys available for loans in that region.

As a result nearly 70 per cent of the Negro farmers are barely able to eke out a livelihood from their small, and often impoverished farms. Tenant farmers, share farmers, or owners of small farms, with no fund available for them to modernize their methods, many of them are forced to toil away year in and year out, often raising but a single bale of cotton in a season. At the country store where they borrow supplies against their growing crops, the balance at the end of the season is often chalked up in red on the debt side.

It is to this group that the Federal Farm Board aims to give relife, and under the Agricultural Marketing Act, there is a possibility that Federal money may be used to ameliorate the conditions for the Farm Board may extend help through co-operative marketing associations which require no security for membership. As medium which market crops to the advantage of the growers, unlike the national farm association affiliated with the Federal Farm Loan system, the man who is farming on shares, or on a rented farm, and the little fellow who owns scarcely enough to warrant a loan, all may become members, and thereby become eligible for loans. Working through these organizations the Federal Farm Board can grant loans, therefore, without the necessity of having large initial security, and in this way solve one of the most distressing problems of the national farm situation.

The burden, however, is very definitely placed upon the farmer himself. Race leaders have been warned that individuals cannot be dealt with. It is up to the farmers to organize into co-operatives and elect officials from their own group to represent them, and reports say, they are accepting the challenge.

FEDERATION NOTES

(Continued from Page 1)

The wives of the members of Mt. Herman have formed a canning club and will pack vegetables this summer and fall.

The Federation offices will endeavor to find markets for their product.

Cooper unit near Belzoni have some very substantial men as members of their unit. The church building where meetings have been held recently burned, but they have secured another meeting place and will give a good account of that section this spring.

Mr. Jno Cooper has recently placed an order for a carload of feed and hay at quite a saving.

King's Chapel near Alpine, Ala., under guidance of Nobile Calhoun, B. H. Swain and J. L. Nicks are needing two or three cars of fertilizer and will also need groceries and supplies for its members.

Mr. Calhoun is considering the idea of erecting a store on his farm for the members.

Nealey Jackson one of the best farmers in Mississippi and a member of Mt. Herman unit has been seriously ill at the hospital in Lexington. Late reports are to the effect that he is much improved.

Jakie Williams of Glen Allan is busy getting things in shape for the organization of a unit in his county. The President of the Federation will assist him.

Mr. Joe Woolfolk, one of the most prosperous farmers in the Delta called a meeting at the church in Craigs. the middle of March and organized a unit of the Federation. A small beginning, but Mr. Woolfolk says it will be but a few weeks when he will have good representation in his district.

Holaday Chapel unit near Louise, Miss., are considering the idea of purchasing a tractor for its members as soon as they reach a membership of one hundred. The tractor will be rented out to non members when not used by the owners. One hundred members paying three dollars each will make the initial payment on a tractor.

COOPERATIVE PRODUCTION

acres planted in food and feed crops, although the staple sold for only 6 to 8 cents per pound in our interior markets, farm life was attractive, farm land mortgages were practically unknown, farmers' credits with both supply merchants and local banks were good, while farm labor, wages, tenants and share croppers were plentiful and contented.

With an increased acreage in cotton within recent years and less acreage in food and feed crops, land mortgages have multiplied, cotton growers' credits have greatly decreased, while farm labor in rapidly migrating to industrial centers.

Every effect has a cause. What is the trouble and what is the remedy? It cannot be charged to the prevailing price of cotton for the past several years, and the difficulty will not be altogether cured through any economic reform in co-operative marketing.

Co-operative marketing, if managed economically, will be most helpful in aiding the growers to better secure the full market values for their grades and staples, but it does not reach the real fundamental troubles of the cotton growers.

The main hope of the future for Georgia agriculture lies in the rank and file of the farmers getting back to the days of 30 years ago, when every farm was self-sustaining by growing abundant food and feed crops and not making the supply bills dependent upon cotton.

There are thousands of farmers who are now adopting safe and sane methods of farming which enable them to lead a life of freedom and independence from debt. There are thousands of others changing from the unprofitable all -cotton system to better methods through a more diversified practice of intensive culture."

Intensive culture means fewer acres to the plow, higher fertilization, increased yields per acre at a lower cost of production. When the great masses of our farmers shall have returned to safe and sane methods of farming the greatest economic problem of the cotton growing industry will have been solved.

Both of these writers have emphasized one thing and that is,—that in order to carry out any sort of a helpful program, southern farmers must work together and work together. They cannot do this unless they organize co-operative units and mass what strength they have for their benefit. Negro farmers of the South are right at the pushing off place and unless they organize they might as well pack up, bag and baggage, and pass out as an economical factor in the South. Their days are numbered unless they organize.

The colored farmers of Georgia are progressive, are not illiterate, and some of them have become fairly prosperous. There are nearly 35,000 of them in the state. 12,000 of them own their farms. In forty-five counties of the state they outnumber the white farmers.

The Farm Board says "ORGANIZE!" The white farmers are doing this. The colored farmers are hesitating. Pretty soon it is going to be EITHER ORGANIZE OR ELSE!

A TARIFF FOR COTTON

The entire South, and the Delta especially will be elated at the action of the United States senate in placing a tariff of seven cents on cotton longer than an inch and one-eighth in staple.

This action of the senate comes after a long fight and is an indication that the United States congress is recognizing Southern agricultural interests in its tariff schedules.

The tariff on long staple cotton should and will mean more profit to the Delta cotton growers. It will be the cause of manufacturers using a greater amount of American grown long staple cotton through forcing up the delivered cost of Egyptian staples which are now used.

The difference in carrying charges between cotton delivered in the United States and in foreign countries will remain in the hands of the cotton section as profit.

The Egyptian competition is a serious one for the long staple producers. The production in Egypt averages 395 pounds to the acre to 153 pounds in America, thus averaging a far less cost per acre.

In 1928 America imported a total of 457,804 bales of cotton of all classes, of which 315,325 bales were long staple. In other words, from one-half to one-third of the long staple cotton consumed in the United States comes from abroad.

While the tariff on Egyptian cotton benefits only the long staple growers, comparatively few in number, when compared with the whole number of cotton producers in the short, it augurs well that cotton producers may ultimately expect whatever benefit the tariff may render, to be extended to them.

Editorial Greenwood, Miss., Commonwealth.

This bill will in all probability become a law and add hundreds of thousands of dollars revenue to organized colored farmers.

SPECIAL DEPUTIES

(Continued from Page 1)

factories. which will furnish a ready market for the produce of the Negro farmer. Already the farmers in Newberry county, who are organized have sold their spring crop to New York buyers. A little over 1,400 acres of land in this county have been planted in spinach alone. There isn't any material increase in acres planted in other crops.

The Negro colleges of the state are carrying the slogan, "South Carolina the iodine State." So enthusiastic are the people over the discovery by Dr. Weston, that the word "Iodine" appears on the automobile license plates of the State.

$5,000 for Travelling

On March 18 to 20 inclusive the Commission will make a good-will tour through the northern part of the State. The Commission will travel to other states in its effort to carry out the Iodine Educational program. The Commission will also be represented at all national conventions, state fairs and all similiar meetings throughout the country in its attempt to spread iodine good news. An appropriation of $5,000 has already been made by the State to meet the traveling expense of the Commission.

The race men on the committee are Seymour Carroll, of Columbia, Chairman; President D. H. Sims of Columbia; George B. Yeargan of Simpsonville; Andrew Hill of Aiken; Joseph Orangeburg; James E. Dickson of Columbia; Mrs. J. Miller-Earle of Ridgeland; C. E. Nelson of Columbia; George W. Howard of Georgetown; Samuel L. Finley of Chester; J. P. Burgess of Orangeburg; W. I. Peeks of Anderson; Henry Butler of Hartsville; Andrew. Hill of Aiken; Joseph B. Williams of Newberry; Harry E. Daniels of Orangeburg; A. G. Kennedy of Bennettsville; Willis Watson of Ridge Springs; A. J. Collins of Columbia; Geo. H. Hampton of Columbia; I. M. A. Mayers of Manning; A. A. Sims of Union; President John Jacob Starks of Sumter.

Mrs. Mary Miller-Earle, the only woman on the commission is the daughter of ex-Congressman Thomas E. Miller of Charleston. Ex-Congressman Miller is still living."

For the benefit of our readers we are quoting some interesting statistics from the agricultural census of 1925.

FARM PROGRAM MAPPED

Tallahatchie Farmers and Agents Confer at Charleston

Charleston, Miss., March 11.—A meeting of farmers of Tallahatchie County with the district and county agents was held in the auditorium of the Tallahatchie Agricultural High School, to agree upon a program during the year.

H. E. White, district agent, had charge of the meeting, being assisted by H. B. White, county agent, Miss Viola Phillips, county demonstrator, and Miss Jewell Garland, district demonstrating agent.

The present outlook for cotton was represented as calling for a radical reduction in acreage and production and an increase of food crops and hay was stressed. Soil improvement and drainage were fully iscussed and plans made for the holding of several terracing schools next fall. The financial situation was discussed and farmers were to understand that banks were compelled to be more conservative than ever before in order to expect liquidation of advances made on the year's cotton crop.

It was decided to put on an active campaign for the planting of more legumes and adopt the slogan "Soy beans in every row of corn in 1930" for Tallahatchie County.

The above clipping was taken from a recent edition of the Memphis Commercial Appeal.

The Negro farmers in Tallahachie county are now getting ready to organize. They should have done so long ago.

We give our readers some data which is food for thought.

Number white farmers in the county 1,276.

Number colored farmers in the county 4,538.

Total farm population in the county white 4,463.

Total farm population in the county colored 18,916.

Average value of crops yearly over five million dollars.

Average cotton yield every year forty thousand bales.

Now if the white farmer who is in the minority in the county finds that it is to his advantage to organize in order to preserve his interests, how is it that the colored farmer feels that he can even hold his own without organization. Then again, what is to become of the Negro children that will soon be men and women citizens of Tallahatchie if their parents do not blaze the way for them?

WINS $6,500,000 IN OK.

COLORED WOMAN GETS 13 MILLION DOLLAR VERDICT ON TULSA OIL FARM OF 200 ACRES—LEFT BY HER GRANDMOTHER WHO HAD 3-4 INDIAN BLOOD—LAWYERS GET ONE-HALF.

Kansas City, Mo., Feb. 17, 1930.—Word has been received by Mrs. Mary Harris Wallace, 2928 Jarboe Street, this city, that she has won a fortune of six and one-half million dollars as her share of a ten-year legal battle with the Texas Oil Company in the courts of Tulsa, Okla.

Mrs. Wallace learned of her wealth she says, in a long distance telephone conversation with her lawyers in Tulsa. The total amount won from the oil company was thirteen millions of dollars, but by contract one-half of the sum went to the law firm which handled the case.

From 200-Acre Farm

The wealth comes directly from a 200-acre farm just north of Tulsa, which was left to Mrs. Wallace by her grandmother, Mrs. Nancy Brown, was three-fourths Indian.

According to Mrs. Wallace, the Texas company has been drilling in the farm for the past nineteen years and in that time disputed her title and has paid no royalties. The sum which she received now is what the court judged she should have been entitled to over all the years.

Oil is still being pumped from wells on the land, and Mrs. Wallace left Friday for Tulsa to take over the title to her farm, arrange payments or royalties and clear up the little business of six and one-half millions.

In Hauling Business

Mr. and Mrs. Wallace have lived in Kansas City since 1919. She was born in Scooba, Miss., and lived awhile in Oklahoma before coming to Kansas City. Mr. Wallace has a truck with which he carries on a hauling business.

GNATS CAUSE BIG LOSS

Planters Lose When Mules Die Near Pine Bluff

Pine Bluff, Ark., March 6.—Losses estimated at from $10,000 to 15,000 were suffered by planters in the vicinity of English and Altheimer, northeast of here during the last several days through the deaths of approximately 100 mules, killed when the section became infested with millions of large gnats.

According to L. W. Clements, English planter, the country became infested with the gnats last Sunday and during the next few days hundreds of mules, horses and cows that were forced to inhale the insects became ill. Veterinarians were called from Pine Bluff and other nearby cities and work was immediately started on covering the animals' nostrils with a fine netting used as a protection against the gnats.

About 75 of Mr. Clemments' mules were sick, but only eight of the animals died. Edgar Blackwell, who has a plantation in the section lost five mules and one horse and the operators of the Hanaberry Lake Plantation also were heavy losers. A. W. Lueka lost five mules.

The Government Enters The Grain Business

EDITORIAL FROM THE FARGO FORUM—CLIPPED

The (Farm) board should be organized to investigate every field of economic betterment for the farmer so as to furnish guidance as to need in production, to devise methods for elimination of unprofitable marginal lands and their adaption to other uses; to develop industrial byproducts and to survey a score of other fields of helpfulness.

Certain safeguards must naturally surround these activities. Certain vital principles must be adhered to in order that we may not undermine the freedom of one of our farmers and of our people as a whole by bureaucratic and governmental domination and interference. We must not undermine initiative. There should be no fee or tax imposed upon the farmer. No governmental agency should engage in the buying and selling and price fixing of products, for such courses can lead only to bureaucracy and domination. Government funds should not be loaned or facilities duplicated where other services of credit and facilities are available of reasonable rates. No activities should be set in motion that will result in increasing the surplus production as such will defeat any plans of relief.

SUBSTANTIAL BASIS FURNISHED

The most progressive movement in all agriculture has been in the upbuilding of the farmer's own marketing organizations, which now embrace nearly 2,000,000 farmers in membership and annually distribute nearly $2,500,000,-00, worth of farm products. These organizations furnish a substantial basis upon which to build further organization. In order to strengthen and not to undermine them, all proposals for govermental assistance should originate with such organizations and be the result of their application. Moreover by such bases of organization the government will be removed from engaging in the business of agriculture—President Hoover's address to the extraordinary session of Congress, April 16, 1929.

Less than a year ago President Hoover informed Congress that he wanted a Federal Farm Board to give agriculture the relief he had promised. He was explicit, however, in his warnings against the Government entering business or fixing prices. "Certain vital principles must be adhered to," he said. There must be "certain safeguards." There should be no Government domination and interference." Private business must not be undermined. "No Governmental agency should engage in the selling and price fixing of products, for such courses can lead only to bureaucracy and domination." All "proposals for Government assistance should originate" with the farmers' organizations themselves. Marketing setups should be the results of their initiative.

That was ten months ago. Since then much has happened. The Farm Board has been created. It has been functioning for about eight months. It suggested and organized the Farmers National Grain corporation, which is the large-scale, all-time orderly marketing agency. It formed the stabilization corporation, which is empowered to buy up surplus wheat and sell it at a loss to the Government, if necessary. It has loaned money right and left, provided capital for the national corporation, extended additional lines of credit. It approved the articles of the Farmers National Grain corporation approved its general manager, fixed things so it exercises a measure of control so long as the corporation is indebted to it.

It promulgated a loan policy for wheat growers, the value of the loan being based on certain fixed market prices, which the board thought necessary. Since then, it has made these loan values, the prices at which stabilization operations will have to be entered into. In other words, it fixed a price which the Government today guarantees to the co-operatives.

But what else has it done? Well, to be brief, it has put the Government in the grain business. It has put private grain concerns out of business, so far as trading in the high grades of wheat are concerned. It has created two markets, one for co operatives, one for the private trade, with the latter paralyzed because the world situation has made the actual value of wheat some fifteen or seventeen cents under the fixed prices.

Mr. Hoover's urgent demands have been forgotten. His warnings that the Government must be kept out of business, that it must not interfere with established business, that it must not kill initiative, that it must not dominate any business endeavor have been forgotten. Every safeguard he suggested has been thrown overboard.

The Federal Farm Board has become sternly bureaucratic. It has set up a grain corporation, which only in theory is farmer-controlled. It has set up a stabilization corporation, and that corporation, under its direction and guidance, is engaging in the purchasing and storing of wheat. It is buying at prices fixed by the Federal Farm Board, a Government agency and it is buying under a marketing policy promulgated by this same Government agency—a policy that interferes with private business; nay, places private business in a position where it cannot compete with the Government.

Since that message to Congress, since the Farm Board's activities first struck at the private grain trade, Mr. Hoover has repeatedly said that it is not the intention of the Government to interfere with private business or to injure it. But this one order of the Federal Farm Board's interferes with it in a particularly costly manner. It interferes with it to such an extent that the private grain houses are vitally suspended, so far as the daily market is concerned. If that isn't interfering with business, what is it?

If the Farm Board's policy is not bureaucratic, what is it? If its present purchases are not made under Government fixed prices, what are Government fixed prices?

If, finally, the Board is not manipulating the market (where now the charges made against the grain trade?) to the benefit of one class and the detriment of another, what is it doing? Aiding the farmer? Is that the answer? Doubtless. That and stabilizing the market. But how is it going to stabilize the market when the price for two-thirds of the wheat is seventeen cents under the price for the other third? The board will answer that the amounts will switch when the cooperative elevators all sign up with its marketing setup. That is true, but when will it go then? What will it do with the huge surplus, which is bound to increase? Verily, the revolving fund will be a "dissolving fund."

FOUR THOUSAND COLORED FARMERS IN ONE COUNTY

Down in St. Francis County, Arkansas, the colored farmers are leading the white farmers almost three to [illegible] These statistics were secured at the request of Mr. Joe Nixon, who, e[illegible]do, Arkansas and th[illegible]re published for the benefit of othe[illegible] farmers who perhaps will want t[illegible]now something about their own particular county.

Number colored farmers in county 4,009

Number white farmers in county 1,338.

Number bales cotton produced annually 26,000

Number bushels sweet potatoes annually 38,820

Number bushels Irish potatoes annually 15,000

You can see by the above that the Colored farmers out number the white farmers by three to one and therefore produce two-thirds of the above.

By all means the Colored farmers should be together.

Total farm population in the county 22,043

Colored farm population 16,777

White farm population 5,266.

You can see by the above that the farm poulation in the county the colored is also three to one.

AMERICAN FARM POWER SECOND ONLY TO RAILS

American agriculture has more power available than any other branch of industry except railway transportation. It has more power available per worker than all manufacturing industries, and it uses more power annually than all the country's mining industries. In electrial power alone the farms of the United States are showing rapid advancement, according to Silas A. Altorfer president of Altorfer Bros., Company

BUTT BY BIG RAM CURES FARMER OF HIS RHEUMATISM

Pierre, S. D., Feb. 8,—A farmer in Lyman County was advised that the only cure for sciatic rheumatism was a chiropractic adjustment of a vertebra. He finally decided that as soon as he could take time off from his farm he would try the plan.

But a large ram caught him unaware one day and butted him on the base of his spine, causing threats of dire revenge.

But when the farmer started to line up for acts of retribution, he found that the proper "adjustment" in his spinal column had been made by the charge of the ram, and that his rheumatism was gone.

SAYS LIFE INSURANCE COMPANIES FAVOR FARMER

Taking issue with recent statements which he attributed to Secretary of Agriculture Hyde, A. A. Zinn of Kansas City, president of the Mortgage Bankers Association of America, stated yesterday that "life insurance companies have never been more favorable to the farmer." Secretary Hyde, he stated, charged insurance concerns with contributing to farmers' distress by foreclosing mortgages and refusing renewals. This Mr. Zinn denied, saying renewals and extensions had been liberal Reading reports from 20 companies, which he said hold 50 per cent of all farm loans held by life insurance concerns, he asserted that life insurance firms have about two billion dollars in farm loans outstanding. There is more money available for farm loans he asserted, than there are customers for the loans. Farmers, he added. reduced their indebtedness to life insurance companies by $44,-000,000 during 1929.

GARDEN PESTS CONTROLLED BY POWER SPRAY

Demand Grows for Nicotine Dust, Bordeaux and Pomogreen; Process Explained.

By Colvin C. Bowsfield.

There is a growing demand fo such powders as nicotine dust, Bordeaux and pomo-green in the control of garden pests.

There is some advantage in combining these preparations if it is done under the advice of dealers or experts. The nicotine dust is specially for exterminating insects of various kinds, while the other powders are good fungicides.

All such powders must be kept in airtight cans, as they soon lose their efficacy if left in open receptacles. Each preparation is put up by itself in cans of convenient size and the garden owner can do the mixing.

HOW TO MIX.

A good combination is three pounds of nicotine dust and a pound each of Bordeaux and pomo green mixing them in an airtight can or jar that will hold the five pounds. For a small garden a proportionately smaller amount will serve. Either preparation may be used by itself, but the combination is recommended.

A small blower will suffice fot the ordinary garden, but the powder must be applied to both sides of the leaves and all over the stalks. This task is necessary at the opening of warm weather. Two or three applications, light but thorough, may be required if flowers and vegetables show insects or defects of any kind.

AFFECTED DIFFERENTLY.

Nearly all plants have diseases peculiar to themselves. This combined powder may be expected to correct defects in a majority of plants while destroying or repelling, insects from the aphis and thrip clear up to the largest worms and beetles.

As the season advances if there are large insects to be dealt with arsenate if lead may be used to advantage either by itself or in combination with the nicotine dust. All of this work in garden or truck patch comes after the early spraying of fruit and shade trees with scaleside or arsenate of lead, the latter in combination with lime-sulphur. Do not spray trees while they are budding or blossoming. Scaleside may be applied in moderate weather as Spring comes on, and the other once of twice after blossoming.

FARMERS ORGANIZE AT LOUISE, MISS.

(Continued from Page 1)

It was also decided at the meeting for the members to put a part of their acerage in vegetables with a view to making co-operative carlot shipments this summer and fall. Miss Chalmers, the Market Agent, was instructed to secure wholesale prices on groceries and farm supplies by their next meeting.

The members also discussed the different varieties of cotton and will plant Weber 49 this year.

Practically every farmer at the meeting spoke enthusiastically and pledged himself to double the membership by bringing a member to the next meeting.

Holaday Chapel means business. The men and women are reliable and absolutely no discord was in evidence.

ATTENTION COLORED FARMERS

The National Federation of Colored Farmers is receiving hundreds of letters from Colored farmers requesting all kinds of aid and information. We are willing to do everything we can for all the Colored farmers of America. It costs money, however, to maintain offices and our expenses are becoming so heavy that we are compelled to discontinue supplying information to those who request it who are not members of the Federation. If you have faith enough in the organization to believe that it can aid you, then you should be willing to join it and help support it. Isn't that so?

Several County units have organized and elected officers but have not sent in their membership dues. These units are eligible to membership in the Federation until dues are paid. Be helpful. Co-operate. Pay up. "All for each and each for all."

The Modern Farmer

Official Organ of the National Federation of Colored Farmers

Leon R. Harris - - Editor

Published Monthly by the Modern Farmer at Nashville, Tennnessee, and Chicago, Illinois.

Nashville, Tenn., Office: 447 Fourth Avenue, North.

Chicago, Ill., Office: Vincennes Hotel, 36th and Vincennes Avenue.

Devoted to the interests of the Farmer, Truck Gardener, Livestock and Poultry Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 8, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 447 4th Avenue, North, Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

"OUR SLOGAN"
STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT!

OUR SECOND YEAR

The Modern Farmer enters upon its second year of service. We are thankful for the many blessings we have received the past year and we want you, our readers, to know it. First of all,—we thank YOU. We have appreciated your interest,—your faith in us,—your loyalty and your generosity. You have inspired us to hold up our heads,—to put our shoulders to the wheel,—to keep right on striving to do what we could to make the lives of the thousands of our racial group who live on American farms, brighter and happier.

For after all, that is why the Modern Farmer is published. It is published for your benefit. You read it, and every month you get from its pages some information or advice that helps you whether you realize it or not. We have tried to give you an interesting publication. It is not the biggest agricultural publication in the country,——perhaps it is not the best,—but it is the only one published by colored American citizens for America's colored farmers.

We hope that during this, our second year, we will be able to serve you better. We desire your support and your co-operation. Your letters will encourage us. Your subscriptions will help us exist and grow. Recommend the MODERN FARMER to your friends. Get together and subscribe for it for your libraries, clubs, and reading rooms. Show it to your white friends, to your ministers and school teachers. It is the paper for the colored farmers of America,—for all who depend on you,—for all who are interested in you. We are not ashamed of our first year's record. Get behind the MODERN FARMER, your paper, and the National Federation of Colored Farmers,—your organization,—and let us prove to the world that the Negro farmers of America are awake,—are progressive,—and are determined not to fail. We have got to get out of the wilderness. We can get out. Come on,—all together,—let"s go!

"WE BACK UP OUR SLOGAN" ANOTHER ARTICLE ABOUT STAYING ON THE FARM

By The Editor

We thank the many who prasied and commended our article on the above subject which was published in the March issue of the Modern Farmer and we were also glad to hear from those who criticised. A majority of those who praised the article were farmers, rural school teachers and leaders, or citizens of the small towns and cities. Most of our critics were citizens of the larger cities and many of them were business and professional men. We will have something to say to the latter class in a subsequent article.

No intelligent person has nerve enough to say that he knows positively just what the other fellow should do to win success and happiness. He does know however that success and happiness is what the other fellow wants. If he is willing to serve and help the other fellow he will freely offer advice and assistance which he believes will be beneficial. When we say that farm life is the best life for a majority of our racial group we say this because we honestly believe that more American Negroes can win success and happiness as farmers than as followers of any other occupation. When we say "Stay On The Farm" we do not mean that you should stay on the farm you are now, if conditions are so bad that you should not stay on it, and when we say "Go Back To The Farm If You're Off It" we do not mean that you should go back to the farm you left, if adverse conditions forced you to leave it. But we do know that if you were born a farmer,—trained a farmer,—and have been a farmer all your life, you will never be a successful "anything else," Today you are simply one of the million or more restless, dissatisfied, unhappy colored Americans who hold a grudge against their native land and their fellow-citizens. How did you get that way? You either made a misstep yourself or somebody kicked you in the wrong direction. But no matter how you got that way you never get too old to learn and you never get too wrong to get right. In these brief articles we are going to tell you about a few members of our racial group who got on the right track and succeeded in spite of the misstep or the mean kick.

STATEMENT OF OWNERSHIP

The Modern Farmer as required by the Act of Congress, August 24, 1912.
State of Tennessee,
County of Davidson.

Personally appeared before me, a Notary Public in and for the State of Tennessee, County of Davidson, S. B. Wilson, who having been duly sworn according to law deposes and says that she is the Secretary of the Modern Farmer, and the following is to her knowledge and belief, a true statement of the Ownership, Management, Etc., of the said publication for the date sworn above caption requested by the Act of Congress, August 24, 1912, embodied in section 443 Post Office laws and regulations.

1. That the name and address of the publisher and business manager of the Modern Farmer, Nashville, Tenn., and Chicago, Ill., Henry Allen Boyd, Business Manager.

2. That the owners are Henry Allen Boyd and S. B. Wilson, both of Nashville, Tennessee.

3. That there are no known bonds, mortgages or other security holder or owners holding 1 per cent or more and that there are no bonds, mortgages or other securities on the corporation.

Signed M. G. Ferguson, N. P.

Sworn before me the 3rd day of April, 1930.
My commission expires January 10th, 1931.

THOSE P'S AND Q'S

What the Negro racial group in America needs today is a few more P's and a few less Q's. We need more Pioneers, Pushers and Prophets. We need a few less quakers, quitters and quacks. We have always had great respect for pioneers. When a boy in Kentucky, we used to read stories about Daniel Boone and Simon Kenton,—those hardy backwoodsmen who conquered the wilderness and established homes for their families in one of the fairest states of the Nation. The day for Negro pioneering is just dawning. Let us tell you of a colored quaker who became a pioneer.

We will call him Tom Jones. He got disgusted and left his father's house at the age of eighteen. He was reared on a southern plantation,—had picked cotton and followed a mule from the time he was five. When he left his home he had ten dollars,—a strong body,—and could read and write his name, but nothing else. He wandered from pillar to post,—worked in nearly all of the larger southern cities for from fifty to ninety cents a day,—learned how to shoot craps and drink whiskey and went to the bowwows for ten years. Then he got work with an extra gang on a western railroad. The gang settled at a little station in the middle of Illinois for a two month's job.

One night a German farmer in the neighborhood lost two pigs. Some of the gang had stolen and eaten them. The "quaker" was the biggest coward in the gang. When the others accused him of the theft he failed to prove his innocense. The farmer told him, "I won't have you jailed, but you've got to work for those pigs." So every day for three weeks during the wheat harvest Tom Jones worked on the hated farm from six to nine at night paying for the stolen pigs.

The farmer learned to like him. When the gang left the neighborhood, Tom remained on the farm for ten dollars a month and eats.

He worked on that farm five years and he learned good farming. Not another colored person was within forty miles of him and in those days autos were unknown. Then he got restless. He was thirtly-three years old. He remembered a little girl back on the southern plantation. The good folks he lived with had taught him much from books. He had joined the church and had a few hundred dollars. He went back home, got married, and brought his wife up north. He worked as a hired hand three more years then rented a farm of eighty acres. In two years he purchesed it. Twelve years later he purchased eighty acres more which lay across the road and which is now occupied by a son. In 1915 he celebrated his twenty-fifth wedding anniversary and he and his good wife are anticipating celebrating their fiftieth anniversary within a few years. He has seven children and twelve grandchildren and four of his children are on farms in the neighborhood. Tom Jones is a wealthy, contented farmer. He has everything to make him happy. He told us his story and summed it all up in these words:—

"Our folks will never get nowhere as long as they're scared to venture out. I used to be scared to make a move, but I learned to be scared of nothings. I work had and get plenty of rest. That's what keeps you well and happy. Hard work and good rest will keep you alive a long time."

God bless Tom Jones and all these other Negro pioneers! They are your examples,—you discouraged, strong young fellows,—now living from hand to mouth in the cities. If thy could win success in spite of their difficulties what can you not do? Venture out! Stop quaking! Be a pioneer! (To be continued).

IMPORTANT INFORMATION FOR THE COLORED FARMERS

Tuskegee Institute, Alabama, March —Organization of Negro farmers of Alabama into cooperative units qualified to receive aid from the Federal Farm Board under the Agricultural Marketing Act is actively being effected following a series of conferences attended by representatives of the Alabama State Farm Bureau, the Alabama Extension Service, the United States Department of Agriculture and Tuskegee Institute.

Negro farm demonstration agents in cooperation with White agents, have been authorized to act as organizers in the Counties in which they work. The units which these Agents establish are affiliated with the County Farm Bureau and through the County Organization with the Alabama State Farm Bureau, the demonstration agent acting as contact officer. Paid-up membership in the County Organization carries with it, life insurance and subscriptions to state and national magazines of the bureau as well as regular agricultural and marketing services.

Under the agricultural marketing act the Federal Farm Board may make loans for marketing purposes to cooperative units only. It does not deal directly with the individual. And because the Negro farmer has been for the most part unorganized for operative purposes and has had little affiliation with White organizations it has become necessary to form such units as are now being organized in Alabama.

T. M. Campbell, Field Agent, United States Agricultural Extension Service, who has been active in helping to work out plans for organizing the cooperative units, states it as the wish of Dr. Bradford Knapp, President, Alabama Polytechnic Institute, Prof. L. N. Duncan, Director, Alabama Extension Service and Dr. Robert R. Moton, Principal, Tuskegee Institute, that the units set up for Negro farmers have the closest cooperation and connection with those for the White farmers, so that at no time should there be any competition between commodities grown by White farmers and those grown by Negro farmers.

Steps toward securing recognition for the Negro farmer under provisions of the Agricultural Marketing Act were first taken last Fall when Dr. Moton conferred with President Hoover, Alexander Legge, Chairman, and other members of the Federal Farm Board in Washington. Tentative plans were worked out for the inclusion of the Negro in such benefits as the Board had to offer to the farmers of the Country.

Addressing farmers assembled at the 39th Annual Tuskegee Negro Conference here last December, James C. Stone, Vice-Chairman of the Federal Farm Board, declared that the Board is as interested in improving the situation of the Negro farmer as that of any other agricultural group in the Country and urged Colored farmers to organize local cooperative units as the first step toward securing federal aid.

At a Conference with Dr. Moton, Mr. Campbell, Prof. Duncan and Mr. E. A. O'Neal, Head of the Alabama State Farm Bureau, a general plan of organization was agreed upon. Later sectional Meeting with White and Colored Agents were held throughout the State.

—Southern Christian Recorder

ROOSTER ATTACKS CHILD

Eugene, Ore., March 6. — A red rooster that was watching over a litter of pigs attacked and severely cut the 15-months-old daughter of E. B. Tinker as the child crawled about the ranch at Pleasant Hill. Several gashes were made above the eyes and the child was saved from serious injury by a bonnet which partly covered its face.

LARGEST SNAKE SKIN

New York, Mar. 6.—The skin of what is said to be the largest snake ever killed on the American continent is at New York Zoological Park. It is the skin of a South American anaconda, 22 feet long and three feet wide. It was killed by a native on the River San Lorenzo in Brazil. It is dark olive in color, with round dark spots.

Sunday School and B. Y. P. U. Workers

ARE CORDIALLY INVITED TO ATTEND THE

Sunday School Congress in Chicago, June 11-16, 1930

Reduced round-trip rates have been authorized on the identification certificate plan, to Sunday School messengers, representatives and dependent members of their families. The rate is one and one-half fare for the round trip.

TICKETS WILL BE ON SALE JUNE 7-13.

Any Sunday School desiring to send a representative, and wishing to get a railroad identification certificate, write to

HENRY ALLEN BOYD, Secretary,
Sunday School Congress,
523 2nd Avenue, North Nashville, Tenn.

NATIONAL FEDERATION TO AWARD VALUABLE PRIZES

(Special)

The National Federation of Colored Farmers and the Modern Farmer announce that valuable prizes will be given this year to members and subscribers for diligent efforts made to increase and improve the yield of various farm products and livestock. These prizes have been contributed by public-spirited corporations, manufacturers and individuals and will be distributed to the deserving next fall. Complete information will be given in our next issue. Join, subscribe and get in line for these prizes.

Application For Membership
NATIONAL FEDERATION OF COLORED FARMERS
Vincennes Hotel, Chicago.

As a Farmer, I believe the time has arrived when the Colored Farmers should form a National Organization devoted to diversified production, grading, packing, shipping and marketing of farm products and to the purchase of needed farm supplies through co-operative methods, to the end that a more prosperous financial condition may result from their efforts as producers.

I herewith subscribe and forward $5.00 for membership in the National Federation of Colored Farmers for a period of 12 months from date.

C. R. Richardson,
Chairman Board of Directors

VEGETABLES FOR FLAVORING

The flavor of the great majority of the dishes served to us at our daily meals is due to the use of some vegetable or vegetables in their preparation. The vegetable flavor is the element that makes many of them palatable and attractive.

Often if we do not care for the substance of the vegetable we like its flavor. One of the most important of the flavoring vegetables is the carrot. Highly esteemed for itself alone as a vegetable by most people, it is a household necessity for flavoring in soups and stews even when the carrot itself is removed and thrown away.

Aside from its sweetness and sugar content it has a characteristic flavor without which many dishes are not complete. The flavor of a carrot is best disseminated through a dish by slicing it rather than cooking it whole. It is a flavor that blends admirably with that of other vegetables, particularly with the onion.

Onions and carrots au gratin is a dish served at some of the well-known restaurants that has met with much favor and has been adopted by housewives. The method of preparing it is to use equal portions of boiled onions and boiled carrots, the onions shredded and the carrots sliced, in alternate layers with a cream sauce to which powdered cheese has been added.

Another happy association of onions and carrots is that of frying a portion of an onion soft in butter, removing the onions and then tossing sliced carrots in the onion flavored butter before serving them.

Raw carrots shaved thin or chopped fine are now used in mixed salads often in combination with cooked vegetables such as green peas and string beans, the raw carrot being much better for this purpose than the cooked vegetable.

The carrot now even appears in Irish stews although residents of the "old sod" often protest that no vegetable of that color ever would be tolerated in an Irish stew in its native land. However, the stew is much the better for the presence of the carrot. Plant plenty of carrots this year when you lay out the vegetable garden. There will be use for them.

MORE CARS THAN COWS

It is reported that there is not a milk cow in a settlement in North Carolina known as Honey Hill, which is situated near the city of Whiteville. But every farmer in the settlement has some kind of a car. This was discovered during the "Live at Home" campaign recently carried on by the state departmnet of agriculture.

Honey Hill is a settlement of Colored farmers. The Modern Farmer is extremely anxious that all of them enter our better farming contest.

WORLD'S CORN KING

For the fifth consecutive year, Mr Ira C. Marshall of Dola, Ohio, has upheld his title Corn King of the world. His production this year was 170 bushels per acre. The average yield for the state of Ohio is 38 bushels per acre.

Mr. Marshall's yield for the last five years averaged 166 bushels per acre.

In fertilizing the crop Mr. Marshall followed the same method he used in making his previous world's records Before planting, he broadcast 400 pounds of 0-14-6 fertilizer per acre and at planting time he drilled with the seed 125 pounds of the same fertilizer mixed with 50 pounds of Chilean nitrate of soda per acre. In June when the corn was about knee high, he side dressed with 150 pounds of Chilean nitrate per acre.

FORD BUYS PLANTATION

Georgia Property Valued at $150,000, Bought by Manufacturer.

Savannah, Ga., March 10.—Henry Ford has purchased the famous old Vallambrosia plantation, 14 miles from Savannah and has increased his real estate holdings in this vicinity to 25,000 acres, it was announced here today.

The price paid for the Vallambrosia, homestead was not announced, but J. L. Budreau, from whom Ford bought the plantation, said the property was valued at $150,000.

The plantation has between 4,000 and 5,000 acres and has a five mile frontage on the Ogeechee River directly across the stream from Mr Ford's property in Bryan County.

No announcement was made of the intended use of the property by Mr. Ford. His other holdings in Bryan County are now being used to further the rubber experiments of Thomas A. Edison, with goldenrod, which grows profusely on the plantation.

The above clipping is taken from Memphis Commercial Appeal. Statistics show that there are 202 colored farmers in Bryan County and of this number 133 own their farms. This is a great sweet potato county. Our farmers in Bryan should organize at once.

FARM SITUATION SERIOUS NEGROES NEED ENCOURAGING

The following letter was sent to the Editor of the Atlanta Constitution. who kindly published it. Another good and wise brother backs up the slogan of the Modern Farmer. We are thankful.

Editor Constitution: I look with favor on all that is seeking to be done for our farmers and the rural sections of the state and the whole country. But I fear the most important foct is being overlooked. We cannot have permanent economic prosperity unless it is backed up by rural prosp rity. Idle acres and crowded cities are no cure for financial depression and no foundation for future stability.

The main issue, as I see it, is to get the people back to the farms. It is well enough to help these few who still remain on the farms but they are too few to produce enough for the many who occupy idle hangouts in the towns where criminal breeding is at its best. We must rehabilitate our farms before we can hope for prosperity or law enforcement. A back-to-the-farm movement is the first order of the day and those who own country land should offer inducements to settlers, especially to colored settlers who can adjust themselves easily to our country life and environs.

The cure for crime is work and a fair return for labor honestly done. A cure for weeds and bushes is cotton and corn. If you want people to be contented and happy give them plenty to do, plenty to eat and good environments. Let them feel safe and secure in their homes, schools and churches. Let the law and all good citizens protect them and encourage them.

All farmers, however insignificant should be allowed the benefits of farm unions, association and marketing organizations. Small and ignorant farmers lose interest if they feel that the "big fish are eating up the little fish.' I would suggest that farm meetings be called right away at every court house in Georgia and an effort made to instruct, interest and organize the people for a determined move toward rehabilitating our farms and improving the efficiency of those farmers who still remain in the country.

D. D. CRAWFORD,
Executive Secretary General Missionary Negro Baptist Convention of Georgia.

Atlanta Constitution
Sunday, Jan. 26, 1930.

BURIAL ASSOCIATION A TEN YEAR SUCCESS

Holmes County, Miss., Colored Farmers Can Stick Together

The Holmes County, (Miss.) Burial Association, organized ten years ago. now has a membership of 368, and during its existence has handled 129 burials. Pauper funerals among our people are unknown in this county

This Association was organized by colored farmers. It is an "assessment plan" organization,—each member paying in to the treasury twenty-five cents upon the death of a fellow-member. Present officers are Wm. Pickens, Pres.; Cornelius Richardson, Sec., and J. C. Davis Treas.

WILL COTTON GROWERS MAKE WORLD ANOTHER $600,000,000 GIFT THIS YEAR

Are cotton growers of the South going to make the nation another $600,000,000 gift this year or will they read "The hand writing on the wall," and reduce their acreage?

This is a question that men who have made a long study of agriculture are asking, and in anticipation of a "Yes" Answer, based on past experiences, they are shouting from the house tops "Don't do it."

The Federal Farm Board is issuing statements almost daily warning of dire calamities if cotton growers do not cut their acreage at least 6,000,000 acres. They are talking of 10 cent cotton next fall and no effective government aid because of over production unless the acreage is cut to 40,000,000 acres.

Growers are reminded by agricultural experts of the government and state college that large cotton crops always sell for less than small ones A ten million bale crop sold for $1,600,000,000 in 1923. In 1926 an 18 million bale crop sold for less than $1,000,000,000 which means that Farmers picked and ginned 8 million bales of cotton in 1926 and gave them to the world free of charge and in effect, paid $600,000,000 for the privilege.

SULPHUR NEEDED IN SPRING PEACH SPRAYS

Tennessee Conditions Reqired It For Brown Rot Control Say U. T. Specialists

March 17, 1930

Tennessee peach growers who are now planning for the spring sprays are advised to include sulphur in the first two applications. This may be in the form of either self-boiled lime sulphur or dry-mixed sulphur lime, which are recognized by specialists at the University of Tennesee to have equal value for the control of Brown rot. It is understood, of course, that these sprays will also contain arsenate of lead, which is necessary to destroy curculio.

Specialists at the University, have found that in some years, like 1929, there is a great deal of blossom blight in peaches. This blight, although frequently attributed to frost is really due to the same fungus which later rots the fruit. It is for this reason that the use of sulphur in the first two sprays, as in the later sprays, is being insisted upon.

As there is evidence that sometimes many curculio beetles may be killed by an arsenical spray applied when about three-fourths of the petals have fallen, growers who wish the most complete control of the curculio are advised to determine the time of arrival of the Curculio by jarring a few trees, especially those near wood lands and packing houses. A large piece of canvas spread under the trees will catch the beetles that fall If many beetles are found before the time of the customary shucks spray, an extra spray containing both sulphur and arsenate of lead should be given.

Some growers are asking why it is that sulphur is needed for the first two sprays in Tennessee Peach Orchard and not, apparently in those of other states. Answering this question, plant disease specialists at the University point out that the Many rainfall is generally much greater in Tennessee Peach Counties than in the peach sections of Georgia. Brown rot is more readily spread in wet weather and therefore greater protection must be given by means of these additional sulphur sprays.

AGREEMENT REACHED ON BEET FIELD LABOR

Last Year's Contract of $23 an Acre to Be Continued

March 3, 1930.

Beet field labor in Colorado this year probably will be paid for at $23 an acre, the same contract rate as last year. Apparent agreement on this figure was reached here yesterday at a meeting of the Mountain States Beet Growers' Marketing Association and the Great Western Sugar Co.

Chief discussion arose yesterday over the bonus of 50c to a ton paid for extra good yields of beets. Last year this bonus was paid for all tonnage above 12 tons an acre. Growers proposed raising the minimum to 14 tons..

The growers and the field representatives of the company annually co-operate in recruiting the field labor for the beet fields.

This is a kind of farm work that our people are adapted to do as it is similar to cotton cultivation.

Colorado could use 500 families in this work, the Mexicans are now doing the work but are undesirable because they do not become citizens and improve their community. Some graduate from a southern agricultural college should investigate this opportunity for college boys.

TO THE FARMERS:

The Modern Farmer contains information every month that you will not find in any other farm journal. It is the only journal published by and for our people that is devoted exclusively to the farmer and his family.

The price is in reach of every one—being less than 2 cents per week. During these times when the farming industry is undergoing so many changes, and when so many advantages can be had by our colored farmers if they are only aware of them, it is absolutely necessary that you should know what is going on. Three-fourths of the white farmers are subscribers to the white farm magazines and journals. They know just what is going on.

Fill out the blank—secure a money order for $1.00 and mail at once:

What South Carolina Has

NINETY THOUSAND FIVE HUNDRED EIGHTY-ONE COLORED FARMERS

Total land in farms, 10,638,900 acres.

Value of all farm property 523,084,383.00.

Total white farmers 82,186.

Total colored farmers 90,581.

Number of counties in the state where Negro farmers outnumber white farmers, 34.

Total number counties in the state 46.

Average annual cotton yield 850,000 bales.

The total white farm population in the state is given at 382,583 while the colored farm population is 529,292.

Some of the counties with heavy Negro farm population are given as follows:

Abbeville county	7,112	Whites and.....	10,488 colored
Aiken county..	10,247	whites and	17,725 colored
Allendale county	1,353	whites and	8,482 colored
Bamberg county	2,823	whites and	10,291 colored
Barnwell county	4,043	whites and	10,017 colored
Beaufort county	1,359	whites and	11,304 colored
Berkeley county	3,913	whites and	9,937 colored
Calhoun county	2,372	whites and	7,879 colored
Charleston county	2,374	whites and	17,206 colored
Chester county	4,115	whites and	13,393 colored
Clarendon county	5,112	whites and	16,316 colored
Colleton county	7,381	whites and	10,275 colored
Darlington county	9,196	whites and	16,397 colored
Dorchester county	3,824	whites and	6,205 colored
Edgefield county	4,068	whites and	9,337 colored
Fairfield county	2,502	whites and	14,318 colored
Georgetown county	3,478	whites and	5,934 colored
Greenwood county	4,621	whites and	10,979 colored
Hampton county	3,851	whites and	6,996 colored
Jasper county	1,132	whites and	4,554 colored
Kershaw county	7,814	whites and	13,216 colored
Laurens county	10,822	white and	13,909 colored
Lee county	4,691	whites and	14,739 colored
McCormick county	2,796	whites and	7,647 colored
Marion county	5,338	whites and	7,101 colored
Marlboro county	5,337	whites and	14,834 colored
Newberry county	7,153	whites and 12,462	colored
Orangeburg county	11,893	whites and	28,566 colored
Richland county	5,362	whites and	12,030 colored
Sumter county	5,058	whites and	20,493 colored
Union county	4,885	whites and	9,072 colored
Williamsburg county	7,801	whites and	20,756 colored
York county	9,468	whites and	17,034 colored

It is apparent that the leading citizens and the officials of South Carolina desire that colored farmers shall share in the state's prosperity. They are aiding them in a wonderful way. Vegetable farming in the state is going to increase rapidly. S. Carolina vegetables bring higher prices now when shipped to markets in the goitre belts, such as Cleveland and Detroit. There is but one thing for the colored farmers of S. Carolina to do, and that is to get together and organize Units of the National Federation of Colored Farmers and get in position to make the most of this great opportunity which has come to them.

WHITE DAILIES OVERWHELMINGLY USE CAPITAL "N" IN NEGRO

N. A. A. C. P. Poll Induces Many Editors and Publishers To Employ This Style

Southern Christian Recorder

New York, Mar. 28—A poll conducted by the National Association for the Advancement of Colored People among editors of leading white dailies throughout the United States, and book publishers, shows that sentiment is overwhelmingly in favor of the use of the capital N in printing the word Negro, and that many editors and publishers have adopted this style in response to the request of the N. A. A. C. P.

The first two week's replies received by post card and letter at the N. A. A. C. P. National Office, 69 Fifth Avenue, show the following startling results:

Now using capital N in printing Negro, or endorsing this use editorially: 114

Will use this style henceforth, acceding to N. A. A. C. P. request: 28

Do not use capital N: 7

Included among those who have adopted this style at the N. A. A. C. P. request are Brentano's, publishers; G. P. Putnam's Sons; Boston Evening Transcript, Albuquerque Journal, Patcrson Evening News, New York Evening Post, Harvard Law Review, Cornell Law Quarterly and San Francisco News. Roscoe Conkling Bruce who has been very active in this campaign for some time, informs the N. A. A. C. P. that Houghton Mifflin Co., and the Directory of Social Agencies, published by the Charity Organization Society have also adopted the capital N.

Among the pioneers in the use of the capital N in this country should be mentioned the Standard, in New Bedford, Massachusetts, which has used this style for fifty years, and the following publications report that they have been capitalizing N in Negro for one or more years: South Bend Tribune, Indiana; The World Tomorrow; Louisville, Kentucky, Times; Birmingham, News, Alabama; Norwich Bulletin, Connecticut; Columbus Enquirer-Sun, Georgia; Peoria Journal and Transcript, Illinois; Register and Tribune, Des Moines, Iowa; Capper's Weekly; Louisville Courier-Journal; Lowell, Mass., Courier-Citizen; Worcester, Mass., Evening Post; Duluth, Minn., Herald; St. Louis Post-Dispatch; Paterson, N. J. Press-Guardian; London, England, Daily Telegraph and Sunday Times; Better Times; New York; Vanity Fair; Troy, N. Y. Record; Troy Times; Elizabeth City, N. C., Independent; Harrisburg, Pa., Telegraph; Johnstown, Pa., Tribune; Columbia, S. C., State; Nashville, Tenn., Banner; Norfolk Virginian-Pilot, Richmond News-Leader; Clarksburg Telegram, West Va.; Evening Telegram, Superior, Wisconsin; Japanese American News, San Francisco.

Besides these, the leading magazines and publishers of the country including the publisher of the **Saturday Evening Post** are using or have adopted this style. The seven replies to the N. A. A. C. P. from editor who do not capitalize Negro, come from Texas (3), Louisiana (1), Florida (1), Mississippi (1), and Missouri (1). These are all states with a high lynching record.

Many Editorials Commend Capital N

Upwards of twenty editorials from all parts of the country commending the capital N have been received by the

Farm Census Aids Agricultural Adjustment, Says Olsen

March 24, 1930—The 1930 farm census is of special importance in view of the far-reaching economic changes which have occurred in American agriculture the last ten years, says Nils A. Olsen, Chief of the Bureau of Agricultural Economics, U. S. Department of Agriculture. He appeals to farmers to give every assistance to the census enumerators.

Approximately 70,000 enumerators will be engaged in taking the farm census in conjunction with the population census which will begin April 2. Preliminary results will be published by the Bureau of the Census, Department of Commerce, early in 1931, but the figures for some States will be available this fall.

"The farm census," Mr. Olsen says, "Has been organized to yield basic information which will enable Federal and State agricultural institutions to aid farmers in formulating plans for improving the economic position of farmers. In this connection, the census is vital to the research and statistical work of the Bureau of Agricultural Economics as it provides basic data from which to estimate annual farm conditions in inter-census years.

"The 1930 census will make available exact data regarding acreage and livestock expansion in recent years and regarding the various shifts in specific lines of farm production. We will know precisely the extent to which mechanical power has replaced animal and man power on the farms and we shall be able to form some judgment as to future developments in this field. The farm population now is estimated to be the smallest in thirty years; we should like to know how much longer this depopulation of farms will continue.

"The information that the census will yield on farm ownership and farm tenancy will give an indication as to whether the trend is toward the development of large farm holdings worked by tenants and hired hands—that is, toward so-called corporation farming—or whether despite the reported industrialization of agriculture the family farm will persist.

"The agricultural census, for the first time, will endeavor to secure information regarding farm income, and expenditures for operating equipment. We shall learn the amount paid for taxes, and obtain data concerning mortgage debts. The amount of the mortgage debt, and the amount charged the farmer for interest, commissions bonuses and premiums will be asked for the farm he owns and operates, and also for other farm land he owns. The need for more complete information on the payment of interest and other charges on mortgage debt is very urgent.

"Data covering the dairy industry will be especially valuable in view of the present uncertain position of that industry. We shall have figures on the number of milk cows and the quantity of milk produced in 1929 The schedules will yield information as to the number of cows milked which are of beef or dual-purpose breeding; quanity and value of milk sold, cream sold, butterfat sold, and butter sold, together with data on the number of cows being milked at the time the census is taken, and the daily production of milk at that time.

"Complete information will become available on all phases of the poultry and other livestock industries. The number of each kind of farm animals sold, number purchased ad number slaughtered on farms for home use or for sale will be asked; also the number of hides and skins sold. These questions have not been asked since 1910, and are important in determing the annual production of livestock.

"Since 1910 there has been a tendency to sell or slaughter animals at an earlier age and consequently the number of animals on farms when the census is taken is an unreliable indicator of production. The returns from the census of 1930 will afford a basic for better estimates of meat production than could be made heretofore.

"More information than heretofore will be available on the fruits. A special fruit schedule for Florida and the Gulf of Mexico coast, and a similar fruit schedule for California and certain counties in other Pacific Coast States will secure information on the acreage, number of trees, production, and sales of citrus fruits, classified into several varieties; similar information will be obtained on grapes, dried fruits, and other tree and vine crops.

"There is practically no increase in the total number of questions to be asked farmers, as compared with the censuses of 1910 and 1920, but it is believed that the questions will yield more valuable information, and especially give data on pressing agricultural problems. All farms will be classified into types of production and also as to value of products.

PASSAGE OF SEED FUND BILL LIKELY

Representatives of Georgia and a few other southern states appeared before the house committee in Washington, the latter part of February, urging a special rule for consideration of the seven million dollar farm relief bill, which has been reported by the agricultural committee, for farmers and fruit growers in financing the purchase of seed, fertilizer and feed in connection with this year's crop operations.

As passed by the house this bill was limited to cover states of the southeast including Ga., Fla., Ala., N. C., and S. C.

It is believed that favorable action from the Rules Committee will open the way for the funds to be approved and made available for early loans to farmers and fruit growers.

Such Negro farmers in these states that suffered losses are eligible for relief from this fund if they are properly organized.

ALEXANDER HURSE DOING GOOD WORK IN S. GA.

The Negro 4 Club of Ware county under the direction of Prof. Alexander Hurse is showing rapid growth. Starting a short time ago with but a handfull of members the roll now has reached something slightly over one hundred. Prof. Hurse is one of the county agents in the entire south.

CO-OPERATIVE PROGRAM OUTLINED TO FARMERS

Macon, Ga., Feb. 17th,—(AP)—Small but strong co-operative marketing associations were described today by J. W. Firor, head of agricultural economics and marketing at the State College of Agriculture in Athens, as essental in the federal farm board program to help farmers.

The 1921 law for organization of co-operative marketing associations, Mr. Firor said, met the requirements of the federal board. He said the usual procedure is to draw up a membership agreement and obtain a charter granting the right to buy and sell certain types of products grown on Georgia farms.

Mr. Firor spoke before a group of farmers of Bibb and neighboring counties. D. F. Bruce, Bibb farm agent, said the Bibb Co-operative Dairy Association was ready for business.

—Atlanta Constitution

GEORGIA LEADS DIXIE IN CUTTING COTTON ACREAGE

While the land devoted to cotton in the other eight southern states increased by 11,060,000 acres in the past ten years, in Georgia it decreased 1,622,000 acres and in South Carolina 646,000.

Statistics showing the decrease in Georgia and South Carolina, as compiled by Charles Molony, Dublin railroad official, and broadcast in a circular letter some weeks ago, were made public by Vivian Stanley, of the state prison commission. Mr. Stanley in announcing them said that they had assumed additional importance in the light of new demands that cotton producers curtail their acreage.

"Georgia farmers," he declared, " have already done more than their share in reducing cotton acreage."

The figure showed that in 1918 Georgia had 5,341,000 acres on which cotton was raised. In 1928 it had 3,719,000 acres. South Carolina showed a decrease in the decade from 3,001,000 to 2,355,000 acres. The total decrease of the two states was 2,268,000 acres.

On the other hand, the other eight states, including Texas, Mississippi, Oklahoma, Arkansas, Alabama, Louisiana, North Carolina and Tennessee, increased their acreage, bringing the total from 35,457,000 to 44,249,000.

Had the other cotton producing states decreased their acreage in the same proportion that Georgia did, the letter stated, in 1928 there would have been 24,800,200 acres of land instead of 44,249,000 devoted to cotton.

"The 44,249,000 harvested acres in 1928 produced 13,795,000 bales of cotton for these ten largest cotton producing states equal to a bale to every 3.21 acres," he said, "This same average yield per acre applied to the reduced 24,800,200 acres would bring 7,725,919 bales, which would amount to an acute cotton shortage.

"With the knowledge that Georgia cut its acreage 1,622,000 acres is shown by the comparison of 1928 and 1918, and is wholly unfair to even think of suggesting to Georgia any further reduction in its already reduced cotton acreage."

MINISTER LEADS RELIGIOUS ACTIVITIES UNIVERSITY IOWA

Iowa, City, Ia., Jan 30—When a grave problem confronts a community and that community or the individual citizens residing within its boundaries, fails to meet the problem, the social welfare of each and every human in that community is directly or indirectly affected. So in Iowa City, where the Negro student population of the University of Iowa is over 100 souls, the long neglect of certain local church leaders to construct an effective social or religious program which would attract the intelligent young students on the campus has heretofore retarded the cultural growth of the local community life.

The appearance of Rev. Edward L. Fuller at Bethel A. M. E. in September not only marked a new era in the history of the church but in extra curricula activities of the Negro students. After finding his desires to enlist the interest of the students in the church proper, thwarted by a few citizens whose ideas were at variance with his, Rev. Fuller sought to establish a social center after resigning from direct pastorship of Bethel. His hopes were to found an institution dedicated to the Christian ideals in the working of which employment would be afforded those students who needed assistance, religious services conducted weekly by a fully ordained minister; a culinary department offering board for students at a minimum of cost; in short he has sought to actively personify the most urgent needs of the Negroes attending the university as well as those residents of the town, and in the seeking of Rev. Fuller he has surely found some of those aims. Through his sole efforts the Carey Social Center has been founded and is at this writing functioning in Iowa City. Employment is now provided for some five students and board for over 40 students.

Undoubtedly Rev. Fuller's contribution to the social and religious life of this town is being felt by those who need an affectually real, vital leadership and a practical institution. This was partly evidenced Sunday, Jan. 12, in the recent election of Rev. Fuller to the office of chaplain of the Student Forum, the largest organization of Negro membership on the campus of the University of Iowa. The unanimous vote received by Rev. Fuller illustrates how this man has struck an answering note in the hearts of all the students on Iowa's campus.

LEASE RADISH ACERAGE

Newport, Ark., March 11.—James G. McGarrick & Co., widely known growers and shippers of truck gardening stuff of Robstown, Texas, have leased 1,200 acres of land near Newport and will plant radishes. Planting will begin next week and seed and drillers are en route to this city. The crop will be ready for harvesting, it is said, by April 20, and ready to turn back to the owners for planting cotton by May 1. The value of the radish crop, it is said, will be around $130,000 and will give employment to a large number of persons.

Large markets like New York and Chicago take several hundred cars of radishes monthly. The Negro farmers in Newport section are not organized.

Largest Onion Town In The World

Kenton, Ohio, a berg with less than a thousand population, claims to be the largest onion shipping center in the world.

Four thousand cars of onions are shipped from this point every year, and in addition to this volume there are several hundred cars hauled out of that section by truck. Davenport, Iowa ranks second.

Farm In One Family Over Hundred Years

The Daniel Reeder farm near Quincy, Ill., consisting of one hundred acres sold a few weeks ago for twenty thousand dollars. This is one of the finest and most modern farms in the entire west. Grand father, son and grandson have been the only owners.

Quincy section is a great wheat and livestock country. There are quite a sprinkling of colored farmers in this part of the state.

OFFER LAND FOR TAKING

Lumber Company Will Give Quit Claim to Parcels for Taxes.

Caruthersville, Mo., —March 6.—The Wisconsin Lumber Company of Deering, a subsidiary of the International Harvester, 12 miles west of here has worked out a plan to dispose of its land holdings in this county in such a manner that it will retain its value as farming land and not be abandoned in default of taxes.

The first of this year this company announced that it would relinquished claim on 57,000 acres of land in Pemiscot and Dunklin counties in lieu of paying this year's taxes. The company has dismantled the mills.

The company will give a quit claim deed on land to individuals on the one condition that they pay this year's on the land, retain ownership of it improve it and keep the taxes paid. Mr. Collier went before the Pemiscot County Court with this prosal and all the members approved of the plan which would add more revenue to the county and state treasury which otherwise would be lost.

A form application is now being worked out with the courts approval by which persons desiring to take over 20, 40 or 80-acre plots or larger ones, can do so and get a quit claim deed on the land without charge providing they pay last year's taxes on the property and any other rightly included liens.

—Memphis Commercial Appeal.

LAUNCH FARM PROJECT

New Firm With $400,000 Capital to Use 10,000 Acres

Newton, Miss., March 6.—A large farming corporation, capitalized at 400,000 to be known as the Mississippi Co-operative Livestock Farms Association and guided by local men as officers and directors, expects to begin operation this spring on a 10,000-acre tract near Newton on which options for purchasing have been obtained.

Organization of the concern has just been announced by H. W. Hoye, real estate dealer, who was elected president. H. N. Brown was elected vice president and W. W. James secretary-treasurer. The company plans to specialize in dairy, beef and pork production, as well as handle poultry, raise feedstuffs, and possibly operate creameries or dispose of its products to the local cheese branch of the Kraft-Phenix corporation.

An elaborate farm program has been planned. The 10,000 acres under contract consist of black lime soil, clay and silt or Norfork sandy loam, underlaid with clay, the majority being of the heavy prairie type.

Two thousand purebred Holstein heifers and 40 purebred Angus sires will be imported and about 600 cows will be in the dairy.

It is the purpose of the promoters to make the 10,000-acre farm self-supporting: to produce all feedstuffs, soy beans, cow peas, clover, vetch alfalfa, beans, lespedeza hay, oats, corn, sorghum, and all other crops upon its lands. Housing, silos and all other modern dairy building equipment will be provided.

The association hopes to realize its profits through the sale of baby beef to northern markets and through the sale of stock to livestock farmers throughout Mississippi and the south. and dairy products to local plants.

BIG GROWTH IN RAYON INDUSTRY .

Mr. Francis E. Simmons tevtile expert of the Commerce Department has issued a very interesting report on the remarkable growth of rayon industry in this country in the past two decades.

Mr. Simons says that production of rayon in this country increased from 320,000 pounds in 1911 to 123,200,000 pounds in 1929.

The popularity of rayon did not expand until 1921. The prospects for 1930 out put will in all probability exceed one hundred and fifty million pounds.

Of the four general processes or rayon production, the report reveals that the viscose process accounted for around 86 per cent of the world output and 85 per cent of the United States production in 1929. The world production of cellulose acetate and cuprammonium processes are next in order of importance, Great Britain and Germany, respectively, being the chief producers by those processes. On the other hand, the United States is the leading producer of rayon by the nitrocellulos and viscose processes, its share in 1929 accounting for about 64 and 30 per cent, respectively, of the world's total output of these two types. The tariff hearing reports further disclose that there were built, or being built, in the United States in 1928 rayon plants classified according to process as follows: Twenty viscose, 4 cellulose-acetate,3 cuprammonium and 1 nitrocellulose.

In spite of the fact that we produced during 1929 a total of 123,000,000 pounds of rayon yarns, we also imported about 16,000,000 pounds from abroad, this comsuming in this country nearly 35 per cent of the world output for that year.

Consumption Classified.

The consumption of rayon yarns by various industries is another interesting point which is commented upon by the Commerce official, who finds that approximately 60 per cent was consumed in the United States in the knit goods industry, the knit underwear branch being credited with 35 per cent, hosiery mills with 21 per cent, and the manufacture of other knit goods with 4 per cent.

The rayon industry and trade of the United States is concerned primarily with producing for the domestic market and exports from a very small percentage of the total output. American producers are, however, giving serious consideration to possible future foreign outlets for American-made rayon yarns.

Another matter of popular concern brought out in the Commerce official's report is the relative importance of the use of rayon yarns, with respect to the consumption of other textile fabrics, and comparative figures are quoted to show that rayon has shown the greatest relative increase.

The eleven counties of the Delta produce a long staple cotton that is perferred by manufacturers to any other section.

Weber 49 is a very popular variety and always bring a premium. A bill has been introduced in the House in Washington placing a duty of 7c per pound on all cotton over 1 1-8 inch. This, if passed will be quite a protection to the farmers who grow long staple cotton.

URGES SOUTHERN PEOPLE TO USE OWN PRODUCTS

Editor, Constitution: We are told many times that speculation in cotton is the ruin of the cotton farmer. This may have some truth in it. But the law of supply and demand still controls.

We people here in the great old south could greatly help matters. How few of us are really using the cotton we produce? Nearly all of our people are wearing silk or wool. Too few of us are wearing any cotton. It seems that we are cutting our own throats, growing cotton and wearing silk and wool. If it were not for automobile tires cotton would not bring anything. We will never have any relief as long as we do not use our products. We are making fat the silk mills in the other nations, who can get labor for nearly nothing, at the same time starving ourselves.

It is a fact that a farmer who grows cotton, his wife and daughters wear silk hose and other clothing to do the work of the farm in. Is it not time we were waking up and starting a movement for the wearing of cotton goods? The current report is that many of our cotton mills are either shut down or running part time. The reason for this is there is no demand for cotton goods. Cotton is the money crop of the south, and there is no reason why it should not be a profitable crop. It is not and we know it is not, and we know why it is not.

There is another thing that can be done that will greatly help our economic life. Why import jute from some other country to wrap our cotton and guano in when cotton cloth would be so much better? In fact, why not wrap all our products that are sent out in bags in cotton bags instead of jute?

It is hoped that we people of the dear old southland will wake up to our condition and start a movement for cotton consumption. We can wear cotton cloth and appear just as well. Health authorities tell us that it is much healthier to wear clothing made from the cotton staple than from silk or wool. May we make a start to better our condition.

H. H. Heisler.

WHITE DAILIES—

(Continued from Page 6).

N. A. A. C. P., from which the following excerpts are forwarded:

Altoona. Pa., Tribune: "The N. A. A. C. P. is right in its campaign for the capital N and the readiness with which newspapers and other periodicals have agreed to fall in line indicates that there was no intentional slight in the usage of the small letter. And it is a source of pride to the Tribune that this newspaper does not need a reminder of the justice of the capital N. The number of southern newspapers which use the capital N is extremely interesting. The success of this movement is one more indication that the effort to relieve the acuteness of the racial problem is thoroughly sincere."

Des Moines, Iowa, Tribune: "The list it (N. A. A. C. P.) publishes is an imposing one, and it must be particularly satisfying to the Association to see how many such papers are in the south. And of course it promises well for the future of race relations in southern states to find friendly publishers there."

Providence, R. I., Journal: "The matter is an interesting one and it is regarded earnestly by the National Association for the Advancement of Colored People. There is no reason for opposing the desired capitalization. Inasmuch as 'Negro' is the correct form and 'negro' is incorrect, there is good reason for a general compliance with the organization's request."

Macon, Ga., Telegraph: "The National Association for the Advancement of Colored People announced this week—not without pride, it is to be imagined—the names of a number of newspapers and magazines, a number of them from the South, that have adopted the use of the capital 'N' in the word Negro.... The Telegraph used the small letter for a great many years, but for several years now it has been using the capital letter, because there is no good argument against its use."

THE MODERN FARMER

Vol. II. Nashville, Tenn., and Chicago, Illinois, May 15, 1930. No. 3.

THE FEDERAL LAND BANK'S

Louisville, Ky., Branch Writes Letter

MODERN FARMER COMMUNICATES IN THE INTEREST OF ORGANIZATION

Federal Land Bank located in various sections of the United States for the purpose of facilitating loans to farmers of every description, have not been generally understood by the farmers. The one serving Tennessee, Kentucky, Indiana, and Ohio is located at Louisville, which is designated as District No. 4.

The Modern Farmer, who has interested itself in explaining the work of the Federal Land Banks, the Land Grant Banks and other Federal Financial Organizations and Agencies, recently addressed a letter to Mr. L. A. Skene, the Assistant Secretary of the Louisville Bank, in the interest of the Rutherford County colored farmers, and the publication received a reply, in which this Louisville Branch said:

"The Modern Farmer, 447 4th Avenue., N., Nashville, Tenn.:— We are in receipt of your letter of recent date in which you advise us that the colored farmers of Rutherford County, Tennessee, desire to make Federal Land Bank Loans.

"Applications for loans on farms in Rutherford County may be made by colored farmers through the Stone River National Farm Loan Association, of which Mr. Eugene Black, of Murfreesboro, Tennessee, is secretary-treasurer. Of course there are necessary requirements for considering loans some of which are as follows:

1. The owners must live on and operate the farm, or live in the immediate vicinity of the farm and have its operation under personal supervision and control.

2. Each must be of sufficient size to produce an income for support of the average family of an applicant and enough to take care of the amortization payments and taxes on the land independent of other income.

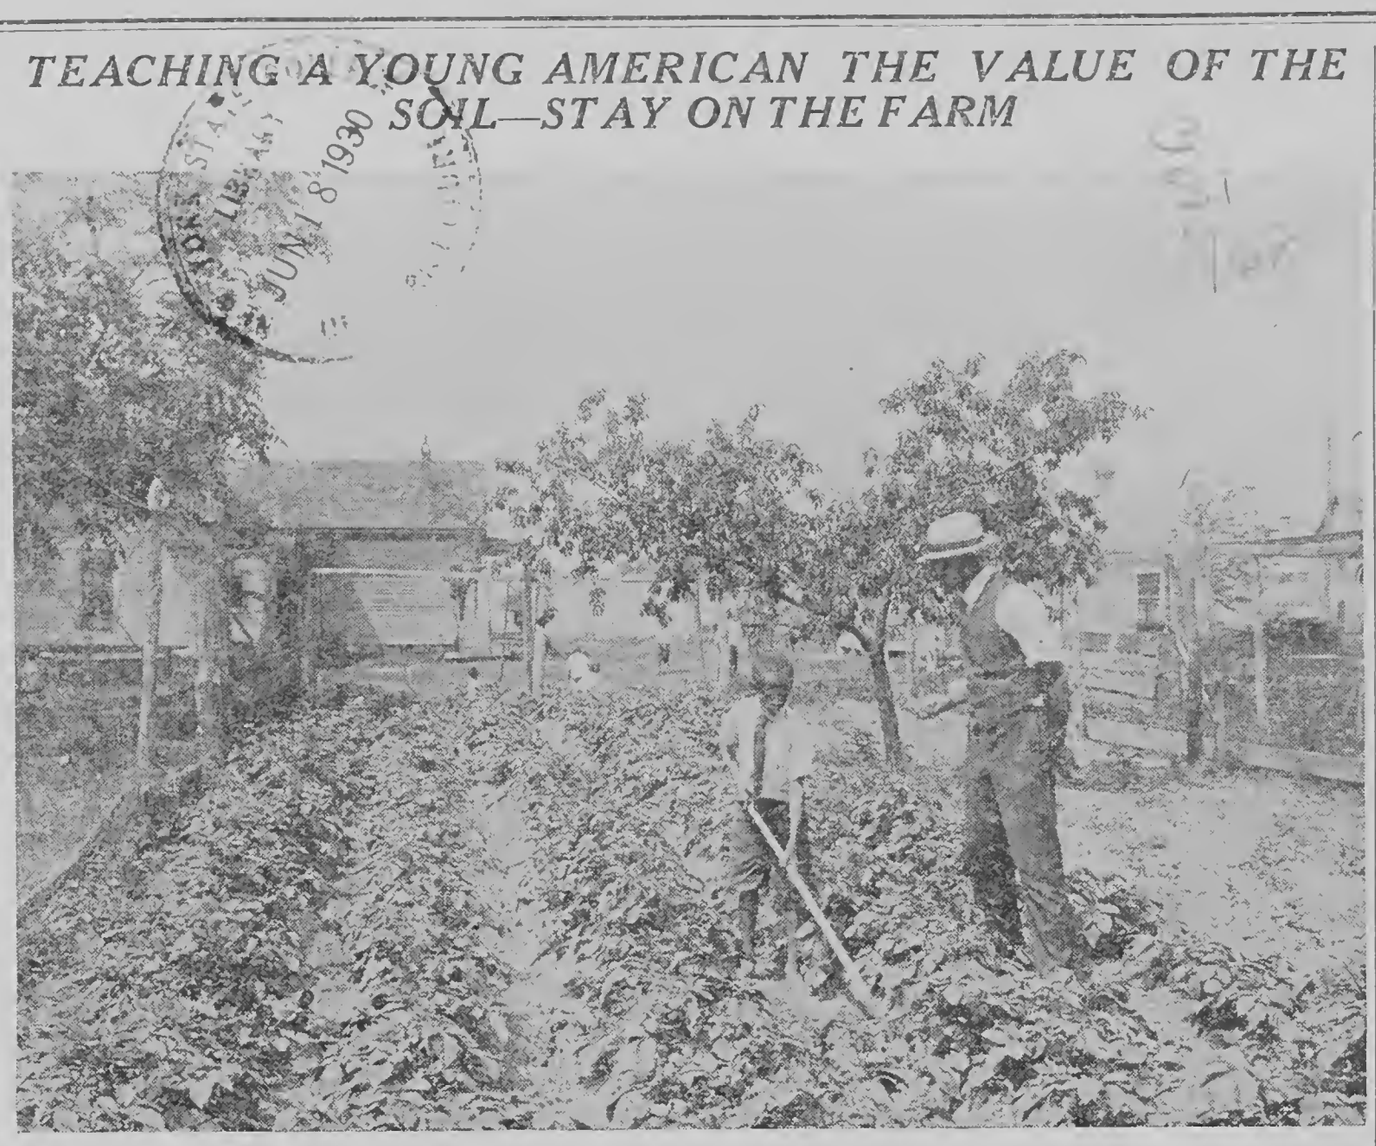
3. Where there are more than two joint owners, except a husband and wife, we will not accept the application because we have more trouble with this class of loan than any other by reason of the fact that when one or the other does not wish to make the payments and take care of the taxes and insurance, the farm is abandoned and it falls on our hands, and of course we are not in business to take over or carry farms at a loss to the bank or association. We must also know that the owner is capable of operating a farm successfully, and has a sufficient equity of at least fifty per cent in the farm to justify a loan.

Yours very truly,
THE FEDERAL LAND BANK OF LOUISVILLE,
L. A. Skene, Assistant Sec'y."

INSECTS FLY LIKE PLANES

There is an interesting resemblance in the methods used by insects for flight and the principles used in present-day aircraft, says the United States Department of Agriculture. Entomologists who have been making a special study of insect flight say the rapildy whirring wings of certain insects present an interesting counterpart of the rotating propellers of air-

TEACHING A YOUNG AMERICAN THE VALUE OF THE SOIL—STAY ON THE FARM



AGRICULTURAL SCHOOL WORK—POTATO PROJECT AT METHOD, N. C.—THERE ARE MANY OTHERS DOING THE SAME KIND OF GOOD WORK

STATE PEACH CROP FORECAST

RECORD FOR 1929 WILL NOT BE REACHED AGAIN

Macon, Ga., April 27.—(AP)—The 1930 peach crop in Georgia is not excepted to greatly exceed last season's crop of 5,300 carloads, according to the preliminary estimate made by the Georgia Peach Growers' Exchange after a three weeks' survey of peach orchards in every section of the state, it was announced Saturday by officials of the exchange.

The small size of the crop, to be more accurately estimated after the May drop, has been due to many causes, principally among them the sudden drop in temperature to 20 and 19 degrees on November 30 and December 1, of last year, following unseasonable warm weather.

"The 'winter kill' was very abnormal," W. C. Bewley, general manager, explained, "and many people believe that it may be traceable to improper fertilization, unsuitable types of soil and to methods employed in controlling insects and diseases.

"The loss of trees in the opinion of the exchange and Federal Government representatives will reach the figure of 200,000 killed outright and others expected to die. The low temperature referred to not only killed outright thousands of trees or parts thereof, but killed or injured many of the peach buds which had formed on the new wood. That partly accounts for the short crop of peaches.

"The Early Rose crop has been seriously damaged and the crop will be light this season. The Carman crop will be extremely light as there are few orchards of this variety.

"There will be a 60 to 70 per cent hiley crop. Most of the Georgia Belles have a full crop, but there are only a few of such orchards left in the state. It is quite certain that we will have less than 50 per cent of the Elberta crop. The situation at present is so abnormal and spotted that it will be difficult for any agency to accurately estimate the 1930 crop; it simply can not be done until the May drop is over and the fruit has become set. From all indications it appears that the total crop of all varieties will not greatly exceed the 1929 crop."

MONEY TO FRUIT GROWERS

USE OF TRUCK FOR HAULING DEMONSTRATED

Motor trucks are effecting big savings in moving perishable fruits and vegetables, according to a recent series of reports by the U. S. Department of Agriculture.

Motor trucks are moving 65 per cent of the fruit in Southern Indiana, 23 per cent in Southern Illinois, 53 per cent in Virginia and 16 per cent in Delaware and Maryland.

"The movement by motor truck is working a revolution in the selling of fruits and vegetables in the corn and coal belts of Illinois and nearby areas in Indiana, Missouri, Arkansas and Kentucky," reports Brice Edwards, assistant marketing specialist of the fruits and vegetables division of the bureau of Agricultural economics, in his survey throughout that district.

"The trade formerly was supplied through wholesale dealers who obtained their supplies from St. Louis, Memphis, Chicago and Indianapolis. The trucking movement avoid these primary markets for the most part and goes direct to the retailed, consumer and wholesaler in the smaller towns and cities.

This has made an enormous outlet for second-grade fruit by increasing the total consumption of these fruits and vegetables in the rural districts, which formerly were poorly supplied."

Among other advantages found in using the motor truck were: Easo of rapid handling in direct from farm to consumer market elimination of refrigeration necessary en route; higher net returns to producer and lower final market prices; package savings and the advantage of marketing less than car load shipments.

WORLD RECORD ESTABLISHED

MAN ON HORSELESS FARM POINTS THE WAY

What is believed to be a world's record for quantity of field crops produced by one man with a two-plow tractor was established in 1929 by Nels Nelson, of Meckling, S. D., when he produced nearly 23,000 bushels of grain with a value of about $15,000.

Not only did Mr. Nelson handle a much larger acerage and produce far more crops than most owners of larger tractors can boast of, but he established a record far beyond anything ever accomplished by one man using horses.

His experience is particularly significant, not only as a demonstration of the possibilities of horseless farming, but also as an indication of the change which the younger generation of farmers is bringing about in farming. Like Roy E. Murphy of West Burlington, Iowa, who pioneered horseless farming in the corn belt, Mr. Nelson is just a young man. But while he may lack many of the advantages which more experienced farmers possess, he has the great advantage of not being hindered by customs nor traditions, but has studied the possibilities of modern equipment from an unbiased viewpoint and acted on his own judgment. It is needless to say that his outstanding success in comparison with farmers who are still following older methods will lead many other young men, and doubtless some older ones, too, to follow his example.

His corn acerage last season was 240, and that of small grain 200. Machinery, of course, is the answer as to what took the place of horses and men. A tractor and a truck were the big factors, with other machinery adapted.

In the fall of 1928, Mr. Nelson plowed 140 acres of corn land. Last spring he listed 100 acres. That took care of the preparation of his large corn acreage.

His crops were good. Oats, of which he had 80 acres, went 60 bushels an acre; corn, 240 acres,

TRUCK CROP ESTIMATE

Division of U. S. Agriculture's Figures

PREDICTION ON EIGHT STATE CROPS GIVEN OUT FROM WASHINGTON

The commercial truck crop estimate of the Division of Crop and Livestock estimates of the United States Department of Agriculture gives predictions on potatoes, cabbage, strawberries, cucumbers, tomatoes, snap beans, green peas and watermelons.

The report follows:

Potatoes: Acreage of early potatoes in both the Lower Valley of Texas and in Florida is now estimated at 45,900 acres which is about 44 per cent increase over the acerage grown in these states in 1929. The production is now forecast at 3,925,000 bushels as compared to 3,576,000 bushels last year, which would be only about 10 per cent larger this year than last. Average yields are forecast well below 1929 in Florida and about 3 bushels lower in the Lower Valley of Texas. The average yield indicated for both states is 86 bushels, which would be nearly one-fourth smaller than the average production per acre in 1929.

The preliminary estimate of acres of Irish potatoes planted in the early states of Alabama, California, Georgia, Louisiana, Mississippi, North Carolina, South Carolina, Texas, other than Lower Valley, and Virginia, is 8 per cent larger than the acerage grown last year, but is 8 per cent below the five year average during the period 1925-1929. Acerage in this group of states is estimated at 177,550 acres compared to 163,860 acres in 1929, and 241,480 acres in 1928.

Cabbage

The production forecast of cabbage for the second early group of states of Alabama, Georgia, Louisiana, Mississippi, North Carolina, South Carolina, is 80,800 tons, about 29 per cent smaller than the production in these states in 1929. The estimate of acreage in this group of states is 13,640 acres, about 32 per cent below the 1929 acerage. The production forecast this season in Alabama is 12,600 tons compared to 10,200 in 1929; Georgia 3,000 this year compared to 2,900 in 1929; Louisiana 13,600 compared to 44,900; Mississippi 18,600 compared to 20,500; N. Carolina 6,200 compared to 6,000; and South Carolina 26,800 compared to 29,500 in 1929.

The estimate of acerage of cabbage that growers intend to plant in the intermediate group of state is 4 per cent below the 1929 acreage, but about 6 per cent above the average acerage for the five year period, 1925-1929. Arkansas and Tennessee will have 25 per cent less acerage than last year.

The total acerage of cabbage reperted in the early, second early,

URGE POULTRY IN UNION

New Albany, Miss.— The Union County Council met at the courthouse Monday with 10 clubs represented. The morning program was devoted to a discussion on color, illustrated by the use of charts and materials, led by Miss Ouida Midkiff, state clothing specialist, and Miss Bessie Hanks, local home demonstration agent.

ANOTHER NEGRO WOMAN ELECTED TO NATIONAL Y. W. C. A. BOARD

DEAN OF WOMEN AT FISK UNIVERSITY ELECTED

In the 11th National Convention of the Y. W. C. A. assembled at Detroit, April 25th—May 2nd Miss Juliette Derricotte, Dean of women of Fisk University, was elected to the National Board. The other Negro member of the National Board is Mrs. Elizabeth Ross Haynes.

Dean Derricotte was formerly administrator of National Student Y. W. C. A. Work among Negro Colleges. She received her A. B. Degree from Talladega College and M. A. from Columbia University. As National Student Secretary, she visited India and went around the world. She is also on one of the National Committees.

Mrs. Elizabeth Ross Haynes was also a National Student Y. W. C. A. Secretary. She received her A. B. Degree at Fisk University and M. A. at Columbia University. She is the author of "Unsung Heroes," and of "Negroes in Domestic Service in the United States." During the World War she was a dollar a year woman of the National Women's Bureau; and is now serving on several committees of the National Board of the Y. W. C. A.; on the executive committee of The Inquiry; and on the executive committee of The Race Relations Commission of the Federal Council of Churches; and secretary of the Board of Management of The A. Clayton Powell Home for the aged. She is also a mother.

The present Negro secretaries of the national staff of the Y. W. C. A. are not only graduates of some of the leading universities of the country, but through their constant world contacts and outlook, their participation in world community development, their sharing in world secretarial interchange, they have become specialists in their several departments and fields. They are: Miss Eva D. Bowles and Mrs. Cordelia Wynne, (City Department): Miss Juanita Saddler and Susie Bailey (Student) Mrs. Bella Taylor McKnight (Girl Reserve.)

The Negro members of National Committees are among the best prepared of the outstanding women and girls of the race. They are Dean Lucy D. Slowe, Mrs. Ruth Logan Roberts, Mrs. Addie W. Hunton, Mrs. Emma Shields Penn, Mrs. J. O. Blanton, Miss Mabel Byrd, Miss Flora Pinckney, Miss Carrie L. Raysor, Mrs. Josephine Pinyon Holmes.

The outstanding achievements of many of the local general secretaries, together with their efficient staff secretaries—Industrial, Girl Reserve, Educational, Health Education, Employment, House, Cafeteria, Membership, Religious Work, Finance and Social and Music, are unsurpassed by none of those of National Board members or staff. The main difference is that National Board members are volunteer workers, Members of the Committees of Management and many other splendid members are also volunteer workers. One of the stipulations and actual practices of the National Association is that it will hold its National Convention in no city which will not furnish equal accommodations to its Negro delegates. All of the hotels in Detroit vied with each other in entertaining all of the 2205 delegates.

The National Board of The Y. W. C. A. is composed of about one hundred of the leading women of the country, among whom are Mrs. Robert E. Speer, Mrs. John D. Rockefeller, Jr., Mrs. Arthur Curtiss James, Mrs. Charles W. Gilkey, Mrs. John French, Mrs. James S. Cushman, Mrs. John Finley, Miss Mary Wooley, president of Mt. Holyoke College and others just as eminent. The three General Secretaries of the National Board are: Miss Anna V. Rice, Miss Helen A. Davis, Miss Emma P. Hirth. The President of the Worlds Committee of The Y. W. C. A. is the Hon. Mrs. Montague Waldgrave of London.

—Nashville Globe.

A LIVE UNIT OF THE NATIONAL A. AND F. CADETS

Hugo, Okla., May 3, 1930.—(Special to the Baptist Union-Review—On last Sunday evening the A. and F. Cadets unit No. 63 enjoyed a real good time at the Hugo Chapel Baptist Church.

They entertained the Church and School for at least three quarters of an hour, and according to their own expressions they enjoyed it.

Of course they are the talk of the town today.

At the close of the entertainment the Supt. of the school was asked to make a few remarks, among the many things that he said were, "These boys here today will be the sons in law of some of these mothers—will be the husbands of some of these dear mothers, dear daughters and for the Lord."

J. E. Sams.

we cannot do too much for them in training them for future usefulness.

"Let us stop neglecting him and encourage him that he may have his proper place in life."

Mrs. Nannie Hogans and Mrs. Cora Rees responded with nice words of encouragement.

Under the direction of Mr. Samuel Monroe, the Cadets are making great strides of progress.

Cadet M. L. Fields, Jr., was the master for the occasion, Cadet Tiger read a short sketch of the History of the Cadets, Cadet O. T. Butler received the contribution.

Miss Addie Lancaster, was a great help to the Cadets in preparing their program ,for which we extend to her whole-heartedly, many sincere thanks.

Three cheers for unite No. 63 Cadets of the United States.

Affectionately,

Miss Addie Lancaster

—Union-Review.

WOMEN LEADERS TO MAKE EUROPEAN TOUR

Evansville, Ind., May.— (By The Associated Negro Press) Announcement has just been made by Mrs. Sallie W. Stewart, president of the National Association of Colored Women, and fourth vice president of the National Council of Women, of the special tour in European cities which is to be made by colored women leaders from various states who are to attend the Quinquennial convention of the International Council of Women which is to be held in the former imperial palace at Vienna, Austria, May 26 to June 7.

There are ten American delegates to the convention from the thirty-seven national orgaizations which comprise the National Council of Women. Mrs. Stewart is one of these ten delegates.

Other women leaders who are to accompany Mrs. Stewart are: Mrs. Hallie Q. Brown, honorary president of the National Association of Colored Women, chairman of the scholarship fund and trustee of the Douglass Memorial and Historical Association, Miss Meta Pelham, trustee and treasurer of the Frederick Douglass Memorial and Historical Association; Mrs. S. Joe Brown, also a trustee and ex-president of the Ohio Women's Federation; Mrs. Nellie Weaver Green, Muskogee, Okla., Mrs. L. T. Miller, Yazoo City, Miss., A. L. Spaulding Charleston W. Va., Miss Jane Hunter, Cleveland, Ohio, Mrs. L. C. Jefferson, Vicksburg, Miss., and Mrs. Cora Allen, Shreveport, La. —Nashville Globe.

IMPORTANT FOR COLORED FARMERS

Prof. A. L. Hosley of Tuskegee Sends Out to the Colored Farmers the following information.

Washington, April.— Negro Extension News is the name of a new quarterly published by the United States Department of Agriculture covering the activities of the U. S. Extension Service among Negro farmers of the South. Its seventeen pages contain agricultural announcements, of farm projects and excerpts from reports by Negro farm and home demonstration agents.

In a foreword, Dr. C. W. Warburton, director, United States Agricultural Extension Service, calls attention to the work of the service among Negroes. "A staff of 335 Negro cooperative Extension workers is engaged in carrying to the Negro farmers of the South information on improved farming and home-making methods." He states, "These are trained men and women cooperatively employed by the United State Department of Agriculture and the land-grant colleges of the 15 southern states. Of these, 171 are agricultural agents working in counties, 128 are home agents for one or more counties, four are in movable school work and 28 are supervisors. Three new farm agents and 12 new home agents have been placed in counties during the past year. Two field agents work from the Federal department, J. B. Pierce of Hampton Institute, Va., and T. M. Campbell of Tuskegee Institute, Ala."

Negro Extension News is effectively and clearly illustrated with pen and ink sketches.

—Southern Christian Recorder

Negro Farmers

Washington, April—A marked trend toward diversification on the part of Negro farmers is recorded in the recently published report submitted by Dr. C. W. Warburton, director of the United States Agricultural Extension Service to the Secretary of Agriculture.

"Negro farmers" the report states "did more diversified farming and participated more generally in cooperative undertakings than ever before. Negro extension agents in sections of Oklahoma and Alabama, wishing to promote dairying, organized tours of their farmers to Starkville, Miss., that they might see for themselves the prosperity of Negro farmers in Mississippi who have included farm dairying in their farm enterprises. One outstanding extension event in Lowndes County, Ala., was a cooperative turkey sale in which six carloads of turkeys were handled. Approximately 90 per cent of the turkeys brought into this sale were raised and owned by Negro farmers, the majority of them tenants. Credit for the success of this sale was given the Negro agent in this county.

"Perhaps the outstanding work of Negro home demonstration agents was in child care, health and sanitation in rural Negro homes. Their food production and preservation was also very successful. On the whole the record of Negro extension work for the year in all lines is a highly creditable one. Much progress has been made."

The Federal Department in Negro Extension Work is represented by two field agents; T. M. Campbell of Tuskegee Institute, Ala., whose district comprises the gulf states and J. B. Pierce of Hampton, Va., whose district includes the northern section of the southern states.

—Southern Christian Recorder

AMERICAN NEGRO WELL TREATED IN EUROPE SAYS J. A. ROGERS

New York, April 25.—The May, 1930 number of the American Mercury carries a long and searching article by J. A. Rogers examining the treatment of Negroes in Europe as contrasted with their treatment here, and drawing upon numerous individual instances known to him to show that the European treatment of the Negro is far more humane and enlightened than the American.

In his article, as summarized by the N. A. A. C. P., Mr. Rogers tell how on an automobile tour of Europe in 1928, himself and two companions were treated with the greatest kindness. In Stockholm, Sweden, reports Mr. Rogers, a restaurant keeper created a public scandal and was reproached on a llsides for declining to serve colored people. In Vienna the ex-Crown Prince danced with colored women while her colored escort danced with white women.

Black color, he continues is something of a distinction in Europe and black women "receive attention that would not be accorded worthier white women. From Sweden to Italy a Negro meets with prejudice only in Americans and in an occasional white South African or Cuban, who is often touched with the tar brush himself." Even frizzled hair is cultivated by white Europeans, says Mr. Rogers, and they cannot understand the desire of American Negroes to have their hair straightened.

"Mixed couples attract no attention on the Continent,," writes Mr. Rogers, though in England prejudice is strong and "the everyday lot of the Negro in England is far worse than in America." In some of the English seaports, like Cardiff in Wales, there has been much intermarriage of white and black people. But in the English law courts there is no discrimination, says Mr. Rogers and "In cases involving white women, Negros are frequently acquitted where they would be punished in America, right or wrong."

—Southern Christian Recorder.

WORLD RECORD ESTABLISHED

(Continued from Page 1)

between 50 and 60 bushels; barley, 80 acres, made 62 bushels; and his wheat ran 22 bushels and acre on his 40 acres. Thus he raised and harvested more than 12,000 bushels of corn, 4,960 bushels of barley, 4,800 bushels of oats, and 880 bushels of wheat, at a total of 22,740 bushels, estimated to be worth $15,000.

This was Mr. Nelson's first year of horseless farming on any scale, big or little, but contending that his theories, at which so many scoffed, have worked out well in practice, it will not be his last, he says.

TO THE FARMERS:

The Modern Farmer contains information every month that you will not find in any other farm journal. It is the only journal published by and for our people that is devoted exclusively to the farmer and his family.

The price is in reach of every one—being less than 2 cents per week. During these times when the farming industry is undergoing so many changes, and when so many advantages can be had by our colored farmers if they are only aware of them, it is absolutely necessary that you should know what is going on. Three-fourths of the white farmers are subscribers to the white farm magazines and journals. They know just what is going on.

Fill out the blank—secure a money order for $1.00 and mail at once:

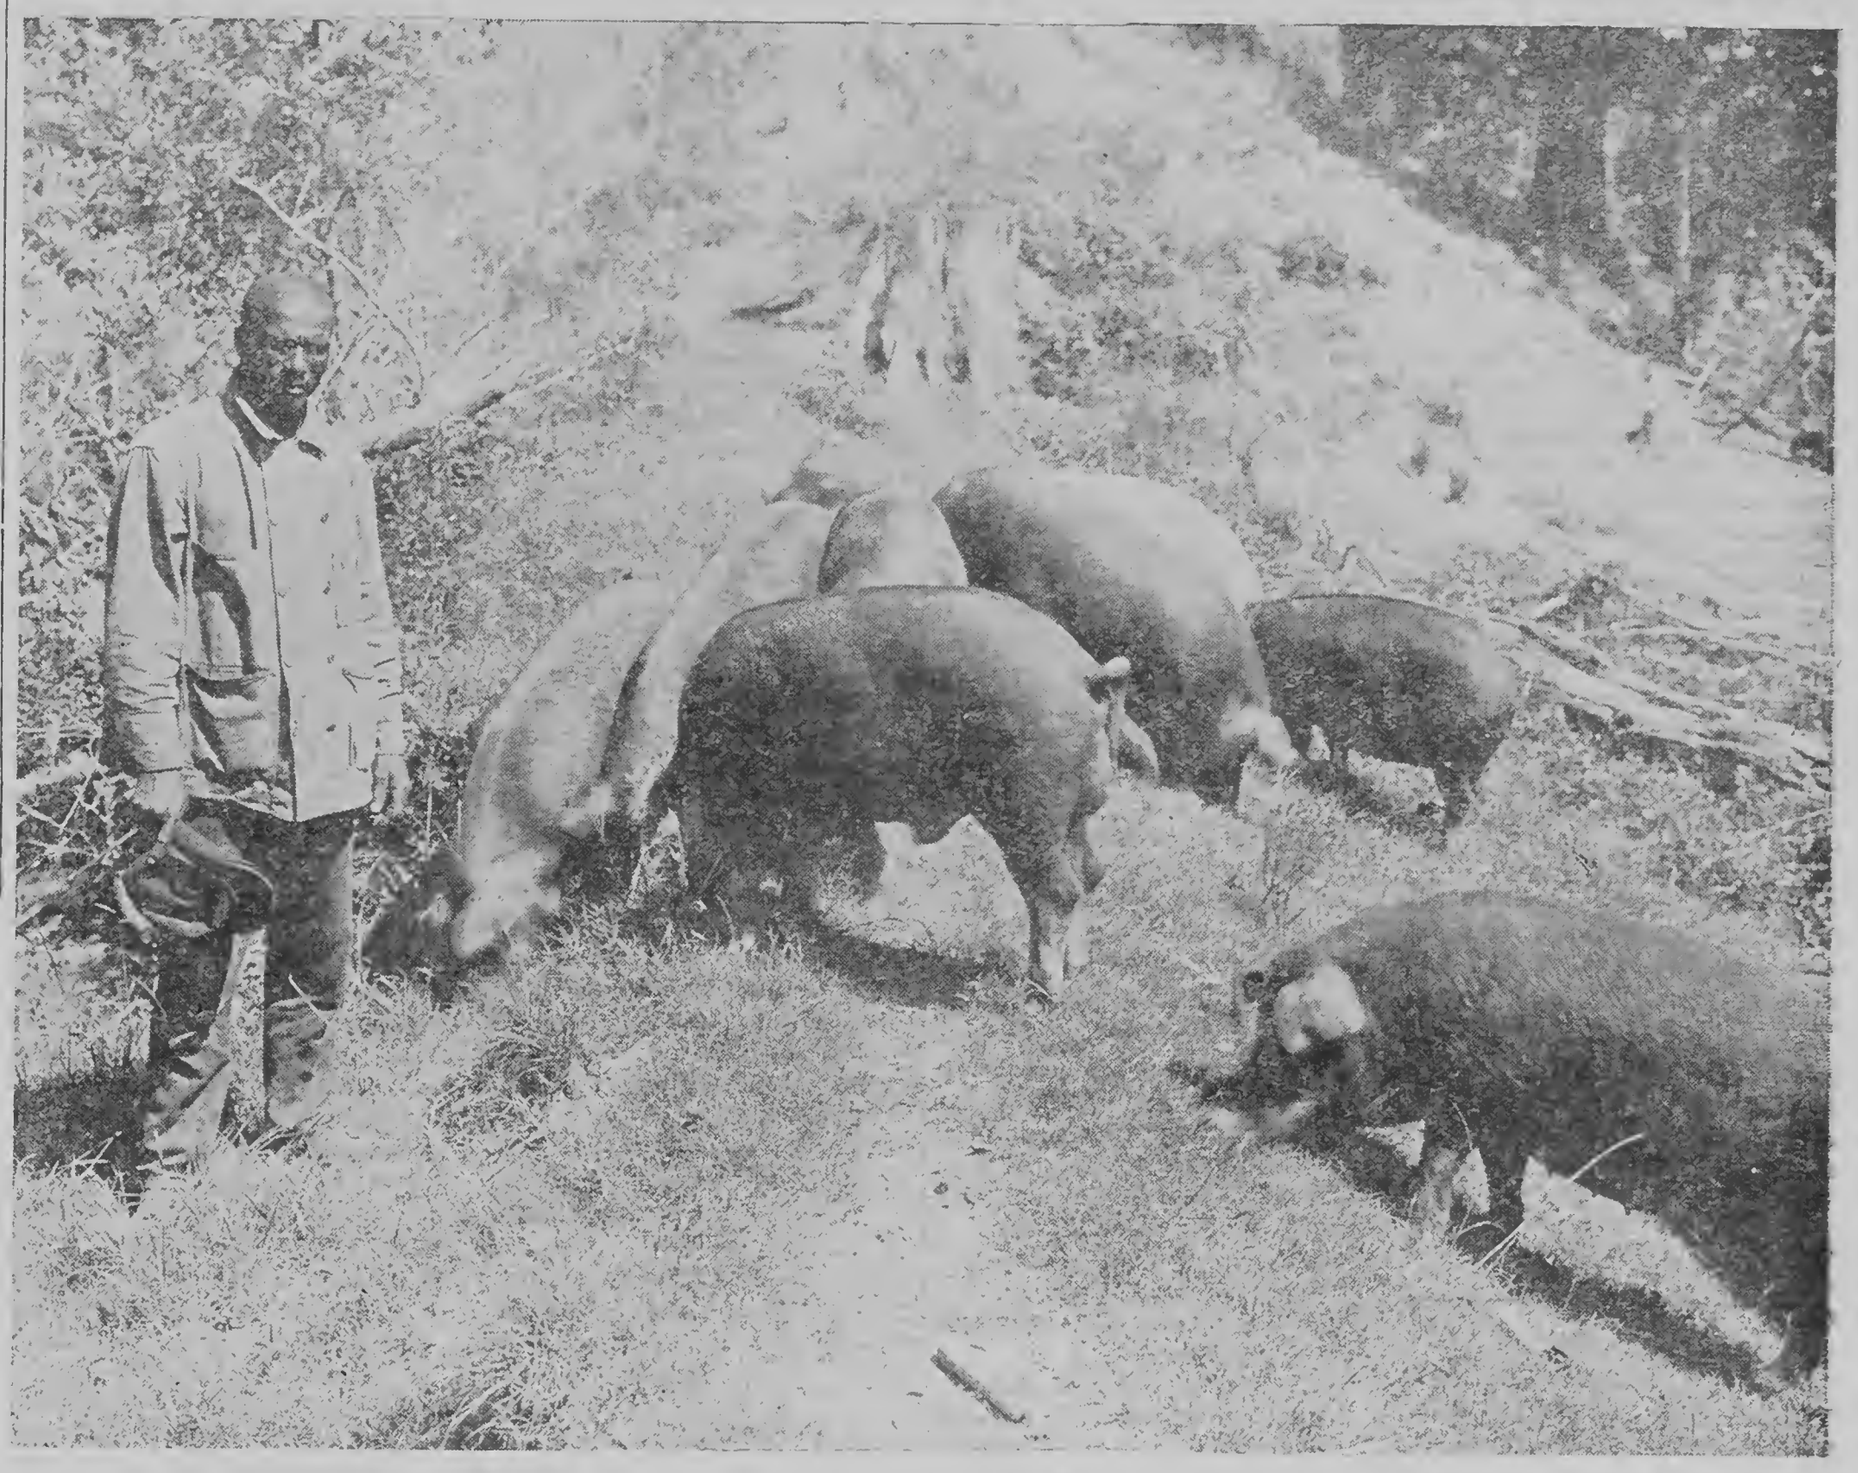
Millions of Dollars Could Be Brought Into The Farmer's Bank Account By An Increase of This Live Stock Raising



Farmer with his herd of hogs, Warren County, Mississippi.

BARROWS ON FEED TEST GAIN MORE THAN SOWS

Hog farmers in the future will do well to give special attention to the male hogs on their farms. Feeding tests recently completed by the United States Department of Agriculture show that barrows make better gains than sows when all get the same kind of feed and attention.

In eight years of comparative feeding tests, 5,653 hogs were studied. Of this number 3,018 were barrows and 2,635 were sows. The barrows outgained the sows by 5.43 per cent, according to E. Z. Russell, of the Bureau of Animal Industry, who was in charge of the tests.

The study was made on hogs in various experiments conducted in practically all parts of the country, under a wide range of climatic conditions and during nearly every month in the year. It included purebreds of all of the popular breeds used in this country, both bacon type and lard type, as well as a number of crossbreds between some of these and grades of unknown breeding.

"Hogs under almost every known system of management were used," according to Mr. Russell. "The results included dry-lot feeding, also hogs on pasture supplemented with limited rations. In some of the experiments a limited ration of barley was fed, followed by a full feeding of corn; in others this ration was reversed.

"In some of the experiments the hogs were full fed from weaning to a weight of about 200 pounds. In others the hogs were started on full feed at weights as high as 50 pounds and carried along to 500 pounds or more. Practically all known hog feeds, including peanuts and soybeans, were used and the resulting carcasses graded in firmness all the way from oily to hard.

"The hogs studied were from sows ranging in ages from 12 months to over 7 years and by boars within the same age limits. Most of the pigs had been farrowed in March, April, May, September, and October, although a few were farrowed in every other month of the year. Some were from sows farrowing but one litter a year, other from sows farrowing two litters."

NATIONAL FEDERATION TO AWARD VALUABLE PRIZES

(Special)

The National Federation of Colored Farmers and the Modern Farmer announce that valuable prizes will be given this year to members and subscribers for diligent efforts made to increase and improve the yield of various farm products and livestock. These prizes have been contributed by public-spirited corporations, manufacturers and individuals and will be distributed to the deserving next fall. Complete information will be given in our next issue. Join, subscribe and get in line for these prizes.

FORESTERS STUDY HARDWOODS

Growth and yield studies for the upland hardwoods of the Central States are being made by the Central States Forest Experiment Station in cooperation with other eastern stations of the Forest Service of the United States Department of Agriculture.

Under the direction of L. I. Barrett, of the Central States Experiment Station field work was carried on last summer, and compilation of the data has been in progress during the current winter. This study is one of the most ambitious of the growth and yield studies yet undertaken by the Forest Service. Some 30 or more species of hardwoods are involved. It will be necessary to prepare numerous volume tables before the yield data can be worked up. Already there has been much demand for the few volume tables that have been completed the Forest Service says.

OUR RED-CLOVER CROP NEEDS LONGER-TONGUED BEES

How long a tongue should a honeybee have? In Russia students have made careful biometric studies of bees in areas where there has been relatively little interregional shipment of bees, and where the bees in any given region are fairly uniform in race and strain. The Russian students find that the northern bees have shorter tongues than the bees of the south. The explanation lies in the adaptation of the bees to the conditions under which they live. In the north the bees gather their honey supply in a relatively short season and in what the beekeepers describe as an intense honey flow. In the south the season lasts longer and the honey flow is not so intense. The southern bee needs a longer tongue.

From the standpoint of the red-clover grower in the United States it might be desirable, says W. J. Nolen, of the United States Department of Agriculture, to have bees with longer tongues in the red-clover regions. He explains that the corolla tubes of the red-clover blossoms are too long for the shorter-tongued honeybees who find it difficult or impossible to gather honey from them. This tends to reduce the visits of all but the longest-tongued bees, and, consequently, many clover blossoms are not pollenized by visits of bees and to bear seed. The races of bees most common in the United States are not exceptionally long tongued. Introduction of long-tongued bees in areas where clover-seed production is important would probably result in larger seed crops and in a larger clover-honey supply.

AMERICAN NEGRO SPIRITUALS ECHO IN WESTMINSTER ABBEY FOR FIRST TIME

FORTY BOYS AND GIRLS FROM HAMPTON INSTITUTE PAY TRIBUTE TO MISSIONARY LIVINGSTONE

London, May 4—The vaulted arches of Westminster Abbey, which shelter the remains of England's kings and great men of history, echoed for the first time today with the soft strains of American Negro spirituals. Forty boys and girls from Hampton Institute of Hampton, Virginia, gathered before the memorial to the explorer David Livingstone, celebrated missionary to Africa, and paid tribute to him as a benefactor of their race.

Great crowds of Londoners waited for an hour outside the Abbey doors for a chance to hear the singing. The congregation of the evensong service remained to hear the little informal concert in the west transept.

Led by Dr. Nathaniel Dett, the little band of Negroes stood for a brief silent prayer before the memorial and then raised their voices in the hymn "Rest, Ye Weary Traveler."

The humb of conversation, in the curious crowd of Londoners, to whom the presence of a Negro choir in the old Abbey was a departure from tradition, stopped as soon as the singing began. The spirituals seemed to cast a spell upon the hundreds of hearers, and as the singers filed out of the west entrance, the crowd almost reverently stood aside to make way for them.

The party left tonight for Belgium, where they will begin a continental concert tour, returning for a final concert in London later.

—Nashville Tennessean.

SAP MOVEMENT IN TREES

Because trees give off water by evaporation at a very rapid rate, the supply must be kept up or the leaves will wilt and die. Water is constantly supplied to these leaves, taking the place of water that has been lost by the air and used by the plant. Just what forces operate to secure this rise of water to the tops of the trees have not been clearly worked out. The water is generally pulled from above and its rise depends fundamentally on two well-known properties of water, cohesion and adhesion. Trees are different in their miscroscopic structure and some are able to raise water higher than others and it is possible that the height of any tree species is limited by this ability to raise soil water to the leaves. That may be why the dogwood can grow only to a scant 20 feet high, while the Sequoia rears its head 300 feet and more above the ground.

The Modern Farmer

Official organ of the National Federation of Colored Farmers

Leon R. Harris - - Editor

Published Monthly by the Modern Farmer at Nashville, Tennessee, and Chicago, Ill.

Nashville, Tenn., Office, 447 4th Avenue, North.

Chicago, Ill., Office: Vincennes Hotel, 36th and Vincennes Avenue.

Devoted to the interests of the Farmer, Truck Gardener, Livestock and Poultry Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 447 4th Avenue, North, Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT!

EDITORIALS

PITYING THE FARMER

The following editorial from the Jackson, (Miss.) Daily News is timely and truthful. It proves that the business of farming is successful, that capital invested in farms pays a good return and that the farmer is not as downtrodden as some appear to believe.

But "between the lines" it tells the Negro farmer something else. It tells him that the white man knows there is money in good farming and is getting ready to get as much of it as possible. The Negro farmer should buy land and forget about a railroad ticket. We need another Booker T. Washington to drive this truism into our heads: "Let Down Your Bucket Where You Are!"

Occasionly one encounters a bunch of statistics that carry a jolt like a punch from Jack Dempsey's paw. Here is a paragraph from a leading editorial in the Hattiesburg American:

When the last census was taken the value of all farm lands in Mississippi was $347,000,000. The value of Mississippi's farming crops for that year was $177,000,000, which represented a gross return of 50c on every dollar invested in farming operations in 1920. The United States Department of Agriculture in a report, titled "Crops and Markets, January, 1930," valued the principal crops of Mississippi at $262,000,000 for 1929. On the basis of the 1920 farm valuation, this crop total shows a gross return of 75c on every dollar invested in farming.

From the above it would seem that all the crocodile tears shed at this session of the legislature concerning "the poor downtrodden farmer" have been utterly wasted.

What other line of business in Mississippi do you know that pays 75 cents on each dollar invested therein?

Farm lands have not appreciably increased in value since 1920, nor has there been a notable increase in farm land assessments. On the other hand, property assessments in the cities have been boosted to dizzy heights, and there has been no market increase of revenue therefrom, after maintenance expenses are deducted.

The legislative idea that the farmers of Mississippi are bearing the heaviest burden of taxation is the veriest tommyrot.

The burden falls heaviest on town property, corporations, industrial plants, and the common carriers. Tax rolls on file in the office of the State Tax Commission conclusively prove this statement.

The 1920 census figure on farm land valuations and crop sales showed only a 10 per cent gross profit for Iowa, admittedly in the highest classification of agricultural prosperity. Mississippi beats the Iowa record five times, and the percentage will no doubt hold good when census figures for 1930 are compiled.

If we farmed in Mississippi with the same energy and intelligence that they farm in Iowa, the Magnolia State would be rich beyond the dreams of avarice.

One of our most urgent needs in this commonwealth is more farmers, white and black, who will spend from eight to ten hours each day in the fields instead of chasing up and down the highways in Ford cars and leaving the farm work to women and children.

HOW TO HANDLE AND PREPARE WOOL FOR MARKET

Wool growers of Tennessee often lose from one cent to five cents per pound on their wool due to lack of proper handling and preparation, according to A. L. Jerdan, extension specialist in marketing, University of Tennessee, who offers the following suggestions for preparing wool for market:

WHEN TO SHEAR—The sheep should be sheared as soon as the weather gets warm and danger of cold rains has passed. Some good shepherds say, "As soon as blackberry winter is over." Shear when the wool is absolutely dry, never when there is any moisture in it.

WHERE TO SHEAR — Shear only on a smooth, dry surface, preferably on a smooth board floor; never on dirt or ground.

HOW TO SHEAR—With shears or clippers. When using shears be sure to clip with blades level with body of the sheep. This avoids making second cuts which shorten the length of the staple and reduces the value of the wool. When using the clippers adjust them so as not to cut close, or the hot sun will blister the back and flies will annoy the sheep before the wool makes the necessary growth to protect the skin. Always smooth the skin toward you with the left hand and the wool roll naturally from the sheep. Never pull the wool down with the hands.

PREPARATION OF FLEECES—Keep fleece intact. Discard all dung locks. They are worth more for fertilizer than they are to the wool manufacturer. Remore tags from each fleece and pack separately. If the fleece has only a small sprinkling of burrs, pick them out before shearing, as it will increase the value three to five cents per pound. Roll each fleece into a neat bundle and tie around both ways. To roll a fleece properly, spread it out evenly on a shearing table clipped or flesh side down and fold in sides until they slightly over-lap. Begin at the neck end and roll in a neat, compact bundle. Tie each fleece separately with four-ply paper fleece twine made for the purpose; never tie two fleeces together or leave the wool untired in bulk, nor tie with binder or sisal twine. Eight and one-half feet of twine will tie a fleece. (See your county agent immediately about fleece twine and wool bags.)

FOREIGN MATERIAL IN FLEECE— Do not permit the fleece to come in contact with chaff, hay, dust, manure or any foreign material, for the buyer wants a package as nearly all wool as possible.

SACKING WOOL—Place the tied fleece in regulation 7 1-2 foot burlap wool bags or cover with canvas or new burlap. You can pack approximately 40 to 50 fleeces in one bag. Keep the white and black fleeces separate Do not permit any of the black wool to be mixed with the white. Keep the burry, seedy, cotted, dead or pulled, black and gray fleeces separate from the clear, clean, white and well-grown wool and pack separately. All grades should never be packed together indiscriminately. Tie or sew bag with hard cotton twine. Do not use sisal twine as fibers get mixed with fibers of wool.

STORING WOOL— Store wool in a clean, dry place until sold. Do not store in a damp place, basement, or leave on the ground.

WASHING WOOL—Never wash wool. It does not pay. You lose more in weight than the gain in price will offset.

POTATO TERMINAL TO COST $2,000,000

Chicago— A $2,000,000 railroad terminal is being built here for the exclusive use of one family—the potato branch of the vegetable kingdom. All modern conveniences for giving the lowly potato safe and rapid transit are included in the plans.

The new yard can be used by any railroad entering the city, according to an announcement by the Chicago & North Western Railway, as track connections are to be provided. The first unit is scheduled for completion by April 1. Team tracks facilities for 600 cars will be provided. with auxiliary tracks for 1850 more.

Some 33,000 carloads of potatoes make the trip into Chicago annually, most of them coming southward from Wisconsin, while Idaho, Maine and Minnesota are well represented.

DO NOT SELL LAYING HENS THIS SPRING

A. J. Caldwell, extension Poultryman, University of Tennessee, warns poultrymen not to sell laying hens this spring for the following reasons:

1. Eggs are the principal source of income from poultry.
2. Spring is the natural laying season.
3. Eggs can be produced at less cost during spring and summer months.
4. The majority make more profit when eggs are 20 cents per dozen then they do when eggs are 50 cents per dozen.
5. The number of eggs per hen is more important than the price per dozen. Fifteen eggs at 20 cents per dozen are worth as much as 6 eggs at 50 cents per dozen.
6. If hens are sold in the spring, many of the good layers will be sold, since practically all hens are laying at that time.
7. The good layers, if properly fed, will continue to lay through the summer and fall months and should be retained in the flock.
8. The hens that go out production in July, August and September are the low producers and should be sold at that time.
9. The eggs laid during the spring will more than make up for the small difference in price of hens.
10. It is not possible to build up a flock of high producing hens where heavy spring selling is practiced.

EDITORS SELECT CAPITAL CITY FOR NEXT ANNUAL MEETING PLACE

Publishers, Printers and Newspaper Managers Coming to Nashville in 1931

EXHIBITION AS WELL AS EXPOSITION SHOWING PAPERS, MAGAZINES AND BOOKS TO FEATURE SESSION

Editors, Publishers, Managers and Owners of Newspapers, Publishing Houses and Periodicals will assemble in this city in 1931 under the auspices of the National Negro Press Association. This announcement reached the city last week from B. J. Davis, the President of the Association, which has just adjourned in Detroit last month, and was confirmed by the Corresponding Secretary, who resides in this city.

According to the early plans, it is expected that the meeting next year will not only embrace the regular annual session, but will be a combined exhibit and exposition of the Periodicals, Books and Magazines produced by members of the fourth estate from their pen and their brain, their printing presses and their newspaper offices. Bound volumes of these publications will be placed in an exposition hall and the citizens of Nashville and middle Tennessee will be invited to give them their constructive criticism during the week that they are placed up for show.

The organization itself, of necessity, has a limited membership, because under the recently amended constitution only publications and periodicals can hold membership. These of course are to be represented either by the editor, managing editor, publisher or president of the organization. It is understood that only three cities were candidates for the entertaining of this Convention of newspaper folks at the Detroit session, that the other two declined when they found that Nashville was nominated. The exact dates have not been handed out, but it is thought that the Convention will be held some time in February.

—Nashville Globe.

NOTED MISSISSIPPIAN ADDRESSES OUR FARMERS

Speaking at the Commencement exercises at Utica Institute, Dr. J. S. Clark, who delivered the main address, advised colored farmers to buy more land, organize cooperative associations, and stay on the farm. The address was delivered before the largest crowd that ever assembled at Utica.

Dr. Clark told his hearers that our racial group could succeed better at farming than any other occupation and that we were foolish to go chasing rainbows when the solid gold lies buried in the soil of our farms.

Utica Institute owns 1,600 acres of land. The farm and plant is run on a business basis. Dr. Holtzclaw, the principal, and Mr. Lawrence, treasurer, are both much interested in cooperative marketing and in the organization of our farmers.

PROSPEROUS COLORED FARMER SAYS "ORGANIZE"

S. L. High prosperous farmer of Madison county Mississippi has 200 acres planted in sweet potatoes this year.

Mr. High owns 660 acres of very fine land in Madison county near Canton and he is one of the most prosperous colored farmers in the United States.

In talking with Mr. High he said, co-operative marketing was the main spring in the success of our farmers, and that Madison county would be organized into the National Federation of Colored Farmers, and he felt sure ninety per cent of the farmers of our group would become members.

Mr. High also has 40 acres in dewberries and finds ready sale for them in large markets like Chicago, Cincinnati, Cleveland and Detroit.

The N. F. C. F. will assist Mr. High in marketing his potatoe crop this year.

FEDERATION NOTES

Mr. J. B. Lee prosperous farmer of Indianola, Miss., attended the commencement exercises at Utica Institute the last of April.

Mr. Lee says prospects for crops this year are very promising, and if the colored farmers will only organize it will be but the question of a year or two when they will be able to operate their farms without the use of borrowed money.

We are glad that we are able to inform any of our members who are desirous of owning a small farm and are unable to make a cash payment, that there is a way open for them to get some real nice tracts of 40 to 50 acres if they are real dirt farmers.

Write the National Federation of Colored Farmers Vincennes Hotel, Chicago, Ill., for full particulars.

ATTENTION COLORED FARMERS

The National Federation of Colored Farmers is receiving hundreds of letters from Colored farmers requesting all kinds of aid and information. We are willing to do everything we can for all the Colored farmers of America. It costs money, however, to maintain offices and our expenses are becoming so heavy that we are compelled to discontinue supplying information to those who request it who are not members of the Federation. If you have faith enough in the organization to believe that it can aid you, then you should be willing to join it and help support it. Isn't that so?

Several County units have organized and elected officers but have not sent in their membership dues. These units are eligible to membership in the Federation until dues are paid. Be helpful. Co-operate. Pay up. "All for each and each for all."

CLEAN CULTURE AND CROP ROTATION CHECK BARLEY SCAB

"A clear complexion and no freckles" on the face of a field plower in the fall is recommended for most farms. This advice has become familiar in areas where the European corn borer has been working. It applies also to areas in which corn and winter wheat are important crops and in which barley is a crop grown either for sale or for feeding. Barley scab has caused serious losses in the central and eastern sections of the country.

The United States Department of Agriculture investigators have found that the fungus causing scab lives over winter on bits of cornstalk or straw. When these bits are covered thoroughly by the plowman the clean-plowed field does not have a freckled appearance. It has the uniform complexion indicative of clean culture, which has proved so desirable in checking the activity of barley scab the following season. Investigators found that on the average in a number of barley fields in northern Illinois the scab infection was more than eight times as great in fields disked or poorly plowed as it was in barley sown on fields plowed clean in the fall. Crop rotation is also helpful in controlling barley scab.

If harvested barley is seriously affected by scab, it is more profitable to feed it on the farm than to try to sell it at the ruinous discount grain buyers must impose. Scabbed barley is useless as hog feed. Hogs reject it, or, if they eat it, they suffer digestive disturbances. Cattle and sheep, however, will relish a ration containing a large portion of scabbed kernels and suffer no ill effects.

CLOTHING HYGIENE SHOWN IN EXTENSIVE LITERATURE

The tremendons advantages made in the direction of hygienic and comfortable clothing, especially for women and children, in the last 10 or 15 years are evident as one scans the literature on clothing for any given period.

Ruth O'Brien, who is at the head of the textile and clothing division of the Bureau of Home Economics of the United States Department of Agriculture, has made a study, with two of her associates, of the available sources of information about the relation of clothing to health. She reports that strictly scientific material on the subject is very meager, but that popular interest in it over a considerable period of time is shown by a bibliography which she has prepared of nearly 1,200 books and articles on some phases of clothing hygiene.

There have always been dress reformers in advance of the times, it seems, protesting against prevailing modes that hampered physical development or contributed otherwise to ill health. Attention to men's clothing seems to have been directed very much to their footwear, especially during the war years. The type of clothing advisable for various occupations has been given considerable thought, of which the latest indication is a discussion of what should be worn for high-altitude flying.

A great variety and quantity of material dealing with women's clothing was found. Some of this relates particularly to the effect of style on health, while another group of references brings out the effect of fabrics on health. The controversy that has raged around the corset for many years can be easily traced through the literature. Women's shoes have also been scored by both lay and medical writers, and there is no dearth of literature decrying the long skirt and other styles even when their vogue was strongest.

Ideas about clothing for children have perhaps emerged most conspicuously of all from traditional practices. It is a far cry from the author of 1863 who recommends flannel as the most appropriate material for children's clothing and who says "dresses should have long sleeves and high neck lines" to the brief sun suit and other lightweight washable children's garments of today.

Those interested in following the changes toward better hygiene and the ideas expressed on the subject at various periods will find this bibliography a mine of fascinating references.

THE CHILD'S DESTINY IS THE NATION'S DESTINY

General Executive American Child Health Association

By S. J. Crumbine, M. D.

There are twenty-six million children in the United States today, a juvenile population that would fill more than four cities as large as New York. In their young bodies and undeveloped minds lies latent power as great as that which gives the economic and civic strength to the most powerful centers of the world. That is why the problem of their health of body and mind concerns the whole nation and why our future as a nation depends on the physical and mental calibre these children possess.

As a nation we are keenly alive to the importance of our enormous child population. It must be educated, trained, protected from disease and accident, and, on the foundation of healthy and successful childhood, brought to happy and successful adulthood. The story of the many community forces at work to make childhood happy and successful has become very familiar to us. There are few mothers and fathers, from the least to the greatest, who have not come in contact with one or more of these forces and who do not know, therefore, where to turn for help in their tremendous job of guiding the destinies of our great child cities of this big population, considered not only as a mass, but more intimately as the individuals who are somebody's much-loved little sons and daughters do, in every truth, depend upon intelligent parental cooperation.

All studies of the present condition of children and the ways and means of securing for them the maximum health and success lead to one primary conclusion—the most important influence in the physical and mental life of children is the influence of the home, for children grow to strong and vigorons manhood and womanhood in direct ratio to the character of the diet, the care and education they receive, especially in the home. Not only must parents inform themselves as to the kind and quantity of food for the growing child that will ensure optimum growth and development, by they need likewise to study the latest information as to the kind and manner of guidance that will ensure growth and development of a sound mind.

The American Child Health Association has made a study of the health of the American school child. This study includes the physical examination of fifth grade children in seventy cities scattered in thirty-two states. It included certain other tests in the fields of health knowledge, health attitudes, health habits and the character and quality of the school facilities provided to meet the health needs of the school child. A great deal of technical information has been gathered in this way and from it we shall be able to improve many of our methods. But over and above the special facts that the study makes clear, the essentialness of intelligent parental cooperation stands out.

The school has a big responsibility which it is trying to meet. It has a health program and health services. Likewise the community has a responsibility, and, to meet it, the community provides immunization against diphtheria, well child clinics where babies and preschool children are examined for the detection of physical defects, other clinics where remediable defects may be corrected, habit clinics where problem children may be examined and the reason for their misbehavior discovered and the treatment outlined that will make the children normal and happy. There are prenatal and postnatal clinics to safeguard the mother's health before the baby comes so that both she and it will be well at the time of baby's birth and to keep them well afterwards. All this exists in addition to the services of the family physician who, can afford to employ him is the person best fitted to safeguard the health of mother, father, baby and older children.

All these means are splendid. If they are used we shall see the improvement of our race and the progress of our child population into a population of healthy, able, right thinking and successful men and women.

"If they are used"—those words point us again to the pivot of the whole wheel of health—the fathers and mothers of the children of the United States. It is the duty of the nation to supply tools and instruction as to the use of the tools, but there its power ends. We may put efficient tools into a parent's hands and teach him how to use them; but if he lays the tools indifferently aside, he will never become a master craftman and never fashion a study or beautiful object. Authentic information, expert advce and well-trained services are the tools which the community offers to fathers and mothers. The bodies and minds of their children are the materials on which to use their tools. And the object of their labor is to produce a sound and beautiful human being, a sound mind in a sound body.

May Day—National Child Health Day 1930 urges us to remember that "if the race is to march forward to a higher civilization, it must march on the feet of healthy and instructed children," and that ahose childish feet will march on the foundation laid by healthy and instructed parents.

—Southern Christian Recorder

EX-SLAVE ELECTED JUSTICE OF THE PEACE

Council Grove, Kensas, May—(By The Associated Negro Press) — Tom Woods was elected Justice of the Peace at the recent city election. For many years it has been the custom of a number of voters to write in Woods' name for one of the city officers. This time he received a sufficient number of votes to elect him. He is a former slave, and was owned by a master named Woods previous to the time he was freed. Tom does not knw his real name or his exact age. He came to Council Grove in 1870.

—Nashville Globe.

FORMER TEXIAN A PH. D. TO SERVE ON P. V. STAFF

Official news has just been released that John Lovell, Jr., son of the eniment clergyman known to all colored Texas, will serve on the staff at Prairie View for the coming summer. Lovell who after taking his B. A. degree from Northwestern and his A. M. from the same University at the age of nineteen (19) will receive his Ph. D. June 1930 from the University of Pennsylvania. He is a specialist in English and will conduct a seminary for post-graduate students and interested staff members on Negro Poets and Writers. Mr. Lovell is one of the best prepared men in the country in his special field, and will be the first Negro Ph. D. to give instruction in Texas in the field in which the doctoral degree has been received. The young scholar was formerly a professor at West Virginia State College and is only twenty-two (22) years of age.

—Nashville Globe.

A Back-To-The-Soil Movement Brings These Results—Self-dependence, Comfortable Homes and Happiness

Plowing Cotton, Greensville County, Virginia

ARKANSAS MEETINGS FOR CO-OP MEMBERS

Sessions Promoting Mid-South's Growth to Be Held In May.

A series of 18 Arkansas meetings, to be held in the interest of the membership drive of the Mid-South Cotton Co-operative Association was announced today by R. S. Burgess ,secretary.

Ten meetings will be held in Tennessee and eight in Missouri. Places and dates of the Tennessee and Missouri meetings have not been set.

Field workers of the co-operative, members of the state agricultural extension service, and representatives of the federal farm board will assist in the meetings.

The Arkansas schedule includes: Blytheville May 6; Jonesboro, May 7; Helena, May 8; Brinkley, May 9; McCrory, May 10; Pine Bluff, May 12; McGehee, May 13; Warren May 14; Strong, May 15; Texarkana, May 16; Hope, May 17; Arkadelphia, May 19; England, May 20; Conway, May 21; Russellville, May 22; Batesville, May 23, and Newport, May 24.

—From Jackson, Miss., Daily Times—warning to our farmers to get together.

BEAN BEETLES EXPECTED TO BE PLENTIFUL

Bean Growers Should Prepare for Hard Fight This Season Says Entomologist.

The Mexican bean beetle was very destructive last summer and is expected to be equally bad on beans this spring. They have already made their appearance and growers are urged to prepare themselves for a hard fight if they hope to have any beans, states Dr. S. Marcovitch, Entomologist for the Agricultural Experiment Station, University of Tennessee.

Dr. Marcovitch has made a special study of the bean beetle and has issued a circular No. 28, "How to Prevent Damage by the Mexican Beetle," to assist growers in controlling the ravages of the pest. This circulation may be secured by writing to the Agricultural Experiment Station, University of Tennessee. Dr. Marcovitch has found that other materials not as poisonous as arsenic will give very good control of the beetle. Cryolite and barium Fluoslicate gave a 300 per cent increase in yield with no foliage injury. He found that perfect control of the Mexican bean beetle may be had if two essentials are observed. These are: (1) Spraying or dusting when the yellow spiny worms are just hatching from the eggs and are still small. (2) placing of the spray or dust on the undersides of the leaves where the worms feed so they can get sufficient poison to kill them.

TURKEY GROWERS MUST IMPROVE METHODS

Extension Service Issues Free Publication To Aid Growers with Production Problems.

If Turkey growers in Tennessee are to continue in the business on a profitable basis they must adopt methods that will check losses of young poults, states A. J. Chadwell, Extension poultryman, University of Tennessee.

A recent survey made by the Agricultural Extension Service through a questionnaire mailed to seventy-one representatives turkey raisers in East Tennessee revealed the very startling information that out of a total of 4,800 eggs hatched in 1929 only 1,269 turkeys or 26 per cent were raised to maturity. No business can hope to succeed under such conditions. Unless there is a rapid shift to improve methods of growing poults, turkey production in Tennessee will be a thing of the past in a few years, according to Mr. Chadwell.

"Growing Turkeys in Tennessee," is the subject of an eight page publication which Mr. Chadwell has prepared to aid growers in improving their methods and increasing their profits. This publication which is No. 163, can be secured free of charge from County farm and home agents or by writing the Agricultural Extension Service, University of Tennessee. It discusses selection and care of the breeding stock, hatching, brooding of poults, range and feeding and prevention of blackheads, the most destructive disease of turkeys.

Every turkey grower in the State should have a copy of this publication.

BABY CHICKS GROW FAST

Baby chicks do a lot of growing in the first four weeks of their lives. H. L. Shrader, extension poultryman in the United States Department of Agriculture, says they double in size in the first two weeks. Not satisfied with such a record, they double in size again in the next two weeks, if they get the right kind of attention.

Two essentials for success in rearing baby chicks, Mr. Shrader explains, are plenty of heat and feeding chicks, he says, is to profeed. A good rule to follow in vide a hopper 4 feet long for each 100 chicks. At the end of three weeks another hopper should be added.

Sunday School and B. Y. P. U. Workers

ARE CORDIALLY INVITED TO ATTEND THE

Sunday School Congress in Chicago, June 11-16, 1930

Reduced round-trip rates have been authorized on the identification certificate plan, to Sunday School messengers, representatives and dependent members of their families. The rate is one and one-half fare for the round trip.

TICKETS WILL BE ON SALE JUNE 7-13.

Any Sunday School desiring to send a representative, and wishing to get a railroad identification certificate, write to

HENRY ALLEN BOYD, Secretary,
Sunday School Congress,
523 2nd Avenue, North Nashville, Tenn.

APPLICATION FOR MEMBERSHIP NATIONAL FEDERATION OF COLORED FARMERS

Vincennes Hotel, Chicago

As a Farmer, I believe the time has arrived when the Colored Farmers should form a National Organization devoted to diversified production, grading, packing, shipping and marketing of farm products and to the purchase of needed farm supplies through cooperative methods, to the end that a more prosperous financial condition may result from their efforts as producers.

I herewith subscribe and forward $5.00 for membership in the National Federation of Colored Farmers for a period of 12 months from date.

Name ... ...

Address ... ...

City or P. O... ... .

If there is any further information desired, write.

Yours truly,

THE NATIONAL FEDERATION OF COLORED FARMERS

Vincennes Hotel, Chicago, Ill.

James P. Davis, President.
Major R. A. Byrd, Vice Pres.
Leon R. Harris, Secretary.
S. B. Wilson, Treas.
C. R. Richardson,, Chairman of Board of Directors.

THE WAY TO REVIVE LYNCHINGS

Slowly but surely lynchings and other violent expressions of the mob spirit are being eliminated from the record of the country. In the 1928, 11 persons were victims of lynchers and last year the number was reduced to 10, of which three were white and seven Negroes. The 10 lynchings occurred in five states, thus furnishing a clear bill of health to 43 of the nation's commonwealths.

It makes no difference how many or how few lynchings there are their superfluity is measured by their number. It is true that 10 are a great reduction from the record of a few years ago, but, even so, they are 10 too many. However, the continued reduction points the finger to the day in the not far distant future when every one of the 48 states can show a clean record as to mob violence.

The only way to prevent this certain and soon eventuation is for the federal government to take a hand in the matter and complicate the situation. It is possible, now and then or here and there, that some strong provocation may cause an outburst of the mob spirit and delay or set back temporarily the day of the lynchless nation. But sentiment is set against mob violence, and, if let alone, the authorities of the various states will settle the matter within a few years.

The only possible chance for a revival of the lynching spirit lies in the passage of such federal legislations as the Dyer act, which would interfere with the solution being made by the states and might cause an outbreak of the crimes for which lynching is invoked through conveying to potential criminals the thought that they would be protected in provocative crime by the natonal government. Lynchings will be eliminated if the states are allowed to handle them. They may be revived, if the states are subjected to federal interference.

—Editorial from Memphis Commercial Appeal, Apr. 29, 1930.

PEACH ROWERS URGED TO PICK UP "DROPS"

Measure Will Help to Reduce Number of Wormy Peaches Says Entomologist.

A large proportion of wormy peaches is caused by the plum curculio. Where the curculios have not been fought in a thorough manner they may become so abundant that the ordinary spray applications of lead arsenate will give little relief, states Dr. S. Marcovitch, entomologist for the Agricultural Experiment Station, University of Tennessee, who suggests that certain additional measures at this time such as picking up "Drops" will be of real benefit in the presentation of wormy peaches.

The fruits that are punctured fall to the ground and breed additional curculios that will puncture the fruit as it ripens. The importance of picking up drops is apparent when one realizes that a bushel of dropped peaches may yield 6,000 beetles that are capable of puncturing at least 600,000 peaches, says Dr. Marcovitch.

The first collection should be made the week of May 12. This should be followed by a collection the following week. A third collection should be made a week later.

All drops should be buried in a trench 18 to 24 inches below the surface of the soil and covered with a layer of quicklime before filling in with the soil. After the "drops" have been picked, cultivation will be beneficial. Destruction of "Drops" will also aid in the control of Brown rot.

MOTHER

By Roselle

To her whose very blood I own,
Whose heart throb set my pulses beating,
Whose disposition shaped my life,
To her to-day I send this greeting.

She loved me long before I knew it,
A helpless mite of human, I;
My life and every joy and comfort
Depended on her ministry.

Her watchfulness was never ending,
My childish steps her constant care;
My growth the cause for deep thanksgiving,
My sins occasioned anxious prayer.

And when I left the dear home circle
To build a hearthstone of my own,
'Twas her example and her training,
That out of things, produced a home.

Since then though far away I've traveled,
Her love has bridged the distance wide;
Her messages of cheer and comfort,
Have been my hope, what-e'er betide.

And now, for her, life's sun is setting,
'Tis little for her I can do;
A message warm, a cheery letter,
Some comforts, or a flower or two.

But such as 'tis, I send it pregnant
With gratefulness and filial love;
With prayers for her abundant entrance
Into the Father's home above. —*Clipped.*

—Union-Review

STATION WANTS CEDAR RUST SPECIMEN

Specimens of red cedar stem rust which affects certain varieties of Apples that are resistant to common rust are wanted for study by the horticulturist of the University of Tennessee Experiment Station, Knoxville.

The common rust on cedars appears in form of Galls suspended from small branches. The galls are covered with "horns" which during wet weather swell and become bright orange in color. These are commonly known as "Cedar Apples."

The stem rust affects older stems where it produces small to fairly conspicuous swellings or cankers. Just at this season these cankers have the bark cracked open, exposing orange colored spores which exude in jelly-like masses during wet weather. Both of the rusts may appear on the same red cedar tree.

So far only a few specimens of this stem rust have been found in the State, therefore it probably is not common. However, in view of the fact that this rust affects certain varieties of apples that are resistant to common rust a knowledge of its distribution in Tennessee is very important and the Aid of Apple growers and farmers throughout the State is solicited. Send specimens and information to J. A. McClintock, Horticulturist, University of Tennessee Experiment Station, Knoxville, Tenn.

TRUCK CROP ESTIMATE

(Continued from Page 1)

and intermediate groups of states in 1929. The total for these groups for 1930, is about 14 per cent less than the acerage in the same States in 1930 is 80,020 acres, compared to 93,350 acres in 1929 and 80,010 acres in 1928. These groups of States had in 1929 about 5 per cent or the estimated total commercial acreage of cabbage grown in the United States for shipment and for manufacture of kraut.

Cucumbers

The preliminary estimate of acreage of cucumbers for two of the early group of states, Florida and Texas, is 11 per cent above the acreage in these states in 1929. Florida has 11,300 acres, an increase of 32 per cent; and Texas 6,240 acres, an increase of 64 per cent.

The total acreage in the four groups this season is 51,200 acres compared to 42,420 acres in 1929 an increase of about 21 per cent.

Strawberries

The forecast of production of strawberries in the early group of states of Alabama, Florida, Louisiana, Mississippi, and Texas, is 68,149,000 quarts, slightly below the production in 1929 although there is an increase of more than 3 per cent in acreage. The production forecast for Alabama is 14,560,000 quarts; for Florida 18,400,000 quarts; Louisiana 29,315,00 quarts; Mississippi 2,312,000 quarts; and Texas 3,062,000 quarts.

Both the acreage and forecast of production of strawberries for the second early group of states of Arkansas, California (S. district). Georgia, North Carolina, South Carolina, Tennessee, and Virginia, are 20 per cent below the 1929 estimates. Production in Arkansas will be less than half of the 1929 production, while Tennessee and N. Carolina are expected to produce about 20 per cent less. California and Virginia will have a larger production than in 1929.

Tomatoes

The preliminary estimate of acreage of tomatoes for the early group of states of Florida. Texas (Lower Valley), and California (Imperial), is one per cent below the 1929 acreage, but 17 per cent above the average for the period, 1925-1929. Although there is a decrease of 14 per cent below last year's acerage in Imperial Valley California, and 25 per cent below in South Florida, the other Florida acreage is about the same as in 1929, and the acreage in the Lower Valley of Texas is about 44 per cent larger than a year ago.

The acreage in the second group of states of Georgia, Louisiana, Mississippi, South Carolina, and Texas (Other), is estimated to be about 20 per cent greater than the 1929 acreage. Increase are planned in all states except Louisiana.

Combining the acreages reported for the two groups of states with the fall acreages in Florida and Texas, an increase of 6 per cent over last year's acreage is indicated. More than half of the acreage estimated for shipment in the United States in 1929 was grown in these three groups of states.

Snap Beans

A production of snap beans 7 per cent larger than the 1929 production, and 27 per cent larger than the average for the five year period 1925-1929, is forecast for the early group of state of California, Florida, and Texas. The acerage for this group is 21 per cent greater than last year, but the average yield per acre indicated this season is 11 per cent smaller.

The acreage of snap beans planted in the second early group of states of Alabama, Georgia, Louisiana, and South Carolina, decreases in Mississippi and North Carolina and about the same acreage in Alabama.

Combining the acreages in the fall, early, second-early, and intermediate groups of states, an increase of 13 per cent over the 1929 acreage is indicated. About 89 per cent of the total commercial acreage of snap beans for shipment in the United States in 1929 was grown in these four groups of states.

Green Peas

The commercial acerage of green peas in the second early states of California, Louisiana, Mississippi and South Carolina, is about 30 per cent larger than in 1929. Acreages in Louisiana and Mississippi are about the same as last year, but California has a 35 per cent increase, and South Carolina 45 per cent increase. The forecast production for this group of states in 1929 is 2,648,000 bushels compared to 2,053,000 bushels in 1929, an increase of 29 per cent. California production is forecast at 2,167,000 bushels; Louisiana 94,000 bushels; Mississippi 178,000 bushels; and S. Carolina 209,000 bushels.

The acreage of green peas intended to be planted in the Intermediate group of states of Delaware, Maryland, New Jersey, N. Carolina, Tennessee, Utah, and Virginia, is 13 per cent greater than the 1929 acreage, but is one per cent smaller than the average for the five year period 1925-1929.

The total acreage of green peas reported to date for 1930 in the early, second early and intermediate group of states, is 21 per cent over the acreage estimated for these groups last year.

Watermelons

The preliminary estimate of acreage of watermelons for the early states of California (Imperial) Valley and Florida, is 12 per cent below the 1929 acreage, although it is 17 per cent above the average for five year period 1925-1929. Florida has a 16 per cent decrease this year; California a 7 per cent increase.

The intended acreage of watermelons estimated for the second early group of states is 2 per cent below the 1929 acreage, but is 3 per cent above the five year average acreage. The states in this group are Alabama, Arizona, Georgia, Mississippi, North Carolina, South Carolina, and Texas. If present intentions are carried out it appears that Georgia will have a 2 per cent decrease in acreage, North Carolina 1 per cent decrease, and Texas 15 per cent smaller than last year, while acreages in Mississippi and South Carolina will be 9 and 33 per cent larger. Alabama and Arizona are reported as planning the same acerage as last year.

The total acreage reported for these two groups is 5 per cent less than the 1929 acreage for the same states when they had about 84 per cent of the total commercial acreage in the United States.

THE NEGRO'S STRIDE IN EDUATION

(Special to The Christian Science Monitor)

New York.

One of the most remarkable advances of the Negro at the beginnings of the sixty-seventh anniversary of his freedom in America has been the progress made in education. No factor has contributed more toward the unparalleled progress of the Negro than education, and in this direction the race has shown capacities that have been astonishing. When the Negro received his freedom there was practically no private or public school, except in a few remote cases, which he could enter. There were few Negro children who were attending [illegible] type.

At the time of the emancipation 95 per cent of the entire colored population of the country was illiterate. Today there are over 2,150,000 Negro children in the public schools of the country.

The annual amount expended for Negro education is $37,000,000. Of this, $3,000,000 comes from Negro resources. The Negro has reduced his illiteracy to approximately 10 per cent, so that today nearly every Negro can read and write.

The progress made by the Negro along educational lines has served to produce outstanding leaders in the fields of business, literature, science, and religion. As the result of this training these Negro leaders are making a definite contribution not only toward the further progress of the Negro, but the country as well.

IN TEN YEARS

It has been within the past decade that the most marked and noted progress in education has been made. Shortly after the war there began what might be called a renaissance in Negro education.

According to the report of the Federal Bureau of Education in 1917 there were 31 Negro institutions that were doing work of college grade. In 1927, when the survey of the bureau was concluded, there were 77 Negro institutions that were doing work of college grade. Referring to the enrollment in Negro colleges the report states: "The college enrollment in the 31 Negro institutions was 2,132 Negro students compared with 13,680 who were attending college in 1927. Today the total enrollment in Negro colleges is over 19,000."

This increase in attendance at these institutions is without a doubt a fine indication for a thirst of knowledge. It represents sacrifice on the part of Negro parents to give their children an opportunity which was denied many of them.

This trend in education among the Negroes is also an indication of an improvement in the economic status of the race. With the opening of better economic opportunities parents are in better position to provide for the education and training of their children.

There is also an increasing large number of Negroes who are working their way through the larger northern institutions, notably Harvard, Yale, Columbia, University of Chicago and similar institutions.

The Negro colleges are on a sounder financial basis than at any time in their history. In 1917 the total income of Negro colleges and universities in America amounted to $2,283,000, while today the annual income is over $10,000,000. The support that is now being given to higher education among Negroes is nearly four times that given in 1917.

The question of financial support has always been one of the big problems facing Negro institutions, and as the result presidents of these schools had to be constantly on the go seeking financial aid for the maintenance of the work. With many of the Negro colleges receiving endowments and larger financial support, more can now be given toward the standardization of these institutions.

Increase of Capital Invested

The total capital that is invested in the real properties of the universities and colleges that were studied by the Bureau of Education has increased from $15,720,000 10 years ago, to over $40,000,000 today. This increase in investment has served to aid in the physical improvement of the plants of these institutions. From inadequate buildings, that were poorly equipped, have come modern buildings with the latest in equipment, with well-kept campuses that would do justice to any northern institution.

Concentration is now being made toward the improving of the academic standing of these institutions so that graduates from Negro colleges will be admitted for graduate work in northern institutions with equal rank. A step toward meeting this condition has been the dropping of high school departments from many of these institutions so that more attention can be given to work of purely college grade.

Some of the Negro colleges that have eliminated their high school departments are Morehouse College, Atlanta University, Howard University, Fisk University, Johnson C. Smith University, Samuel Houston College, and Lincoln University.

The Negro colleges today are paying more attention to admission requirement, enrollments, training of the faculty, salaries, teachers loads, and educational and scientific equipment. Negro educators are paying more attention to matters of administration and many of the southern states are providing scholarships for students.

TRAPS FOR ORIENTAL FRUIT MOTHS

Traps baited with a solution of molasses or sugar and water have been found promising as a control measure for oriental fruit moths in tests conducted by the United States Department of Agriculture. The addition of small quantities of aromatic chemicals such as citral increased the effectiveness of the traps about three times. Glass containers of 1-quart capacity were used for traps. Since there is no effective insecticide control for this pest, further tests will be made with the baited traps. This pest, since its discovery in the United States some years ago, has spread well over the peach-growing regions east of about the Rocky Mountains and is causing serious damage to peaches, infesting both twigs and fruit. It also attacks other fruits, as the apple, quince, pear, etc.

MOVIES AID IN TICK FIGHT

Last year the United States Department of Agriculture's cattle-tick movies were shown four hundred and fifty-seven times and were seen by 62,503 persons in the States of Arkansas, Florida, Mississippi, and Texas. In the six years from 1924 to 1929, inclusive, the pictures were shown in rural communities two thousand four hundred and twenty-nine times to an attendance of 370,778 people.

Two films have proved very helpful in tick-eradication work. "Mollie of Pine Grove Vat," a 3-reel film shows a community organizating to get rid of cattle-fever ticks, the dynamiting of the dipping vat by opponents of trick eradication, their capture by the heroine, and the final release of the county from quarantine. In more than one instance, communities hostile to tick-eradication work became favorable to it after seeing "Mollie of Pine Grove Vat."

"Southern Cattle Yesterday and Today" is a 1-reel film photographed in Virginia, the Carolinas, Georgia, and Mississippi and shows the gradual eradication of the cattle-fever tick in infested Southern States.

FARMER, 89, HURT WHEN PLOW TEAM RUNS AWAY

Petersburg, Ind., April 9.—(Special.)— Herman Fulscher, aged 89 years, Pike County's pioneer corn grower, who was plowing his land for his 75th consecutive corn crop, was seriously injured here this afternoon when a team ran away with him.

THE MODERN FARMER

Vol. II. Nashville, Tenn., and Chicago, Illinois, June 16, 1930. No. 4.

Eight Thousand Eight Hundred and Sixteen Car Loads of Produce

Chicago Received This Amount in One Month

ONE-FOURTH OF GROSS SHIPMENT SENT FROM THE SOUTH BY FARMERS

Chicago received during the month of March 8,816 cars of fruits and vegetable as follows:

Anise—3.
Artichokes—14.
Asparagus—53.
Bananas—622.
Beans—63.
Beets—63.
Brocolli—2.
Brussell Sprouts—2.
Carrots—345.
Cauliflower—274.
Chicory—69.
Cucumbers—7.
Eggplant—4.
Escarole—4.
Greens—4.
Mixed Vegetables—275.
Mustard Greens—9.
Parsley—12.
Parsnips—3.
Peanuts—146.
Peas—122.
Peppers—41.
Pineapples—21.
Radishes—58.
Rhubarb—52.
Rutabagas and Turnips—54.
Shallots—10.
Spinach—266.
Potatoes (white) 2448.
Potatoes sweet—145.
Strawberries—104.
Tomatoes—355.
Apples—396.
Cabbage—309.
Celery—245.
Grapefruit—254.
Lemons—66.
Lettuce—943.
Mixed Citrus—117.
Onions—151.
Oranges—623.
Pears—60.

Total 8816.

Of the above—

Florida shipped 884 cars.
Georgia shipped 53 cars.
Mississippi shipped 11 cars.
Tennessee shipped 96 cars.
Louisiana shipped 43 cars.
Virginia shipped 29 cars.
Texas shipped 922 cars.

The south shipped 2038 cars or one-fourth of cars shipped.

Several units of the National Federation of Colored Farmers are planning to ship solid cars of vegetables this summer and fall.

ENDORSED NATIONAL FEDERATION COLORED FARMERS

On May 5th, while in Canton, Mississippi, the President of the National Federation of Colored Farmers, through Col. Sol High, prosperous Madison County farmer met Hon. J. W. Rogers, President of Chamber of Commerce at Canton.

Mr. Rogers not only endorsed our movement, but added that the Chamber of Commerce would stand squarely behind us and render any aid needed in the promotion of organizing colored farmers in Madison County. Mr. Rogers said that the shipping cooperatively of fruits and vegetables by our members would bring a better financial condition to the colored farmers of that section.

Mississippi Members Of Federation Purchase More Land

Two Large Tracts Acquired Recently

FIRST TIME IN HISTORY OF NEGRO FARMERS WHERE COOPERATION BENEFITS

Two large tracts of land in Mississippi were closed out to members of our Federation during the month of April. This is the first time in the history of the Negro farmer where he has been able to colonize tracts of land and secure farms of their own at liberal terms and practically no down payment.

This was accomplished through the continued efforts of the National Federation of Colored Farmers.

Members who have been paying as high as four hundred dollars per year rent for the past five or six years and never owned a foot of land in their lives were the buyers of those tracts.

One six hundred acre tract will be divided between 15 farmers—each owning forty acres. They will next purchase a tractor to be used by them cooperatively and save the cost of a mule and feed. This is a step in the right direction.

THREE ACRES A FARM

According to the U. S. Census Bureau, anything from 3 acres up is considered a farm. No tract of land smaller than this is being recorded as a farm in the present census unless it produced at least $250 in crops last year. Not many 3-acre patches will do that well.

The Ever-popular Water-melon In Large Demand

SIXTY THOUSAND CORDS

UNITED STATES ENGINEERS WANT BRUSH AND POLES

United States Engineers will need approximately sixty thousand cords of brush and poles to be used in preventment work in the Memphis district.

The willow brush and poles are woven into large flexible mats and placed on the river banks to prevent scouring.

Fifteen thousand cords of the brush and poles are to be used in mats for the protection of the Memphis river front. Fair Landing Arkansas will require about 20,000 cords and about 8,000 cords for Avenue, Ark. Repair work will require something over fifteen thousand cords.

Completion of any contracts for this brush and poles must not be later than June, 1931. Government barges and tow boats will be furnished for conveying the brush from the contractors camp to the site of the revetment work.

Any of our farmers who would like to make bids for supplying this brush and poles should write United States Engineers, Memphis, Tenn.

Department Issues Encouraging Statistics

A GOOD SOURCE OF VITAMIN--A NEED FOR GROWTH PHYSICALLY

A bulletin recently issued by the Bureau of Home Economics of the United States Department of Agriculture says that watermelons are a very good source of vitamin A, needed for growth and physical well-being. The watermelon is also well supplied with Vitamin C, the food factor important in the nutrition of the teeth, and some other parts of the body. Further, Vitamins B and G which are essential in stimulating growth and normal development were shown to be present in watermelon.

The seeds of the watermelon are often used for medicinal purposes. The melon seed is mild, mucilaginous and a very excellent diurêtic, a tea of which is valuable in retention of the urine and all affections of the urinary organs. The seeds are to be bruised and infused in boiling water, the tea to be drank freely.

This tea is also good in inflamation of the bowels and in fevers.

The watermelon is a very popular fruit. The Tom Watson, Dixie Bell, Irish Grey and Thurmond Grey are the most palable varieties, and from 30 to 40 pound average the best sized sellers.

YOUR OWN VINE AND FIG TREE

AN EDITORIAL OF FAR REACHING IMPORTANCE TO FARMERS

Under the heading, "Important Information for Colored Farmers," the April number of the MODERN FARMER carried an account of the organization in Alabama of certain units of Negro farmers which can affiliate with County Farm Bureau organizations and thru these with the Alabama State Farm Bureau and through it with the American Farm Bureau. In other words,—these newly organized Negro Units become adopted great-grandchildren or fourth cousins of the American Farm Bureau,—the leading organization of the white farmers of America.

It is not our purpose to condemn the organization of these Units. We are so glad to see Negro farmers organize that we don't care where they organize, what they call their organization, or who runs them. Just now, "organization" alone is the big word, and the big job is to get them to organize at all. If Negro farm demonstration agents in cooperation with white agents can do the job, let them go to it and we wish them success. But, as they attempt to set up these organizations,

(Continued on Page 2)

County Agent Demonstrating Selection of Seed Corn to Club Member, Morgan County, Oklahoma.

YOUR OWN VINE AND FIG TREE

(Continued from Page 1)

we want them to be honest with our farmers, we want them to tell the whole truth, and we want them to play fair with the National Federation of Colored Farmers.

These organizers are not telling the whole truth when they tell our farmers that the American Farm Bureau is the only national farm organization recognized by the Federal Government. The American Farm Bureau may appear to receive the most recognition because it is the "biggest" and by far the "loudest," but the Government cannot give it any special treatment nor favors. Every national farm organization, and there are several of them, has certain rights and privileges and many desires. We believe the Government and the Federal Farm Board are trying to be fair to all of them.

These organizers are not telling the whole truth when they tell our farmers that they must organize and join these Units, which are supposed to affiliate with the American Farm Bureau, or they cannot expect to receive any relief under the provisions of the Agricultural Marketing Act. It is true that the Negro farmer will get no relief at all unless he organizes. But it is nobody's business just how he organizes. The farm Board is authorized to make loans for relief to any cooperative association of farmers. The law does not say that these associations must affiliate with the American Farm Board Bureau to obtain relief.

These organizers are not telling the whole truth when they tell our farmers that it is necessary for them to join an organization that affiliates with white organizations so that at no time will there be any competition between white and colored farmers. Unless it be these particular organizers, we know of none who fear such competition. It has been well proven that membership in a farm organization will not prevent competition anyway. Some members will abide by the dictates of the orgaization but many will not, and officers and leaders who attempt to compel obedience have a hard time of it.

The National Federation of Colored Farmers shall keep right on organizing Units and we believe the Colored farmers of America and their friends will be loyal to it and will support it. We again declare that it is the only organization of Negro farmers in America and we know what we are talking about. We fully realize that some other national farm organizations, the American Farm Bureau included, have recently discovered that there are a million or so Negro farmers in America, and of course, they desire now to take this million under their benevolent protection. Many colored farmers will join these organizations. But they will never be satisfied in them simply because they belong to the Negro racial group. American Negroes, and the Negro farmer included, are tired of being babied and "protected" and cajoled and petted by those who have never proven that they have any particular regard for our interests. We are sick and tired of these mother-hen-baby-chick arrangements. We have reached the frying size now. We want to scratch the crow, and we want to scratch and crow under our own vine and fig tree.

Eventually, these adopted and affiliated great-grandchildren of the American Farm Bureau will come back home. They will come, body and soul, into the National Federation of Negro Farmers, where they belong, and they will come in spite of anything our great race leaders may say or do. For today, the Negro race is leading. It is leading its leaders. They are wise leaders who can understand what the race is thinking and doing and are willing to follow it.

And again we say, the National Federation of Colored Farmers is the only organization of Negro farmers for Negro farmers in America. It is an organization of Negro farmers for Negro farmers from the top on down. It is doing good work for its members. The American Farm Bureau is also a great organization. It is also doing good work. But we do not desire to affiliate with it. We do want to cooperate with it. This we will do.

Under our own vine and fig tree we shall find peace, happiness, and eventually, prosperity. Your own vine and fig tree, Brother farmer, is the National Federation of Colored Farmers. Get in it. Stay in it. Be builders and build it up. Make of it a great national organization. Be independent. Stay indepedent. Keep the ring out of your nose whether it be a ring of gold, iron or velvet. We thank you.

THE EVER-POPULAR WATERMELON IN LARGE DEMAND

(Continued from Page 1)

During the summer months Chicago and the territory contiguous, consumes over 125 carloads of melons per day.

There are about 700 to 800 large sized melons to a carload, and during the early part of the summer months the grower can invariably get from 350 to 600 dollars per car for his melons, provided they cut red and there is no white streak in the center.

The colored farmers in the southern states produce over half the melon crop.

For the first time in history the colored farmers will have a selling agency of their own in the National Federation of Colored Farmers. The Federation will find buyers for cooperative and individual shippers, and our farmers will get the top of the market without the trimmings deducted.

NEWS NOTES OF IINTEREST AMONG OUR MEMBERS

A small group of redblooded farmers in Leflore county have organized a unit that promises to become one of the largest in the state of Mississippi. A rousing meeting was held at one of the leading churches and every farmer present pledged to bring more to the next meeting.

Prof. A. B. Carter and Rev. Womack are being backed by practically every farmer in Butler county, Alabama in the organization of a unit in that section.

The President of the Federation is planning a visit the latter part of May.

A. R. B. Payne the hustling chairman for Honey Island unit has sent in 6 orders for groceries and supplies totaling fifteen hundred dollars. The members are saving over 30 per cent in purchasing co-operatively and the quality of the goods in some instances is superior to what they have been buying.

R. B. Granderson and Jasper Brown are all smiles. The fifty-six tons of nitrate soda they purchased arrived and each member has received his share. They are well statisfied and saved about ten dolars per ton on the purchase.

This unit also made up a large order for overalls and the saving was far more —per member than their annual membership fee in the Federation.

Quitman county, Miss., has organized at last.

A good crowd of farmers in Quitman county near Marks met at Belmont church on the evening of April 18th and organized the Belmont unit. Encouraging talks were made by several of the farmers present and they appointed another meeting for one week later at which time they were to send in their first order for groceries and supplies.

Several inquiries coming in from Louisiana relative to the organization of units in that state.

It looks as if Mansfield will be the first in that state to organize.

Mrs. Bettie Jackson the brilliant wife of Miles Jackson of the Mt. Herman Unit has organized a canning club.

Order for the canning outfit and equipment has been placed and the plan to begin canning in about 6 weeks.

This is the first club to be organized by Federation members and promises to develop into a very large and profitable venture. They will pack tomatoes, beans, peas, turnip greens, sweet potatoes, pumpkin and fruits.

At Bethel Church near Tchula, Sunday April 27, 29 enthusiastic farmers met and made plans for the organization of the Belmont unit.

One of the principals at the meeting stated that the church was organized in 1870 and not since that date had any effort been made to organize our farmers until this gathering. These men were in earnest. They are hustlers. Complete report in June issue of the Farmer.

Mr. Scott Williams of Holmes county had the misfortune to get in an auto accident some weeks ago. He suffered a broken leg, but is coming around all right and will soon be active again. A very good man.

H. S. Harrison of Thornton has been elected by Good Hope unit to succeed the late Clarence Jordan. He started off with a rush and Tom Stewart and Louis Irving says he is the right man in the right place.

Success to Brother Stewart.

NO ADVANCE IN MELON RATES

The Georgia Department of Agriculture states that the railroads have decided to abandon a proposed increase in freight rates on watermelons for the coming melon shipping season. This is good news for both the grower and consumer.

Watermelons are well supplied with Vitimine A, needed for growth and physical well-being. The watermelon also carries Vitamines C B and G very essential in stimulating growth and normal development.

TWO THOUSAND GROCERY STORES IN CHICAGO SELLING SASSAFRAS ROOT

A survey of the retail grocers in the city of Chicago revealed the fact that something over 2,000 groceries and delicatessen stores are selling sassafras root.

The sassafras root is generally known all over the country as a blood purifier and hundreds of thousands of citizens drink sassafras tea for about two weeks in the spring of every year.

The sassafras tree is found principally on rich uplands usually from twenty to thirty feet high and from a foot to eighteen inches in diameter.

The bark of the root is the part generally used as a medicine though the whole tree—wood, bark, twigs and flowers is more or less medicine, and possessed of a pleasant agreeable flavor: Sassafras is an aromatic stimulating alterative, and purified of the blood; also diahoretic, diuretic and as stingent. A tea made of the root is often used as a beaverage.

It is especially good in chronic rheumatism skin diseases and syphillis.

There are several sections in Mississippi and Alabama as well as the other southern states where sassafras trees are more than plentiful, and another season we will urge our units to urge their members to gather the bark from the roots and prepare it for shipment to the larger markets where they will find a ready sale for it. During the early spring months when there is not so much to do on the farm a part of the idle idle moments of the farmer could be made profitable in gathering safras root.

EXPERTS PLAN OFFENSIVE AGAINST BUGS AND WORMS

"Be Ready to Fight Pests," Farmers Advised by Mississippi Officials.

A. and M. College, Miss., May 23.— Farmers, orchadists, truck growers and gardeners will pay heavy tribute to insect pests during the next few months unless they are prepared to fight them, says the State Plan Board of Mississippi. The board is advising that sprayers, dusters, poisons or other equipment should be on hand ready for prompt use.

Among the insects that usually cause heavy loss each summer is the striped cucumber beetle. This is a small beetle about one-fourth ineh long with yellow and black stripes on its wings. Altho it is an important cumcumber pest, it is known thruout the Southern states as the most destructive insect attacking matermelons. Tips of vines are soon destroyed by the beetles, and in some cases parts of the rind may be devoured by the hungry insects.

The board suggests that dusting the plants thoroly with a mixture of one part calcium arsenate in 15 parts hydrated lime every week or 10 days is perhaps the most effective control measure. If sodium fluosilicate is available, a mixture of one part in three or four parts hydrated lime will also be effective. These dusts should be applied with a hand dust gun in order to give a good distribution of the posion.

COMBAT GRASS WORM

The Southern grass worm is another pest dreaded by all Southern farmers. Corn is the main crop damaged, but when the worms are unusually abundant they will destroy beans, peas and other plants. The worms are so small when they first appear that frequently they are not noticed until the corn is severely damaged.

When present in large numbers a field of corn can be ruined in a day or two. The most effective control is dusting the plants with plain calcium arsenate as soon as the worms are noticed. Very little, if any, burning will be caused by the poison and the worms are usually killed quickly.

TO THE FARMERS:

The Modern Farmer contains information every month that you will not find in any other farm journal. It is the only journal published by and for our people that is devoted exclusively to the farmer and his family.

The price is in reach of every one—being less than 2 cents per week. During these times when the farming industry is undergoing so many changes, and when so many advantages can be had by our colored farmers if they are only aware of them, it is absolutely necessary that you should know what is going on. Three-fourths of the white farmers are subscribers to the white farm magazines and journals. They know just what is going on.

Fill out the blank—secure a money order for $1.00 and mail at once:

NATIONAL FEDERATION TO AWARD VALUABLE PRIZES

(Special)

The National Federation of Colored Farmers and the Modern Farmer announce that valuable prizes will be given this year to members and subscribers for diligent efforts made to increase and improve the yield of various farm products and livestock. These prizes have been contributed by public spirited corporations, manufacturers and individuals and will be distributed to the deserving next fall. Complete information will be given in our next issue. Join, subscribe and get in line for these prizes.

Stands of corn, beans, tomatoes and other crops are often ruined by cutworms. There are several kinds of cutworms, but most of them are rather general feeders and the measures suggested for one crop will prevent damage to others. A poisoned bate made of one part Paris green in 50 pounds of wheat bran, mixed thoroly and moistened with enough water to make a stiff mash has been found very effective. This should be scattered broadcast over the field late in the afternoon at the rate of about 10 pounds (dry weight) per acre.

The baits should be distributed as soon as the cutworm damage is noticed, or injury is expected the baits should be applied before the plants comes up. This bait has been very satisfactory in certain sections of the delta and in some of the trucking areas.

Plant Decoy Traps

Many gardeners will soon be asking how to keep worms out of the cucumbers and cantaloupes, but it will be too late to use a remedy at that time. This worm is known as the pickle worm, and is best controlled by planting trap rows of early squash among the cucumbers or cantaloupes.

Four or five rows to the acre, with alternate hills planted first and the remaining hills planted about two weeks later, will give good results. The infested squash blooms should be pulled off and destroyed as rapidly as the worms get in them. When plants become badly infested they should be pulled up and destroyed.

The harlequin cabbage bug, the red, yellow and black bug so common on mustard, cabbage and collards is a regular offender in the garden. This is a sucking insect and is very difficult to control since it does not swallow poison and is killed only by sprays strong enough to injure the plants The best method of controlling it is to pick off the bugs as early in spring as possible and thus prevent them from increasing in number.

LIGHT PLANT AT LOW COST

In the fall of 1923 Ira Noble of Lucas county, Iowa, installed a farm light plant in his home. Since that time, this plant has constantly furnished electricity for the farm, almost without attention the total expense for repairs consists of the price of one new spark plug.

Although he had experienced no trouble with his farm light system, Mr. Noble decided recently to have a service man look it over. The service man suggested an overhauling of the small gas engine which supplies power for the plant and said that the outfit was good for several years more of service.

The life of a farm lighting system, users say, can be lengthened by good care and particularly by following directions of the manufacturer.

Baking soda, table salts, and also epsom salts, when added to your 'foot water," all make for healthy comfortable feet. About two tablespoonfuls to an ordinary foot basin of water is the right proportion to use. Use whichever of these three is the handiest.

Just after you have soaked your feet is the best time to trim nails. A great many people prefer having their nails rather short and nearly straight across. This keeps them from wearing holes in the toes of stockings.

To avoid ingrown toe nails, some chiropodists advise cutting a small "V" in the middle of the toe nail. As this grows together its tendency will be to naturally draw the ingrown nail out.

It is best to change your hose daily. It is not hard to rinse out a pair or two of hose every day or so, and how much better your feet will feel!

When a woman's feet feel good she can sweep, dust, wash, and make up beds with vim and vigor, and feel happy while she does it. She can walk for miles and not get tired.

Oh yes, healthy comfortable feet are very important, not only for beauty, but for living, working, and enjoying life in general

SHIPMENTS DURING APRIL

Interesting Figures on Movement of the Various Products

Detroit, May—Shipments of apples the past month from all sections of the United States amounted to 3,193 cars. The market during the month assumed a firmer tone.

Asparagus shipments from all sections of the country amounted amounted to 1,359 cars. In addition to this, of course shipments by local express amounted to a considerable tonage. The bulk of the shipments were from California.

Cabbage shipments from all sections of the country amounted to 3,086 cars. The market throughout the entire month of April ruled very high. Imported receipts of Holland cabbage were quite heavy and were shipped out from New York to many other cities in the East and Middle West.

Lettuce shipments amounted to 5,595 cars. At the present time, Salinas shipments are reaching the eastern markets and are selling at extremely good prices. The Arizona deal was a disastrous one.

Orange shipments amounted to 3,476 cars from all shipping sections. Prices ruled high all over the country during the month of April.

Cucumbers were very light during April, compared with the previous year. In all, 332 cars were shipped from all sections for the month. Texas is the heavy shipping point at present.

Pea shipments amounted to 1,083 cars from Mexico and California to United States points. The market ruled high until Mississippi peas commenced to move, but the pea deal in Mississippi will be very short this season.

SQUASH ON BASIS $3 CRATE F. O. B.

Zephyrhills, Fla., May.— Pasco County truck farmers are encouraged over the success of squash growers this season, from the standpoint of yield as well as price being in the northern markets. Shipments now moving are bringing the equivalent of $3 or better per crate on the platform. and the volume now permits the movement in carlots. Shipments of Spring beans are moving also at satisfactory prices.

WE'LL BUY FROZEN PEACHES NOW

A million dollars is to be spent in Georgia this year for equipment to pack the peach crop in "dry ice." The peaches are peeled, sliced and put into small paper cartons with just enough sirup to fill in the spaces, then frozen. In this way they retain the ripe peach color and flavored in idefinitely. They are to be handled much as ice cream, and retailed by drug stores, grocery stores, etc. Heretofore markets have been limited to points reached within 10 days from the orchard, allowing time to handle and sell them. Frozen, the crop can be sold any where in the world. Last year Georgia grew 20,000 carloads of peach color and flavored indefi- at a loss and left 3,000 carloads to rot on the ground. It is predicted the new plan of handling the crop will add $5,000,000 to the state's farm income.

TOMATO DISEASE

The most common tomato diseases are wilt or blight; two kinds of leaf spots found separate or together and mosaic. These are diseases of the growing plant and are to be found in all parts of the southern states.

Prof. S. H. Essary, Botanist for the agricultural experiment station University of Tennessee, has prepared a very interesting bulletin describing these diseases and giving methods of control.

Copies can be secured by writing the Agricultural Experiment station, Knoxville, Tenn.

BEES STING TWO HORSES TO DEATH

Grover Hargrove a farmer near Pemberton New Jersey was badly stung about his head and arms by a nest of bumble bees when he dislodged a pile of lumber while plowing.

One of the horses hitched to the plow was so badly stung that it died a short time later. The second horse stung is also expected to die.

Hargrove was completely blinded from the stings.

Tomatoes and Lettuce Intercropped

The Modern Farmer

Official organ of the National Federation of Colored Farmers

Leon R. Harris - - Editor

Published Monthly by the Modern Farmer at Nashville, Tennessee, and Chicago, Ill.

Nashville, Tenn., Office, 447 4th Avenue, North.

Chicago, Ill., Office: Vincennes Hotel, 36th and Vincennes Avenue.

Devoted to the interests of the Farmer, Truck Gardener, Livestock and Poultry Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 447 4th Avenue, North, Nashville, Tenn.

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT!

EDITORIALS

A TALE OF TWO COUNTIES

This advice is being displayed on large placards in Greenville, Miss:—"TRADE WITH AMERICANS, WHITE OR COLORED, AND NOT CHINESE." There are thirty-seven grocery stores in that thriving little city owned by Chinese and they are drawing quite a bit of the grocery business.

This placard interests us because it proves that the white man and the Negro are getting together in business. They are beginning to look out for each other's interests. Greenville is in Washington County. There are eight thousand colored farmers in the county. There are 2298 white people living on farms in the county and 31,651 colored people.

Evidently some of or farmers are patronizing some of these foreign groceryment and we say bluntly that they should stop it These foreigners, especially Chinese and Greeks,—have no love for America and still less for American Negroes. They are here for what they can get. Every surplus dollars they get their hands on goes back to their native lands. Negro farmers should patronize American business. These foreigners are sure to kick us out of their establishments as soon as they discover they can do without our trade, so why contribute to heir prosperity? Yes, Trade with Americans, White or Colored. Keep your money in America,—where it belongs and where you belong.

Madison County, Miss., is a great fruit and vegetable county. It is one of the biggest sweet potato countiees in the country. It also produces thousands of bushels of peaches annually. Its citizens, white and colored, are wide-awake and progressive. They are industrious and peaceable and best of all they are farsighted. They are alert to take advantage of every opportunity to help their county that comes to them.

A few weeks ago Mr. Sol High, a colored farmer of Madison, became acquainted with the work and program of the National Federation of Colored Farmers. Mr. High is a big farmer and a big man. He owns a six hundred acre farm,—has nearly forty acres in peaches and nearly two hundred acres in sweet potatoes. He is a man of influence and his advice is heeded.

Mr. High realizes that the colored farmers of Madison need such an organization as ours. He knows that if they are organized they can ship their fruits and vegetables to market in car-lots and will get better prices. This will bring more money to the pockets of Madison county farmers,—they in turn, will spend more in Madison and thus Madison County will be benefited.

Mr. High introduced the president of the Federation to the president of the local Chamber of Commerce, Hon. J. W. Rodgers. Mr. Roberts not only endorsed the Federation but also said the Chamber of Commerce would stand squarely behind us and would render any aid needed in getting the colored farmers organized. Both these influential men,—one white,—one colored,—realized that the Federation was a necessity for Madison County and they intend to make it a success in Madison County.

The officers of the Federation appreciate such courtesy and friendliness and are encouraged. What is good for Madison County is also good for every other county in Mississippi. Be loyal to your own county and to your own community. Stop passing up these opportunities. When a good thing comes your way, grab it,—like they do in Madison county.

THE PROOF OF THE PUDDING

The proof of the pudding is in the eating. The proof of the value of any organization to its members is the good it does for the membership. The Natcnal Federation of Colored Farmers has recently assisted several of its units in the purchasing of groceries and farm supplies and this assistance has already resulted in a saving to the members of these units of much more than the cost of their yearly membership fees. These supplies were purchased co-operatively at wholesale prices. The goods arrived safely,—they were above the ordinary quality, and the members were well pleased with them and doubly well pleased with the saving. What these units have saved, others also can save. The Federation is not selfish. It wants to aid Negro farmers every where if they will allow it the privilege.

The Federation is also assisting its members in buying land and much has been accomplished. The officers of the Federation are being well treated by business men and leaders. We are doing business for our members in a business-like manner. It is remarkable how others will help you if you only show a willingness to help yourself a little. The National Federation of Colored Farmers merits the support of every American Negro. Let us have it. We will not abuse your friendship or your confidence.

READ THIS AND CUSS, WE DON'T CARE

This little gem appeared in a recent issue of the Memphis Commercial Appeal:—

OSCEOLA, Ark.,—The function of the Federal Farm Board will be explained to Mississippi County cotton growers at a conference to be held at the court house here April 6, at 7:30 P. M. Speakers from the University of Arkansas Extension Service, Federal Farm Board, the Mid-South Cotton Growers' Association, and thee Cotton Credit Corporation will be on the program.

Admission is upon invitation and cards are being mailed to cotton growers of the county from the office of County Agent S. D. Carpenter today. Interested growers whose names are not on the mailing list and who desire to attend the conference are asked to apply at the county agent's office for admission cards.

Why the invitation cards? Can you read between the lines, Brother Colored Farmer? Somebody in Mississippi County, Arkansas, and also in a good many other counties we might name, does not want YOU to learn anything about farm relief. Probably they think your head is too thick to understand in any way. You are a good cotton grower—have been growing it all your life,—but yet you haint!

O well, that's just another reason why you should get in your own organization and learn something in your own meetings. The time has come when you have either got to be pig or pup—dead or alive,—a respectable American Negro farmer or a peon. Let that soak in then write to the National Federation of Colored Farmers and say that your community is ready to organize.

A "BERRY" GOOD LESSON

We remember reading a letter about this time last year which was written by a Tennessee farmer and all through it he sang the "blues" because himself and his neighbor farmers were unable to secure a profitable price for their berries. They had to take what was offered them or nothing, while at the same time, berries were selling in northern markets for about three times what they, the growers were offered.

Here is a little item from a Kenton, Tenn., paper. "The Berry Growers Association of Kenton had a meeting at the Star Theatre Bldg., for the purpose of setting berry picking prices and arranging for the handling of the coming berry crop. It was agreed by the growers present to pay two cents a quart for picking and a representative was chosen to handle the shipping."

Of course no colored farmer attended this meeting. None of them belong to the Association No wonder they have to take what is offered them. What else can they expect? Why don't they organize like their neighbor farmers have done?

This is a "berry" good lesson for the colored farmers of Tenn. The colored farmers of Mississippi, Alabama and Georgia are organizing,—are buying their supplies co-operatively and are getting ready to ship their products in carlots this summer and fall. The Tennessee farmers are still looking on and whining and writing "blues" letters. We advise some of the progressive leaders of the colored farmers of Tennessee to write to the national office of the Federation of Colored Farmers and tell them that they now see their mistakes and want to organize. Those are the kind of letters that mean something and do some good. This is the United States of America, Brothers, and Tennessee is in it. Nobody has any time to fool with whiners in this country. Get busy. Get together. Organize in every county in your state.

THE POOR COLORED FARMER OF TEXAS

A report compiled from government records and published in this issue informs us that of the 2,038 cars of fruit and vegetables shipped into Chicago from the southern states, one state, Texas, shipped 922 cars. We would like to know how many of these cars were shipped by Texas colored farmers. There are thousands of colored farmers in Texas but if any one of them or any group of them ever shipped a car of vegetables to Chicago or anywhere else we have never heard of it. Why?

Someone made some money during March. Vegetables sell well in Chicago during March. Why didn't some colored farmers get some of this good money? Simply because they were in no position to take advantage of their opportunities. No one knows anything about them—no one knows or cares whether they have any carloads of vegetables to sell or not,—no buyer has ever heard of them because no group of them have ever gotten together and offered their products for sale. In other words,—they are unknown because they are unorganized.

Folks who are unwilling to help themselves a little receive no help from others. The colored farmers of Texas are that kind of folks. No wonder they say,—"the poor colored farmers of Texas."

THE FARMER CAN HELP

It always pays to help out a good cause and when by so doing you may save yourself much expense, sickness and sorrow, your effort at helping pays all the more. A cause every colored farmer should be willing to aid in the yearly fight on the malaria mosquito.

Malaria has steadily increased during the past four years and no one seems able to tell just why. It is causing more suffering than ever before. It is still largely a rural disease so it can be fought better and more effectively in the rural districts than anywhere else. It is known to be a disease caused by the bite of he malaria mosquito and a sure preventive would be the total destruction of the pests This will require many year's labor, but all can help at the present time by screening our houses and by either draining or oiling the stagnant pools of water on our premises. Five dollars spent for screens may save you a fifty dollar doctor bill. Screen your home, your outbuildings,—and keep the vessels about the yard empty of stagnant water.

FIGHTING THE WEEVIL

In some sections of the cotton belt, there are signs of the weevil, and if weather conditions are favorable for their multiplication this summer, they could do great damage. Farmers are urged to have dust guns and a supply of Calcium arsenate ready for immediate use if needed. A pre-square application of 1-1-1. Molasses mixture or in other words 1 gallon molasses, 1 gallon water, 1 pound Calcium is advised and then followed by regular dusting.

Corneluis Richardson, large planter near Lexington, Miss., says early planting and rapid cultivation is a "sure cure" against the weevil. Joe Chalmers, Jr., of says his method of examining the Halady unit in Humphrey County, weevil is to split a crocus sack and tack it across the handle bars of the plow, letting the sack down sufficiently low to brush against the plant while plowing

Tack an empty can (the bottom of which is perforated with small holes) on the cross bar of the plow - fill the can with about a cup of coal oil. The oil dripping on the sack gives sufficient application to the cotton plant and is a sure dead shot to the weevil.

Owing to heavy rains throughout Ark., and Miss., during May, several thousand acres of farm lands are under water and it now looks as if there will be considerable replanting necessary.

In some sections, replanting will not be possible.

In Washington, and Holmes County Miss., washing rains have devastated several hundred acres, leaving numerons ruts excavated to considerable depth.

Several farmers in Miss., have decided to plant corn instead replanting cotton. This will to some extent bring about a reduction in the cotton acreage.

In southern Miss'ssippi conditions are bettere and fields fairly well cultivated.

"And so it is that conditions throughout the cotton industry continue the exact reverse of last year. Last spring optimism was running high, with consumption figures soaring. This year the demand is exceedingly dull and prospects not very encouraging. Last year the peak of the market was reached on March 9 when the spot month went to 21.65, whereas the low of 14.03 cents was touched on March 10 of this year. Therefore, if history repeats itself and if the present depression is to be followed by a revival of prosperity as is the history of former periods of depression, it might be reasonable to expect an improvement in conditions a little later on. To this theory optimists are turning for consolation and it is hoped that their predictions may materialize in the not too distant future."

LONG STAPLE COTTON

Lots of cotton buyers will say that there is practically no difference in the price of long staple cotton and short staple cotton. This is wrong. Long staple cotton will command better prices at all times and in future still greater differences will be paid.

Under the new tariff, a duty of 7 cents per pound must be paid on all long staple cotton coming into this country from foreign countries. This will protect the cotton growers in this country who raise long staple, and will mean better prices. If you are growing long staple cotton this year you should get better prices than for short staple cotton.

ATTENTION COLORED FARMERS

The National Federation of Colored Farmers is receiving hundreds of letters from Colored farmers requesting all kinds of aid and information. We are willing to do everything we can for all the Colored farmers of America. It costs money, however, to maintain offices and our expenses are becoming so heavy that we are compelled to discontinue supplying information to those who request it who are not members of the Federation. If you have faith enough in the organization to believe that it can aid you, then you should be willing to join it and help support it. Isn't that so?

Several County units have organized and elected officers but have not sent in their membership dues. These units are eligible to membership in the Federation until dues are paid. Be helpful. Co-operate. Pay up. "All for each and each for all."

HONOR TO WHOM HONOR IS DUE

Editor's Note:—The author of the following article is first of all, a good farmer. He is a landowner. He is one of the oldest members of the National Federation o Colored Farmers. He is loyal to his organization. He is the Secretary of Trinity-Mt. Zion Unit,—Miss.

OPPORTUNITY KNOCKS! FARMERS TAKE NOTICE

By W. Moore, Sec.

TRINITY—MT. ZION UNIT, N. F. C. F.

If you don't use the talent you have they shall be given to the one who uses his! An hazardous issue is before colored men today. Our ideals must be raised. "Where there is no vision, the people perish." We must have a vision and the time to have that vision is NOW! The past is gone and should be forgotten. The lesson it taught has undoubtedly been learned.

The Future

The future! Ah, to just peep into it; to glimpse its treasures! But what good would that do? Leave that with faith and trust in the hands of Divine Intelligence. It is wise to map out a course to follow, but even this should be subject to change if the spirit of God within us so direct. The colored man is facing a world revolution. The shadow of coming events is cast from the public press and platform everywhere.

Where Is, What Is My Talent.

As a whole, we are farmers by inheritance. All of our forefathers were farmers and are children are farmers. We cannot say what our grandchildren will be. They may be LOAFERS. If they are, it will be our fault because we fail to use our talents Farming is our talent. It is our birthright.. If we fail to follow our calling we will receive nothing but woe in the hereafter

In the newspapers daily, you can see that men of every calling are advertising for plantations and country homes. What is the trouble- What is the matter with the towns and cities? These men have quite a sum of money to invest. They are enjoying every blessing life affords, but they have discovered that all the bait is on the farm and they are seeking bait.

"In Sympathy With My Colored Brethren"

I am in sympathy with my colored brethren. Discontent aroused

Discontent is causing them to wander from city to city. Some object to the idea of discontentment. But I do not blame them. To be content is equivalent to being satisfied with things as they are. But they are ambitions,—eager for power, position, wealth. They are restless and want something to happen.

Here Is An Opportunity.

I am holding for sale one thousand acres of delta land. I want to sell this land to the members of the National Federation of Colored Farmers. I am selling this land at a bargain,—trying to help someone help himself. I am selling small tracts,—forty, eighty or one hundred acre plots.

The price is a treat to members of the Federation. $32.50 to $75.00 per acre. Adjoining land is selling at $100 per acre and more.

This land is going to be sold to members of the Federation. I have sold during the last twenty-five days,$7,900.00 worth of this land and am holding applications now from men that will bring the amount to $12,000.00 I can't feel just right in helping only one or two men. I want to help all I can. You don't know what I can do for you but it is no crime to find out. Let us correspond with one another. I am willing to send any information desired about the above described land. Address—W. Moore, R. F. D., 2, Box 74. Lexington, Miss.

Be on your watch. Don't fail to use your talents. Grasp opportunity while it awaits you and make your last days your best days.

LEGGE TO STAY

Alexander Legge has agreed to remain as chairman of the federal farm board for another year. That is good news. Faced with the difficulty of harmonizing conflicting farm leadership and with the opposition of private handlers of farm products, and with an imperfect law to work with, Mr. Legge has made a remarkable record. The job is far from complete, and it is fortunate for agriculture that he has agreed to stay with it.

—Prairie Farmer.

Editor's Note.—We agree most heartily with the above. Mr. Legge has given the National Federation of Colored Farmers some nice consideration and we believe he will be fair. Our organization is young. We are not expecting anyone in power to "fall for us" suddenly. Like all young things we are being watched. It is up to the leaders and the members of the organization to be so true to our ideals that we will merit every consideration given us.

EXCAVATIONS BACK BIBLE

Finds Around Jericho Tally With Scriptural Descriptions.

Jericho, Palestine, May 3.—Excavations around the walls of Jericho are claimed to confirm the Biblical story.

Some time ago doubt was raised as to whether the trumpets really did shatter the ancient ramparts. The passage from the Bible reads:

"And it came to pass when the people heard the sound of the trumpet, and the people shouted with a great shout, that the wall fell down flat, so that the people went into the city, every man straight before him .... and they burned the city with fire."—Joshua. vi. 20-24.

A section cut through the mound under the city has revealed some of the old wall lying flat and unbroken. Pottery under the walls has been identified as belonging to B. C. 1400. The city is said to have been captured by Joshua about 1451 B. C.

HEALTH WORKERS GIRD FOR FIGHT ON MALARIA MOSQUITO

City Has Three Trucks Traveling Over Memphis While U. S. Forces Map Out Busy Summer's Campaign—Oil Used as Preventive.

While the city health department is busy pouring oil on all standing water in Memphis to catch the mosquitoes early this summer the United States public health service's malarial experimental office in the courthouse is mapping out a busy summer's campaign, despite the illness of the director, J. A. Le Prince, who has fought malaria and yellow fever for the government since the Spanish-American War.

The city has three trucks traveling over the streets under the direction of A. H. Fletcher, sanitary engineer. Every stagnant puddle in Memphis will be oiled

Oil is still the only preventive for the ordinary pest mosquito and should be used in the yard and around the home, according to H. A. Johnson of the public health service. It kills all types of mosquitoes.

Malaria Has Increased

Malaria has steadily increased in Memphis and the midsouth as it has everywhere in the south—since 1926, the city health department's records show. In 1927 there were 516 cases and 17 deaths in the city; in 1928 there were 671 cases and 20 deaths last year the number of cases was 715 of whom 29 died.

"The increase throughout the south has been phenomenal, said Mr. Johason, "as yet entirely unexplained, except by assuming that malaria, like epidemic meningitis, recurs in cycles. We know only by estimates that the increase since 1926 has been from 30 to 50 per cent in this part of the country. At first there was a tendency to blame it on the 1927 flood—but that doesn't explain an increase in North Carolina and an increase of 100 per cent in the number of cases in Florida. Mr. Johnson only recently returned from Florida where he conducted a screening campaign.

Despite the recent increase in the city, Mr. Johnson says malaria is today largely a rural disease, and is no longer the scourge it was two decades back. Its increase at present is probably not so alarming as the figures would indicate. Actual figures for the states of the south are kept only in Alabama and Mississippi and these only recently. In many cities and counties in the other southern states, accurate figures are kept also.

Plasmochine Favored.

Quinine is still the sovereign remedy but its old companion, calomel, is losing favor a bit with the medical fraternity. Quinine is cheap and can be administered at home, but recently a new substance, plasmochine a quinine derivitive has come into favor with the medical fraternity. It has been used very successfully at Memphis General Hospital. Plasmochine is not to be handled by the layman though as is quinine. It can be administered only by the professional physician

"Forty per cent of all malaria cases are recurrences," the department of public health holds, "largely because the patients do not keep up the treatment long enough." A few doses of quinine will break up the clinical symptoms of malaria, but will not eliminate the disease.

The work of the public health service malarial office here is all experimental, and all mechanical It is not a medical office It problem is to show the states, counties and cities how to get rid of the anopheles mosquito. After the experiments are concluded, it is up to the local government entities to wage the actual warfare.

Two major activities are being carried on now. The first is the campaign to make the southern farmhouse, and particularly the Negro tenant cabin impenetrable to find a cheap poison that will kill the anopheles mosquito where it exists over large dark or watered areas

Screens Are Aid

A large measure of success has been acchieved in both. The public health screen door, the public health screen windows and methods of sealing walls and floors will keep out mosquitoes. For example, an active campaiga for screening and sealing in Lake County, Tenn., during the last two years resulted in a decrease of four per cent in malaria cases while the maladay increased in all surrounding counties.

It is not enoaght to screen. The walls and floors must be made "skeeter proof." Mr. Johnson has lately evolved a satisfactory sealing. He tried tar, and other substances for filling cracks and none were successful, until he hit on asphalt. The modus operandi is to stuff ordinary newspaper in the crack as a base and then fill the crack with asphalt. It is apparently impervious to everything then.

The Memphis office will in June start the third year of a three year program of experiment with Paris Green for killing the anopheles (malaria) on large bodies of water. It is quite obvious that to cover Reelfoot Lake with fuel oil, or kerosene or gasoline, would cost an enormous sum, would probably kill fish, and ruin the appearance of the lake.

But the public health service has proved that Reelfoot Lake can be rid of the anopheles mosquito very cheaply. In fact it has practically been done. Lest the fishermen who were bitten by mosquitoes on the lake last year protest at the statement, let it be said that the Paris Green method is not fatal to the ordinary pest mosquito but—this creature holds no interest for the public health service. It's only a nuisance, not a menace.

Paris Green Is Used

The paris green is used in every weak mixture—10 per cent to 90 per cent lime— and is actually broadcast over the whole surface of the lake or pond. For small areas of water or dank marsh it can be distributed with an ordinary cotton duster. On the lake, an automatic blower driven by a small engine mounted on a rowboat was used. The wind always blows from one side of the lake to the other, and by blowing with the wind the boatman can broadcast his cloud of lime and paris green 600 feet at a single swath. "We know that we can kill all the anopheles mosquitoes with 600

Field Demonstration in the use of a Farm Level, Morgan County, Alabama

feet of the boat without harming other forms of life," said Mr. Johnson. Reelfoot Lake is covered with vegetation extending a foot or more from the surface of the water, yet the cloud of poisoned dust will filter through all this.

It is a comparatively cheap process.

The principle?

The "wiggletail" of the anopheles mosquito has a peculiar habit which his brother of the harmless variety hasn't. He lies on the surface of the water and feeds on the surface. The other variety lives under the surface. The particles of pairs green float and are devoured by the anopheles wiggle_tail. But to kill the pest mosquito it is necessary to cover the water with oil and prevent the young ones from coming to the surface as they reach the flying age.

The life cycle of the anopheles mosquito is 12 days, and in the past it has been believed necessary to try to kill each new crop The public health service now believes that by dusting only ever 21 days the anophels tribes will be so diminished in numbers that malaria will disappear from the locality, so this program will be tried this year.

Dyersburg and its environs will be the location for the experi_mental work this year, A crew of about 10 men will be sent there in June.

ATTENTION MEMBERS! GET READY FOR ANNUAL MEETING

The first annual meeting of the units of National Federation Colored Farmers, will be held in Holmes County, Miss., near Howard on August, 3rd and 4th Prominent speakers; barbecue.

This is the first time in history of the colored farmers to have a gathering for the promotion of their interests; buying their groceries and supplies cooperatively and the selling of their fruits and vegetables in carlots, handling their own business and also the buying of farm lands on terms so easy, that any farmer can get on his own farm.

Complete details and programs will appear in July issue of Modern Farmer.

NEWS NOTES OF INTEREST TO OUR MEMBERS

Bethel Unit with Kimbrough Banks and Diggs behind it promises to become one of the largest in the federation.

The Directors of the Colored Fair Association at Jackson, Miss., have set aside Oct. 21 as Farmer's Day and the Federation has been invited to arrange the program.

Honey Island Unit has committee out to select site for purpose of erecting a hall and commissary building.

Trinity Mt. Zion Unit members have purchased seven thousand nine hundred dollars worth farm lands in the past sixty days, and by members who have never owned a farm.

The land was purchased on terms that were more than easy.

Meetings have been held at Micks Chapel, Holly Grove Swifttown, Aguine Church preparatory to the organization of units.

Practically every Unit of the Federation is now buying their groceries and supplies wholesale at a saving of from 40 to 75 cents on the dollar. A member of Holmes County Unit, a widow woman says her fifteen dollars spent for groceries thru her unit was as much as twenty-five dollars worth groceries purchased at retail.

During August several Units will have moving pictures and lectures on agriculture thru the courtesy of a large agricultural implement concern.

Members. of the Wisconsin Units are considering plans to organize a Federal Loan Association.

Jakie Williams of Glendlean, Mississippi says Washington Co., farmers will soon have a Unit that will be a credit to N. F. C. F. There are over seven thousand colored farmers in Washington County.

"TOMOPOTATO" NEW VEGETABLE

Oscar Soderholm, Worcester, Mass., florist has crossed a tomato and potato successfully by grafting. He calls the new hybrid "tomopotato." He started out with the theory that since a potato plant has stronger roots than a tomato, a tomato plant with potato roots should bear more heavily. He has not only proved his theory correct but his hybird plant also is bearing potatoes underground. The plant grows as high as 10 feet. Tomato seeds and pieces of potato are planted at the same time. When the stem of the plants are about the thickness of a lead pencil he grafts the tomato into the potato stem. Soderholm now is plan_ning to do the same with cucumbers.

EVER EAT PUMPKIN ICE CREAM?

Finding they had a surplus of canned pumpkin on hand, the Idaho canneries have found a delivered in an enterprising ice cream man's invention of "pumpkin ice cream. It is so popular in the Pacific northwest that it may permanently enlarge the market for pumpkins. Both the color and the taste appeal to the consumer, and the combination is delicious.

SINGLE COW'S MILK WOULD SUPPLY 35

New State Record Set by Cham_pion Guernsey of North Caro_lina.

(By Associated Press)

Raleigh, N. C., May 3.—Milk enough to supply 35 children with their "pint a day" for a whole year is the record of North Carolina's champion three-year-old Guernsey.

This cow, Grape Lawn Fairy Lady, broke all state records for her class by producing 10,859 pounds of milk and 604.8 pounds of butter fat in 365 days.

Another record started before Fairy Lady was old enough to en_ter another class gives her a production of 13,808 pounds of milk and 768.3 pounds of butter fat which when it becomes official, will make her not only state Guernsey champion, but champion of all breeds.

PRODUCE IS UNSETTLED

Movement of Potatoes And Cantaloupes Very Heavy

Produce markets showed no uniform trend last week, according to the U. S. Department of Agriculture.

Potatoes from the Gulf States advanced in price, while Carolina cobblers were declining. The Chicago carlot market for old potatoes was rather weak. Shipments of this crop were heaviest from the Carolinas, and the Virginia season also is about to open. Movement of tomatoes was beginning actively in Mississippi and Eastern Texas. Prices were moderate and were tending downward, especially at shipping points. A wide range of quality and condition was noticed in many receipts from southern states and Mexico.

Cabbage prices took another slump. The market for this

product was weak. Bulk of the cabbage supply was coming from Virginia and Tennessee Shipments of cantaloups from Imperial Valley of California still average 300 cars daily, though first peak of the season was past. Prices at loading stations strengthened slightly. Forwardings of strawberries were rapidly decreasing; prices were fairly well maintained Onion prices showed little change Three states, Texas, Louisiana, and California were furnishing nearly all of the supply of onions.

The watermelon season is much later than last year, but movement was becoming fairly heavy in Florida and southern California. Opening prices of melons were high. Liberal supplies are expected after the Florida season. Although central California was still shipping 100 cars of lettuce each day, additional sources were opening in Washington, Idaho and Colorado. Cash-track prices of California lettuce were somewhat higher. Markets were firm for good celery. The Florida celery season is about now finished.

Peach movement increased to about 10 cars for the week, including several each from Georgia and California and 1 car from North Carolina. Out put of plums and of prunes increased greatly in California to 105 cars California cherry shipments went up to 40 cars, while the first car of the season was reported from Washington. Michigan and Wisconsin cherries and berries were damaged by recent frosts. Oranges, almost exclusively from California, decreased to 960 cars, compared with twice that number during the same period last year. Shipments of string beans increased to 645 cars, chiefly from North and South Carolina and Louisiana. The season for Virginia beans also opened.

Cucumber movement from Alabama jumped to 340 cars, while Sonth Carolina increased to 140 and Florida dropped to 65 cars. Shipments of green peas had dwindled to 85 cars. Total output of 31 fruits and vegetables for the week decreased about 7 per cent to 17,255 cars, and was 2,300 cars lighter than a year ago.

Watermelons Arriving

Medium sized Tom Watson watermelons from Florida sold at $800-$850 per car load in New York City. Sales on a unit basis were made in a number of markets at 90 cents $1.75. Texas melons ruled $5.50 per 100 pounds in St. Louis. Florida shipments had increased to 210 cars, Texas originated 3 and Florida season, movement will be California 60 cars. During the lighter than last year but the states shipping after Florida expect larger crops of melons. Total forwardings of 275 cars last week were only about one seventh as heavy as corresponding shipments last year, when the season was earlier.

THE ATLANTA CONSTITUTION PUBLISHED THE FOLLOWING INTERESTING EDITORIAL

INDUSTRY IN THE SOUTH

A correspondent of the New York 'Herald-Tribune" is traveling in the southeastern states and writing vivid articles "on the rise of industry now bringing wealth to the old southeast"

In the main Allen Raymon attempts to be graphic and philosophic in depicting economic and industrial conditions that have come to pass in the seven southeastern states during the period since 1900, but he cannot wholly lay aside the blue spectacles usually worn by professional northerners when they scan the south His views are highly colored by the economic and social prepudices that seem inseparable from a northern mind dealing with southern labor and living conditions.

The second of his articles, dealing with agriculture and mill labor in the southeast, begins with the following sweeping generalization:

"There are about 4,000,000 person living in poverty, ignorance and hereditary hopelessness on farms in the seven southeastern states today, a drag on the country's industrial prosperity because they cannot buy anything; a menace to the standards of living of working people elsewhere because the labor of their men, women and children is essentially pauper labor, and a reproach to the richest nation in the world which has permitted its purest American stock to sink lower in intelligence and manner of living than the peasants of other lands who now are barred from the country by the immigration laws."

Mr. Raymond is altogether too cocksure and inclusive in that statement He overrides the fact that schools have been planted all over the rural and mountain regions of the southeast in the past quarter of the century and that illiteracy in these seven accused states has decreased since 1900 by more impressive percentage than in some of the eastern and midwestern commonwealths Georgia decreased her lliteracy percentage from 20.7 in 1910 to 15.3 in 1920, and this year's census will show a further large decrease. The white illiteracy will be below 5 per cent. Between 1910 and 1920 North Carolina reduced her average from 18.5 to 13.1. The white illiteracy in Georgia in 1920 was 5.4 per cent in Alabama 6.3 and in North Carolina 6.8; in Connecticut 6.2 and 5.1 in both New York and New Jersey.

Mr. Raymond finds that the new factories and mills, and what are called "mushroom mill villages," are drawing families away from the farms and degenerating agriculture in the southeast to a most precarious state. But he does not evaluate the plain fact that the bulk of the persons who have left farms for the factories were the hill and mountain farmers whose holdings and produce cut no large and profitable part of general southern agriculture.

The new mills and their villages offering better living, schooling and social ambitions have been of great benefit to many thousands of families who needed just such transplanting and enviroment benefits. And if Providence gives to the southeastern region better working climate, cheaper power and labor able to live equally with eastern and northern labor on somewhat lower wages, the eastern complaints against those conditions should be made to God and not to the southern industrialists and workers.

On the whole, whatever real labor and social problems appear in southern industry are being honestly considered by the potential leaders of southern enterprise and will be worked out to just and humane bases against which the most critical and captious will not be warranted to complain. And criticis honestly authorized and justly apportioned will be helpful to the ultimate solution and not be resented.

MAYOR BOASTS AT WRONG TIME

Major Burns, of Troy, N. Y., made a proud boast last night. He said, "We have no such thing as a speakeasy in Troy." Albany prohibition agents listened and laughed. They had just descended on four places where they arrested four persons and seized a quality of alleged liquor and beer.

LIMBS COVERED IN THIS CHURCH

Women must wear skirts reaching their ankles when they attend church at Bilboa, Spain, according to official orders, and flesh-colored stockings and bare arms are verboten. Little girls must wear their stockings just below the knee.

SOUND EFFECTS NOT INCLUDED

Dr. Werner Siebert, of the Charite hospital, Berlin, has just completed a moving picture of the human lung at work. By means of an internal arrangement of mirrors through the throat thus providing artificiallight, a successful series of animated views of the pneumothorax was obtained Every movement of the respiratory organs can be studied from the picture and the pulsations of the heart are distinctly shown.

PACIFIST BIDDIE LOVES ENEMIES

A hen at Gayhead, near Beacon, N. Y., has chicks that are going to grow long claws, but she doesn't know it yet. She is mothering three abandoned kittens. She keeps them under her wings and stands by while farm hands feed them milk. We all know the way of a cat with a bird and now we know the way of a bird with a cat.

QUARREL ENDS AND SO DOES SCHOOL

For two years the school board of Sommerville, Tenn., had been arguing whether Taylor's chapel a Negro school should be repainted yellow or white. The argument waxed hot until at last a settlement was reached and white was selected. But just that night the building burned withm alost of $8,000. The country authorities, suspecting a dusky fellow in the woodpile, have begun an investigation

TOOK TWO TO TELL IT

The record game fish catch for 1930 in Southern Indiana was made by Zeke Barnes and Roy Davis of Bicknell, Ind., who landed a 21-pound white perch.

TRACTOR PROVES RATHER TOO NOISY

The citizens of Great South Bay off Long Island, N. Y., have been disturbed by the nocturnal snorting and trampings of some huge and mysterious creature which, they through, could be nothing less than a dinosaur. Officers investigated and discovered that it was a farm tractor laden at the time they investigated with 250 cases of choice liquors, Rum runners have been using the tractor to transport liquor across the sandy beach, but it's all over now and the residents have gone back to sleep.

WOMAN ASPHYXIATED

Biloxi, Miss., June 3.—(AP) — Miss Vivian Harrington, well-known business woman of Biloxi, was found asphyxiated in the kitchen of her home here today. The body was found lying downward o nthe floor by a washerwoman. Friends said she had been ill for some time and was worried because of an attack of appendicits.

—Southern Christian Recorder.

THE DISTRIBUTION OF THE BIBLE

New York, N. Y., May, 1930.—. During 1929 the American Bible Society distributed Bibles, Testaments, and Portions totaling 11,102,664, the largest distribution for a single year in the Society's history. According to the 114th annual report just published, the Society since its organization in 1816 has distributed 216,198,915 volumes of Scriptures. The year 1929 was the fifth year in succession in which the distribution surpassed that of the preceding year. Scriptures were distributed in 179 languages and dialects.

The largest circulation occurred in China where nearly five and one third million copies of Scriptures were issued. It is significant that although the number of missionaries in China is twenty per cent less than three years ago the figures for Scripture distribution are thirty per cent greater. This is due largely to the fact that the churches are more generally accepting a responsibility for Scripture distribution in their own localities. In the West Indies there has never been so great a desire for owning complete Bibles as was shown last year. In Brazil the report shows that the circulation for 1929 was twenty-five times what it was forty years ago. In Cairo in a single week designated as "United Literature Week" and promoted by the Christian forces of the city over 6,000 copies of Scripture were sold by students of the Christian theological seminaries. The Society experienced a serious loss of over $1,000 by fire during July in the printing plant of its chief printer in Tokyo when many volumes of printed Scriptures were destroyed Despite this handicap over 900,000 volumes were distributed in Japan during the year, exceeding the number in 1928. Through its foreign agencies the Society promoted distribution in thirty-six countries and in addition cooperated with missionaries organizations by making grants of funds and of Scriptures in twelve European countries. The report states that 4,637 workers shared in the distibution program.

During 1929 publication of Scriptures in the following languages occurred: The four Gospels for the first time in the language spoken by the Kuskokwim Eskimos in southwestern Alaska; an edition of the four Gospel and the Acts of the Apostles in Benga for use in West Africa; the four Gospels in Hopi, the first of the Scriptures to be published for the Indians of that name living near the Grand Canyon; a "diglot" edition of the Gospel of St. John with Portuguese and Jananese in parallel columns for use among the Jananese immigrants now pouring into Brazil; and the Psalms in Bolivian Quechua for use among a large Indian population in the Andes

The year 1929 saw the completion of the New Testament into Cakchiquel, a language spoken in Guatemala by an Indian tribe numbering about 200,000. The completion of this translation marked the climax of ten years of painstaking labor on the part of a faithful missionary and his wife. Teh report states that the Bible in whole or in part has now been translated into 886 languages chiefly due to the combined efforts of the Bible Societies of the world. Some portion of the Bible appears in a new language or dialect as once every five weeks.

Among the new translations in process are: parts of the New Testament in the dialect of the Cheyenne Indians; the translation of the Gosples into Mam, Quiche, and Valiente, the respective languages of three Indian tribes in Central America with a population of 400,000; a fresh tranlation of the New Testament into the languages of the Quechua people of Peru; and that of the four Gospels into the Aymara, spoken by some 500,000 Indians in Bolivia. Among revisions being made are: the transliteration of two Gospels in Shilluk into the new Shilluk alphabet in Anglo-Egyptian Sudan, an extensive revision of the Turkish version of the New Testament; the Canton (China) Colloquial Old Testament and the Ilocano (Philippines) Old Testament.

In 1929 a new record was established in the number of volumes of enbossed Scriptures distributed to the blind, the figure being 3,725. As the average annual distribution for the preceding five years was 2,260 the increase for 1929 is seen to be considerable. The report calls attention to the fact that embossed Scriptures in any system may now he obtained at fifty cents a volume. An entire Bible in revised Braille may be secured for only $10.50. Since 1835, when the Society began its service of providing embossed Scriptures for the blind, the Society has issued 78,614 volumes, the largest continuously rendered service of this kind by any organization in the United tates.

—Southern Christian Recorder.

WHY THE NATIONAL ASSOCIATION AND BROTHERHOOD OF DINING CAR EMPLOYEES WAS ORGANIZED

By Ray Pearson

Friends and Fellow Workers:

The hour has arrived when we, as men, must be up and doing. We, as a body of men, comprise two-thirds of the laboring body of the country and with your co-operation in this cause, will benefit you and generations to come. It is only a movement to improve our conditions financially, physically and morally. Long hours cause physical weakness and mental weakness.

God has given every man life to breathe it free without being humiliated in your toil in industry through life. We, as men, have a right to ask for the necessities of life, as long as we perform the duties that are essential to the ones that employ us. My friends, there never was anything worth while received unless it was asked for. Your employer never knows your conditions unless it is presented to them. In this Association we can protect the man who is worthy of protection, and that depends on the man. We insure his health and protect his family from humiliation, if there be any. We have had, you know, a lot of our groups who were misfortunate in life not to be in the best of circumstances and who have had to look to the Charities of their co-workers when that dreadful reaper of Sickness has visited his door. And that isn't all, —there has been a lot of good men thrown out of work from some personal dislike. Laid off and caused to lose time when it was all unnecessary, and just because there was no one to represent their cause.

With an Association of this kind, we can have all the grievances thrashed out and see if the complaint is justified or not. There is no corporation in the world that will not give you a fair play if the conditions are brought forth to their eyes. Why we have not gotten any further in life, it has been fear and this is what we must get away from. Remember these words 'Time and Tide waits for no man,' so let's get going and do something. We have the making of one of the greatest steps of progress of mankind since the days of Re-construction. My Friends we are entitled to better positions in the Dining Car Department than we have. Why is it, that we haven't got them? It is partly ourselves and the rest on the part of the Companies that we work for. We, in the first place, have never betriedan liflfq. our conditions for advancement only being satisfied with whatever has been given us. Now we must get away from that old idea of staying in the same old rut all the time through this Association we can work for our Advancement, as every other race in this line of work.

First, we must improve our mental power, as well as our physical power: we must get away from the cowardly idea, and be men and not babies; be efficient in our work; neat with ourselves and alert at all times; and in that way you soon will get well regulated. Our advancement depends on ourselves and it is up to you and I, to improve our actions in every respect so we will be ready when the opportunity presents itself There is a place in the labor world for us, when we qualify ourselves for that place. It will take hard study on our parts, economics is our study because through economics our very existence depends; our social life and our political life is secondary, but not the least.

Our organization is only for the protection of men who try to protect themselves by giving the Company the best of their service and working by the rules and regulations of the Company by whom they are employed.

We must, as a part of the Industrial world, play our part as a people who is entitled to the privileges of labor as all other workers. Our dream of a place in the sun is at hand. The clouds of disadvantages have almost disappeared and the dawn of a New Era is here for our class of workmen, in this line of employment, through this Association Though it must be slow, for the the mills of God, grind slow, but exceedingly fine, you will find a Heaven for the last of the railworkers who have handled tocmfwhrdl ers who have handed together and joined hands with the labor of his Capacity for a common course.

—Nashville Globe.

PRESS SERVICE COMMISSION ON INTERRACIAL COOPERATION, 409 Palmer Bldg., Atlanta, Ga., R. B. Eleazer, Educational Director.

Atlanta, Ga., June:—The Board of Trust of Gammon Theological Seminary has accepted the resignation of Prof. Willis J. King, D. D., Ph. D., to become effective October 1. For the past twelve years Dr. King has been professor of Old Testament History in the seminary. He is now abroad on a Rosenwald Fellowship, studying at Oxford and in the Holy Land, whence he will return about July 1 Dr. King's plans for the future have not been announced.

Atlanta, Ga., June 5—Five Negro colleges and a theological seminary, located in this city, this week graduated 193 students with bachelors' degrees, and turned out in addition a large number of normal and high school graduates. The total number enrolled in the college grades of the several institutions was 1,258 and with several hundred more in the preparatory grades and normal training.

The six institutions which give Atlanta pre-eminence as a center of Negro education are Atlanta University, Morehouse and Spelman Colleges, Morris Brown and Clark Universities, and Gammon Theological Seminary. The three first named were recently affiliated to form a single university system, under the name of Atlanta University.

ATLANTA UNIVERSITY, MOREHOUSE AND SPELMAN TO HAVE NEW LIBRARY

Word has just been received from New York of a grant of $450,000 from the General Education Board for the cost of a site and for the erection of a library for Atlanta University and affiliated colleges.

For more than sixty years Atlanta has been an important center of education for Negroes. No other city has had five colleges for Negroes, each with its own constituency but maintaining friendly relationships and mutual respect. A year ago three of these institutions entered into an affiliation which provided that Atlanta University should be developed as a center for graduate and professional courses and that undergraduate work should be conducted by Spelman College and Morehouse College.

The affiliation itself was a notable step in the advancement of education for Negroes. In the three institutions are enrolled more than seven hundred students of collegiate rank exclusive of the summer session and extension school. All three colleges came into the affiliation with a heritage of honest achievement behind them. They have a total initial plant of eighty-seven acres of land and twenty-eight buildings, and are located in the strategic center of the Southeastern states.

The greatest handicap for doing work of college and university grade was the lack of adequate library facilities. The grant of funds that has been made will make it possible to erect and equip a library which will in size and architectural features command attention. This library will serve Atlanta University and affiliated colleges, Spelman College and Morehouse College, and it is honed that other institutions at a greater distance may share in its use. It is expected also that the University library will serve the citizens of Atlanta, stimulate their wholesome reading, and provide a center of community culture.

The lot of land that has been purchased for the library is situated on Chestnut Street between Spelman College and Morehouse College. The campuses of all three institutions border on Chestnut Street, and from the library lines will radiate to the three institutions.

The library will bring together colleges and University in a unity of purpose and outlook and give an impetus to the development of the University that could not be provided in any other way.

A nameless man, amid a crowd
That thronged the daily mart,
Let fall a word of hope and love,
Unstudied, from the heart;
A whisper on the tumult thrown,
A transitory breath,
It raised a brother from the dust,
It saved a soul from death.
O germ! O fount! O word of love!
O thought at random cast!
Ye were but little at the first,
But mighty at the last.

Mississippi's Organized Farmers To Have Two Days Meeting

COTTON PRODUCTS AIDED

Department of Commerce Bulletin in Dixie Staple

PUBLICATION IS AVAILABLE WITHOUT CHARGE FROM WASHINGTON

The annual hegira to seaside or lakeside, mountain top or plain—to resorts of all sorts, is now starting. In most instances the vacationer's aftermath is marked by regrets that the equipment was not more wisely or more completely chosen, that the bedding was too light or the mattress too heavy, that the drinking water had not been given a thought (a desert water-bag was all that was needed)—or foot troubles developed the second day out.

How to save the situation for the vacationer, how cotton caters to his needs with scores of fabric devices, new and old, is the theme of a 24-page booklet detailing 200 tested and approved uses of cotton just brought out by the Department of Commerce. Three-score of them have been carefully written up in "skits" delineating the best in each. Where electric refrigeration is lacking, the cottager may have a cotton-insulated provision safe; the safe-and-sane wading pool and sand box is suggested as a never-failing "locale" for the kiddies, as well as a play tent to round out the play equipment. The subject of boats and canoes has been dealt with in cotton (canvas)—though an alternative of an air-inflated variety is recommended for portability; in short, none of us can remember everything, and even the seasoned camper will find his memory or his buying instinets harpened as he scans "Speaking of vacations."

The publication is available, without charge, from most large department stores and sporting good shops, or by applying direct to the textile diivsion of the Bureau of Foreign and Domestic Commeree, Department of Commeree, Washington.

BIG COW BEST

A study of the Bureau of Dairy Industry, United States Department of Agriculture, or nearly 220,000 yearly records of cows in dairy herd improvement associations showed that within the breed the heavier cows generally excelled the lighter cows of the same age in production and income over cost of feed. The heavier cows ate more in dollars worth of feed, but they more than made up for it in production.

FORTY-FIVE MINUTES PER ACRE

When wheat was harvested with a sickle and threshed with a flail, from 35 to 50 hours of labor were required for harvesting and threshing an acre with a yield of 15 bushels. The introduction of the cradle saved about 10 hours per acre. At present farmers in the Great Plains use from 4 to 5 hours in harvesting an acre of wheat with a binder and threshing from the shock with a stationary thresher; from three to four hours when the crop is harvested with a header and threshed with a stationary thresher; and an average of three-fourths of an hour when the combined harvester-thresher is used.

NEWS NOTES AMONG MEMBERS

President and Editor Make Observations

THREE STATES VISITED BY FARM LEADER LAST MONTH

Holly Grove church near Cruger was the scene on June 15th of a big meeting held that resulted in the organization of a new unit of the National Federation of Colored Farmers. About 25 charter members with more promised for the following week.

* * *

Hyman Chapel near Cruger, Miss., held a rousing meeting just after Sunday school services Sunday, June 15th and a large group of farmers both men and women were out and formed the Hyman Chapel Unit of the National Federation of Colored Farmers. This is a real good farming seetion and the farmers were in real earnest.

* * *

Felzoni Unit has been organized under the guidanee of Miss Martha Chalmers. The President of the Federation paid them a visit and spoke at the church.

The following are the officers: William Johnson, Chairman; John Hart, Secretary and James Lewis, Market Agent.

* * *

James Davis, Chairman Yazoo Mt. Zion Unit, says their first order for groceries and supplies came in good shape and the members declare there is a big saving in buying co-operatively.

There are some real hustlers in Yazoo County.

* * *

D. L. D. Anderson, large livestock and dairyman near Lexington, Miss., has become a member of the Federation and affiliated with Mount Olive Unit. Mr. Anderson has 32 head of cows and yearlings.

* * *

Mrs. Rachel Cooper of Mt. Herman Unit and one of the first members of the Federation in Mississippi has eighty acres of the finest cotton we have seen. She is operating three farms this year.

* * *

Rev. C. H. Kelly is very busy increasing the membership of the Arkansas unit near Twist. Rev. Kelly is not only a good farmer but one of the best ministers in his state.

* * *

Prof. A. B. Carter, the able Secretary of Butler County, Alabama Unit of the Federation is in Montgomery attending summer school During his absence the secretarial end of the unit is being looked after by the Assistant Secretary.

* * *

Members of King Chapel Unit near Talladega, Ala., are busy with their crops. This unit is being handled by B. H. Swain, J. L. Nicks and Nobile Calhoun.

This unit was named for one of the oldest Congregational churches in the south.

* * *

L. R. Harris, Secretary of the National Federation has been invited by the Holmes County units to make an address at the annual gathering near Howard, Miss., the third week in August.

* * *

Official buttons for members of the Federation will soon be ready and members simply rearing for them. They will be mailed out just as soon as received from the factory.

* * *

The President of the Federation will visit Bartlett, Murfreesboro, Mason, Humboldt, Brownsville and Keeling, Tenn., during July.

* * *

Oce Banks was asked by a visitor the secret of success in making Bethel the largest unit in the membership in the state of Miss. He replied 'Early to bed and early to rise, work like ..... and organize." Rev. Sherrord smiled and acquiesced.

Holmes County Units to Entertain State Session

INSTRUCTIVE AND ENTERTAINING PROGRAM PROVIDED

The National Federation of Colored Farmers announces that the first Annual Meeting of the Mississippi Units will be held at Howard, Miss., near Lexington, Holmes County, on Wednesday and Thursday, August 13th and 14th. The largest gathering of colored farmers in the history of Miss. is expected The Holmes County Units, which will entertain the visitors, are preparing for hundreds of farmers and their families from all sections of the south. The following interesting program has been prepared:

PROGRAM

Wednesday, August 13th.

8:30 A. M. Convention called to order by C. C. Richardson, Master of Ceremonies. Devotional Services. Louis V. Irving, Good Hope Unit, Mileston. G. W. Bryant, Whitman Unit, Money. Rev. Granson Marshall, Mt. Herman Unit, Tchula.

9 A. M. Rev. C. C. Crafton. Tchula. Response: Hon. B. W Green, Bolivar Unit, Mayor of Mound Bayou.

9:30 A. M. Special Address: Leon R. Harris, Secretary, National Federation of Colored Farmers, Chicago, Ill.

10:10 A. M. Official Roll Call. W. Moore, Sec.

10:40 A. M. Necessity of Organizing: Miss Martha Chalmers, Holaday Chapel Unit, Louis, Miss.

11 A. M. Benefits Derived From Organization: Dr. Edgar Thomas, Wisconsin Unit, Milwaukee, Wis.

11:15 A. M. Sermon: Rev. Chas. H. Kelly, Arkansas Unit, Twist, Ark.

12 Noon. Dinner by the Holmes County Units.

1:30 P. M. Five Minute Talks on Home Canning: Mesdames Betty Jackson, Mt. Herman Unit, Tchula, Mollie Fisher, Bethel Unit, Tchula. Will Brown, Good Hope Unit, Mileston.

1:50 P. M. Marketing Fruits and Vegetables: Col. Sol High, Madison County Unit, Canton, Miss.

3 P. M. Demonstration of Agricultural Implements, Farm Tools and Cream Separators. International Harvester Co., Chicago.

8 P. M. Movie Show.

Second Day—Thursday, August 14th

8:30 A. M. Meeting called to order by C. C. Richardson, Master of Ceremonies. Devotional Services H. S. Harrison, Good Hope Unit, Thornton, Essex Wilson, Mt. Herman Unit, Tchula, Rev. B. J. Howard, Hyman Unit, Cruger, Miss.

(Continued on Page 3)

EIGHT MILLION FIVE HUNDRED THOUSAND COWS

United States Government Owns Much Live Stock

AVERAGE PRODUCTION PER COW FOUR THOUSAND LBS. OF MILK

At the present time 22,500,000 cows are being milked in the United States, 8,500,000 of which are not paying their way, J. W. Ridgeway of the National Dairy Council stated recently.

"If we could get rid of these boarder cows we would be producing practically all of our dairy product needs from 14,000,000 cows and making a nice profit from each one," he said.

The average production per cow in the entire country is above 4,000 pounds of milk. Although the average production in Tennessee and the South has improved considerably the past few years it is still under the national average. Many dairymen and farmers are milking cows that are not producing a profit above feed and labor cost. Such cows should go to the slaughter house, say dairy experts of the State College of Agriculture.

It has been stated that if Wisconsin dairymen had the same average production as we have in the South they would go broke in 60 days. It costs more to feed and house their animals; therefore they must have more effieient producers. This being a faet, southern dairymen would increase profits materially if they would cull their herds and continue to breed for higher production. One cannot always pick the best cow by looking at her or glancing at the milk pail. There is only one sure way to determine a profitable producer and that is by testing. Ask your County Agent about this.

(Agricultural Extension News Service, University of Tennessee).

"LANDING FIELDS" FOR BIRDS

The establishment of five bird sanctuaries and one public shooting ground in important wild-fowl areas of four Canadian Provinces within the past year indicates that Canada is fulfilling her obligations under the migratory-bird treaty, which protects birds migrating between that country and the United States, according to Paul G. Redington, chief of the Biological Survery of the United States Department of Agriculture, who has written the commissioner of the national parks of Canada, congratulating him upon the progress made by Canada "along this most important line of conservation."

The United States has already set aside a number of similar refuges, or "landing fields," for migratory waterfowl, and, in accordance with the migratory bird conservation act of February 18, 1929, will purchase lands for other sanctuaries, it is antipicated, when funds appropriated become available after the 1st of July.

NEGRO FARM YOUTH COURSE

Three Hundred Boys and Girls With Adults

SHORT COURSE IN SPECIAL TRAINING EMPHASIZED

Tallahassee, Florida—That Negroes are making use of their opportunity for better Farm and Home Making in Florida is evidenced by the 300 farm boys and girls, and the 78 men and women assembled at the Florida Agricultural and Mechanical College for four days of special training in 4-H Club work under the supervision of Farm and Home Makers' Clubs of the Cooperative Extension Work in Agriculture and Home Economics. Farm and Home Makers' Clubs are under the supervision of the State Agricultural College of the University of Florida, Gainesville with the Florida State College for Women, and the Florida A. and M. College for Negroes at Tallahassee cooperating with the U. S. Department of Agrieulture.

Thirteen counties were represented and representatives for the most part were given free trips for meritorious work accomplished the past season. Except where assistance was given by the Extension Staff of the State Agricultural College and the Woman's State College, the Florida A. and M. College had direct supervision of the program planned. In a very simple and orderly manner, farm and home problems were dealt with in a way that those in attendance will return to their respective homes better enlightened and encouraged to remain on the farm and help make their community better and more prosperous.

Dairy Farming to be Stressed

Aside from the general short course program carried out, what was of most interest to adult farmers was that given by Mr. T. P. Turner, Secretary of the Tallahassee Chamber of Commerce at the closing session in the College Auditorium, under the auspices of the Leon Farmers' Cooperative Association Thursday night on "Dairy Farming as an All-year Round Money Project."

The great possibilities for the dairy industry in Florida espeeially in the Northern part of the State were pointed out, together with plans that are being worked out in Leon and other North Florida Counties whereby farmers can buy first class dairy cows through local or central creameries which may be paid for monthly from the cream or milk check. Cream or milk routes passing in close range of the farmers will give them ready market for their produce.

Jefferson County Active

The report of local agent, M. E. Groover of Jefferson County shows that 52 Negro farmers signed contracts with the Monticello Creamery purchasing from one to five milch cows. In several cases the cows thus enlisted in the dairy farm project have paid out of debt for their owners and continuing a steady cash income to their credit. Under this arrangement, the farmer pledges himself to plant one acre each of corn and beans, also two acres of field peas for hay for each cow kept. Dairy Farming is calculated to lay the foundation for the "Safe-farming" program which will be carried

(Continued on Page 3)

LOCUST OF OLD WORLD SAME AS GRASSHOPPER

The locust of Egypt and Palestine, whose present-day devastations have been mentioned frequently this spring in newspapers, is really a grasshopper, the United States Department of Agriculture says, and is very similar to the kind of grasshoppers expected in damaging numbers in the Dakotas and Montana this summer. But the periodical Cicada, often erroneously called the "13-year" or "17-year locust," a distinctly different insect, will also appear on the scene this year. In the more northern localities each brood of this insect appears every 17 years, but in the South the broods appear every 13 years.

A general swarm of "17-year locusts" (Brood IV) is due this summer in southwestern Iowa, western Missouri, eastern Kansas, northwestern Missouri, eastern Kansas, northwestern Oklahoma, and a few in northwestern Texas and perhaps Arkansas.

A few individuals of "13-year locusts" (Brood XXIX) will appear this summer in upper South Carolina, northern Georgia, and Oklahoma, and a few next year in Missouri and Louisiana.

The periodicals Cicada, or "locust," lives only a few weeks in its adult winged stage, during which it seldom takes food, and, in general, does no damage except in puncturing tree twigs and laying eggs in them. This causes a natural "pruning" of the punctured twig ends. Young trees, however, are sometimes killed by the punctures, so it is best not to set out young orchards during the spring of "locust years" and not to prune the trees, especially the young trees, heavily the winter before.

ROAST LAMB SERVED IN NUMEROUS COMBINATIONS

Custom has placed special emphasis on two accompaniments to roast lamb—peas and mint sauce. But there is no rule, social, culinary, or dietary, requiring this combination, or preventing the use of other relishes and vegetables. Variety in the menus and contrast in flavor, color, and texture are assured by changing occasionally to other combinations, says the Bureau of Home Economics, United States Department of Agriculture.

Vegetables which in themselves are pronounced in flavor are especially appropriate with a roast of- lamb. The same is true of lamb chops, stuffed breast of lamb, and other lamb dishes. In a lamb stew, onion, green pepper, and turnip, all having decided flavor of their own, give zest to the meat flavor. And when roast lamb is reheated there is the fine and unusual relish obtained by making a curry sauce, which seems to be especially adapted to lamb.

For the roast relishes like currant jelly, spiced conserves and pickles, and horse-radish sauce are all good, in addition to any vegetables served. English cooks sometimes have caper sauce or mint sauce, both of which are made with vinegar to give a pleasant mild acidity of flavor. American cooks seem to like their mint occasionally in the form of a green-colored jelly made from apple pectin and flavored with mint, or as mint gelatin served as a salad or a garnish.

There is no logical reason why other vegetables may not be served in place of peas or to accompany them. For a change, the home-economics specialists suggest buttered shredded string beans, or quick-cooked spinach, or onions, baked or boiled or creamed, or asparagus, or turnips, white or yellow, or cauliflower. Nor should the possibilities of good salad flavors be overlooked. Plain lettuce with a tart dressing is sufficient for a dinner salad; tomato, cucumber, and lettuce, in season, is always an appetizing salad with any meat and excellent with roast lamb; kumquat, endive, and watercress salad is unusual and colorful enough for a company meal; grapefruit and lettuce, too, is a good tart dinner salad. As roast lamb with a gravy is somewhat rich a light French dressing is preferable to a heavy mayonnaise with all these salads.

BARRED QUILLS PROTECT PORCUPINE FROM FOES

A mouthful of porcupine quills is anything but a savory dish for any enemy of this self-confident animal.

Misguided and overzealous attackers, such as coyotes, often lose their appetites and even starve after collecting some of the tenacious and finely barber quills in their noses or mouths, or in their tongues or cheeks. Frequently at water holes in forest range cattle will sniff at a porcupine and, in return, receive a noseful of quills from a flip of the heavily barbed tail. The sharp quills imbed themselves more deeply with each attempt to remove them, causing intense suffering and sometimes death.

Thus protected the porcupine usually goes its way unhindered, and in its quest for food it may destroy young fruit and forest trees, or vegetable crops, or wallow down alfalfa. According to Leaflet 60-L, Porcupine Control in the Western States, by Ira N. Gabrielson and E. E. Horn, of the Biological Survey, issued recently by the United States Department of Agriculture, the porcupine in many areas has branded itself as a pest that must be controlled. But in many parts of its extensive range it does no serious harm and is tolerated because of the interest that attaches to a native wild animal.

Porcupines in the Northwest winter in the cliffs and lava rims of the mountains. In the Southwest they go to the lower forests for the winter. This makes it possible to find them close to their dens when snow is on the ground and to shoot them, often in sufficient numbers to effect satisfactory control. In summer it is easy to locate their winter dens by the girdled trees. Taking advantage of the porcupine's fondness for salt, foresters, ranchers, and rodent-control workers of the Biological Survey bait them near their dens with a half-and-half mixture of salt and powdered strychnine.

GROWS 122 BUSHELS CORN ON ACRE

Darnell Gordon, 4-H Club member of Henderson County, produced 122 bushels of corn on one acre last year. It cost $33.92 to produce the crop. Valued at $1.00 per bushel, his net profit on the acre was $88.08.

ON PROGRAM IN ALABAMA

Huntsville, Ala.—(Special To The Nashville Globe)—Announcement was made here last week by Miss Aleane Stewart, corresponding secretary of the Flint River Missionary Baptist Sunday School Convention that the executive committee of the organization had secured the services of Henry Allen Boyd of Nashville, Tenn., to make the principal address in this city at four o'clock Sunday, August 3rd.

The address will be made to a mass meeting which will be the closing session of the Forty-fifth Annual Session of the Flint River Missionary Baptist Sunday School Convention. Owens Chapel Baptist Church will be used not only for the mass meeting, but for the sessions of the Convention. The pastor of the church, Rev. M. L. Lanier, is making every arrangement to entertain not only the delegations, but a reception committee has been announced to meet the Congress Secretary when he arrives in this city.

The officers of the Association consist of Rev. G. W. Owens, president, W. H. Herring, vice president, Miss Sibbeo G. Wilhite, secretary, Miss Aleane E. Stewart, corresponding secretary, Elbert Elliott, treasurer.

—Nashville Globe.

FAYETTE FARMERS USING MORE NITRATE

Over 500 tons of Nitrate of Soda have been purchased by Fayette County farmers this season, an increase of 25 per cent over last year, states County Agent C. O. Woody. This does not mean any great increase in cotton acreage but instead it indicates that the farmers of this County are using more nitrate per acre. They are also using it on corn and other crops Mr. Woody says.

CREAM CHECKS HELP NEGROES WITH THEIR CROPS

Negro farmers of Fayette County report that their cream checks are helping them to make their crops states W. R. Davis, Negro county agent. One demonstrator stated that he has not gone in debt since he learned how to take care of his cows, hens and pigs.

EGG PRODUCTION AND PROFITS DECLINE IN MAY

Poultry Specialist Offers Suggestions For Keeping Up Production

The average production of 10,627 hens in 91 demonstration farm flocks in Tennessee for May was 17.7 eggs per hen as compared with 18.8 eggs in April. This was an average of 2.3 eggs below standard production for the nation for May for a 160 egg per year hen, states A. J. Chadwell, extension poultryman, University of Tennessee.

The total income per hen for the month was 48 cents. Egg sales per hen amounted to 33 cents. Feed cost per hen amounted to 26 cents and feed cost per dozen produced was 18 cents. The average selling price of eggs for the month was 23 cents per dozen.

The five high flocks for May averaged 24.6 eggs per hen which was the same as for April. These flocks contained 1,128 hens. The decrease in the average production of all flocks is attributed to low egg prices which has caused some of the demonstrators to cut down on their feed. Mr. Chadwell points out, however, that the best feeders were the ones who made the largest profits as illustrated by the five high flocks which averaged 24.6 eggs per hen against 17.7 for all flocks enrolled.

Hens need more mash and less gain in hot weather. They will not eat enough dry mash to keep up production, they should be fed a moist mash once a day, preferably in the afternoon in addition to the dry mash which should be kept before them at all times. Other important items that should not be overlooked are plenty of fresh water, shade and proper ventilation in the house at night. Hens that fail to lay with proper feeding and management should be culled from the flock and sold.

FARMER STRICKEN WITH PARALYSIS FROM KITTEN BITE

Mr. Harry Leadley of Wyoming, Illinois, prominent farmer, is in a critical condition as the result of being bitten by a kitten.

He is paralyzed from his feet to his knees, and hands to elbows.

BISHOP L. W. KYLES SAYS, "BACK TO THE FARM"

Bishop L. W. Kyles of the A. M. E. Zion Church and who presides over the Western Central and Blue Ridge Conferences of North Carolina which comprises over 300 churches and one hundred thousand members in a recent interview in New York City said "Back to the Farm" and that the large exodus from the farms to the urban centers the congestion is alarming and the struggle for existence is now more than acute.

Bishop Kyles has established a colored agricultural community in North Carolina where members of our race have an opportunity to develop along wholesome lines. He has already secured something like five large farms that he has leased and sold to 21 farmers. Bishop Kyles was one of the first to write a congratulatory letter to the National Federation of Colored Farmers when they first started their membership campaign, and was also one of the first subscribers to the Modern Farmer.

SHIP BEANS BY CARLOAD

Clarksdale, Miss., June 16—Yalobusha county farmers have shipped a carload of beans to the Northern market at Chicago and the tomato growers of the county are gathering their tomatoes for the first shipments to the market.

Truck acreage this year will exceed that of last year. The shipment of beans is the first ever sent out of the county in carload lots. Heretofore beans have been sent out by express.

GROWTH IN THE USE OF FERTILIZER

The first guano was brought to this country from Peru in 1832 This was a small shipment. In 1856 the importations reached 50 thousand tons. The first mixed fertilizers were manufactured in Baltimore, Richmond, Va. and Charleston, South Carolina in 1854. The total tonnage for 1928 reached seven million nine hundred thirty-three thousand six hundred and forty-three tons.

HAIL STORM CAUSES HEAVY DAMAGE TO GEORGIA FARMS

Recent hailstorm in Colquitt, Worth, Thomas and Mitchell counties of South Georgia caused damage of over half million dollars and 300 farmers suffered almost a total loss of their crops. In some places hail fell in such quantities that residents collected it by the wagon load and hauled it to their homes for their refrigerators.

Statistics from the Department of Commerce give the colored farm population as 2,733 Colquitt county 8,118, Mitchell county 6,382, for Thomas county 5,744, and 5,774 for Worty county. This number is over half the farm population.

OLDEST MAN IN UNITED STATES FORMER FARMER

Major Bond of 80 Spruce Street, Stamford, Connecticut, places his age at 115 years. The census office in Stamford recorded him as the oldest citizen in that city, and in all probability the oldest in the United States.

Mr. Bond was born in Georgia and worked on a farm belonging to Mr. Len Bufford.

Mr. Bond says he was 45 years of age when the Civil War broke out.

IOWA FARM WOMAN IS GORED TO DEATH BY BULL

Grundy Center, Ia., June 25—(Special)—Mrs. John Bruns, 25, was gored to death by a bull on her husband's farm near here last night.

TO THE FARMERS:

The Modern Farmer contains information every month that you will not find in any other farm journal. It is the only journal published by and for our people that is devoted exclusively to the farmer and his family.

The price is in reach of every one—being less than 2 cents per week. During these times when the farming industry is undergoing so many changes, and when so many advantages can be had by our colored farmers if they are only aware of them, it is absolutely necessary that you should know what is going on. Three-fourths of the white farmers are subscribers to the white farm magazines and journals They know just what is going on.

Fill out the blank—secure a money order for $1.00 and mail at once:

NATIONAL FEDERATION TO AWARD VALUABLE PRIZES

(Special)

The National Federation of Colored Farmers and the Modern Farmer announce that valuable prizes will be given his year to members and subscribers for diligent efforts made to increase and improve the yield of various farm products and livestock. These prizes have been contributed by public-spirited corporations, manufacturers and individuals and will be distributed to the deserving next fall. Complete information will be given in our next issue. Join, subscribe and get in line for these prizes.

START CULLING LOW-PRODUCING COWS FROM THE DAIRY HERD NOW

By O. E. Reed, Chief of the Bureau of Dairy Industry, U. S. Department of Agriculture, Washington, D. C.

There are three things we can do to make our dairy herds more profitable. Cull the low producers; feed the others according to what they can produce when well fed; then breed intelligently. Let's consider what we can accomplish by culling the low-producing cows from our dairy herds.

Studies, by the Bureau of Dairy Industry, U. S. Department of Agriculture, of the production, feed cost, and income records of cows on test in Dairy Herd-Improvement Associations have shown that the elimination of the lowest producers from the dairy herd not only increases the average production per cow, but always results in increasing the cash income over cost of feed per cow. Therefore, if any dairyman is dissatisfied with the income which makes over cost of feed, he can always increase that income per cow by culling a little closer.

At present, when the surplus of dairy products in this country is abnormally high, and when prices are correspondingly low, closer culling is one of the ways of getting better results immediately. Our figures indicate that culling the lowest-producing 1 per cent of the dairy cows in this country would not lower the milk and butterfat production as much as 1 per cent, but only one-fifth of 1 per cent; and that culling the lowest-producing 10 per cent, but only 5 per cent.

Some people say that it is not good logic to blame the low-producers when there is a surplus of dairy products in this country. I am not interested in whether it is the low-producers or whether it is the high-producers that cause the surplus,—but I am mightily interested in the fine effect which the culling of the low-producing cows from our dairy herds has upon the pocket-book of the dairy industry.

However, not every low-producing dairy cow in the United States represents a loss. There are farms where the family cow lives principally on feed that would otherwise be wasted, and she may be cared for by labor that could not earn as much in any other way. We are talking about the commercial dairy.

In the commercial dairy, there seems to be little danger that the culling will be too severe. If all our commercial dairy herds were culled as they should be culled, the roduction of milk could be so controlled that it could be kept constantly in balance with consumption. That, of course, would be the ideal situation.

However, to bring about such an ideal state of affairs, the dairyman must have production, feed cost, and income records of his cows How is he going to get such figures? As far as I know, the most practical way to get such information, at a cost he can afford, is through the work of the Dairy Herd-Improvement Associations, or similar organizations of dairymen.

A Dairy Herd-Improvement Association is an organization of about 26 dairy farmers who cooperatively employ a man to test their cows for economical production of milk and butterfat. One day each month the tester weighs the feed, both concentrates and roughages for each cow in the herd; weighs her milk and tests it for butterfat and figures out the gross income and income over cost of feed for each cow. From the record of one day per month he computes the record of the individual cow for the month and for the year, and by comparing the production records of the daughters of each bull with the production records of their dams, he passes an accurate judgement upon the actual breeding value of the bull. Thus the farmer in the association knows, at all times, what every cow in his herd is producing. Knowing the amount of production and the cost of feed, he is able to cull the low and unprofitable producers without guesswork. He is able to feed the rest of his cows according to their capacity for profitable production. Thus he increases his profit. Also, he is able to use the records in such a way as to breed his herd up toward higher production, instead of down toward a lower and less profitable production per cow.

The Dairy Herd-Improvement Associations are growing rapidly in numbers and influence all over the country, and the National dairy breed association have recently worked out and adopted herd test plans by which it may be possible to bring about a very rapid improvement in our dairy herds.

At the beginning of 1930 there were about 1,150 Dairy Herd-Improvement Associations in operation. These associations are working wonders for the dairy industry of the United States. Dairymen anywhere who want to organize one of these associations can find out how to proceed by asking their county agricultural agent or their State College of Agriculture. The Bureau of Dairy Industry, U. S. Department of Agriculture, Washington, D. C., as a bulletin on the subject, "Dairy Herd-Improvement Associations," Farmers' Bulletin No. 1604—F, copies of which will be sent free upon request as long as the supply lasts.

In all this herd-improvement work three things are kept constantly in mind,—culling, feeding and breeding. Culling the low-producers from the herd, and feeding the rest of the cows according to their capacity for production, brings immediate results. The Bureau of Dairy Indnstry has figures which show that more culling is needed in average herds, in Dairy Herd-Improvement Association herds, and even in herds of registered dairy cattle. According to figures now available in our Bureau, the culling of the lowest-producing 10 per cent of all the dairy cows in this country would not reduce the dairyman's net income by a single dollar. The lowest 20 per cent could be culled and there would be no noticeable loss. Yes, the lowest-producing 30 per cent of our dairy cows could go to the butcher and the losses due to their absence from the herd would be almost negligible.

However, I would not recommend the sudden elimination of 30 per cent of our dairy cows. To get rid of so many cows all at once would completely demoralize the dairy industry and would cause a milk famine. I would not recommend the sudden culling of 20 per cent of our dairy cows, for the same reason. I would hesitate to recommend the sudden elimination of the lowest-producing 10 per cent of our dairy cows, though that would certainly not send any profit producers to the butcher. Such a culling and killing would be too drastic. It would create a milk famine, and also it would put too much cow-meat on the market. That would be bad for the daily industry, and perhaps worse for the beef industry.

It probably would not be wise to recommend the culling of any particular per cent at this time, but rather to recommend that the dairy men of this country should cull their herds closer and closer, and not stop culling until they have brought production and consumption into proper balance. After that the culling at the bottom should be continued as rapidly as breeding can build at the top.

I have given the figures that show the results of culling in average herds. The herds on test in Dairy Herd-Improvement Associations are producing about 60 per cent more milk and butterfat per cow than is produced in the average herd. In the herds on test culling is now supposed to be done intelligently and according to known production. For that reason you would perhaps be surprised to know that the lowest-producing 10 per cent of those cows are producing no profit to their owners. If these cows were transferred to the meat market, their present owners would make more money from them than they are making now.

How about the registered dairy cows on test in our Dairy Herd-Improvement Association? Should any of them be culled out and sent to the butcher? These questions seem to find an answer in a recent tabulation we have made of 36,000 mature registered dairy cows of the different breeds. The figures show that the lowest-producing 10 per cent gave their owners a profit so low that the owners did not have enough left to pay even a fair wage for labor, after paying the cost of feed and the other overhead costs of keeping these cows in the herd.

Therefore, in conclusion, let me recommend to all commercial dairymen,—whether their cows are grade or registered,—that they first find out what each and every cow in the herd is roducing, and, as far as possible, what the cost of that production is. Then cull systematically until every cow in the herd is bringing in a satisfactory net profit. Don't stop culling even then. Keep on culling until every cow in the herd is producing, and, large net profit every year. While we are culling we must build at the top, so that the supply of dairy products always will be maintained.

The final results will be, not a milk famine, but a fair profit for the producer, and an ample and economical supply of all kinds of dairy products for the consumer.

NEGRO FARM YOUTH

(Continued from Page 1)

out by the Farm and Home Agents next year.

Professor A. P. Spencer, Vice Director of Extension Work from Gainesville, and Miss Flavia Gleason, State Home Demonstration Agent with members of her staff witnessed the various demonstrations and classes by 4-H Club members and were gratified to see the great improvement shown in the Negro work during the week over previous years.

A. A. Turner, Local District Agent who pioneered the Negro work in Florida and Julia A. Miller, Local District Home Demonstration Agent were given much praise for the showing made.

The president, faculty and teachers of the summer school left nothing undone to make the visiting club members and patrons feel at home and a most cordial welcome was extended to ever yone. All departed to their respective homes Friday morning.

MISSISSIPPI'S ORGANIZED FARMERS TO HAVE TWO DAY MEETING

(Coutinued from Page 1)

Williamson, Tunica Unit, Dundee, Miss.

9:30 A. M. Memorial Tribute to Deceased Members: Miss Maggie Givens, Holly Grove Unit, Lexington, Miss.

10 a. m. Sermon by Rev. I. H. Henderson, Lexington, Miss.

10:30 A. M. Woman's Work On The Farm: Mrs. Rachel Cooper, Sunflower Unit, Sunflower, Miss.

11 to 12 Noon, General Discussion: Farm and Farm Life:—Rev. J. W. Hare, Jackson, Miss. Rev. E. J Jackson, Jones Chapel Unit, Honey Island, Miss.

12 Noon. Dinner by Holmes County Units.

1:30 P. M. Co-operative Buying: A. R. Payne, Jones Chapel Unit, Honey Island.

1:50 P. M. Poultry: W. M. Johnson, Jr., Belzoni, Unit, Belzoni.

2 P. M. Building For The Future: John Cooper, Watson Chapel Unit, Belzoni.

2:30 P. M. Curing Meats: Burrill Reeves, Belmont Unit, Mark, Miss.

2:45 P. M. Benefits of A Home Garden: S. L. Bradfield, Yazoo Mt. Zion Unit, Vaughn, Miss.

3 P. M. Selling Livestock: D. V. Caldwell, Leland Unit, Leland, Miss.

3:30 P. M. Profits in Butter and Eggs: Mrs. Ethel Jones, Brandon Unit, Brandon, Miss.

The Following Committees will have charge: C. C. Richardson, General Chairman. Secretaries: W. Moore, Tom Stewart, Rev. C. H. Sherrod, Jasper Brown, Mrs. O. M. C. Joiner.

Barbecue and Purchasing: J. N. Hoskins, Louis V. Irving, Essex W. Brown, Green Ross, D. W. Redmond, Rev. W. M. Johnson, Simeon Coleman, John Cooper, Scott Brewer, W. H. Harris, O. S. Banks, James Lewis, George Bradfield, C. C. Thurmond.

Committee on Music: Walter Riley, H. D. Averhart, Eddit Jointer.

Committee on Dinner: Mesdames Nora Evans, Harriet Oliphant, D. G. Givens, Mary Collins, Stewart Harrison, Octavia Bailey, Messrs John Jointer, George Doyle, Collin Tidwell, Allen Lewis, James Smith, Percy Freeman.

Ministers: Revs. S. Grace, I. H. Henderson, J. A. Marshall, L. W. Williams, B. W. Byram, R. B. Granderson.

Committee on Unit Stands: R. D. Davenport, J. B. Kimbrough, Prof. I. H. Montgomery, O. G. Grayer.

Yard Officers: M. J. Louis, Jesse Wilson, Sam Diggs, Tommie Noell, Walter Rowe.

Parking of Cars: Henry Caldwell, Anderson Quinn, Welton Jones

Bell Man—Albert Pickens.

Marshal, Louis Ewing.

Committee on Subscriptions to the Modern Farmer: Milton McGhee, Nealey Jackson, Isaac Randall, Mat Fields.

PILL-BOX TRAPS RID HOUSE OF RED ANTS

An ordinary pill box can be converted into an excellent trap for ants in a few minutes, and does not call for any mechanical ability whatever. When properly made and baited this trap has been unusually satisfactory for breaking up colonies of the little red ants, sometimes known as Pharaoh's ants, which are so fond of sugar.

The pill-box trap, devised by Dr. R. T. Cotton and G. W. Ellington, entomologists of the United States Department of Agriculture, is very simple to make. Take an ordinary cardboard pill box, remove the top, and cut out four small square holes from the inner collar. Pour a thin layer of hot paraffin inside the box to make it water tight. When in use the top of the box is partially raised to expose the holes and allow the ants to enter. Poison baits attract the ants to the trap, where they either die at once or carry the poison away and spread it among other ants.

A good homemade bait can be prepared by rubbing a small quantity of tartar emetic into small bits of bacon rind. Another bait which has given excellent results is made by dissolving 4 ounces of sugar in one-half pint of water, to which is added 30 grains of sodium arsenate and a little honey. Heat to boiling and strain. The best plan is to have the local druggist prepare this and other baits which contain violent poisons.

When a sirup bait is used the box should be partially filled with small bits of blotting paper and the sirup poured on the paper. When not in actual use the lids should be pushed all the way down on the boxes, and they should be put away where children and pets can not get to them.

The Modern Farmer

Official organ of the National Federation of Colored Farmers

Leon R. Harris - - Editor

Published Monthly by the Modern Farmer at Nashville, Tennessee, and Chicago, Ill.

Nashville, Tenn., Office. 447 4th Avenue, North.

Chicago, Ill., Office: Vincennes Hotel, 36th and Vincennes Avenue.

Devoted to the interests of the Farmer, Truck Gardener, Livestock and Poultry Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 447 4th Avenue, North, Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT!

EDITORIALS

LOOKING FOR SUNDOWN AND "LIMIT DAY"

No Negro should be ashamed of his race and no intelligent Negro believes that his race has been cursed simply because Brother Noah back in Bible days laid a curse upon his grandson. But we know that we have tied on to our race a careless, shiftless, trifling element of which we are ashamed, and if anything is our particular curse, this element is "it." We are talking about the class of Negroes found in so many plantation communities, who have nothing, want nothing, and look for nothing except sundown and "limit day."

They are no good to themselves or to anyone else and we would be perfectly willing to let them go hang, except for the fact that we have stated,—they are tied on to us. They live with us,—they look like us,—they are related to many of us, and we have to carry them. And all of us know the burden is heavy.

John is an honest, industrious tenant farmer. He is a good Christian and a good citizen. He is supporting his family,—is trying to educate his children, and is dreaming and hoping that some day he will be able to have a little farm he can call his own. But there is his kinsman, Will. He only works when he has to do so. He gets his "limit money" on the first of the month,—blows it in, then starts off again working for another "limit day." It ought not to be so, but yet it is,—Will is ruining John's chances to get that home simply because he is no good. John is judged accordingly.

What can we do about it? Nothing except some missionary work. Preachers, every time you get one of these Wills in your church,—preach about the rottenness of laziness and shiftlessness. Preach about the happiness and contentment of home-ownership—of the joy of being a respected husband and father. Teachers,—start an adult night-school. Start it whether you get any pay for it or not. Talk and read to these Wills. Wake them up. It's a job for the church and school.

NATIONAL FEDERATION OF COLORED FARMERS VINCENNES HOTEL—CHICAGO

As Reliable as Tomorrow's Sunrise is a News Bulletin sent out June 20, 1930

"To our Members:

After careful survey of the wheat market and crop conditions, it is our opinion that flour will sell lower than present quotations, and we suggest that you buy no more than a month' supply until further advised. We believe meal, meat and lard will hold up around present values.

There is a large surplus of both sugar and coffee, which reflects no advance in price. 100 lb. sacks of cane granulated at around 4.85 per bag, fob shipping point, is a good buy.

We urge canning and preserving of all fruits and vegetables and berries. If you do not care to sell them, you will be able to use them to advantage in your home this Winter and thereby reduce your living expenses.

FEED

New crop of oats almost ready for the market. We do not expect any great change in prices before Fall. Sweet feeds are now selling at very low prices. Wheat shorts at 1.50 per hundred fob shipping point is a good buy and a very good feed for both hogs and cows.

COTTON

The new plan for handling this year's cotton crop has not as yet been announced. It is reported that the stabilization corporation is considering buying cotton direct from the farmer when they are organized. This should prove very helpful to our members who are in large units. There is a surplus of something over a million bales left from last year's crop. This must be sold before new crop comes on the market or we will most likely have low prices this Fall and Winter. That is, if this year's crop is as large as the crop of 1929. The new tariff bill which has just passed the Senate and has been signed by the President of the United States, places a duty of seven cents per pound on all long staple cotton shipped into this country from a foreign country. This should prove helpful to our members who have long staple cotton.

WATERMELONS

Market dull. Florida Tom Watsons. 26 pound average, $450 per car. 34 pounds average Tom Watsons, bringing $650 per car. Several cars arriving spotted and decayed. Members or units who wish to ship melons, write for information and daily market conditions.

Members who live in the upper half of Mississippi and Arkansas can most likely get employment on government projects during "Lay-by" period, doing levee work. Something over 3,000 men will be needed. About 150 miles of revetment work along the Mississippi river now going on, besides immense dredging operations. A six mile levee in Tunica county is also to be built this Fall and Winter. Considerable work in Washington County south of Greenville now going on. When the floods are harnessed, farm lands will in all probability sell at much higher levels, and we again urge our members to buy them a small farm while prices are in their reach. Plant a small garden. Raise all the hogs and chickens you possibly can and avoid buying meat another year. If you have an idea of getting another automobile, let us suggest that you wait until Fall and then be in better position to know of your financial condition.

Attend meetings regularly and learn of market conditions.

If you have not paid your entire membership, please do so at once. This is your organization and is for your guidance and protection.

Faithfully,

NATIONAL FEDERATION OF COLORED FARMERS,
Jas. P. Davis, President
36th St. and Vincennes Ave.
Vincennes Hotel,

PREDICTS THREE HUNDRED FIFTY MEMBERS

Thornton, Miss., June 9, 1930—To The Modern Farmer, 447 4th Ave., North, Nashville, Tenn. Dear Sir: I am sending in some subscribers for your paper. As we all are getting along fine and all seem to be satisfied with work of our unit. We have placed our third order for $152.50. Our membership is growing very fast. We hope for 350 by fall. We are planning for a grand meeting in August when all units will meet at Mount Zion, Howard Miss. There will be with us speakers from different Counties to speak to these units and also land men will come before them. There will be free dinner on the ground. The Band Boys will make music for the units. Good Hope Unit.

H. S. Harrison, T. S. Steward, L. W. Irvin, Calvin Winston, Officers

JUNIOR FORESTRY CLUBS ACTIVE IN NEW JERSEY

Junior forestry clubs are making rapid growth in New Jersey, according to a report from Extension Forester E. L. Scovell to the Forest Service, United States Department of Agriculture. With 38 clubs, having a combined membership of approximately 1,000, Ocean County is boasting one of the largest enrollments for clubs of this kind of any county in the United States. These clubs have all been organized within the last three years by County Agent E. H. Waite, the pioneer club of the county being the Ah-Go-Wan Pocahontas Club, of Cassville, N. J. The county agent's program calls for a visit to each of the clubs at least three times a year.

Activities of the clubs cover a wide range of projects, including tree study and identification and other general phases of forestry. Members of the junior forestry clubs range from 10 to 14 years of age. Senior forestry clubs are being organized among the older school children in the State, the activities including more specialized forestry projects and actual forest work.

The clubs of the State get together each year for forestry-club rally days. A meeting this year will be held at the New Jersey State game farm. Exhibits of the work of the clubs will occupy an entire room at the State fair at Trenton.

BANDED DUCKS

A male pintail duck, banded at the Bear River Marshes, Utah, on September 10, 1929, and a female, banded on the same day at Dawson, N. Dak., 500 miles to the northeast, were both killed on the same day by the same man at the same place—Toluca, Mexico. This interesting coincidence recently came to the attention of the Biological Survey of the United States Department of Agriculture, which directs bird-banding studies in this country as a means of obtaining information regarding the flights and life histories of native birds. Toluca, where the pintails were killed, is about 1,700 to 2,000 miles from the places where they were banded.

SOUTH'S AGRICULTURAL ILLS BLAMED ON TENANCY SYSTEM

Hobbs Tells Economic Conference That Less Than Half of Farms Are Operated by Owners.

The Southern Economic Conference, meeting in the Baltimore hotel Monday morning to find out what is responsible for and what can be done about agricultural and economic conditions in Dixie, heard Professor S. H. Hobbs, Jr., of the department of rural social economics at the University of North Carolina, place the blame on farm tenancy and cogently explain why he did so.

"More than half of all the farms in the south are operated by tenants," Professor Hobbs told bankers, business and railroad men who composed the group of about 100 representative southern leaders. "Our tenancy system is the lowest type of land tenure existing in the civilized world today, the cropper system which is just one step removed from serfdom. These tenants are not Negroes, as is so often imagined. Nearly two-thirds of all tenants in the south are white, our own kith and kin.

"Southern farming, southern rural social economic conditions are the cause and the result of farm tenancy," Hobbs continued. "No praiseworthy rural civilization has ever yet developed in a land dominated by tenancy. These eight states (referring to Virginia, North and South Carolina, Alabama, Georgia, Florida, Mississippi and Tennessee) range in tenancy from 21.3 per cent in Florida to 68.3 per cent in Mississippi, and the percentage continues to rise.

"If we could solve the farm tenancy in the south we would be well on the way to a solution of all our rural social economic problems. If the problem of tenancy is never solved, then I predict that the south will make little progress agriculturally. The south grows the two best tenant crops on the face of the earth and these crops are likely to plunge the south further into tenancy.'

Illiteracy in South.

"A fundamental and conditioning factor in the south is an appalling amount of illiteracy and near illiteracy. More than two-thirds of all the illiterates in the United States dwell in the south and more than nine-tenths of our illiterates live in the open country. The near illiterates far outnumber the sheer illiterates and are a far more serious menace.

"A third conditioning factor," Hobbs said, "in the south is excessive ruralism. The rural population ratio of the south is more than twice the ratio for the rest of the United States. Excessive ruralism means an unbalanced economic development The nature of our agriculture is determined largely by the lack of local urban markets. Non-food cash crops predominate because of excessive ruralism and the consequent necessity of producing those things for which we can find a market beyond the borders of the south. An excessively rural region necessarily must content itself with the production of primary wealth and producers of primary wealth are notoriously poor in accumulated an retained wealth.

"A fourth factor that this region must reckon with," the Tarheel economist said, "is the large Negro element in our population. There is nothing that can be done about it, but it is a condition that exists, a factor that will always have its effect on southern social economic conditions.

—Atlanta Constitution.

CHICAGO EATS MILLIONS OF BANANAS YEARLY

Plant Matures in About Fourteen Months.

By Paul Potter in the Chicago Tribune

Less than 100 years ago the pioneers of the middle west knew about tropical fruits only by reading about them in books, while even the elite of the southern city of New Orleans seldom tasted luxuries that now are common on the Chicago market, such as bananas, oranges, grapefruit, and pineapples.

Today Chicago eats nearly 200,000,000 bananas in a year, and those of all classes are able to buy this fruit the entire year, although it comes from plantations approximately 2,500 miles south.

In 1850 clipper ships began carrying partial cargoes of bananas to the United States, and about 1865 Carl B. Franc started the first regular importations from Aspinwall, within the present Panama canal zone. Through a consolidation of several carriers in 1899 ample capital and resources were made available and the importations began coming more rapidly until today there are fleets of refrigerated boats operating between the tram and steam railways on plantations in Honduras, Jamaica, Colombia, Costa Rica, Guatemala, Panama, Nicaragua, Cuba, and British Honduras and the railroad and truck facilities which supply the fruit consuming centers of the United States.

Production and Transportation

Japan ships some oranges, Cuba sends us tomatoes, grapefruit, and pineapples, and the Argentine has developed some of its trade with this nation by supplying cantaloupes and grapes, but the banana industry, based on a production centered in the tropics because of the temperature and moisture requirements of the plant, has outspread them in shipments into the United States.

Bunches consist of eight or nine "hands" of an average of 10 "fingers," or bananas, each. The bunches, or stems, are cut when still green, handled carefully to prevent bruising or other damage, placed as quickly as possible on board train or boat and watched carefully until the transportation and ripening processes are at an end in retail stores.

The fruit spends four to five days on a boat, if it comes from the Central American plantations, as most of Chicago's bananas do. This is a trip of about 1,380 miles by water to New Orleans. Then they are packed into special fruit cars and are in Chicago in about 55 hours, according to H. R. Johnson of the Standard Fruit and Steamship company of this city. Bunches received here on a Thursday will be ripened and on sale in stores by Monday, Tuesday or Wednesday of the following week.

Matures in 14 Months.

More irrigation than in former years is being done in Central America, according to latest reports.

(Continued on Page 8.)

ATTENTION COLORED FARMERS

The National Federation of Colored Farmers is receiving hundreds of letters from Colored farmers requesting all kinds of aid and information. We are willing to do everything we can for all the Colored farmers of America. It costs money, however, to maintain offices and our expenses are becoming so heavy that we are compelled to discontinue supplying information to those who request it who are not members of the Federation. If you have faith enough in the organization to believe that it can aid you, then you should be willing to join it and help support it. Isn't that so?

Several County units have organized and elected officers but have not sent in their membership dues. These units are eligible to membership in the Federation until dues are paid. Be helpful. Co-operate. Pay up. "All for each and each for all."

GANDER 106 YEARS OLD.

A gander belonging to Miss Katherine Allen of Erie, Illinois, claimed to be the oldest fowl in the world, died July 9th. Miss Allen says the gander was raised in the east and brought to Rock Falls and later taken to Nebraska. The gander was brought to Illinois in 1884.

PQCA—282.

ADMINISTRATIVE INSTRUCTIONS

EXTENSION OF PRODUCTION AND HARVESTING PERIOD OF FLORIDA GRAPES AND HOST VEGETABLES.

(Modification of PQCA—272 and of Regulation 3, Section A (1), supplemental to Notice of Quarantine No. 68 (revised).

(Approved June 20, 1930; effective June 21, 1930)

Pending later amendment to the Mediterranean fruit fly quarantine regulations, Section A (1) of Regulation 3, as amended to date, is hereby further modified to read:

(1) Host-free period.—**A host-free period shall be maintained each year throughout the eradication area, beginning on April 15 for citrus and other host fruits (except grapes and cantaloupes), beginning on July 16 for cantaloupes and for host vegetables, and beginning on August 1 for grapes, and continuing until September 1, subject to such modification as to duration and dates of commencement and termination and as to articles to which it is applicable as may be authorized or required by the United States Department of Agriculture. During the host-free period, no host fruits or vegetables shall be permitted to grow or exist within or to be moved from the eradication area except; (a) citrus fruits, avocados, and persimmons, on the trees and host vegetables and bananas, when such fruits or vegetables are in such state of immaturity that in the judgment of the inspector they are not susceptible of infestation: (b) host fruits and vegetables in storage or held for local utilization or consumption.**

These Administrative Instructions shall become effective on and after June 21, 1930, and shall supersede and cancel paragraph (1) of Administrative Instructions JQCA—272.

LEE A. STRONG,
Chief, Plant Quarantine and Control Administration

Approved:
ARTHUR M. HYDE,
Secretary of Agriculture.

CENSUS REVEALS BIG INCREASE IN COLORED IN CHICAGO

Mr. Joseph Vessley, chairman of the Chicago Census advisory committee released estimates on the number of alien and racial groups in Chicago.

The figures are necessarily only approximations but they are very nearly correct having been calculated from the proportionate growth in population according to the last two counts. There are in excess of two hundred thousand Negroes living in Chicago as compared with 109,458 in 1920. This is almost one hundred per cent gain in ten years.

The colored voters on the south side are organized, and organization means strength, as a result of which there is our only colored congressman, one state senator, five members of state legislature and two aldermen; all elected by majority vote.

BLACKBIRDS LATEST MENACE TO CORN

Newbern, Tenn., June 17—Blackbirds have played havoc with the late planting of corn in Dyer county. In some instances fields have been planted for the fourth time on account of the birds.

Farmers are alarmed over the situation and are guarding their fields with shotguns.

FARMERS FLEE TO CALIFORNIA FROM THE TEXAS RIOTS

Los Angeles, Cal., June 13—(ANP) With unprinted tales on their lips and haunting memories of nights of horror and apprehension spent in hiding from blood-thirsty human wolves several colored citizens of the Sherman and Honey Grove, Texas, dist. have arrived here.

They report the existence of a general feeling of unrest among Negroes, and active antipathy against him by whites in those sections, previous to the burnings of a George Hughes and a George Johnson.

Apparently, in the environs of the thriving business places and homes in the little Negro community remarks were frequently made about smart Alec niggers' by whites who were piqued by the evident prosperity shown by Negroes with cars or decent homes. Reports from the refugees also bear out the facts gleaned by Roscoe Dunjee, editor of the Oklahoma Black Dispatch, that the young girls were customarily insulted by white cake-eaters.

One accomplished young lady who is visiting here, states that she had lived with her parents and several of her brothers on their own farm near the seat of the present trouble, but from the age of fourteen was sent to Kansas City to school. This was to protect her from the domineering advances of white men who considered all the good-looking colored girls of the countryside their natural prey. She only returns twice a year for short stays. She declares that with each visit she learns of more girls who have become victims of the system of concubinage maintained by the despoilers. On her last visit home, a Texas officer grew very wroth when he was repulsed by a girl friend at whose home she happened to stop in. The two girls were alone at the time and he seemed to have trailed the visitor there. At any rate, he stormed out of the house, but returned in a half hour and arrested the girl on a trumpled-up charge.

Los Angeles is a natural haven for Texans fleeing from the Lone Star State, as probably twenty per cent of the colored people here are originally from there; hence, on arrival they can easily find friends or relatives. Of the various "back home" clubs, the Texas Club is the largest, numbering approximately one thousand members. Some of the best business firms are run by former Texas merchants.

ABOLISH COTTON HOEING

Holly Springs Station Exhibits New Farm Method.

Holly Springs, Miss., May 31—The new 188-acre addition to the Holly Springs experiment station is mostly level ground, laid out in plots for cotton fertilizer and legume tests.

One cotton plot is of special interest, as it eliminates hoeing and chopping. This cotton is planted in two-foot rows, using four bushels of seed to the acre and 1,200 pounds of fertilizer. It is cultivated with a rotary hose and no shopping is to be done. This rotary hoe is an ordinary horse-drawn farm equipment, and by using this C. T. Ames, director, expects to make one and one-half bales of cotton per acre.

There are also 100 plots of lime and legume tests. In one plot the hairy vetch is shown that was planted last fall and went through the severe cold last winter without damage.

—From Memphis Commercial Appeal.

Another S O S to the Negro farm hand, tenant, and share cropper to begin now and buy him a farm.

FEEDING MILK TO RACING COLTS

The Holstein-Friesian Thoroughbred Association says that milk from cows in the bluegrass section of Kentucky is being fed to racing colts and producing sturdy limbs and sound bodies for some of the greatest racers of the present day.

They further state that breeders of race horses have become firmly convinced that milk is the best food for a young horse. Many big breeders who may have from 25 to as many as 100 foals which they wish to raise to maturity do not have supply of milk sufficient for their requirements. Colts that are considered backward in development are put on the milk diet. The usual feed is from one to one and a half gallons per day.

HOW TO END MALARIA

Malaria is transmitted by the female mosquito. The male mosquito never enters the home. The average life of a mosquito is 21 days. After laying the eggs the female mosquito dies. The malaria parasite exists in the blood stream. A blood test will reveal if there are any malaria parasites in your blood.

If you eliminate the mosquito malaria will pass out of existence.

There are three major factors to curb malaria—proper sanitation of the home and water supply, oiling of stagnant lakes and pools and screening of doors and windows. Well fitted screen doors and windows keep out the house fly as well as the mosquito.

WORKER IN WOOD

Negro Janitor Is Genius With Pocket Knife

Fred Douglas Upholds Old Art of Whittling

PUTS MODELS IN BOTTLES

How He Does It Is A Mystery He Won't Reveal

He Has Turned Out Guitar, Ship Models and Tops

From Topeka State Journal

Long ago embalming became a lost art; a few hundred years later glass stainers joined the ranks of the "has beens;" fifty years ago seamen ceased to make the wonderful tapestries that once helped them while away long hours when their watches were vanished—but in our own time we are seeing the once exalted art of whittling fall to the low ebb that precedes oblivion.

One of the few remaining who are upholding the whittling standards of the past generations is Frederick J. Douglas, of 1103 Lane Street, the mechanical minded janitor of The State Journal force. From his boyhood days Douglas was a whittler. Boats, wooden daggers, tops, and all of the other things that he wanted were turned out of chips of woods by his ready pocket knife.

Puts 'Em in Bottles

It was in 1927 that he started putting the things he had made into bottles. He did not do this to be doing something out of the ordinary but with a view of keeping the things he made clean and unbroken. People began to talk about his work and after he saw that it was something other people could not do he became secretive and now he will not tell how he gets the large pieces of wood past the small neck of the bottle.

Whittled Out Guitar

He has a guitar that he whittled out that will give just as pure tones as any other instrument, Masonic and Eastern Star emblems and ship models. He whittles them out and puts them in bottles just for fun and to keep busy in his spare time.

Douglas was one of the earliest chauffers in Topeka and in 1906 he drove Great Smiths and Atlases. To be a chauffer in those days meant to be a mechanic also, for garages were few and far apart, but for several years he drove cars for residents of Topeka.

He has a patented safety valve device that he invented a few years ago that he is holding until the time is right to sell it and he has another patent that is ready for the patent office now. His work shop is one of the most complete amateur workshops in the city and is well equipped with many handy contrivances that are the work of his tools and still active pocket knife.

—Topeka Plain Dealer.

RASPBERRIES

The crop of raspberries this year is better than the average and the quality most excellent. They are selling in Chicago at 50 cents per quart for the reds and 40 cents per quart for the black variety. It is about the most expensive fruit that grows.

It is not generally known, but there are four varieties of the raspberry—red, black, yellow and white. The red and black are the most abundant and highest in table quality. The red raspberry is generally preferred when they are to be eaten raw because they have fewer seed.

The black raspberry has the more excellent flavor, and the black variety has more fat, while the red raspberry has not fat at all. The black also contains more protein than the red.

Local Agent and Farmer Discussing growing of cow peas for soil building and hay.

Officials of Negro Bishops' and Connectional Councils, African Methodist Church, In Meeting

FIVE OFFICIALS of the Councils of Bishops and Ministers, African Methodist Episcopal Church meeting in international session here, are pictured above.

Standing are: Rev. A. J. Allen, Ohio, president of the connectional council, and Rev. C. A. Wingfield, secretary, of Atlanta, Ga. Seated, are: Bishops S. L. Greene, South America; J. S. Flipper of Florida, secretary of the bishops' council, and G. B. Young, South Africa.

The Connectional Council

By Rev. W. E. Guy, D. D., Des Moines, Iowa

The program of the Connectional Council was a success from every point of view. The constantly increasing interest of the ministers and laymen, and their whole hearted cooperation with the president are definite signs of growth and progress. It has been for a long time the general opinion that this organization is potentially a sleeping giant that needs to be awakened to a full sense of its possibilities and opportunities. It seems now that this awakening is taking place under the able leadership of Rev. A. J Allen He is proving to be a capable executive and wise administrator. He is presenting to the organization a program that is neither radical nor conservative. It is a progressive program which is designed to meet the present challenge of widespread criticism and unrest growing out of the need of a general readjustment of the operative machinery of our church to meet the spiritual needs of today and tomorrow. It is encouraging to note that in his program the president is receiving the solid backing of the members of the Connectional Council.

He seeks to correlate the program of the Connectional Council with the program of the Bishops' Council. When a complete understanding is affected between the two bodies much will have been accomplished towards the realization of our needs.

The following recommendations of the president, after having been referred to the committee and reported favorably, was unanimously adopted by the council:

FIRST: That the Bishops Council be asked to join with the Connectional Council in proposing a measure to the next General Conference to give legal status or special precedence to any proposed bill or measure passed in two consecutive sessions of the Bishops' Council and the Connectional Council.

SECOND: That the Connectional Council have headquarters at the seat of the next General Conference; not for the purpose of promoting the interest of men seeking office, but to thoroughly thrash out and discuss the vital issues confronting the church which the lack of time and opportunity so often fail to permit on the General Conference floor.

THIRD: That there be created what will be known as "THE CONNECTIONAL COUNCIL MEDAL" to be awarded to the minister or layman who, during the preceding year made the most praise worthy contribution to the spiritual welfare of the A. M. E. Church. Nominations to be made through the vice president of the Episcopal District in which the nominee resides.

FOURTH: That the Connectional Council cooperate with Wilberforce University in the celebration of its Diamond Jubilee in 1931.

The complete program rendered by the Connectional Council is herewith given below.

CONNECTIONAL COUNCIL A. M. E. CHURCH

San Antonio, Texas, Thursday and Friday, June 26-27, 1930

Programme—Thursday, 2:30 p. m.

Devotionals.
Rev. N. H. Jeltz, D. D. Chaplain
Mrs. N. H. Jeltz, Chorister
Remarks of Welcome:
Rev. J. B. Butler, D. D., 1st Vice President
On Behalf of the Laymen—Prof. J. W. Rice, A. M.

FACTS ABOUT THE LEMON

The fruit lemon tree was brought to this country by the Spanish padres and planted in the state of California about the time this country was born. However, it was with the coming of American settlers that the commercial possibilities of the lemon became apparent. One of the reason why the lemon tree is so profitable is that it bears the year round. The ripening fruit is present all the time to gather fragrant flowers. A good tree bears about three hundred lemons per year.

Much of the art of cooking lies in the correct flavoring of foods.

The lemon provides a natural fruit flavor both in juice and grated peel. It seems to develop the flavors of other foods and because of this reason it is freely used in a great variety of cakes, puddings, sauces, cocktails, salads etc.

It is also indispensable in hot weather beverages. The yellow coloring of the meat of the lemon, together with the bright highly colored skins of waxy texture makes the fruit especially adapted for decorative purposes. The juice also furnishes color for frostings, fillings, jellies, ices and other foods.

Aside from the uses mentioned in the previous paragraphs, lemons are commercially prepared for the food market in the form of extract, juice, beverages, lemon oil and lemon peel candied and preserved.

Old Farm Home—Montgomery County, Alabama.

MAKE PAPER FROM LINTERS FOR USE IN RAYON INDUSTRY

Buckeye Cotton Oil Officials Here Establish Mill Believed to Be Only One of Kind in World. Aids in Timber Conservation.

(Memphis Appeal)

With the tenacity of the old-time book salesman, Memphis has wedged its foot into the front door of the rayon industry and is about to occupy a chair in the parlor while the world listens to its story.

The Buckeye Cotton Oil Co., a subsidiary of the Procter and Gamble Co., has made the initial move through production in its plant here of a fine grade of cotton blotting paper used in the manufacture of rayon silk. The cotton product supplants a material made of wood pulp and produces an infinitely better grade of rayon, manufacturers say.

A complete paper mill, the first of its kind in the world has been installed in the local plant and has been in operation for more than three months. A quarter of a million dollars was spent for the paper making machine alone—one of the finest in the world.

Let W. F. Bowld, plant superintendent tell the story of its purchase and installation:

"We have manufactured cellulose cotton products for several years but have always had to send our pulp to Richmond, Va., to a paper mill there to be formed into sheets for the trade. Several months ago we became interested in the erection of our own mill and sought the finest machinery the market afforded.

Obtain Finer Quality.

"The Whitting Company sold our company this machine. In many ways it is superior to the ordinary paper making plant. For instance we dry our product under a vacuum at 1000 degrees Fareuheit. while the old type machine dries it in open air at 250 degrees or more. We get a finer quality and better color sheet, too.

"How did you happen to conceive the idea of supplying your product to the rayon industry?" Mr. Bowld was asked.

"We had been supplying the celluliod manufacturing plants—the places where your photographic films and such things are made—for a number of years. We decided that the product we produced would be far better than a wood pulp product in the manufacture of rayon. We had some sheets made up at the Richmond mill and sent them to the rayon manufacturers. That was the opening wedge.

"Soon we were selling the bulk of our production to this industry, but with the hindrance of shipping pulp to Richmond for manufacture. Then, we were unable to keep our force of employees occupied full time in our cottonseed oil mills alone, so we built the paper mill.

Now, despite the business depression that has hit all industry we are able to keep the plant running and our force employed five days out of the week and soon we will go back on full time production. The machines run 24 hours a day, you know.

"Is this product a by-product of the cottonseed oil mills?" was the next question.

"It is, and yet the pulp is manufactured from the finest grade cotton linters. We purify them with a solution of caustic soda and chlorine. That is the reason our paper is so white and that is the reason it makes the finest rayon."

"Is the Buckeye the first mill to manufacture this product for the rayon industry?' '

"As far as we know there is not another mill in the world providing a paper made from cotton linters for the rayon industry. The government is urging conservation of wood and timber—this is our answer. We can produce all the cotton the industry needs here in the south and add a new use to the long list now enjoyed by King Cotton."

Every batch of paper is tested for water content, thickness and color. Special equipment is provided to care for these tests and experts brought from the writing paper plants in Holyoke, Mass., are in charge of the paper making, Mr. Bowld said.

FEDERAL APPEALS COURT UPHOLDS NEGRO'S RIGHT TO VOTE IN VIRGINIA PRIMARY

Asheville, N. C., June 30, 1930—The United States Circuit Court of Appeals today ruled that the Democratic party in Virginia could not debar Negroes from participating in primary elections. This decision marks an important victory in the long and successful campaign of the National Association for the Advancement of Colored People against attempts at disfranchisement of Negro voters in southern states.

Today's decision of the Appeals Court affirms decision by Judge D. Lawrence Groner of the Federal District Court, at Richmond in the case of James O. West v. A. C. Bliley, William Boltz and William Richer, the three defendants being Democratic Judges in the precinct in Richmond in which Mr. West lives. Three Judges denied to Mr. West the right to participate in the Democratic Primary of April 3, 1928, refusing on the basis of the ruling of the Democratic party limiting participation in its primary elections to whites.

Today's opinion was written by Judge Elliott Northcutt of West Virginia and was concurred in by District Judges W. E. Baker, also of West Virginia, and William C. Coleman of Baltimore. The decision says in part:

"If all the political parties in the State of Virginia incorporated the same qualifications in their rules and regulations as did the Democratic party, nobody could participate in the primary except white persons and other persons would be deprived of a material right guaranteed to them under the Constition as amended: That is, the right to participate in the selection of candidates to be voted for in the election."

It will be remembered that the disfranchisement method thus outlawed by today's decision follows successful efforts of the N. A. A. C. P. against state laws barring Negroes from participation in Democratic primaries. In the case of Nixon v. Herndon, carried to the United States Supreme Court by the N. A. A. C. P., that Court in 1927, ruled such laws unconstitutional.

Following that decision various states attempted to achieve the same ends by giving to individual political parties the right to set up their own qualifications for membership. The N. A. A. C. P. immediately proceeded to act against this subterfuge. The case of West v Bliley is one of the four actions begun to test the validity of this legislation. The N. A. A. C. P. is financing the Virginia and Texas cases and has rendered legal and financial asistance in similar actions in Florida and Arkansas.

It is expected that appeal will be taken by the Virginia authorities in the present case to the United States Supreme Court, in which the National Association for the Advancement of Colored People is prepared to continue its efforts until a decision is secured from the United States Supreme Court which will void such disfranchisement not only in Virginia, but in all states.

The N. A. A. C. P. attorneys in the case of West v. Bliley are Alfred E. Cohen and Joseph R. Pollard of Richmond, Va., and Arthur B. Spingarn and James Marshall of New York of the N. A. A. C. P. National Legal Committee.

REDUCED RATES AUTHORIZED

NATIONAL BAPTIST CONVENTION OF AMERICA, NEW YORK SESSION GETS EXCURSION FARES

New York, N. Y., July 17—(Special)—Exeursion fares for the reduced round-trip rate were granted the National Baptist Convention of America, which is to meet in this city September 10-15 according to an announcement made here on July 11th by the office of Mr. C. M. Burt, Chairman of the Trunk Line Association, whose Association took the initiative in granting these excursion fares to messengers and dependent members of the families of those who are to attend the Fiftieth Anniversary and Golden Jubilee Celebration. It was also understood from Henry Allen Boyd, who is the secretary of the Railroad Commission of his Convention, and who was here in the interest of the Golden Jubilee, that he had placed an order for 5,000 Railroad Identification Certificates, to be presented and furuished to the messengers of his Convention.

Mr. Burt's office further stated that after they had granted the rate the same was promulgated or tendered to the New England Passenger Association, Mr. Frank VanUmmersen, Chairman, with headquarters in Boston, Mass.; Central Passenger Association, Mr. C. A. Fox, Chairman, headquarters in Chicago, Ill.; Southeastern Passenger Association, Mr. H. W. Howard, Chairman, Atlanta, Ga.; Western Passenger Association, Mr. T. Thompson, Chairman, headquarters in Chicago; Southwestern Passenger Association, Mr. J. E. Hannegan, Chairman, headquarters in St. Louis, Mo. Trans-Continental Passenger Association, Mr. H. W. Siddall, Chairman headquarters in Chicago; Canadian Passenger Association, Eastern Lines, Mr C. P. Riddell, Chairman, Montreal, Que.; Canadian Passenger Association, Western Lines, Mr. Jos. B. Parker, Secretary, headquarters at Winnipeg, Man.

The Chairman of the Railroad Commission, Dr. S. S. Jones, who lives in Chicago, had instructed Secretary Boyd to proceed here, as had the President of the Convention, Dr. J. W. Hurse, to complete further details aside from the railroad transportation facilities. It is understood that tickets will be on sale from September 10th every day until September 12th, and that they will have a final return limit date of September 20th.

This first action embraces practically all the Eastern Territories taking in New York State, east of and including Buffalo, Niagara Falls, Suspension Bridge and Salamanca, New Jersey, Pennsylvania, (east of and including Erie, Oil City and Pittsburgh,) Delaware, Maryland, District of Columbia, Virginia and West Virginia (east of and including Wheeling, Parkersburg, Kenova, Orange and Norfolk). He states that this is the initial step, however, that in all probability the same rates would be granted in all the other territories, as they work jointly.

ANNUAL MEETING OF STATE INTERRACIAL LEAGUE

Thursday, July 17th has been named as the date, with A. and I. State College, buildings and campus as the place for the meeting of the State Interracial League. This information was handed out by Mr. R. E. Clay, the executive secretary, and Mr. G. W. Gore, Jr., the publicity director, and confirmed by Dr. R. T. Burt, the chairman of the executive committee.

The official call was dated June 30th. Perhaps it was delayed in transmission, but Mr. Clay, the one man who seems to be forever and ever on the job, like the chief of the organization, Dr. W. J. Hale, says every indication points to a successful meeting. The official call said:

"Dear Friend:

The Annual Meeting of the State Inter-racial League will be held Thursday, July 17 at Tennessee A. and I. State College, beginning promptly at 9:20 A. M. Mrs. Arch Trawick and other leading white women will be present to extend greetings. Reports from the field will issue receipts and turn over all retaries and county chairman in addition to other features.

The executive committee will meet at 8:20 A. M. in the Library Assembly Room, on July 17. Each member is requested to be present and to send at once $1.00 as his contribution to the yearly expenses of the League. Mail checks or money orders to Dr. R. T. Burt, Home Infirmary, Clarksville, Tennessee, who will be made by the interracial secfees collected to the treasurer, Mr. J. C. Napier.

Yours to serve,
H. T. BURT,
Chairman of Executive Committee.
R. E. CLAY,
Executive Secretary.
G. W. GORE, Jr.,
—Nashville Globe.

THE FARM QUESTION

If Herbert Hoover's plans to relieve the farmer will not bring results, he might try the method of a certain Kansas farmer.

In an arid county of western Kansas which compares with the eastern slope of the Rockies, lives a rancher 70 years of age, whose hired man, 65, has been with him for more than forty years. The two of them barely manage to eke out an existence. A visitor one day asked the old rancher: "How do you manage to pay that fellow his wages?" "It's this way," replied the rancher: "I hired him for two years and gave him a mortgage on the ranch to guarantee his wages. At the end of the two years he got the ranch, and I went to work for him on the same terms. For fifty years the ranch has passed back and forth every two years and neither of us has drawn a cent of wages."

—From "American Farming."

We can go the above one better. There are colored farmers in Mississippi and Arkansas who have worked year in and year out and have had no settlement in three years.

DOWNSTATE APPLE GROWER SELLS HIS CROP FOR $90,000

Jerseyville, Ill., June 26—(AP)—One of the largest apple deals ever made in Calhoun county was closed this week when Charles Godar, apple grower, disposed of his crop for this season to Gebler, Troch and Co. of Chicago for $90,000.

CHICAGO EATS MILLIONS

(Continued from Page 4)

The banana is a quickly growing plant, rather than a tree, and matures in about 14 months. The 15 or 30 foot "tree" is cut down when the single bunch of fruit is harvested, but new suckers or shoots spring up almost immediately from the rhizome or root. Rainfall is between 80 to 200 inches per year in Central America.

Small armies of laborers work under engineers, timekeepers, and foremen in cutting away underbrush, setting out the banana plant root stocks, cutting down heavy timber to let it rot where it falls, slashing away the heavy tropical growth so that it does not smother out the young plants, and then harvesting with feverish speed when a boat docks at the nearest harbor. An acre of plants produces 125 to 150 bunches annually in Central America, while in Jamaica the plantations harvest from 200 to 250 bunches because of more intensive cultivation methods.

COW DOES A HURDLE INTO MENOMONEE RIVER

Milwaukee, Wis., June 26.—(Special.)—Escaping from pens of the Milwaukee Dressed Beef company under the 16th street viaduct at Muskego avenue, a cow doomed for slaughter today leaped into the Menomonee river. Some one called the fire department, but the animal was rescued by company employes before its arrival.

NEGRO EDUCATOR ADDRESSES ROTARY

"The most interesting and thrilling page in the history of Little Rock is the page which tells the story of the erection of the Paul Laurence Dunbar High school for Negroes, an unmistakable symbol of industry, civic pride and social progress," John H. Lewis, Negro, principal of the school, told the Little Rock Rotary Club at its luncheon meeting at Hotel LaFayette Thursday, speaking on "The Ideals of the School."

Professor Lewis, a graduate of several nationally known universities, was introduced by R. C. Hall, superintendent of the city public schools, and a Rotarian.

"It is unusual, it is most surprising, that you are giving Negro youth opportunities; that you have erected here in the heart of the South the finest school building in the world for Negroes. It is a demonstration of fair play, of justice and of educational vision unmatched anywhere," said Professor Lewis.

"Dunbar is a challenge to the race. It is a great opportunity as well as a great responsibility. It is not to be just another high school of the conventional, traditional type, but a school unique in its aims and definite in its objectives for the training of the Negro future citizens of this great state of Arkansas, and the nation," he added.

The speaker, in an interesting way, told of the various phases of this great Negro institution, which was formally opened last April. costing $400,000, of which $67,000 was given by the Julius Rosenwald Fund, and $30,000 by the General Educational Board. He said thousands of people from over the nation have visited the school since it was dedicated, and lauded Little Rock for erecting such an institution for Negroes. He also cited the progress of Negro education during the past two decades.

Professor Hall said 25 per cent of the school population in Little Rock was composed of Negro children; that there are 3,785 Negro school children enrolled, that there are 105 Negro teachers, of which 80 per cent are attending some summer school. He said there were 580 students in the Negro high school, and 39 high school Negro teachers.

Allen Foster, Negro singer, entertained with several selections, accompanied on the piano by Myrtle L. Williams.

Josef Rosenberg presided in the absence of W. Dewoody Dickinson, who, with several other Rotarians, is attending the national meeting in Chicago.

—Southern Christian Recorder.

NEGRO IMPROVES "WHITE CIVILIZATION" DECLARES COLONEL J. E. SPINGARN

Springfield, Mass., June 26.—That the American Negro is able not alone to maintain and defend but even to "improve" white civilization was the assertion last night (Wednesday) of Colonel J. E. Spingarn, of New York, addressing the opening mass meeting of the National Association for the Advancement of Colored ePople whose 21st Annual Conference will be in session here through July 1.

"The white South is forever talking of being the defender of a white civilization." declared Colonel Spingarn, "endangered by tha thraet of 'Negro' supremacy.' But the last twenty years have shown that the Negro is able to maintain and defend our white civilization —yes, even to improve it.

"This white civilization is his as much as ours, for much that is fine and distinctively American in it is his own contribution; and if this National Association for the Advancement of Colored People has accomplished anything it has been to prove that white civilization is safe in the hands of colored Americans."

Colonel Spingarn said in his address that the past twenty-one years during which the Association has been active "are perhaps the most epoch-making period in the history of the Negro race," and continued:

"Individual Negroes throughout the course of history have attained distinction and many held political office during the Reconstruction period with the help of white bayonets. But the last twenty years have seen the Negro take his full place in a white civilization for the first time in history—in every field of activity, cultural, practical and political—and win his victories by his own orce and by the methods developed by the white civilization itself.

"How shall this great work be further developed? There are some who believe that the hope of the Southern Negro lies in allying himself with the poor whites against the wealthy white classes of the South; there are others who think that the Negro race as a whole should make common cause with the white liberal and the white radical. I bring a warning against this false hope and shallow doctrine. The Negro race should contain every element that goes to make up a great race. It should have conservatives and radicals, rich and poor, learned and ignorant, good and bad.

"It should develop every distinction of culture and character that any human race is capable of it should not only develop these distinctions but should never cease its efforts until the rest of the world understands and recognizes these distinctions too. Let Negro radicals consort with white radicals, but let them not dream of handing over a whole race to any one form of political or economic dogma."

—Southern Christian Recorder.

AMERICAN BIBLE SOCIETY HOLD CONFERENCE

At the headquarters of the American Bible Society in New York City there occured during June 24-26 a conference of the division secretaries of the Society's Agency among the Colored People of the United States which was interesting in its discussions and significant in its conclusions.

The work of this agency of the American Bible Society of such importance to the Negro race was begun in 1901 under the supervision of the Rev. J. P. Wragg, D. D., During the years of its history to the end of 1929 the agency through its division secretaries and assistants distributed 1,823,688 volumes of Bibles, Testaments and portions. This large figure has been attained through the fine leadership of Dr. Wragg, now the agency secretary emeritus, whose ideals and purposes have been supported by the division secretaries as they entered into association with him.

The presiding officer of the recent conference was the Rev. Eric North, Ph. D., general secretary of the American Bible Society, who was assisted at the various sessions by other executives of the Society each of whom presented at the conference the Society's program for which he is directly responsible.

The various topics considered included the following, among other items: distribution of the Scriptures, denominational relationships, contact with pastors and laymen, publicity material, accounting providing Scriptures for the Blind, securing colporteurs, budget items, and territorial problems.

A tentative understanding was reached for a somewhat different grouping of states within the four divisions with a view to greater accessibility and increasing effective handling of Scripture distribution in those states.

The announcement of the territorial realigment will be made following its approval by the Board of Managers of the Society. It was felt by all of those participating in the conference that the topics studied will be of immediate and enduring value both to the office staff in New York City and to the division secretaries as they face the responsibilities of distributing the Scriptures among the colored people of the United States.

The secretaries of the four divisions of the Agency among the Colored People of the United States in attendance at the conference are the following: the Rev. M. L Vaughters of the Colored Methodist Church, division secretary at Houston, Texas; the Rev. S. A. Lucas of the African Methodist Episcopal Church, division secretary at Cleveland, O., the Rev. D. H. Samsom Jr. of the African Methodist Episcopal Zion Church, division secretary at Charlotte, N. C.; and the Rev. D. H. Stanton of the Methodist Episcopal Church, division secretary at Atlanta, Ga.

SOME FACTS ABOUT THE WATERMELON

Watermelons are grown for the market over a wide range of territory. According to statistics from the Department of Agriculture covering a five year period from 1918 to 1922 inclusive, there was an annual movement of approximately 50,000 carloads from 18 principal producing states. This does not include melons marketed locally.

The area planted to watermelons in these 18 principal producing states is about 215,000 acres. The average yield is about 315 marketable melons per acre. When weather conditions are favorable the yields run as high as 450 to 500 marketable melons per acre.

There are about 20 different varieties of the watermelon. The most favored are Irish Grey, Tom Watson and Excell. The Kleckly Sweet is also very popular.

In California the White Seeded Angelino and the Black-seeded Angelino are favorites.

In the past few years there has appeared on the market late in the season after the regular crops of watermelons are practically gone, a small round melon grown in Colorado and California, known as Winter Queen, Winter King, Alaska and Klondike. These varieties originally came from Russia. These melons are round or slightly oblong and have a thin rind. The quality is only medium but the melon is an excellent keeper. The Russian growers who live in Colorado follow the practice of placing the melons in salt brine and keeping them in a cold place until mid-winter for their home use.

Watermelons are now being served in all first class hotels in Chicago as a breakfast fruit as well as with the evening dinners.

NEW FARM AND HOME AGENTS APPOINTED

June 30, 1930.

John S. Robinson, a graduate of U. T. in 1919 Smith-Hughes teacher in Polk County four years and teacher at State Teachers' College, Johnson City, five years, has been appointed assistant county agent in Washington County.

W. P. Davidson, former agent in Washington County, will succeed H. L. Miller as agent in Johnson County July 1. Mr. Miller goes to Florida where he will engage in truck farming.

Four recent graduates of the College of Agriculture, University of Tennessee, have been added to the Extension staff as assistant County Agents. They are: E. P. Callahan, Thomas F. Joyce, William Moser and H. C. Holmes. These men worked as assistant agents during the summer of 1929 in various counties to acquaint themselves with Extension methods. They have been assigned to the four districts to do club and farm management work in various counties.

Miss Georgia C. Roberts, graduate of Union University, has been appointed home agent in Henderson County to relieve Miss Ann Clay who is on leave of absence due to illness.

Dr. Walter E. Eddy, Explains Vitamins

TEACHER AT COLUMBIA UNIVERSITY'S COLLEGE

Says Chemical Substances Present Natural Food Results

Dr. Walter E. Eddy of the Teacher's College Columbia University says "Vitamins are simple chemical substances present in natural food stuffs in different concentrations and their absence from the diet sooner or later results in a definite diseased condition, the condition enabling us to state definitely what vitamin is lacking." Dr. Eddy also says that the average person gets too few vitamins, and the symptoms are, lowered resistance to infectious diseases and lack of pep.

Vitamins are obtained directly from plants or indirectly through goods furnished by animals fed on plant rich foods.

There are five vitamins known as A. B. C. D. and E. Abundant sources of vitamin A are found in cod liver oil, butter and eggs, milk and leafy green vegetables.

A deficiency of vitamin A leads to serious eye diseases. It also results in lowered resistance to diseases of upper respiratory organs, colds, influenza, pneumonia and tonsilitis. Vitamin B. is found in whole cereals vegetables [illegible] of a dual nature prevents pellagra and beri beri, which eventually leads to death. This vitamin is not stored in the body to any extent, and we should eat foods daily that contain Vitamin B.

Raw vegetables and fruits, citrus fruits tomatoes and raw cabbage especially rich in Vitamin C.

Foods rich in vitamin C. should be eaten daily.

Vitamin D is found in abundant quantities in cod liver oil and egg yolk and also in milk and green vegetables. This vita min prevents rickets in children and also regulares mineral metabolism in adults.

Vitamin E. is found in all seeds such as beans, peas and whole cereals.

By studying this article and arranging your diet to contain an equal distribution of these vitamins our readers will improve their lives.

It is claimed that in lots of cases attributed to and styled as rheumatism, aching muscles, is dues to lack of vitamin C. in the diet.

ROSENWALD SCHOOLS IN THE SOUTHERN STATES

Mr. Julius Rosenwald jewish philanthroist in co-operation with fourteen Southern States has built in 13 years over five thousand Negro rural schools.

These five thousand schools use 12,594 teachers who instruct over half million children.

The total cost is twenty-three million dollars. Of this amount the white citizens of various communities gave slightly over a million dollars, and the colored citizens gave 4,220, 726 dollars, while something over fourteen million dollars was taken from the public funds.

North Carolina has 762 Rosenwald schools the largest in any state.

TENNESSEE, TEXAS AND S. CAROLINA

REGIONAL SCHOOLS FOR FARM AGENTS REPORTED

The regional schools for Negro county agents opened at Tennessee State College, Nashville, Tenn, Prairie View Texas, Prairie View College, and South Carolina State College, Orangeburg, South Carolina on Monday Aug. 4.

At Nashville there are approximately eighty agents in school from Arkansas, Mississippi, Alabama, Tennessee and Kentucky and others agents are expected from Mississippi. The total enrollment at this institution will probably exceed one hundred agents At Orangeburg, S. C. there are one hundred and twenty agents. At Prairie View, Texas these are assembled from Texas, Oklahoma, and Louisiana, approximately one hundred agents.

The specialists in the various fields of agriculture have been selected from every section of the country in order that the agents might have the latest and most modern instruction in the technique of extension work including marketing and rural organization. The staff of each school is made up of instructors from both racial groups.

A corps of experts in the field of Extension Service, Agricultural Economics, Agricultural Finance, and Home Demonstration has been selected to make special lectures and demonstration at each one of the regional schools.

Special mention might be made of Dr. John D. Black, Professor of Agricultural Economics at Harvard University, Dr. W. J. Spillman, specialist in Farm Management of the United States Department of Agriculture, Mr. C. L. Chambers, senior agriculturist for the United States Department of Agriculture, Mr. A. B. Graham, specialist in Extension Methods, United States Department of Agriculture, Dr. V. N. Vangreen, and Mr. B. B. Derrick, specialist in Farm Finance. All these recognized specialists in their particular fields bring to the agents practical solutions to the

(Continued on Page 2)

OKLAHOMA COLORED FARMERS SHIP THIRTY-FIVE CARS OF POTATOES

George Doaks, Wybank, Okla., is correctly styled the "Potato King." Up to July 15th he has shipped thirty-five cars of potatoes from his own farm.

For this thirty-five cars he has received in cash something over eighteen thousand dollars. Out o fthis amount he paid four thousand dollars for harvest expenses.

Mr. Doaks is the owner of a 70 acres farm, and in addition he rented this year 160 acres.

The quality of the potatoes graded number one stock, and buyers claim they were the most perfectly grown potatoes in that entire section of the country.

This beats cotton farming and if our farmers would only divide their acreage into potatoes they would realize much better profits.

CROSSBRED HOGS SHOW GAINS

UNIVERSITY OF TENNESSEE TEST PROVED SATISFACTORY

In eighteen feeding trials conducted at the University of Tennessee Farm at Knoxville with 194 Berkshire, Duroc-Jersey, Poland China and crossbred hogs, the crossbred porkers led in daily gains, according to Prof. H. R. Duncan of the Animal Husbandry Department.

The hogs were fed for an average of 87 days on self-feeders. Most of the rations fed were conductive for good gains, being tests of various proteins supplements and pasture comparisons. No starvation rations were included, although some lots were fed rations on which only fair gains were made. In all cases on attempt was made to divide the breeds in the various test from the standpoint of weight, sex, number individuality. The average daily gains for the breeds represented are as follows: 6r Berkshires, 1.385 lbs. 85 Duroc-Jerseys, 1.575 pounds; 22 Poland Chinas; 1.594 pounds; 20 Crossbreeds, 1.600 pounds.

These figures speak for themselves, states Prof. Duncan, not enough Poland Chinas and Crossbreds were used in these tests to make them comparable with the Berkshires and Durocs. However, the results indicate that the crossbred porker will gain a little faster than the aristocratic purebred.

Other experiment stations have found this to be true and the time may come when the use of crossbred hogs for commercial production may be generally recommended. This would be no reflection on purebreds for a crossbred is secured by mating two purebred of different breed, Prof. Duncan explains. Purebreds have raised the hog from a "seng digger" to the exalted position in the livestock world, of "Mortgage Lifter."

Incidentally, every one of the hogs in this experiment paid its board bill and a profit.

COW 27 YEARS OLD

McManus Brothers owners of a dairy farm at Owanda, Pa., are the owners of a Jersey cow that is 27 years old. This cow has given birth to 21 calves which is said to be the world's record.

There are fifty heads of cattle on this farm, all direct descendants of this cow.

BUMPER CROP OF MINT THIS YEAR

Sixty-one years ago the A. M. Todd Co., of Kalamazoo, Mich., made their first efforts to cultivate the production of mint. The crop this year—something more than thirty thousand acres, principally in Michigan and Indiana, will yield a crop valued at more than two million of dollars for the finished distilled product. The crop is now about ready for distilling having been cut and dried.

Chewing gum manufacturers are the largest users of mint oil. with dental cream makers second and confectioners third. Medicine and extracts require much of the remainder.

About one-fifth of the crop is exported.

Farmers who specialize in the growing of mint are forced to own a still used in the extraction of the oil. The stills are rather costly—ranging around fifteen thousand dollars and up.

Interesting News To Unit Members

METROPOLITAN MARKET FIGURES

FRUITS AND VEGETABLES LED AT MAY SHOW

A recent report giving the number of carloads of fruit and vegetables which were reported unloaded on the New York City Market during the month of May as reported by the receiving transportation companies.

Apples	405 cars
Apricots	79 cars
Asparagus	35 cars
Beans	619 cars
Beets	83 cars
Cabbage	361 cars
Cantaloupes	1412 cars
Honeydews	438 cars
Carrots	312 cars
Cauliflower	14 cars
Celery	205 cars
Cherries	388 cars
Corn	342 cars
Cucumbers	909 cars
Dewberries	35 cars
Eggplant	40 cars
Fresh Figs	17 cars
Garlic	10 cars
Grapes	23 cars
Grapefruit	344 cars
Huckleberries	38 cars
Horseradish	2 cars
Lettuce	512 cars
Lemons	886 cars

Tomatoes	1587 cars
Watercress	2 cars
Water mellons	602 cars
Total	16,474 cars

From the above it clearly demonstrates the opportunity for the Negro farmer to organize and ship his fruits and vegetables cooperatively and have money coming in every month rather than wait until fall for his cotton money. This within itself is farm relief.

SUCCESS IN SHIPPING HAMS.

Robert Williams curer and packer of special Virginia hams has a plant at Suffolk Virginia and has built up a business among the high class fancy grocery and delicatessen stores all over the eastern states. Mr. Williams started several years ago in a small way curing his hams in an old barn, and his business has steadily grown to the point until he has orders constantly coming in every week throughout the year. He has customers in 8 states, and gets his price without a kick.

Mr. Williams will attend the National Negro Business League in Detroit in August.

FACTS ABOUT THE NATIONAL FEDERATION

Prominent Persons in Many Sections and What They Are Doing

Bethel unit under the leadership of J. B. Kimbrough, Sam Diggs, Rev. Sherrod and O. S. Banks declare they will lead the membership roll at the convention.

Sunshine unit under the guidance of John R. Jordan, Chairman, J. H. Harris, Secretary and D. V. Caldwell, Market Agent. Washington county promises to give a very good account of herself. These men are all active and know their onions as farmers.

Spring Valley unit is another Richmond, born just a few weeks ago. The officers are Primas Jones Chairman, Tddie Hollingshead, Vice Chairman, B. W. Wade. Secretary. Mrs. R. A. Pitchford, Assistant Secretary, R. A. Cooper, market Agent and Tom Lockett, Treasurer. Their membership while small in the beginning promises to grow rapidly.

W. M. McGhee, Mat Fields, Nealey Jackson and Isaac Randall has been named as the committee to secure subscriptions to the Modern Farmer during the convention.

A very wise selection. We predict that they will be able to secure at least a thousand new subscribers, especially since a beautiful 35 piece set of dishes will be given away to the person who brings in the largest number of subscribers.

Rev. S. Grace the scholariy minister of the cloth is doing good work for the Lexington unit.

He is very popular not only among the farmers but all classes and creeds. Rev. Grace says Lexington unit will soon rank in the class A grade by fall.

Indications point to full representation of every Mississippi unit at the convention, and a horde of visiting non-member farmers on the side.

Arkansas, Tennessee and Alabama will also send representatives.

Letters from Canada and Panama have been received by the Federation offices in Chicago asking for information relative to the method of organization of farmers.

The National Federation of Colored Farmers now have members in eight states and still growing.

Col. Sam Brown one of our first members and the owner of several farms in Indlana and Illinois is considerlng the idea of opening up a large commission house in Elgin, Illinois for the handling of fruits and vegetables.

Letters from Oklahoma and Louisiana asking for information and also a representative of the Federation to visit them and set up units.

Units in Alabama, Mississippi and Georgia will have several cars of sweet potatoes ready for market durlng the latter part of August.

SNUFF BOX 348 YEARS OLD

Several years ago Ernest James found a snuff box in the rear of the J. O. Penny Stores in Pocomoke City Maryland dated 1582 and also engraved with astromical and calendar dates. The box was sent to the Smithsonian Institute in Washington, D. C.

CHICKENS HATCH IN HOT SUN IN ARKANSAS

Mr. Robert Henderson of Magnolia offers to produce affidavitts to prove that seven chickens hatched from eggs in a box in his work room at the City Service station, without the benefit of a hen or incubator, but from the heat of the sun's rays.

The chickens are in a thriving condition.

Every year an average of 143,500 forest fires damage some 36,000,000 acres of timberland in the United States Ninety per cent of these fires are caused by man himself and are preventable, according to the Forest Sercive of the United States eDpartment of Agriculture.

TENNESSEE, TEXAS AND S. CAROLINA

(Continued from Page 1)

problems confronting them in their various fields of activity

The instructors, at each school have arranged work that covers from two to four weeks period Many of the instructors are having their first contact with Negro agents and are much impressed with the quality of leadership found among this group of Negro Farm and Home Demonstration Agents. They say, among other things, "The reaction to our teaching is all that we could wish for. "They are live, wide-awake men and women." They know what they are here for and are anxious to take advantage of every opportunity to improve the quality of their success." We never realized that there are so many fine representative leaders among the Negro extension agents."

These schools are made possible by the Julius Rosenwald Fund cooperating with the United States Extension Service and the various State Extension Services, throughout the south. The Julius Resenwald Fund Appropriated $500.00 for expenses connected with the organization and operation of each school.

The feeling is that there is a special need at present for wide awake well-trained men and women who not only know the produ:tive end of Agriculture and Home Demonstration work, but understand and appreciate the economic factors underlying success in present day farming, including marketing of farm products.

Dr. D. H. Shinn of the United State Extension Service is charged with the responsibility of setting up the schools. Pres. B. F. Hubert of Georgia State College working with the Julius Rosenwald Fund and the Federal Extention Service and Pres. W. J. Hale, Tennessee, Pres. R. S. Wilkerson, South Carolina and Pres. W. R. Banks, Texas, is supervising and directing the schools of Farm Demonstration agents, L. A. Potts is director of the the school at Prairie View Tex., W. W. Lawson is assistant director at the Tennessee State College. F. M. Staley is assistant director of the school at Orangeburg, S. C.

Judging by the comments made by the agents in attendance at these regional schools, this pioneer effort of the Julius Rosenwald Foundation and the United States Extention Service to reach Negro county agents with a system of vital teaching, has met a long felt need. It is the hope that plans will be made for the extension and development of the ideas underlying this intensive training of the men and women, who are on the front lines working to establish an economic base that will buttress all of the culture professions and make the future of the Negro race secure.

SEEK TO BREED NEW RACES OF HONEYBEES

The United States Department of Agriculture is attempting to develop a new race of honeybees superior to any now serving the beekeeper.

Specialists in the Government bee laboratory near Washington, D. C., are testing and attempting to improve various methods for the artificial insemination of queen bees devised within the past few years in this country and abroad. Once such technique is made more practicable they will assemble speciments of the more important races of honeybees and will make innumerable crosses in an effort to combine the desirable characteristics of all of them into one or two new races, just as the livestock breeder seeks in his breeding operations to improve his animals.

The bee breeders hope their work will go even further than this by producing new types with the desirable traits developed to a greater degree than in any races now known.

First, beekeepers would like bees with considerably larger honey stomaches so they can carry more nectar on each trip. They hope for a bee with a larger thorax and a greater wing expanse so it can fly in cooler weather is sought. ditions and carry heavier loads. For northern climates a bee that canfly in cooler weather is sought. A longer tongue capable of sucking nectar from the depths of long-tubed flowers would be welcome. A race that would breed rapidly but not swarm excessively and would be immune to contagious diseases is another hope of the breeders. And last but not least, a gentle, sociable honeybee with a good disposition is more to the hearts of the men who work with bees.

"The honeybee has been longer in man's service than most domestic animals," James I. Hambleton, head of the Government bee laboratory, says, "but the bee can not be classed as a domestic animal. It leaves for the woods on the slightest provocation and is just as well satisfied as ever. We believe we can really domesticate the honeybee and can make bee breeding as profitable to the keeper as careful breeding now is tor the livestock man."

WATERING A GARDEN

Artificial watering, if properly applied, will prove a decided advantage to the garden during dry periods, but may prove an injury if not properly done. The United States Department of Agriculture says frequent light sprinkling of the garden is injurious. The proper method is to soak the soil thoroughly about once each week, preferably during the evening, and then loosen the surface by cultivation as soon as the soil is dry enough to work. No more water should be applied until absolutely necessary; then another soaking should be given. On a small scale water may be applied with a sprinkling can, or a garden hose. Perhaps the best method is to open slight furrows alongside the rows of plants and allow the water to flow gently along the furrows . After the water has all soaked into the soil the wet earth in the furrows should be covered with dry soil to prevent baking.

UNSEASONED CRATES CAUSE EGGS TO MOLD

A new and peculiar mold which develops on eggshells during shipment and in cold storage has caused heavy losses to handlers of cold-storage eggs. Recent investigations by bacteriologists of the United States Department of Agriculture indicate that unseasoned wood in the shipping cases probably is responsible for the trouble.

Spot mold or pin mold, as this has been termed by the department investigators, first appears on the outside of the eggshell, and although it does not impair the quality of the egg when confined to the outside, it renders the egg unsightly and reduces its market value. However, the mold penetrates the shell after a time and spread over the inside surface, becoming very noticeable when the egg is candled. Such eggs have a decided moldy flavor.

Most egg cases are made of seasoned wood, but in wet weather or during a rush period improper seasoned wood may be used. The unseasoned wood contains about 50 per cent more moisture than the well-seasoned wood. This moisture, according to Dr. L. H. James and T. L. Swenson, the investigators, favors germination and early development of the molds before eggs reach the storage houses. Eggs nearest the case partition molded more than others in the same case, they found. These results indicate that development of the mold on eggs in cold storage is dependent on previous conditions favoring its germination.

By eliminating unseasoned egg crates, one of the causes of such losses may be eliminated.

"DAYLIGHT-SAVING" BIRDS

The graceful Artic terns, some of which breed close to the North Pole and spend their winters not far from the South Pole, are without doubt the champion "globe trotters" and day-light savers" of the bird world. Some individuals must make an annual round trip of about 22,000 miles from their breeding grounds to their winter quarters and return. They also probably enjoy more hours of daylight than and other creature living; before they reach their breeding grounds in the Artic the mid night sun has already appeared, while during their sojourn in the Antarctic daylight is continuons.

Individual birds of this species. according to Frederick C. Lincoln, of the Biological Survey of the United States Department of Agricultnre, making the longest flights known to science. An Artic tern banded as a chick on the coast of Labrador was found about three months later near La Rochelle, France. Another fledgling banded at the same point was found on the beach at Margate, about 15 miles southwest of Port Shepstone Natal, South Africa, about three months after being banded, during which time it had flown not less than 8,000 miles.

CREAM CHECKS HELP NEGROES WITH THEIR CROPS

Negro farmers of Fayette County report that their cream checks are helping them to make their crops, states W. R. Davis, Negro county agent. One demonstrator stated that he has not gone in debt since he learned how to take care of his cows, hens and pigs.

LARGEST POTATO PATCH IN THE WORLD

What is said to be the largest potato patch in the world is a 2,100 acre tract of land near Houston, Texas.

This farm is operated on a scientific basis, and only certified seed potatoes are used in planting.

Over nine hundred cars of potatoes will be shipped from this farm this season and the yield will run something over a half million dollars.

The six hundred people, are employed on the farm during harvest period.

After the potatoes are harvested cowpeas are planted. This of course adds humus to the soil and makes crop rotation unnecessary.

Mr. W. I. Eldridge of Houston, Texas is the owner of the farm

NEGRO FARMERS CONGRESS AND SHORT COURSE

Prairie View State College, July 28, 1930.—The twenty-third annual Negro Farmers' Congress and Short Course convened at Prairie View State College July 28. Prof. C. H. Walker. State leader of farm extension work among Negroes in Texas, presided.

The Congress and short course will have a three days session extending through July 30. Lectures and demonstrations will be given each day on farm and home topics, farm shop, farm machinery, home improvement, poultry, clothing, foods, health and sanitation. Judging contests will be held on dairy barns, grain and livestock and in identification of insect pests and treatment.

Each country will present some phase of extension work in a five minutes stunt. Stunts will be graded on representation of extension work, education, humor, and stage demeanor. Four prizes will be awarded each night to successful contestants.

Lectures will be given by Dr. O. B. Martin, director of extension service; representatives from A. and M. College; Prof. W. R. Banks, Principal, Prairie View College; Prof. C. H. Walker, state leader of Negro farm extention service; Mrs. M. E. V. Hunter, state leader of Negro home demonstration service; Prof. H. S. Estelle, district farm agent Prof. L. A. Potts, director of the school of agriculture; Prairie View State College. and other members of the faculty.

The following counties engaged in farm and home extention work among Negroes were represented at the congress and short course: Anderson, Brazos, Brazoria, Colorado, Cherokee, Dallas Freestone. Gregg, Guadalupe, Grimes Harris Henderson, Harrison, Houston, Jefferson, Lee, Limestone, Matagorda Milam, McLennan, Nacogdoches, Navarro, Rusk, San Jacinton, Smith, Victoria, Waller, and Washington.

Napoleon B. Edward,
Executive Secretary.

"FUZZLESS" PEACHES MAKE APPEARANCE ON EASTERN FRUIT STANDS

"Fuzzless" peaches are to be the newest attraction of a fruit display to be made in eastern sections during coming weeks. They are described as having a skin as smooth as a plum, and with every characteristic of the peach, except the disagreeable fuzz.

The new type of peach, called the "nectarine," is common in Europe and on the Pacifice coast, but is just becoming established in eastern orchards. It is said to be a "sport" or freak of the peach tree fruit, forty varieties of which are now fruiting on the New York experiment station plots at Geneva. There are no less than 280 known varieties of peaches in this same orchard this season, orchardists report.

TO THE FARMERS:

The Modern Farmer contains information every month that you will not find in any other farm journal. It is the only journal published by and for our people that is devoted exclusively to the farmer and his family.

The price is in reach of every one—being less than 2 cents per week. During these times when the farming industry is undergoing so many changes, and when so many advantages can be had by our colored farmers if they are only aware of them, it is absolutely necessary that you should know what is going on. Three-fourths of the white farmers are subscribers to the white farm magazines and journals. They know just what is going on.

Fill out the blank—secure a money order for $1.00 and mail at once:

The Modern Farmer,

NATIONAL FEDERATION TO AWARD VALUABLE PRIZES

(Special)

The National Federation of Colored Farmers and the Modern Farmer announce that valuable prizes will be given this year to members and subscribers for diligent efforts made to increase and improve the yield of various farm products and livestock. These prizes have been contributed by public-spirited corporations, manufacturers and individuals and will be distributed to the deserving next fall. Complete information will be given in our next issue. Join, subscribe and get in line for these prizes.

TALKING HEN EXHIBIT FOR WORLD POULTRY CONGRESS

No one ever saw a hen 7 feet high or heard one speak the English language. Neither has any one ever observed the internal workings of a hen in full operation, nor a lot of other things shown in an exhibit prepared by the United States Department of Agriculture for the Fourth World's Poultry Congress now being in London (July 22-30, 1930).

This 7-foot hen is made of wood, wallboard, and a few feathers, and has a set of mechanical organs. These organs are visible and show how feed is taken in, ground up, digested, and distributed.

The specifications of this hen are somewhat similar to those of the new model automobiles: Full-vision gullet, extra large crop, fitted with window; copper-lined stomach; flexible rubber intestines; variable speed control on gizzard (a grinding machine); and a heart which is represented by a 2-valved pump.

The rate of laying eggs can be arranged to suit one's fancy in this exhibit by speeding up the small motor which operates the lathe on which the eggs are turned. Small mannikins, made of German silver, are attached to the various machines and seem to be furnishing the power for their operation. Actually, the power comes from electric motors installed behind the exhibit.

This hen is fitted with a strong voice and a special phonograph record gives her an opportunity to explain the internal processes which are observed by the visitors. She speaks with an American accent, although her larynx and throat must be regarded as typically British, because the phonograph and amplifying apparatus are rented in London.

Of course, this bird can not give a complete course on the subject of nutrition, says the department, but she can hit the high spots and attract the attention of visitors to the remainder of the exhibit, which explains in greater detail certain phases of nutrition.

This exhibit will be returned to the United States as soon as the congress is over and will be at State fairs.

Hog raisers in 37 States have produced a total of 4,159 official ton litters since the project was started in Indiana in 1922, according to the United States Department of Agriculture. Pennsylvania leads the States with a production of 549 litters weighing a ton or more at 180 days of age. Indiana is second with a total of 500 litters, followed by Illinois with 479, Tennessee with 415, Ohio with 336 and Minnesota with 314.

International trade in dried fruits, in recent years, has been marked by large and increasing production in the United States, with Europe as the largest factor in the purchase and consumption of supplies. The average total world production of dried prunes in recent years has been about 470,000,000 pounds, according to the United States Department of Agriculture. The United States supplied 75 per cent of this production. Of this total, about 50 per cent was exported to Europe.

SOYBEANS

The soybeans was introduced into the United States as early as 1804, but only in the last 10 years have we really begun to appreciate it. Production is now reaching to the United States Commercial proportions according to the United States Department of Agriculture. The crop has many things in its favor. It produces a large yield of beans and an excellent forage. It is easy to grow and to harvest. The beans have great possibilities in the production of oil, meal and industrial products. Soybean production will continue to increase as we find better methods and machinery for handling the crop and still more uses for the soybeans and its products for industrial purposes.

RAILROAD STILL HAUL MOST OF OUR LUMBER

Seventy-five per cent of the 21,000,000,000 board feet of lumber which entered interstate traffic from the large mills of the country in 1928 traveled by rail, according to a census recently completed by the Forest Service of Agriculture and the Census of Agriculeure and the Census. Bureau.

It is not surprising that railroads still haul a large portion of the lumber shipped from one State into another, since many destinations can not be reached by water and most of them are too distant for economical trucking.

Water transportation on ocean and river is used to great advantage by lumbermen and buyers in the Pacific Coast States. Eighteen per cent of the country's interestate shipment go by water, and the average water haul is 2,500 miles.

While the motor truck accounts for only 7 per cent of the country's interstate lumber traffic, it comes into its own in the Northesat, where one-fourth of the sawmill products went to market by truck, and in the Pacific Northwest, where more than half of the hardwoods and 10 per cent of the softwoods in interestate traffic go by truck.

The average rail haul of lumber increased from 360 miles in 1914 to 750 miles in 1926, as the principal centers of production retreated farther from the great consuming regions.

There was, course, some overlapping of the several methods, as a great deal of the lumber shipped by rail or by water was handled by trucks at some stage.

TO SEARCH AFRICA FOR ALFALFAS AND FRUITS

Two explorers of the United States Department of Agriculture H. L. Westover and K. A. Ryerson, are in North Africa looking for wilt-ersistant alfalfas and fruits adapted to the United States. They will later continue their exploration in Spain.

Mr. Westover, a forage crop specialist is now making preliminary surveys in the principal alfalfa growing districts of Morocco, Algeria, and Tunisia, in order to return to Spain for the first portion of his collection trip. He will return later to those countries to collect the seeds from the harvest which is not yet ready. He made a similar exploration in southwestern Asia, the heart of the alfalfa district, last year, and bronght back many varieties of alfalfa now being tested by the department for wilt resistance.

Mr. Ryerson, head of the Office of Foreign Plant Introduction, is looking for varieties of peaches and other fruits that will be of value in this country. He seeks particularly to recover some American varieties of peaches that have disappeared from production in this country after having become established abroad. He originally planned to join Frederic T. Bioletti, professor of viticulture at the University of California, who has been conducting an exploration for grapes and apricots for the United State Department of Agriculture and the university in North Africa. Professor Bioletti's illness has caused some alteration of these plans, so that Mr. Ryerson will have to take charge of the completion of Professor Bioletti's work after the later has returned to this country. The preliminary work in connection with apricots has been completed, and there remains only the harvest of the seeds and scions. The grape work has not reached so advanced a stage but it is well under way.

Four or five years ago bacterial wilt appeared in the heart of the alfalfa belt and threatened to exterminate this crop. The San Joaquin Valley of California has suffered heavy losses from wilt. Losses in Kansas in 1927-28 amounted to about 15 per cent and for the last three years in Iowa and Missouri to about 25 per cent. In Minnesota, Nebraska, and Missouri wilt has worked hand in hand with crown rot combining to bring losses up to 50 per cent of the crop. In Colorado it is the most destructive disease of alfalfa, one field suffering loss of 80 per cent of the plants. Wherever prevalent, wilt has done its greatest damage in humid climates and on irrigated lands.

NEW RURAL BUILDINGS

A dual-purpose type of building is appearing in rural communities which fulfills more functions houses more activities and centralizes the varied economic and social interests of the community more effectively than does the ordinary community building, says the United States Department of Agriculture. Modern farm organizations recognize that farming is a mode of living rather than merely a business; they plan their community buildings to closely relate the economic and social factors in the conduct of their business.

RETAIL PRICES TOO HIGH

Hon. Samuel R. McKelvie Board member representing grain in the Federal Farm Board says "Wheat is selling for more than 50 cents per bushel less than a year ago, yet the retail price of bread is the same."

Practically all of the ingredients that go to make up a loaf of bread are much lower than they were at this same period last year.

This same conditions exists in the prices of other commodities both in food, supplies and wearing apparel.

Montgomery Ward and Company, Sears Roebuck and Co., and Butler Brothers three of the largest wholesale mail order houses in the United States have reduced their prices anywhere from 10 to 25 per cent.

The wholesale price on beef is down from 10 to 19 cents per pound, yet in most of the retail markets there has been no reduction.

Eggs are the lowest from a wholesale standpoint than at any other time in over a year, yet the retail prices hold up.

When the farmer has anything to sell, there is always some season why he cannot get a decent price for it, and yet he is forced to pay exorbitant prices for what he needs. This is an uneven distribution of justice, and the only relief is to mass themselves and buy co-operatively at wholesale prices until conditions adjust themselves.

We give our readers a very interesting article clipped from a recent edition of the N. Y. Times:

REDUCING RETAIL PRICES

Considerable interest attached during the week to the prices made by the two leading mail-order-chain houses in their Fall catalogues. The largest company asserted that the prices were 'lower, much lower, than at any time in the past ten years." Its rival ont only reduced prices "drastically," but introduced a new feature in the acceptance for two months of instalment on all orders exceeding $25 except for groceries.

The answer, of course, by retail stores to these broadsides will be that values have been constantly reduced as wholesale reductions made them possible, and that in coming months there will be further concessions that the mail-order houses will not be able to meet because their quotations are practically fixed for the season of their catalogues.

While a few stores announced price cuts before the Penney chain published its decision to put all values on the basis of lower replacement costs, the Penney action was followed by many more stores throughout the country, so that pages of comparisons with last year's quotations have become common. So far, the response of the consuming public has not been remarkable, and it is to be supposed that customers are waiting for still greater reductions.

The installment feature of the Montgomery Ward announcement will probably find its critics, and yet it suggests a method of merchandising that appears to have real merit not only on its own account but for the general business welfare of the country. Why would it not be a good idea to restrict credit in times of prosperity when money is plentiful and cash purchases should be encouraged, and to open up credit when times become not so good so that they may be improved?

In effect, this is the method pursued in agricultural districts when crop failures necessitate business on credit and good crops see a liquidation of indebtedness and liberal purchasing.

THE BEES' BUSINESS

An ingrenious device at the United States Bee Culture Laboratory, Somerset, Md., measures the fight activity of honey bees. It is an instrument about 3 feet tall and 4 inches in diameter, filled with sugar sirup. Small holes at the bottom permit the bees to feed. By a system of floats and weights the rate at which the bees take sirup is recorded electrically on a chart in the office. This information, together with a record of weather conditions at the time of feeding, enables the investigators to determine how much work bees do in different kinds of weather.

THRIFTY SHEEP GROW MOST AND BEST WOOL

The character of a sheep's fleece is largely within the control of flock owners, says the United State Department of Agriculture. An investigation by the Bureau of Animal Industry indicates that there is a close relationship between the thriftiness of sheep and the quality and quantity wool produced. Fibers were found to grow fastest and coarsest in summer and fall and slowest and finest in winter, but generally the period of greatest wool growth was also associated with a thrifty condition of the animal. Least wool growth, in ewes, occurred during lambing time and the 45 days preceding.

SOIL FERTILITY EASILY HELD ON TERRACED LAND

At the soil-erosion experiment station farm near Guthrie, Okla, last year a field cultivated for the first time produced 75 per cent more lint cotton per acre than another field that had been cultivated for 30 years, according to the United States Department of Agriculture. The old field produced 89 pounds per acre, the new field 156 pounds.

Both fields were terraced before the corn crop was planted last year, and otherwise were treated exactly alike. The poor yield of the old field, the department explains, is a result of the removal of great quantities of plant food during the 30 years—not alone by cropping, however, but by the gradual washing away of the rich top soil, plant food and all, by sheet erosion. A soil survey had shown that each field originally had a surface slope of about 5 per cent; that erosin had taken from the old field from 10 to 16 inches of the surface soil and that practically no erosion had occurred in the virgin field. Both fields originally were of the same type of soil.

The terraces on the eroded field have prevented further loss of soil, the department says, but it will take several years and much labor and expense to restore the soil to its former productivity. Terraces on the new land will prevent loss by erosion and the fertility of the soil can be maintained easily.

The Department of Agriculture, in cooperation with State agricultural experiment stations, is now studying the soil-erosion problem at six soil-erosion experiment stations—two in Texas, and one each in Oklahoma, Kansas, Missouri and North Carolina.

GOVERNMENT INSPECTION AIDS CANNING INDUSTRY

It is surprising that the tomato we relish today was for 300 years considered a rank poison. In those days the way to test a poison was to taste it; if death followed shortly there was no doubt about the poison. Few experimented needlessly, and the result was that careful people washed their hands after handling a tomato.

Today the tomato or a tomato product is found on nearly every table. In season we have salads of sliced tomato or in combination with fruits or other vegetables, green tomato pie, tomato soup. After the vines are black we get our old friend tomato out of a can or bottle as sauce, soup, catsup or one of the many other product made from this vegetable.

Along about 1850 the people first found that tomatoes were an excellent food, but even then tomatoes were used only in season. At the start of the canning industry the sale of canned tomato products did not go so well, mainly because some unscrupulous manufacturers used bad tomatoes, failed to wash them properly, left in the peelings and cores, and sometimes added water to reduce costs.

Government inspectors at that time found a few manufacturers running spoiled tomatoes, cores, and peelings through a "cyclone" machine which ground everything to a pulp. This, with spices added, was bottled and sold as catsup. A chemical was often added to prevent further spoiling.

That type of adulteration is a thing of the past. Today inspectors of the Federal Food and Drug Administration, United States Department of Agriculture visited the canning factories to see what kind of tomatoes are used and to watch the methods employed in packing. Government scientists have so perfected methods of analysis that they can determine the amount of moldy tomato in a bottle of catsup if any is present. Added water can be very easily measured and any preservative is detected at once.

The result is that manufacturers seldom take the risk of adulterating food. People have greater confidence in canned goods, and the tomato-canning industry has grown 100 per cent in the last 22 years.

NATIONAL FEDERATION OF COLORED FARMERS "AS RELIABLE AS TOMORROW'S SUNRISE"

Read to the Members in Meeting At Chicago, Ill., this month

COTTON:

The world's consumption of American grown cotton for the season which has just closed was about 13,050,000 bales as given out by the Garside Service. Last season, which was the season previous, the consumption was 15. 159,000 bales or something over 2 million and one hundred thousand bales more than the season just closing. Last year (or rather last season) at the beginning of the new crop, there was estimated about 4 1-2 million bales of cotton from old crop left unsold. This year the carrying-over is estimated around six million bales more than the average lion bales more than th average carry-over for the past 5 years period. Owing to the continued drouth in the cotton growing states the chances are that the crop will not be as large as the forecast given out by the Department of Agriculture last month. For the past 10 days there has been better demand for cotton among the mills, both in this and foreign countries, and especially for long staple cotton. It is reported that the rayon mills are running full time with future orders sufficient to keep the plants running permanently. Cotton is a weather problem. That is to say the price this Fall depends upon the size of the crop, and this is all based on the weather.

Beginning the middle of August it may be necessary to issue weekly Bulletins for the benefit of our members for important changes in cotton are likely to occur, besides the new American Cotton Association which is backed by the Farm Board, will begin actively in operation. We therefore think it wise that our units begin meeting weekly after August 15th.

CORN:

Our last Bulletin urged members to feed their corn sparingly and buy oats at the low price. The continued drouth throughout the middle West states will reduce the acreage by several million bushels and we again say that we believe corn will sell very high this Win-Fall or Winter.

FLOUR:

Wheat continues at the lowest prices in about 14 years, and while flour has declined some 75 cents per barrel, yet the chances are it will sell much lower than preseut quotations, and we urge our members not to by over a 2 week's supply. There is nothing to indicate high prices on flour this Fall or winter.

FEED:

Oats around 48 cents per bushel, and wheat shorts $1.45 per hundred pound sack are very good buyers at present.

Hay is beginning to advance in prices. It will be very high this winter on account of the heat wave parching the crop in the West. Our members should begin now and save the hay and forage possible and house it from the weather during their "lay-by" period.

GROCERIES AND SUPPLIES:

Sugar, while low in price now selling around 4:95 per hundred, may rule a little lower and with the liberal supply of fruits and vegetables it will pay to can both these commodities for home consumption this winter.

Neither meat nor lard will likely decline in price. Hogs remain rather firm at all packing centers.

Coffee is at a very low ebb and nothing to indicate any high prices for at least another year.

CHICKENS AND EGGS:

Chickens and eggs are both a drag on the markets. It will be profitable our members to use their eggs at home and save their chickens until next month when the market will be much better. We are hopeful of making arrangements with large poultry houses to handle all the shipments from our units, and full announcement of the plan will be forthcoming in a later Bulletin.

WATERMELONS:

On account of the continued hot weather, watermelons continue in heavy demand and bring better prices than for the several years. There is a very heavy demand for 30 pound Watsons from practically all of the large terminal markets, yet heavy average Irish Greys and Dixies sell without any salesmanship. Our units who have made shipments report they are getting satisfactory prices this year. Don't believe any statements to the contrary.

SWEET POTATOES:

New sweet potatoes easily bringing 2.75 to 3.00 per bushel. That is for Triumphs, and we urge our unites to hurry their shipments as fast as possible while prices are good. The market will ease off as soon as reciepts become heavy.

PLANT A FULL GARDEN

Buy as many pigs and hogs as you can take care of. Fatten them on shorts.

Buy your supplies co-operatively through your unit from the cheapest house—quality considered, and save every penny possible. Cotton will not bring high prices this year, and you can offset some of this loss through your buying at wholesale prices.

THE MISSISSIPPI CONVENTION

Everything indicates a record breaking attendance at the Convention in Howard Miss., August 13th and 14th.

A special representative from the United States Department of Agriculture at Washington, D. C., has just advised that he will address the Convention on the after-

ATTENTION COLORED FARMERS

The National Federation of Colored Farmers is receiving hundreds of letters from Colored farmers requesting all kinds of aid and information. We are willing to do everything we can for all the Colored farmers of America. It costs money, however, to maintain offices and our expenses are becoming so heavy that we are compelled to discontinue supplying information to those who request it who are not members of the Federation. If you have faith enough in the organization to believe that it can aid you, then you should be willing to join it and help support it. Isn't that so?

Several County units have organized and elected officers but have not sent in their membership dues. These units are eligible to membership in the Federation until dues are paid. Be helpful. Co-operate. Pay up. "All for each and each for all."

noon of the opening day.

All Mississippi units are urged to collect their assessment of 50c from each member and send it in at once to C. C. Richardson, Route 2, Box 67, Lexington, Miss. Notify W. Moore, Route 2 Box 74 of the approximate number of members and friends that will attend from their Section.

BANISHING FOOD PRODUCTION WASTE

There should be a minimum of waste in manufacturing and distributing human necessities. Since time immemorial the production and distribution of food has been inefficient in comparison to the standards of efficiency maintained by other industries.

Recognizing this condition, one of the largest manufacturers of table specialties has consolidated over 40 non-competitor products and is producing and distributing them under unified management.

This is a tremendous step forward. No commodity is so vital as food. Mass production and distribution is the industrial doctrine principally responsible for the progress made by such industries as the electric, the automobile and the telephone. It should prove to be a revolutionary force in raising the food industry to where it can give us better and cheaper products.

A LESSON FOR AMERICA

It is not a coincidence that the nation which has the most laws, the United States, likewise has the most disgraceful crime record. It is a historical fact that we cannot cure a social problem merely by prohibitory legislation.

Revolvers and pistols have been the favorite targets for American reformers They argue that prohibiting them will curb crimes of all kinds. But they fail to recognize that anti-gun laws would disarm the good citizen but would not affect the well financed, organized, underworld.

No country in Europe is freer from crime than Switzerland and it is the only country without laws their possession and use. There is a lesson in this for America.

HORSE POWER AND HORSE-POWER

The Middle West Utilities Company of Chicago recently ran an advertisement disclosing that, contary to the city dwellers' conception, American agriculture is a highly mechanized industry with an aggregate capacity of about 50,000,000 horse power—greater than the capacity of all prime movers in factories and electric generating stations combined.

Except for his electric motors and windmill, the farmer's power machines demand almost constant attention. They consist of more than 24,000,000 small units. Of these 18,750,000 are animals with 35 per cent of the total power capacity.

From all his power resources the farmer gets only about four per cent of capacity. The manufacturer gets at least 13 per cent and electric generating stations deliver better than 30 per cent.

For power the farmer pays at least 25 per cent of his gross income while cost of fuel and power in manufacturing is only three per cent of value of out put.

Electrification of agriculture then, cannot be viewed as merely a process of bringing power to the farmer. The farmer has power—lots of it—but he has not the kind of power which can do small scattered jobs with a minimum of human attention. He has not the kind of power which can work at a high percentage of its capacity as an interconnected electric system can.

It is only by grouping the resources of the power in industry that uniform low-cost service can be given to the American farmer and bring him the advantages now enjoyed by his city neighbor who is able to draw upon unlimited supplies of electricity. Practical "farm relief" will result.

WATER AND DUST-PROOF ROADS HELP FARMER

Good roads, in the opinion of Dr. Julius Klein, Assistant Secretary of Commerce "have revolutionized the business of the nation, and the end is not yet."

In 1904 the State and Federal governments spent $2,500,000 for highways and in 1928, the last year for which complete statistics are available, they spent $827,000,000, or 330 times as much. In addition the expenditures of countries and other local units of government reached the total of $832,000,000. Since 1921, the annual aggregate expenditure for roads has been above $1,000,000,000.

These are impressive figures and one might think we have all the roads we are likely to need for some time to come. But such is not the case. Our cities have been adequately provided with expensive streets and highways but most of the agricultural and rural country depends on the same type of road that existed in the horse and buggy days. Five million of our 6,250,000 farmers are cut from their market during several months of each year by a barrier of mud. It is a lucky farmer who is assured of all-year contact with the outside world over water and dust-proof surfaced roads.

Good low-cost farm-to-market roads offer better economic and living conditions to our farms.

NUT GRASS GROWS FROM UNDERGROUND TUBERS

One reason why nut grass, one of the worst weeds of the Southwest and the Southeast, is so presistent, according to M. W. Talbot, weed specalists in the United States Department of Agriculture, is because it sprouts from underground tubers or 'nuts," even when these are buried very deep. On each plant the nuts are arranged on long, slender, underground stems like widely separated beads on a string.

Usually the nuts occur in the top foot of soil. In recent tests at the Mississippi Delta Experiment Station it was found that nuts buried to a depth of 4 feet, and one nut buried 6 feet, sprouted and sent up shoots to the surface. It is not yet known how long nuts will live in the soil awaiting favorable conditions for generation. One thing is certain, however, nut grass can not be controlled simply by cutting off the tops, for growth after the tops are clipped is amazing rapid. A remarkable discovery of the Mississippi Delta Station is that individual nuts, when permitted to germinate and grow unmolested, have produced more than a thousand other units in one summer.

A special treatment for three years has proved an excellent method of handling nut grass-infested land. The following definite operations must carefully be observed: (1) Prepare the seed bed with more than ordinary care. (2) Plant the infested land to corn or cotton, in checkrows. (3) Cultivate very thoroughly, at least once a week.

(4) Remove the crop as soon as it is mature; plow and harrow the land, and seed it to a winter cover crop adapted to the locality. A mixture of oats and hairy vetch has been widely recommended for this purpose. (5) The following spring, after the oats and vetch have been harvested for hay, repeat the whole process. Cotton may be planted the second year, if corn was planted the first.

Nut grass does not thrive in dense shade. Next to rigid cultivation through a long period, the best hope of eradicating nut grass is by smothering it with some shade crop such as velvet-beans, soybeans, or cowpeas. In Louisiana two recently introduced variieties of sugar cane known as P. O. J. 36—M. and P. O. J. 213, have proved useful in controlling nut grass and other weeds, when planted on the same tract and in good stands for about three years.

BYRD HEROES FORTIFIED BY TONS OF FOOD

Two Years in Icy Waste Without Sickness

By Guy W. Kesler

(Great Atlantic and Pacific Tea Co.)

Down in the icy waste of the anarctic, where howling winds and frigid temperatures hurl the full blast of their fury against the explorer, Rear Admiral Richard Byrd's band of men completed two years of existence without a single case of sickness. Moving pictures of their adventures and activities in this trying region, showing currently at a Chicago theatre, verify the well-being of the expedition members during those months.

Certainly the scenes that make up this epic of filmdom would appear to corrobate the well known sally of a famous general, that an army travels on its stomach. Statements by the aids of Admiral Byrd on their recent return to New York indicate how seriously this sentiment was considered in preparation for the perilous trip.

Select Provisions With Care

Selection of the provisions for the expedition, they revealed was held to be quite as important as the choice of the ship, the City of New York and its fittings. Because of the necessity of conserving space on shipboard the prime factor was the choice of foods containing the highest possible amount of nutrition and stimulation, against the bitter cold days that lay ahead. It was not only a special type of food that was needed but also the highest grade of that particular food.

Much has been written and discussed about the statistics of the Byrd expedition—about the sailing ship, dog teams, airplanes, scientific instruments and other aspects of the equipment but no one element is of greater interest than the item of food. Both the morale and the physical condition of the band was influenced by it.

Drink 2 1-2 Tons of Coffee

Thousands of miles from civilization, surrounded by vast seas and buffeted by the polar blizzards, shut in by mountains of ice the favorite foods to which their families back home in civilization were sitting down.

Two of the staples that were always served steaming hot were coffee and baked beans. Over the two year period spent in the anarctic the records of the expedition show members consumed approximately two and a half tons of coffee, or five thousands pounds—and 10,000 pounds of beans, which amounts were taken along at the start. Later a radio order over 11,000 miles of space sent additional stores of 500 pounds of coffee.

When confronted with 30,000 helpings of baked beans and the consumption of 180,000 cups of coffee, as these men were, it is self-evident that none but the most appetizing of grades could have kept their army and navy diet from becoming monotonous and unappealing. The proof of the pudding in this case surely was in the eating—and drinking.

Foods Thoroughly Tested

Tests made of the various types of food offered as possibilities for this expedition were as rigorous and painstaking as the tests that were made of the scientific instruments Rear Admiral Byrd intended to use to plumb the mysteries of the age old polar waste. Choice was made upon the basis of taste and food values.

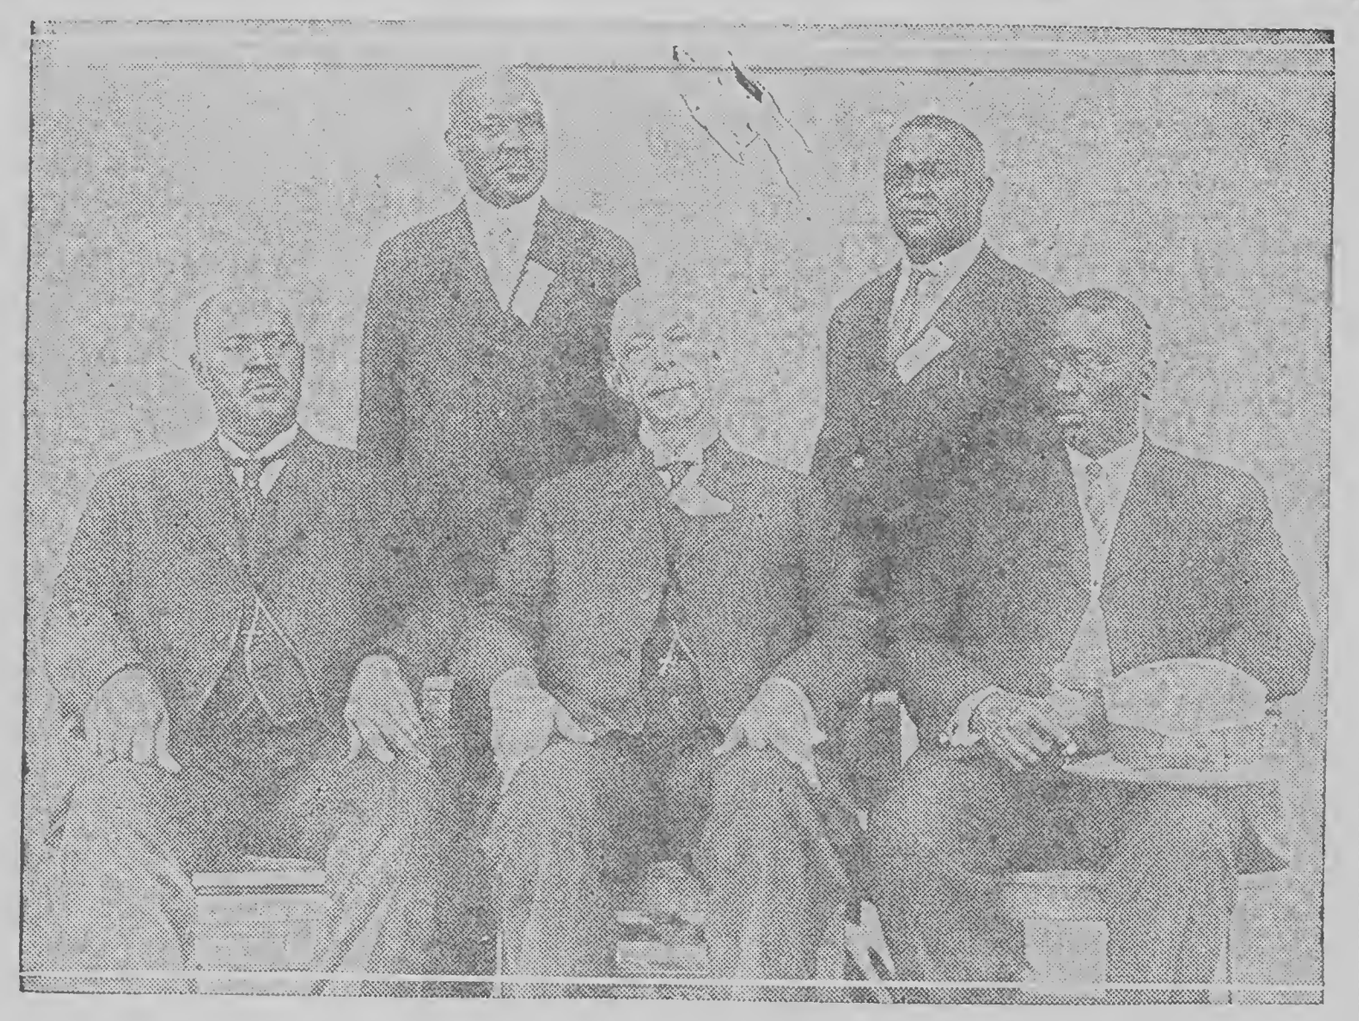
The high spirits and excellent physical condition maintained during their absence which were plainly evident on the return of the party to the temperate zone, speak volumes for the success with which the preparations were made, the selection of staples that constituted the "pieces de resistance" of their antarctic diet, and the superior quality and flavor of the grades utilized.

FAYETTE FARMERS USING MORE NITRATE

Over 500 tons of Nitrate of Soda have been purchased by Fayette County farmers this season, an increase of 25 per cent over last year, states County Agent C. O. Woody. This does not mean any great increase in cotton acreage but instead it indicates that the farmers of this County are using more nitrate per acre. They are also using it on corn and other crops Mr. Woody says.

COUNTY AGENT INSPECTING A FARMER'S FLOCK OF SHEEP, MADISON COUNTY, ALABAMA

Officials of Negro Bishops' and Connectional Councils, African Methodist Church, In Meeting



COTTON IN BAD GRACE

year ago in July cotton was selling at 19 cents a pound, what is known as middling upland cotton in the New York market. On July 11 of this year the price was 13 cents. A staple commodity that is not perishable hal thus lost one-third of its value.

Here again, as with wheat, the Government h'd attempted unsuccessfully to stem a falling tide In October of last year the Board announced that it would lend 16 cents a pound to cooperatives, "in order to assist cotton farmers to hold back their crops and at the same time have money with which to pay their obligations." In other words, the Government began to lend 16 cents on something that was then worth 19 and is now worth only 13. It is understood that $50,000,000 has thus been invested.

The first bale of this year's crop reached the New York market on July 10. The acreage planted is slightly less this year than last, but there has been none of that radical restriction which would have gone far to raise the price. Plainly what is wroug with cotton at the moment is a decided slump in buying. Domestic consumption fell off, during a ten months' period, by more than 10 per cent. Foreign purchases declined at the same time by as much as 16 per cent. Speaking roughly, domestic consumption and export shipments thus accounted for 13.6 million bales in a ten months' period last year and for only 11.7 million bales in a similar period this year.

Such a shortage in present demand for cotton can hardly be counter-balanced by a shrinkage of less than 3 per cent. in acreage, which the Government reports.

From The Review of Reviews

FREEZING PEACHES IN GEORGIA

The Houston Frozen Foods Company of Montezuma, Ga. are successfully operating a peach freezing plaut. The peaches are gathered from teh trees dead ripe and placed in the refrigerating plant, frozen, packed and shipped to all sections of the country.

Through this method fresh peaches can be eaten throughout twelve months in the year, and it will eliminate waste and decay.

It is said by another year, the refrigerating plants will be installed throughout the entire peach growing sections of the United States and save the orchard owners handreds of thousands of dollars.

TRACING OF VECETABLES

Vegetables have been cultivated by men for several centuries, but it has been only within recent years that the importance of vegetables in the diet has been urged by physicians and dieticians.

Mr. Orland E. White of the University of Virginia has published a history of the common garden.

Mr. White classes the tomato as being relatively now, which originally came from Peru and was introduced into England and Italy in 1596.

The sweet and irish potato, string beans, squash, maize and pumpkin are natives of America. Most of these foods were taken from Mexico and South America into Spain and found their way through Europe.

Some school histories say that potatoes were introduced into England from Virginia, but the potato was brought to Virginia from England. It was not known to the Indians of North America, but on the other hand had gone from Peru to Spain and was extensively cultivated in Ireland long before Sir Walter Raleigh's time.

New Zealand spinach is practically a new vegetable. The gherkin cucumber came originally from the West Indies, the wrinkled pea from England. The history of some vegetables can be traced back as far as four thousand years.

TWO WHITE MEN IN GEORGIA TO DIE FOR KILLING NEGRO FARMER AND HIS WIFE

The Georgia Supreme Court on July 21st affirmed the sentence of two white men to the electric chair for the murder of Doc Elder and his wife last November.

The Elders were prominent farmers living in Oconee county Georgia.

The white men who were convicted of the murder were Weyman Bradberry and his brother Harvey, and his cousin Raymond Cooper. The two brothers were sentenced to death and the cousin Raymond Cooper to life imprisonment.

WHITE FARMERS IN MISSISSIPPI HOLD IMPORTANT MEETING

Mr. G. H. Alford, President of the Mississippi Farm Bureau Federation told 200 delegates in a meeting held in Jackson the latter part of July that the burden of the farmer is not wholly upon the government but principally upon the farmer himself.

Among other things Mr. Alford said:

"We know further that the problems will never solve so long as a system of farming is practiced that leads to lower acre yields, higher cost or production, increased acreage for a single crop and total yields in excess of demands."

The federation of which Mr. Alford is president meets again in Jackson Aug. 12 to complete the officer and clerical personnel and to put into operation a program of expansion affecting each of the 82 counties in the state. Committees have been appointed to conduct membership campaigns in an effort to bring all the counties into the federation that now has 60 already represented out of the 82.

The first business of the federation in Mississippi is to put funds and facilities into the hands of the farmer for development of his business—farming. But the social welfare of his family is equally as important, believers Mr. Alford.

"The social and economic institutions of the rural districts are not keeping pace with the development of the nation as a whole," he said.

If it is necessary for the white farmers to organize, then it is more than necessary for the Negro farmers to get together and stay together.

HEN LAYS 358 EGGS IN 365 DAYS

A Barred Plymouth Rock pullet owned by the University of Saskatchewan has the reputation of being the world's champion egg producer. This pullet laid 358 eggs in 365 days, which is a record that has never been equalled.

SOUTH CAROLINA FARM LANDS

The government and people of South Carolina wish you to know that vegetables, fruits, milk, cream eggs and other products of that state are rich in iodine which prevent goiter. Through its South Carolina natural resource commission the state gives information about goiter throughout the country.

A large percentage of young pigs are "born dead or imperfect and soon die," because the mothers haven't enough iodine in their systems and in another state "sheep fail to reproduce for lack of iodine."

Farm lands in South Carolina may be had at the lowest prices in many years. The possibilities there are of interest to those that have money, to develop land you need money to start.

Predicts Frost by Sept. 1

Washington, N. J. July 25.—The first chirp of the katydid for 1930 was heard hereabout Tuesday. The initial chirp of this insect, according to tradition among farmers of northwestern New Jersey, means frost within six weeks, or not later than Sept. 1.

The farmer also point out that corn was in tassel and ears appeared this year before July 15, which indicates a very early ripening season and bears out the katydid's prognostications.

Peach Train Overturns

Salisbury, N. C. July 25.—R. T. Cline of Greenville, S. C., fireman on the Southern Railroad died Thursday from injuries received Wednesday night when a peach train overturned at Goldhill, 12 miles from here. The train, made up of two engines and 40 cars of peaches, was bound for northern markets. A split switch was believed to have derailed it.

Forms Mailed to Produce Dealers

Washington, July 25. —Application forms for licenses under the agricultural commodities act, approved by President Hoover on June 10, are being mailed to dealers in fresh fruits and vegetables by the Dept. of Agriculture. It is not incumbent on the department to notify dealers, officials said, but it is trying to notify all persons affected by the law. The act provides that dealers must have licenses to operate after Dec. 10.

FIRST CAR FROZEN BERRIES

Sent to San Francisco By Barney Radovich—Revolutionizes the Industry.

Watsonville, Calif., July 11.—The first car of frozen bush berries to leave Watsonville was shipped with ceremony by the firm of Barney Radovich, June 30, who in the past few months has revolutioned the bush berry industry of the entire section, says the Pajaronian.

Already several hundred tons have been contracted for and Radovich has purchased over half of the bush berries grown in this section. The large plant at First and Walker Sts. has been working day and night for months to make a success of the business.

A force of 50 persons, local in each community where Radovich is operating, is busy preparing crates and cans for the growers, who have been under no expense or obligation for supplies, their only task being to have the berries ready for Radovich to haul to his warehouses.

Radovich, of course, handles fresh berries for direct market purposes, but the cold storage proposition is the one that has been a real boon to the berry raisers. When the market is low, then is the time for cold storage. In these refrigeration plants the berries will keep indenfinitely and in cold storage reefers can be shipped to any part of the country at any month of the year. After being removed from storage they are good from six to fourteen hours after their delivery.

The great bulk of the frozen berries are consumed by bakeries, preserving plants, cafeterias and tea rooms.

When the fruit is placed in cold storage, it is stored in two forms, in pint cartons and three gallon cans, which contain 24 pounds of berries.

When the consumer finds out that he can get fresh berries, such as make a far more juicy pie than the old-time cooked, canned berry, it was then that the valuation of the frozen berry seized him, and the result has been an increasing in orders that has been more than Radovich could handle.

In forming the firm that is taking care of the new business, Radovich has succeeded in marshaling the necessary equipment to keep the berry growers supplied. It means all kinds of supplies, cans, cartons and a corps of box makers, working day and night to keep up with the demand, but he has done it along with the other business firms and citizens of the community. Radovich has faith and ability to make an outstanding success of the industry that promises to be a boon to the bush-berry growers of this community.

The shipments at the present time are confined to California, but several inquiries have come from the eastern markets.

FARMERS ADVISED TO FEED WHEAT TO LIVESTOCK

With prospects of a short corn crop in many sections and with wheat cheap farmers of the State are urged by L. A. Richardson, U. T. Extension Livestock Specialist, to consider the feeding value of wheat for livestock before disposing of their surplus at present prices.

The price of wheat has been declining steadily while corn has remained relatively high. Wheat can be fed to all types of livestock. However, farmers who plan to feed wheat should consult their County Agent or write the Agricultural Extension Service, University of Tennessee, Knoxville, for a circular which outlines the best methods of feeding wheat to different types of livestock.

Hold Livestock

Mr. Richardson also advises farmers not to rush their cattle and other types of livestock to market due to short pastures and some crops due to the recent drought. There is a shortage in the number of cattle in the country and there is virtually no beef in storage. Present depressed prices for livestock are due largely to a slump in the industrial situation and, as soon as general business conditions improve, higher prices for all types of livestock are expected.

There is 22 per cent less pork in storage and 37 per cent less lard than a year ago and the Tennessee hog crop is 25.3 per cent less than a year ago. In view of this situation farmers are especially urged to hold female animals for breeding purposes. Cattle feeders who can possibly so do are advised to hold heavy cattle of quality as it is the opinion of the economics department of the Producers' Livestock Commission Association that prices of slaughter cattle will gain strength during the fall.

THREE SCHOOLS FOR NEGRO EXTENSION ..AGENTS TO BE HELD IN AUGUST

Three summer schools for Negro farm and home demonstration agents will be held August 4 to 30 inclusive at Nashville, Orange-

burg, S. C., and Prairie View, Tex.

This movement for the training of Negro Agents for home effective service is sponsored by the Julius Rosenwald Fund. Arrangements for the schools were made by the Office of Cooperative Extension Work of the United States Department of Agriculture in cooperation with directors of extension work in the Southern states and president of Negro land grant institutions.

The school at Nashville will be held at the A. & I. Normal School. Courses will be given in dairying, poultry, swine, cotton, soils fertilizers and crops, home gardening and fruits, farm management, cooperative marketing, home and community beautification, sanitation, canning, cooking, etc.

WATERMELONS

These are the days when the excellent ladies who run the recipe and cooking columns in the newspapers are telling how to make a watermelon really delicious by cutting out the inside, shaping it into cubes and balls, and soaking 'em in ginger ale or pineapple juice or something, and then, after sevral hours or days in the refrigerator, serving 'em on fancy plates or in tall glasses. Which is the honey, according to our way of thinkin'.

You don't have to do all or any of that highfalutin' stuff with watermelons to make 'em good any more than you have to paint a lily to make it beautiful. Before any of these modern kitchen word painters began sounding off we boys down in the small towns knew all about how to prepare a watermelon so it tasted better than any dish that was ever set before the late Mr. Lucullus. We would pick out a dark night—the darker the better—and we'd sneak down the long dusty road past the old log cabin (and it was ha'nted, too, you betcha) and then through the woods and along the edge of the cornfield. After a bit we'd slip along through the corn until we came to Old Man Blodgett's melon patch. And there were the melons—black long shapes in the darkness looking like fat pigs fast asleep. And like ghosts we'd glide from melon to melon, giving each one a rap with our knuckles. If a melon sounded "plank" we left it alone and went on to the next melon—"plank," and then to the next one "plank." Sometimes it would begin to look as though Old Man Boldgett had combed through his patch that very day and taken all the ripe melons to the store. "Darn!" one of us would say in righteous indignation. "The old skinflint!" But still we'd try some more melons. "Plank! plank! plank!" Gee! Old Man Blodgett was a mean guy. Then we'd try another one—"PLUNK!" That was it! When they went "plank" we just passed right on, but when they went "PLUNK!" we grabbed 'em.

One little jirk tore the melon off the vine and then some scooting black shadows dodged back through the cornfield and on over the fence to a lonely place in the woods where the feast was held. Gentlemen, your new-fangled cooks can cut the red meat of the watermelon into all the cubes and round balls they want to; soak 'em for days in ginger ale or pineapple juice or whatever; put 'em on all the fancy plates or in all the tall-stemmed ice-cooled glasses they've got—but to know what a watermelon really tastes like you've got to be a barefooted boy and steal one on a dark night out of Old Man Blodgett's melon patch.

—Chicago Tribune.

HOW FAR WILL A BEE TRAVEL?

Mr. Paul Potter in the Farm and Garden column of the Chicago Tribune has the following interesting article on the activities of the bee. He says:

How far will a bee travel for a load of honey nectar? The United States department of agriculture recently ascertained that the diligence of the bee is beyond question. They sometimes will fly as far as eight miles in a quest for flowers.

Irrigated alfalfa in a Wyoming community was found to be virtually the only source of honey, so the investigators placed hives of bees as far as eight miles from the alfalfa blooms, then found that the insects made daily trips and returned with nectar to fill the hives. Under such circumstances, it is estimated, a single pound of honey would represent 18,000 trips or 16 miles each day or a total of 300,000 miles of flight by the bees.

Some members of the colonies failed to return home from their voyages to the alfalfa. Sand storms and headwinds deterred them. When laden with honey many were forced to alight an rest on the trip home. After reaching the hives they often made abnormal landings and frequently failed to alight at the entrance of the hive.

HOT WEATHER AND LOW PRICES CUT EGG PRODUCTION

The average production of 8,396 hens in 69 demonstration farm flocks in Tennessee for June was 15.3 eggs per hen as compared with 17.7 eggs in May. This was an average of 2.7 eggs below standard production for the month for a 160 eggs per year hen, states A. J. Chadwell, extension poultryman, University of Tennessee.

The total income per hen for the month was 47 cents. Egg sales per hen amounted to 29 cents. Feed cost per hen amount to 24 cents and feed cost per dozen eggs produced was 18 cents. The average selling price of eggs for the month was 24 cents per dozen.

The five high flocks for May averaged 20.4 eggs per hen which was 2.4 eggs above standard production. These flocks contained 1,333 hens. The decrease in the average production of all flocks is attributed to unusually hot weather and to low egg prices which has caused some of the demonstrators to cut down on their feed, Mr. Chadwell states.

Care of Flock

Every month is important in the management of a farm flock. Long time heat records have already been broken in several counties. The poultry raiser who gives the hens and pullets proper care during the hot summer months will be well repaid in increased egg production during the fall and winter months, according to Mr. Chadwell.

Hens need shade, fresh water at frequent intervals, access to laying mash with a feed of moist mash once a day, well ventilated roosting quarters, green feed and access to ground limestone or oyster shell. The flock should be kept free of lice and mites. Proper care of the pullets during the next two or three months will result in fewer cull pullets and more eggs during the fall and winter months. Every poultryman should have copies of extension circulars 14 and 15 "control of Lice and Mites" and "Developing Pullets for Winter Layers." They can be secured from county agents or by writing the agricultural extension service, University of Tennessee, Knoxville.

NUMBER OF COWS ON TEST SHOWS INCREASE

A total of 4,425 cows were on test in ten Dairy-herd-improvement associations in June, an increase of 245 over May. Of this number 724 made the honor roll by producing 40 pounds or more of butterfat or 800 pounds of milk per cow.

Average production for the month was 542 pounds of milk and 24.6 pounds of butterfat per cow, records submitted to C. A. Hutton, U. T. Extension Dairyman show. Owners culled 22 cows from their herds as unprofitable producers in 23 months.

A herd of 24 Holsteins owned by Johnson Bible College, Knox County, led the state in average milk production with an average of 926 pounds per cow. A herd of 10 Jerseys owned by Sam Hollins, Sumner County, led in average butterfat production, producing 37.8 pounds per cow.

The high cow in both milk and butterfat was a registered Holstein, No. 339, owned by Knapp School Farm, Davidson County. She produced 2,253 pounds of milks and 90 pounds fat.

Agricultural Extension News Service, University of Tennessee.

CARE FOR FOOD PRODUCING ANIMALS AND WORK STOCK FIRST

The step of first importance in the winter feeding plan is to take care of work animals and animals that furnish milk, meat and eggs to the farm family. The second step is to plan to retain sufficient breeding stock of all kinds to restock farms in 1931 when it is believed good prices will prevail.

All fattening animals should be sold as soon as they are in marketable condition and the feed saved for wintering work stock, breeding stock and young stuff. Keep stock on pastures as long as possible before feeding begins. Short, dry grass is very nutritious. When it gets too short before rains start begin feeding cut corn until pastures revive. Use fall and winter pasture as long and as extensively as possible by supplementing with a small amount of cottonseed meal or corn. Save roughage for rough weather. Mature cattle and even work stock can be wintered by this method in an emergency.

Better Livestock Prices Seen

There is a shortage in the number of cattle in the country and there is virtually no beef in storage. Hogs at present are following the usual trend and are picking up somewhat in price. Prices will probably remain comparatively strong during August and September. Owing to the spread in prices between light and medium weight hogs, all hogs now on feed should be fed out to weights that will bring top market prices which minimum at present is 175 pounds.

In view of the favorable outlook for winter pastures, sheep will probably be the easiest type of livestock to carry through the winter. The long time outlook for spring lambs is favorable.

Poultry

Material improvement in egg prices, other than the seasonal rise this fall, is not expected until after the first of next year and little improvement in the market for poultry is anticipated during the remainder of the year. Poultry raisers should practice careful selection and market low producing hens as soon as production ceases. High producing hens and all pullets that show promise of developing into good layers should be retained. Extreme reduction in number of hens on Tennessee farms does not appear to be justified.

Sow Small Grains for Pasture

A million dollar fact—An oasis in the midst of the drouth is the fact that dry summers are usually followed by unusually rapid abundant growth. The best wheat crop in 20 years followed the drouth of 1925. The 1926 crop of blue grass seed was unusually heavy. Judging the future by the past, small grains sown for pasture this fall should produce a bumper crop of grazing this fall and winter as soon as rains come.

Sow alfalfa August 20 to September 15, crimson clover after soaking rains up to September 1, rye and rye grass, September 1 to 30—hye grass can be safely sown earlier than other small grains, barley on rich land the latter half of September, wheat on average land after October 1.

Purchase seed and have them on the farm for prompt sowing when conditions are right. A free bulletin, No. 165, giving recommendations for meeting the drouth with full instructions on what, how and when to sow, can be secured from County Agents or by writing the Agricultural Extension Service, University of Tennessee, Knoxville.

SHEEP INDUSTRY GROWING SAYS DR. M. JACOB

Farmers Advised to Begin Now to Improve Quality of Spring Lambs For Next Year by Use of Purebred Rams

The number of spring lambs marketed this year as compared with shipments in the past is an evident fact that the sheep industry of the State, especially in East Tennessee, is undergoing rapid growth, states Dr. M. Jacob, head of the Animal Husbandry Department, University of Tennessee.

This development is evidence of good judgment on the part of farmers of the State and will, over a period of years, bring them substantial returns, he further states. There is no other kind of livestock which, during the past twenty years has paid such a high percentage in the form of a dividend on the amount invested as have sheep. The

OLD HOME OF JOHN TYLER, ORANGEBURG, COUNTY, S. C.

WHEN IN CHICAGO STOP AT AMERICA'S LARGEST NEGRO HOTEL—VINCENNES

VINCENNES HOTEL—Chicago, Illinois, located at 36th Street and Vincennes Ave. The most modern and up-to-date Hotel owned and operated by Negroes in America. Mrs. E. Barnett-Lewis, is Proprietress. Write for Prices and Rates.

fact that this has been an off year in the price of lambs and wool. more or less comparable to every other farm or commercial commodity, should not discourage a desire to improve or establish a flock. There is room for at least a small breeding flock of sheep on every farm for the production of early spring lambs and they will do much toward helping to stabilize a dependable income.

Ram Important Factor

But admitting that the principal of sheep production is in keeping with a sound agricultural program, the farmers of the State must realize that the future of the sheep industry will be based on quality of production. There is always a strong demand for top lambs and the market has never been overrun with those of food quality. Tennessee must produce a larger proportion of top lambs an eliminate common and culls. To do this most effectively will necessitate the use of good registered rams, according to Dr. Jacob.

"It is a physical impossibility to produce top lambs when you have a poor lamb to begin with and it is poor economy to place dependence on a scrub ram, expecting that he is capable of producing well shaped lambs. The ram represents at least 50 per cent in influencing the kind of lambs the flock will produce. Hence, the selection of a ram is something that should be given immediate consideration as it will be necessary to turn the ram with the flock during the next two or three weeks in order to obtain lambs that will be dropped early enough to obtain sufficient weight and finish for the May and June market.

Sale Announced

The Tennessee Purebred Sheep Breeders' Association is cooperating to the extent of arranging a ram sale every year for each division of the state. Sales have already been held in East Middle Tennessee and one will be held at the West Tennessee Experiment Station, Jackson, in connection with the Farmer's Institute, July 24. These sales offer farmers an excellent opportunity to secure good purebred rams at their own price.

Agricultural Extension Service, University of Tennessee.

REV. J. W. WRIGHT WRITES THE MODERN FARMER

Wilmington, O., 7-26-30
Miss S. B. Wilson,
Treasurer Modern Farmer,
Dear Madam,

The Modern Farmer is a splendid publication. It is full of information and one of the greatest organizations ever known among Negro farmers.

My neglect in replying to your requests was not that I didn't see the great value of your paper, but did not think I could handle it by reason of being as I thought over stocked with such matters. However. your persistency has won me and I have a higher esteem for you than ever before.

I wish your organization the greatest success, and shall do all I can to help.

Please find enclosed money order for $1.00 and let me know when my subscription is due and it will be forthcoming.

Very truly yours,
Rev. J. W. Wright.

HAMPTON LEADS IN ENDOWMENTS AMONG COLORED COLLEGES

From figures given out by the Crisis magazine, Hampton Institute has an endowment of 9,476,270 dollars with an income of 601,371 dollars. Other colleges in alphabetical order are as follows:

	Endowment	Income
A. and T. N. C.		182,000
Askansas State		140,000
Allen S. C.	323,392	82,617
Benedict	1 40,000	
Hampton	9,476,270	601,371
Howard	843,406	588,903
Knoxville	636,469	60,737
Lane	31,500	45,750
Lincoln Penn.	1,029,065	123,500
Lincoln, Mo.		556,500
Livingston	646,500	38,500
Morehouse, Atlanta	321,000	109,383
Morgan	68,000	273,000
New Orleans	101,300	58,148
Paine	1,203	83,050
Prairie View	2,013,100	635,725
Shaw	355,000	102,883
Spelman, Atlanta		187,500
A. an M. S. C.		192,351
Talladega	300,000	205,785
Tuskegee	7,772.108	552,694
Fisk, Nashville	1,291,531	251,057

The enrollment of Negroes in colored colleges this year totalled 19,000 with 2,160 graduates.

ACREAGE TO COTTON PASSES 1929 FIGURES

Washington, July 24—The total acreage of cotton land fertilized in 1930 was reported today by the department of agriculture to have been greater than in 1929.

A total of 18,239,000 acres was fertilized this year as compared with 18,182,000 a year ago.

"Farmers used about 2,380,000 tons of commercial fertilizer on cotton planted in 1930 compared with 2,427,000 tons used in 1929," the report said. "While about 3 per cent less acreage of cotton was planted this spring than in 1929, commercial fertilizer used on a slightly larger percentage of the acreage."

The number of pounds per acre in 1930 was 261, while 267 pounds were used per acre a year ago.

Cost of the fertilizer this year was $75,000,000 as compared to $76,500.-00 a year ago. By states the greatest amounts were spent in Georgia Alabama, Mississippi and North Carolina.

INDIANA FARMERS SLAUGHTERING THEIR COWS ON ACCOUNT DROUTH

Reports coming into Purdue University reveal the fact that many farmers in Indiana are slughtering their cattle for market to forestall their dying from thirst. The drought as described by the Indiana weather bureau is the worst in 29 years.

TWO CHIEF RESPONSIBILITIES OF YOUTH

Frequently it is said that the future of this country depends upon its youth, its young men and its young women who are becoming, or who are to become, engaged in various departments of the country's activities. Realizing the truth of this assertion, Hon John E. Edgerton, of Lebanon, Tennessee, president of the National Manufacturers' Association, delivered a most valuable commencement address in the exercises attending the recent graduation of a large number of young men from the Univ. of Florida. This address, in full, the writer has not been privileged to read until now, and there is no hesitation in saying, as must have been realized by the university students and friends who heard it, that it was a most unusual as well as most valuable commencement address.

Mr. Edgerton discussed, mainly, what he was pleased to designate as the two primary relationships which the graduates must first recognize if it is their normal expectation to make their lives as valuable as they should be to themselves and to their fellow men. "In whatsoever professions, trade occupations or vocations," said Mr. Edgerton, "you decide to invest your particular abilities and energies your attitudes towards these two relationships are going to determine inevitably both the essential income and outcome of your lives." Mr. Edgerton then went on to speak, first, of the relationship to God, and, second, the relationship to country.

In plain words and in unmistakable sincerity and purpose, Mr. Edgerton called the attention of his commencement audience, and particularly the attention of the young men at that time receiving their diplomas, to the general proneness to dismiss God and His laws as factors in achievement. Along this line he said: "To my perception, the most ominous fact in our national situation today is the rundown, unresponsive state of the popular sense of responsibility."

Proceeding in the development of this line of thought Mr. Edgerton asserted that "Until that highest of authority, that of authority, that of the Creator, is actively recognized lower cerations and orders of authority will not be long respected; for respect for man's law, and government must begin with that for the Author of life," to which Mr. Edgerton added: "Upon our churches and educational institutions must we continue to depend, principally, for leadership in this task of restoration and preservation." A little further along in his address, Mr. Edgerton said that he knew of no "better beginning for our colleges and universities in general than to establish or reestablish the processes of spiritual culture as an indispensabilities of life. A diploma," he said, "it seems to me which contains no certification or implicathat fits for the highest responsisable requirement of an education tion other than that its owner is intellectually ready for an opportunity to make a living, represents little of value as far as the world is conredned. It is inconceivable to me," said the speaker, "that a person can rightfully claim to be educated or that his Alma Mater can so regard him formally unless he is in all essential respects qualified to discharge all of the responsibilities attaching to his inevitable relationships to God and to his country."

In this connection it is to wonder how many graduates in the higher institutions of learning, and in the present time, could conscientiously be awarded diplomas although it is to be admitted that a certain proportion of young men and young women, graduated from universities and colleges in these times, appreciate the responsibilities such as placed upon them by Mr. Edgerton and by others who realize that without definite consciousness of responsibilitiy to God and to country there can be no attainment of the full stature of manhood and of womanhood, or even of citizenship.

Mr. Edgerton, at some length presented, out-of his very practical educational and business life, present-day conditions in religious, business and political activities, holding, with reference to governmental affairs that "good government is the product only of good citizenship," and that the character of government "reflects the character of the citizenship which creates and supports it."

Mr. Edgerton rightfully contended that "there can be no hope for the amelioration of harmful conditions in government without a revival of the sense of public responsibility "among particularly the beter qualified elements of our citizenship. That suggests again," he said, "the derelictions of our schools and churches. Good citizenship," he continued, should not only be preached it should be taught, and a working knowledge of all that is imples should be required of every college and university student before he is turned loose, with a diploma, upon society. A good lawyer, doctor teacher preacher, or other half-educated person is on the whole a social liability, unless and until he is also a good citizen."

Indicating precisely and definitely many of the things required of the youth of today, and especially those who graduate from colleges and universities, Mr. Edgerton concluded his very forceful and very helpful address with a quotation from the writings of William Tyler Page as follows:

I believe in the United States of America as a government of the people, by the people, for the people; whose just powers are derived from the consent of the governed; a democracy in a republic; a sovereign nation of many sovereign states; a perfect union, one and inseparable; established upon those principles of freedom, equity, justice, and humanity for which American patriots sacrificed their lives and fortunes.

I therefore believe it is my duty to my country to love it; to support its constitution to obey its laws; to respect its flag, and to defend it against all enemies.

EXHIBITION OF NEGRO ART TO BE HELD AT ART CENTER

The Harmon Foundation has completed its arrangements to hold the Exhibition of the Work of Negro Artists, which is an outgrowth of the Harmon Award in Fine Arts, at the Art Center, 65 East 56th Street, New York, N. Y. during the last two weeks in February, 1931, it was learned today. This exhibition which is given in cooperation with the Commission on Race Relations of the Federal Council of the Churches of Christ in America took place for the first time in 1926 at International House, where it was again held in 1927 and 1928. It is felt, however, that the Art Center will furnish a more professional setting for the work. As it is the fifth year of the experimental period of the Awards, it is expected that a great many artists will be interested to submit their work, and that the showing will attract a large umber of people who are interested in seeing and buying Negro Art. All material entered for the Award in Fine Arts is eligible to the exhibition on the recommendation of the committee of judges.

The William E. Harmon Award for Distinguished Achievement Among Negroes, nominations for which close September 2, 1930, are made in eight fields of endeavor: Farming and Rural Life, included this year for the first time; Education; Fine Arts; Science and Invention; Literature; Business and Industry; Religious Service; and Music. During Dr. George E. Haynes' absence in Africa the Awards are under the direction of Miss Hannah Moriarta.

Organized Farmers Held Great Meeting In Mississippi

Twelve Thousand Three Hundred Cars of Fruit and Vegetables

JULY ESTABLISHES RECORD IN PRODUCE MOVEMENT

Second City in the United States Offers Unprecedented Opportunity

The following table shows the carlot arrivals of fruits and vegetables in Chicago during the month of July.

Asparagus	5 cars
Bananas	552 cars
Beans	17 cars
Carrots	73 cars
Cauliflower	7 cars
Corn (roasting ears)	31 ears
Blueberries	3 cars
Cucumbers	191 cars
Currants	28 cars
Eggplant	3 cars
Garlic	3 cars
Mixed vegetables	226 cars
Okra	7 cars
Peanuts	75 cars
Peas	210 cars
Pepper	11 cars
Raspberries	73 cars
Spinach	4 cars
Turnips	3 cars
Cabbage	23 cars
Celery	213 cars
Lettuce	748 cars
Tomatoes	796 cars
Apples	342 cars
Apricots	28 cars
Cherries	141 cars
Grape Fruit	11 cars
Table Grapes	116 cars
Lemons	198 cars
Cantaloupes	1141 cars
Watermelons	2839 cars
Onions	385 cars
Oranges	353 cars
Peaches	667 cars
Pears	236 cars
White Potatoes	2352 cars
Plums	197 cars
Sweet Potatoes	19 cars
Total cars for one month	12,323

If fruits and vegetables can be shipped from California to Chicago, a distance of several thousand miles, Southern farmers can easily compete and make money from vegetables as well as cotton.

California shipped 2445 cars of the above shipments during July, which included carrots, cucumbers, tomatoes and cantaloupes. These products can be raised in the South.

Big Shortage In Sweet Potatoes

Truck Growers of Yams to Make Increased Profits This Year- Tennessee Yield Almost Million Short

The United States Department of Agriculture Bureau of Agricultural Economics gives a crop estimate of 63,127,000 bushels for this year. Last year's crop of 84,661,000 bushels or something over twenty-one and one half millions bushels short.

The estimated yield by states is given as follows:

	1930	1929
New Jersey	2,016,000	2,100,000
Illinois	780,000	1,020,000
Missouri	900,000	1,320,000
Delaware	720,000	1,160,000
Maryland	950,000	1,250,000
Virginia	3,220,000	6,705,000
North Carolina	8,280,000	9,126,000
South Carolina	4,160,000	5,750,000
Georgia	8,928,000	11,780,000
Florida	2,320,000	3,190,000
Kentucky	960,000	1,365,000
Tennessee	3,520,000	4,400,000
Alabama	5,320,000	7,622,000
Mississippi	3,710,000	7,670,000
Arkansas	1,107,000	1,716,000
Louisiana	5,590,000	7,440,000
Oklahoma	1,080,000	990,000
Texas	7,232,000	7,384,000

Total est. this year 63,127,000. 1929 crop 84,661,000.

The crop in Mississippi is cut in half, as well as Virginia. Sweet potatoes should bring good prices all the fall and winter, for the reason that the crop of Irish potatoes is estimated to be almost twenty million bushels less than last year.

A FRIENDLY TALK ON "THE OPPOSITION"

EDITOR OF THE MODERN FARMER . DISCUSSES CONDITIONS HE HAS MET

(An Editorial)

"The founders and organizers of the National Federation of Colored Farmers expected opposition and prepared to meet it. Therefore they do not fear it. The co-operative movement among Negroes is, to a certain extent, "a reform movement" and all such movements are opposed by those who fear a change and by those who are afraid of any kind of progress.

We haven't time to argue and squabble with the "opposition." There is nothing to squabble about. For the past twenty years and longer, American farmers have been advised and begged to form co-operative organizations by the government, press, pulpit and platform. —by every public agency there is. White farmers, quick to sense the benefit of organization, have formed many co-operatives. Negro farmers, of which there are nearly a million, had not one until the National Federation of Colored Farmers was organized.

Before the advent of the N. F. C. F., no one seemed to care whether the Negro farmer was organized or not. In fact, the Brother didn't seem to care himself. He never realized that organization and co-operation could improve his condition. If things got so bad he couldn't stand it any longer, he simply quit the farm and went to town. Thousands of them know now that they only jumped out of the frying pan into the fire. But they didn't know it then.

The moment the Negro farmer began to organize the whole world, apparently, discovered him. Some who discovered him told him he wasn't organizing in the right way. These are those of the first class we style the "opposition." This class told the colored farmer that he should hang on to some of the other farm organizations,—that he didn't need one of his own. The Brother knew better however, and this advice was not heeded.

Others who have very recently discovered the Negro farmer are telling him that he shouldn't organize at all. They are afraid to tell him "WHY" for, to save their necks, they cannot give him one logical reason. Their real reason is because he has been their "good thing,"—their monkey-man, their bread-basket for years,—and they don't want to lose him. These are those of the second class we style the "opposition." This friendly talk is to those of this class.

The Negro farmer, whether a landowner or tenant, is a human being just as you are. He has virtues and sins, likes and dislikes, desires and habits,—just as you have. He even has hobbies—little activities that add to his own personal happiness. If you don't know this, then you do not know the colored farmer, even though you were reared

THOUSANDS ATTEND DELTA STATE CONFERENCE

Co-operation Pays Big Dividend to Tillers of the Soil

Howard Miss., August 14—In addressing the Mississippi Units of the National Federation of Colored Farmers, convened at this little rural center in the heart of the Delta, Leon R. Harris, editor of the Modern Farmer and national secretary of the organization declared, "The voice of the Negro farmers of Mississippi will be heard today around the world. First of our race to accept the gospel of cooperation, you will also be first to reap the rewards of co-operation Just remuneration for your labor—freedom from debt slavery—ownership of farm and home—the privilege of being American citizens in America—these are the rewards of co-operation and they shall be yours I admire your common sense—your courage—your faith. You have blazened a way to economic independence that all the colored farmers of the Nation will eventually follow."

This was the first convention of organized Negro farmers ever held in America. It was a "good-time" meeting but these farmers did not meet only to have a good time. They were there—more than five thousand of them— sober and thoughtful, and the way they carried out their program, their interest in it and their decorum, would put to shame some of the most "enlightened" audiences.

Members were present representing twenty-seven Units from ten Mississippi counties. Representatives were also present from Arkansas, Louisiana, Texas and Illinois. The convention was entertained by the Holmes County Units, under the general chairmanship of Mr. C. C. Richardson. Mr. Richardson is the owner of a farm of two hundred four acres and is one of the most progressive farmers of the county. The Holmes County Units boast a membership of over six hundred, which is the largest farm organization in any county in the state, white or colored.

Greetings to the Convention were

MR. O. S. BANKS ADVISES FARMERS

Tchula, Miss—(Special) To The Modern Farmer—My advice is for the old farm hand—Stay where you have served and make a better farmer and co-operate with your employer if you are hired out to some one else, help him to develop the farm that you are working on and then try to buy a farm of your own. Build a house, beautify your yard, make a good garden, raise corn, hogs and chickens. Leave off whiskey, raise cows, lay aside trifling things and develop your mind, body and your farm. I have lived on this farm twenty years and feel that I could live here twenty more. Stay where you are. Let down your bucket where you are and bring things to pass. Don't call the people who have befriended you your enemy. We must understand how to do and act to make of ourselves what we ought to be as farmers. I will write more next time.—O. S. Banks of Bethel Unit.

HENRY ALLEN BOYD'S REPORT

Secretary of the National Baptist Publishing Board's Plant at Nashville, Tennessee, Reviews Year's Work at New York

Thirty-three Years of Regular Operation of an Institution Founded by the Late R. H. Boyd, Presented at Golden Jubilee by the Son of the Founder.

New York City, Sept. 12.—(Special)—One million copies of religious literature and tracts distributed each month during the past year, with a gross business running a little over $300,000.00 was reported to the National Baptist Convention of America in session here, by Henry Allen Boyd, Secretary of the National Baptist Publishing Board's Plant at Nashville, Tenn. Mission donations to stations on home and foreign fields as a direct gift from the institution established thirty-three years ago by the father of the present secretary, in the person of the late R. H. Boyd, were brought to the attention of the Convention as a fact conclusive that the printed page in the dissemination of literature is one of the objectives of the Missionary Baptists that go to make up this National Convention body.

"Henry Allen" was presented to the Golden Jubilee session by Dr. J. P. Robinson of Little Rock, Ark., who for forty-four years has pastored the same church, and who for thirty-three years has been a member of the National Baptist Publishing Board. The Board members who have served throughout the years, together with the editorial staff of writers, the contributors and several members of the Publishing Board's Plant, composed of editors, writers and workers, supported the secretary with seats on the platform as he brought to the Convention that he serves, and which the Publishing House is operating under, the facts and figures for the fiscal year which closed July 31st.

The Convention Theme: "Go ye therefore into all the world," etc. was emphasized in Secretary Boyd's report, as well as those of other boards. He gave a minute description of the property owned by the denomination in Nashville, located at the corner of Second Avenue and Locust Street. He gave not only the location but the description of the seven brick buildings that make up the domicile and provide the housing of the institution which he claims in this report, and backs it up with appraisal certified accountants' audits and valuation, that it is the largest printing and publishing plant operated by members of the race in the world. "Down in Nashville, Tennessee, the Athens of the South, we manufacture, publish, disseminate and circulate religious literature for the Missionary Baptists of every land and country where they believe in and desire to practice the "One Lord," One Faith and One Baptism" idea.

My father, the late Dr. R. H. Boyd, conceived the idea and made a demonstration of the possibilities of Negro printing, manufacturing and supplying literature for Negro Baptists. He had faith in God and confidence in his people. He left a rich heritage for posterity, he laid a sure foundation for denominational constructiveness; he visualized the potentiality of future Baptist progress fifty years ahead of his time; he opened the door of opportunity for this as well as other generations; he builded better than he knew; his life was characteristic of that adage or saying in the Holy writ, "They rest from their labor, but their work do follow them," are just some of the tributes that Henry Allen Boyd paid to his illustrious and distinguished father in the course of the two hours alloted to his Board in making his report.

Work of the Plant at Nashville

The secretary showed that the institution in Nashville is operating almost every kind of intricate and delicate piece of printing machinery, that a complete publishing and pritning plant needs. He says they can produce anything from a

(Continued on Page 2.)

THE "OPPOSITION"

(Continued from Page one)

with him and have been living beside him all your days. If you do know this, then you should stop taking advantage of his lack of knowledge,—of his poverty, of his weakness, and you should treat him as you would treat a human being, as you would like to be treated yourself if you were in his place.

If he is a tenant farmer and desires a farm of his own you should give him an opportunity to purchase a farm. We know of places where it is almost impossible for a colored tenant to purchase a foot of land, yet any Chinaman, Greek, Italian or what-not can come into the community and buy on the easiest terms imaginable. Why? That's just what we would like to know! The colored tenant is an American. He and his forbears have worked for you and your forbears for generations. He has been loyal to you and your family, he has been loyal to his country and yours, he even loves you, in a way, with a doggish sort of love, yet you will deny him an opportunity and give it t a Chinaman! We cannot understand your heart or your common sense. What does the alien give you in return?

If you are a planter or a merchant, or both, you should give your colored tenant or neighbor farmer a square deal when he comes to your store. Just a few weeks ago, we know a colored farmer was offered ten cents a dozen for eggs in trade and was charged nine dollars a barrel for the flour he purchased. At that vey time eggs were retailing at twenty-seven a dozen and flour could be purchased at 3.90 wholesale. The planter-merchant robbed the man and the victim was powerless to prevent it.

If you are of this class,—and we are sorry to say there are many of you,—we understand and our members understand why you oppose the National Federation of Colored Farmers. Negro farmers have been forced to organize to get some relief from you and your like. You force him to borrow money and charge him an exorbitant rate of interest,—you cheat him out of his products,—out of his labor. No wonder he joins a "Unit" and purchases his supplies at cheaper prices! No wonder he spends his money "out of the county" as you say! Who wouldn't but a fool? Wouldn't you do the same thing if you were in his place?

You had better learn to live and let live. A poor man is a dangerous man. When you have forced a man in a position where he can't feed himself and family,—when he has to drudge year in and year out and never has a surplus dollar,—when he sees the mother of his children dying by inches,—worked to death,—if he is any man at all he is going to find a way out or make a way out. The National Federation of Colored Farmer is showing many colored farmers a way out of such predicaments.

The better class of white people want Negro farmers to organize. They want them to take advantage of every opportunity to make more and save more that they may be able to spend more— have more— know more,—do more and be more.

They want them to progress that the communities in which they live may progress. They want to see prosperity, not poverty. They want to see financial independence, not debt-slavery. They want to see the United States of America,—not Soviet Russia. They know that you can't keep a man down in a ditch unless you stay down in the ditch with him, and in the ditch you will sink as deep in the mire as your victim is in the mud.

If you are of this class of the opposition, get this straight. You can't keep the Negro farmer from organizing. You can't destroy the National Federation of Colored Farmers. Members of the Federation, who live in communities where antagonism has developed, can move if they are persecuted and they will move. They realize now that the United States is larger than the county in which they were born.

The National Federation of Colored Farmers is engaged in a mighty effort to help the Negro racial group in the United States and to help the United States. There is no excuse for so much ignorance and poverty,—especially among colored farmers. There is no excuse for a million lives going to waste. This country needs colored farmers but it does not need Negro peons. It is the objective and the duty of the National Federation of Colored Farmers to teach its members to farm intelligently,—to help them to get higher prices for what they produce.—to assist them in getting lower and more reasonable prices for the supplies they need and must purchase,—to assist tenant-farmer members in obtaining farms of their own,—to advise and instruct its members on the means and methods of obtaining loans on property and crops,—to protect them from dishonesty, greed and graft,—to teach them to practice co-operation that they may obtain all the benefits of co-operation. If this program pinches a few who have been living off the Negro farmer and getting wealthy off the Negro farmer, we can't help it.

But the organization of Negro farmers will not injure any honest merchant or planter permanently. The money the farmer saves on groceries and supplies will eventually be spent for radios, automobiles, washing machines, gasoline engines, cream separators and many other articles that will not be purchased co-operatively. The more one has the more one wants and the more he will get. A man who wants much is worth far more to his community and country than a man who wants little.

Organized Negro farmers will be able to help you far more in the future than will the unorganized. So let them organize. Help them organize. Get their friendship now, and the friendship of their organization. Get it while you can. Stop trying to oppose a good thing and a right thing. Your opposition only makes it stronger and "it is hard for thee to kick against the pricks."

ORGANIZED FARMERS HELD GREAT MEETING

(Continued from Page 1.)

received from Senator Arthur Capper, of Kansas, Hon Jas. C. Stone, vice-chairman, Federal Farm Board; Emmett J. Scott, Secretary-Treasurer, Howard University; Dr. J. E. Shepherd, President North Carolina College for Negroes, Durham, N. C.; R. H. Rutherford, President National Benefit Life Insurance Co., Washington, D. C.; Dr. Henry Allen Boyd, Nashville, Tenn.; J. A. Jackson, Department of Commerce, Washington, D C.; J. W. Holley, President Georgia Normal and Agricultural College, Albany; Albon L. Holsey, Secretary National Negro Business League, Tuskegee, Ala.; Bishop Wm. D. Johnson, A. M. E. Church; H. C. Slade, Department of Agriculture, Washington, D C.; Bishop L. W. Kyles, A. M. E. Z. Church, Winston-Salem, N. C., and others. These were read to the Convention. The meetings were held in the grove surrounding Mt. Zion Church. No building in rural Mississippi could have accomodated so large an assemblage.

The Convention was called to order at 9:30, with C. C. Richardson presiding. After devotional exercises a welcome address on behalf of the Holmes County Units was delivered by Rev. C. C. Crafton, Tchula. Response was made by Hon. B. W. Green of the Bolivar County Unit and Mayor of Mound Bayou. Mayor Green stressed the importance of organization and co-operation. He said that the farmers of his state had started something that could not help but redound to their own good and he urged them to hold on to the organization for dear life.

The official roll-call by W. Moore, general secretary of the Convention, acquainted the assemblage with the fact that representatives were present from every Unit in Mississippi. Miss Martha Chalmers, prominent schoo-teacher, member of Holaday Chapel Unit, Louise, and a special organizer of the Federation, spoke on the "Necessity of Organizing." Her address was well received. Five-minute talks on "Home Canning" and "Benefits of a Home Garden" were made by several of the representatives.

An inspiring address was made by Hon. E. P. Booze, noted Mississippi publicist of Mound Bayou. Mr. Booze urged his hearers to bear the responsibilities of American citizenship and to demand the privileges of American citizens. He told them to pay ther taxes and try to register and vote whether they could or not. He also expressed the hope that the Convention next year would be held at Mound Bayou.

An old-fashioned barbecue was served at noon-hour and was enjoyed by all present. The afternoon session was enlivened by addresses from Col. Sol High, prominent undertaker and planter of Canton, Miss., and by Leon R. Harris, national secretary. Col. High is a native Mississippian and a self-made man. He is the owner of a six-hundred acre plantation and employs thirteen tenants. He is the sweet potato king of our group in his state and has now over two hundred acres planted. Col. High told the farmers that there should be no strife between white and colored farmers of the state. He said that all must continue living together and working together for the best interests of both. In discussing his subject, "Marketing Fruits and Vegetables," he related his own experiences and gave some valuable advice relative to grading and packing. He also urged his hearers to raise more vegetables and fruits. He emphasized the fact that right now the farmers of Mississippi have an opportunity to plant fall gardens and assured them that the proceeds from these would enable them to have money for the holidays. They would not have to resort to the common practice of borrowing at excessive interest rates.

Mr. Harris spoke of the organization and objectives of the National Federation of Colored Farmers. He emphasized the Federation's slogan, "Stay on the Farm," and proved by pointed illustrations how the organization was helping its members make and save more money. He urged the farmers to be loyal to the first co-oprative organization they could call their own and assured them that help was forthcoming for all who would try to help themselves.

As some of the members had driven from fifty to more than one hundred miles to attend the meetings, there was no night session. The second day's session was devoted to reports, official conference and discussions relative to the general bsuiness of the Federation. All Units that are purchasing home and farm supplies co-operatively reported that their members were saving from twenty-five to forty cents on the dollar and that in many cases they were getting better merchandise. The Secretary reported that a Georgia Unit was shipping watermelons to Chicago and that another Alabama Unit was preparing to ship sweet potatoes in car-lots. He informed theofficers of the various Units assembled that they must plan that their members produce co-operatively as they would be able to market in car-lots and get the benefit of cheaper freight rates and higher prices.

Of particular interest to farmers' wives was the plan announced by the secretary that Canning Clubs were to be organized in connection with every Unit. Each Unit will purchase an improved type of canning apparatus now on the market and the product will be assembled and sold under one label. Mississippi is destined to become a great friut and vegetable producing state and the culture of much products will add materially to the farmer's income.

Resolutions were passed endorsing the work and plans of the National officers and thanking them for services rendered. Those who attended the meetings expressed themselves as being very optimistic concerning the organization's future and promised to work diligently for a larger membership.

HENRY ALLEN BOYD'S REPORT

(Continued from Page one)

postal card to an encyclopedia, or from a calling card to a Bible, with workmen within the race. Their battery of linotype machines manipulated by experienced operators that they themselves have trained in the main, their large number of presses ranging from a job press to an old Washington hand press, up to the Duplex and Rotary presses, enable them to dispatch the millions of pediodicals coming from the presses annualy. The value of the printing machinery alone is placed conservatively by the secretary at $45,000.00. This gross valuation of the Plant goes beyond the million mark. "Negro Baptists throughout the world have long since conceded, said the Rev. Mr. Boyd, "that self-help, racial advancement and denominational accomplishments, these three in one, are found in the institution down there in Nashville.

Leads in Denominational and Race Publications

Leading out in the production of a series of literature thoroughly Baptistics and strictly orthodox, is one of the claims set up by the secretary that he recited before the leaders of his religious faith. He showed to the Baptists of America that they are originators and producers of organized literature suitable to Baptist ideas and conforming with their denominational tenets; that they lead out in the production of high-class standards on Sunday School Lessons, and have developed a list of publications that have been distributed in three world's Sunday School Conventions.

The secretary of this institution, who worked side by side with his father, and then stepped into the late Dr. Boyd's place when he was called from labor to reward, has spent a quarter of a century in specializing in Sunday School work. He heads up the Sunday School Congress, and is a member of the International Council of Religious Education. They produce twenty-five different song books and Anthems at their Plant; they manufacture church supplies, they circu-

TO THE FARMERS:

The Modern Farmer contains information every month that you will not find in any other farm journal. It is the only journal published by and for our people that is devoted exclusively to the farmer and his family.

The price is in reach of every one—being less than 2 cents per week. During these times when the farming industry is undergoing so many changes, and when so many advantages can be had by our colored farmers if they are only aware of them, it is absolutely necessary that you should know what is going on. Three-fourths of the white farmers are subscribers to the white farm magazines and journals. They know just what is going on.

Fill out the blank—secure a money order for $1.00 and mail at once:

The Modern Farmer,

late the official organ of their denomination, a weekly publication; they are headquarters for the religions though, and the source of supplies of the National Baptist Convention of America.

In concluding his report he gave not only a statement of circulation by Periodicals, but the total receipts and disbursements for the fiscal year. When he had finished, the Convention endorsed and adopted it by the unanimous vote.

—Nashville Globe.

SCIENCE AIDS BOY SEEKING PRIZE IN CORN

Elk Grove Youth Follows Carefully Laid Plan; Sows His Special Seed More Thickly.

By Colvin C. Bowsfield

When John Folkerts, 15, of Elk Grove Township, Cook County, made up his mind to enter corn growing competition he thought he could perfect plans which would give him the championship prize.

John reasoned with his friends and finally said:

"This Elk Grove land of ours is the best in Cook County and with attention will yield the biggest and best corn crop. It is fertile enough to grow more than the usual number of stalks of corn, and with the best seed in the state and a bit of 4-8-6, nitrogen, phosphorus and potash, nobody can beat me."

So John planted his rows of corn 36 inches apart, and as the other contestants planted their crop 42 inches apart it stands to reason he has more stalks to an acre than any other boy or girl.

Thrives in Drought

It remains to be seen if his crop will give more ears of perfect corn than his competitors can produce.

Professor H. J. Byrd, one of County Superintendent Tobin's staff of directors of rural education, drove out to John's ploce yesterday to inspect the corn. He found a splendid crop, which seemed to be thriving in spite of the drought. Some of the stalks were ten feet high, and nearly all of them were more than eight feet.

Stands Strain

The soil is standing the strain of nourishing the many extra rows of corn, and a good crop is assured if no calamity occurs. Both Professor Byrd and John's father claim the seed is as largely responsible as the soil for what has happened.

The seed was bought through the farm bureau and is the choicest so far developed. It was grown in DeKalb County. Every kernel sprouted and large ears are the rule. It also stands drought, resists disease and matures early.

There is little doubt John will be among the prize winners, and he will sell his crop for seed at not less than $5 per bushel.

—Chicago Herald.

MEMBER OF BETHEL UNIT WRITES MODERN FARMER

Tchula, Miss., (Special to Modern Farmer—The meeting of the National Federation of Colored Farmers is just closed with a two days meeting of over three thousand people in attendance. There were several visitors from other states present and there were forty-eight counties represented There were two great speeches delivered each day by our race leaders for the good of the Farmers. We do not mean for you to leave your home where you have been for years, but look around you, bring your mind back to your old self and do good for the Southland and become prosperous farmers.

EMPLOYEES TAKE OVER CANNING INDUSTRY AFTER RIGID TEST COVERING 13 YEARS

Special To The Christian Science Monitor

INDIANAPOLIS, Ind.,—Legal control of the Columbia Conserve Company, a business whose gross sales last year amounted to $1,600,000 and gross profits $163,000, passed into the hands of its 151 employees at a meeting held recently.

The step marks the consummation of an experiment which has been in process for 13 years. Three brothers— William, Hutchins and Norman Hapgood—inherited the Columbia Conserve Company in 1917. They immediately determined to manage their acquisition with first consideration for human relationships.

During the 13-year period they feel that they developed their socio-industrial experiment to the point of practicability. Having carried it to that point they took the step to which they had been steadily working and added legal control to the actual control which the workers' council had been exercising for several years.

The scheme of organization of the company had three fundamentals: (1) gradual increase to ultimate and complete control by the employees; (2) Substitution of salaries for wages and (3) profit sharing.

These have all been achieved The employees as a group now own more than 51 per cent of the stock, and it is expected that they will gradually take over the remainder. It was purchased from the earnings of the company. There was no deduction from wages. No employee can hold any stock as an individual. The amount credited to each is in relationship to the profits and the annual pay roll.

Employees are taken on by the council. Each undergoes a six month's period of probation. There is practically no turnover in employment.

Wages are fixed for each individual by the council and in accordance with the needs of the worker. Free schools within the plant are provided for children of employees.

The employees seem contented and loyal. Their average annual wage is $1380 as compared to $1045 average for the fruit and vegetable branch of the canning industry generally.

In view of the record made social and industrial theorists are inclined to point to the Columbia Conserve Company as one of the outstanding experiments in the humanizing of industry.

CANNERS SEEKING NATIONAL HONORS

Shenandoah, Iowa,—Spurred by 25,000 entries last year, household canners from every state in the union will compete for the $4250 in prizes offered by the second national canning contest which closes October 1.

The canning will be carried on during the entire summer, but all entries must be recorded at the contest headquarters in Shenandoah not later than the October date.

Among those contributing to plans for the contest and who will sit among the judges are Dr. Louise Stanley, director of the federal bureau of home economics, and Mrs. Grace Viall Gray, Chicago, secretary of the contest and nationally known canning expert.

The contest is open to every woman and girl. There are no restrictions on the type of canned food to be entered. Fruit and vegetables will be judged for clearness, color, neatness, flavor and texture. The meat entries will be judged for neatness, flavor and texture. Contestants will be free to use any method of canning they perfer. Standard jars of quart size must be used.

Prizes which include the $500 sweepstakes prize to the grand champion and many other prizes for championships in various classes will be awarded under auspices of the Household science institute.

Last year's championship was won by Mrs. Mary Hvass, farm woman of Kennan, Wis., with a quart jar of green peas.—Moline Dispatch.

COLORED FARMERS CATCH LARGE ALLIGATOR IN MISS.

One of the largest alligators ever captured was found by two colored farmers in a swamp near Holly Bluff, Miss. The alligator was lassoed and taken into Holly Bluff. It measured 10 feet and 8 inches long with a stride of four feet, and weighed four hunder and fifty pounds. After the alligator had been brought to Holly Bluff, and placed on exhibit, one of the spectators leaned too far over the ropes and with one swat of his tail the alligator slapped the man in his mouth. It took two men with crowbars to prize the man from the alligator's mouth. The animal was finally carried to Jackson and placed in the city Zoo.

PITTSBURG COURIER TELLS IT—EDITORIALLY

Negro famers are meeting out in Howard, Miss., this week. They are learning to pool their money and buy cheaper. This is great intelligence for the Negro farmer. If he ever learns how valuable the farm is to the whole country he will buy cheaper automobiles and more land. We are slowly learning but pressure is making us learn.

KANSAS VOCATIONAL SCHOOL RAISES BUMPER CROPS

The Kansas Vocational School near Topeka, produced and harvested the largest crop in the history of the institution. They have gathered and housed 221 bushels onions that will take the prize in any fair, 500 bushels oats and about 700 bushels white potatoes.

KNOW YOUR WEEDS

The knowledge of poisonous plants is quite an asset to farmers who have livestock.

Prof. W. C. Muenscher of the New York State College of Agriculture says there are over 50 kinds of plants that have piosonous properties.

During the drouth period and especially late in the summer months cattle will invariably graze on these plants, Wild black cherry and the choke cherry contain prussic acid and are therefore dangerous and in some instances deadly poinsonous.

Barke fern causes a disease among cows that causes sickness. White snakeroot is common in most pastures. This is a very dangerous weed and veterinarians claim that cows who feed on white snakeroot will have a disease known as "trembles."

Field butter-cups have been found to be poisonous when green, but harmless when dry.

Cocklebnrs are invariably fatal to hogs on pasture.

Water parsnip, which are more prevalent in the very early spring, is a very dangerous plant and will poison a cow almost instantly.

WILSON PROPOSES CROSS-TIE ORDERS

Baton Rouge, La.,—The suggestion that the railroads operating in this state resume their orders for crossties in order to relieve the drouth situation by providing employment for farmers in this way, is made by Harry D. Wilson, commissioner of agriculture and immigration, in letters sent to all the railroads in the state.

"There are a large number of farmers that have not made anything whatever in the way of feed or food crops and a very small cotton crop, which, as you know, is selling at a very low price." Mr. Wilson said: "If a farmer and his family could earn only $50 to $100 by making crossties, you have no idea how greatly it would assist them and prevent real suffering among many of our good substantial citizens."

ALABAMA 1,800 ACRE FARM IN WITH NO COTTON

Mr. Bradley Nucknollsis the owner of an 1,800 acre plantation in Russell County, Alabama, all in cultivation, with not one stalk of cotton.

Hundreds of acres are in wheat, oats, Austrian peas, vetch, peanuts, velvet beans, artichokes and potatoes.

Several carloads of hogs and beef cattle are shipped to large markets from this plantation annually.

ALFALFA MOST RELIABLE HAY CROP

IMPORTANT LESSON OF DROUTH SAYS CROP EXPERT. CONDITIONS FAVORABLE FOR SEEDING

"One of the important lessons learned by farmers in the parts of Tennessee which were unusually dry this year is that Alfalfa is the most reliable hay crop that we have," states J. C. McAmis, U. T. Extension Economist.

Its depth of root system enables it to withstand drouth to a remarkable degree not only as a hay producer but as an emergency pasture crop. The chances of success with Alfalfa sown in the next three or four weeks are better than usual in sections where the season has been unusally dry, Mr. McAmis believes. At least the records show that Alfalfa as well as other late summer and fall sown crops generally do especially well when rains start following dry seasons, because the soil supply of available plant food has been gradually stored up during the dry summer ready for the Alfalfa to use, he states.

When sown in late August or early September Alfalfa should have a firm, clean seed bed. It should be sown the day following a good soaking rain or as soon as the surface of the land can be worked sufficiently to cover the seed very lightly. It is a mistake to disc the land immediately before seeding. Favorable conditions are found on clean land that has been harrowed after every rain for the past month. The next best place would be tobacco patches from which the crop was removed early. All that is necessary if the land is clean is to harrow lightly and if the drill is used to sow the seed, harrowing will probably not be necessary. In areas which have not had much rain and where the soil is dust, probably the best plan is to sow the seed on the surface and go over the land with a corrugated roller. If this method is followed the land should be sufficiently dry that the seed will not germinate until rains come.

On land which has not previously grown Alfalfa or Sweet Clover a few pounds of red clover should be added to the mixture and if the Alfalfa should fail for any reason the red clover will likely make a stand. Under favorable conditions it may be advisable to risk sowing Alfalfa along with some small grain as late as October 1. Late summer seeding is the surest method of obtaining a stand of Alfalfa that has been tried at the University Farm. Not all farmers however are careful enough about the preparation of their seed bed and the methods of sowing. Those who are not able to have ideal conditions should sow in the spring in about the same way they would sow red clover except that the Alfalfa requires inoculation and more lime than red clover. Beginners should also sow a mixture of Alfalfa and red clover until they have learned how to grow Alfalfa alone.

NATIONAL FEDERATION TO AWARD VALUABLE PRIZES

(Special)

The National Federation of Colored Farmers and the Modern Farmer announce that valuable prizes will be given this year to members and subscribers for diligent efforts made to increase and improve the yield of various farm products and livestock. These prizes have been contributed by public-spirited corporations, manufacturers and individuals and will be distributed to the deserving next fall. Complete information will be given in our next issue. Join, subscribe and get in line for these prizes.

The Modern Farmer

Official organ of the National Federation of Colored Farmers

Leon R. Harris - - Editor

Published Monthly by the Modern Farmer at Nashville, Tennessee, and Chicago, Ill.

Nashville, Tenn., Office. 447 4th Avenue, North.

Chicago, Ill., Office: Vincennes Hotel, 36th and Vincennes Avenue.

Devoted to the interests of the Farmer, Truck Gardener, Livestock and Poultry Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 447 4th Avenue, North, Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT!

THE LAW

"It is hereby declared to be the policy of Congress to promote the effective merchandising of agricultural commodities by encouraging the organization of producers into effective association under their own control.

The Board is authorized and directed—to promote education in the principles and practices of cooperative marketing—to encourage the organization, improvement in methods, and development of effective cooperative associations." (Public—No. 10—71st Congress. Sec. 1-5.)

THE GOSPEL

"This law is predicated upon the ability of the farmer to manage his own business, once he is organized to do so. Cooperation is the key to it and only in exceptional cases can the Federal Farm Board have any dealings with a farmer who is not a member of a producer-owned and producer-controlled marketing unit." Hon. Sam'l R. McKelvie, Member, Federal Farm Board.

The National Federation of Colored Farmers believes that the Colored Farmers of America should own and control their own co-operative associations.

"Co-operation With All—Affiliation With None."

EDITORIALS

WHO ARE THE "OTHERS?"

Jesus Christ was a plain speaker. He came to save people from their sins. It took plain language to convince the hard old sinners and hypocrites of his day that they were mean and evil. The common people heard him gladly. The rich and powerful,—those who bossed the common people,—despised him. They crucified him to shut his mouth. But they could not destroy his words. He spoke the truth. Truth cannot be killed.

Jesus Christ proved to men that it was better to do right than to do wrong. Righteous living brought happiness and peace. Wrong, or sinful living brought trouble and misery. To help men to be righteous, he gave them a number of rules or precepts to follow. One of these is called the GOLDEN RULE. Plainly it reads: "Do unto others as you would have others do unto you."

Who are the "others?" They are those we meet every day. They are those we live with,—those we work with,—those we work for,—those who work for us. The "others" are even those from whom we buy and those to whom we sell. The GOLDEN RULE is accepted as a good business principle. Successful business men, who remain successful, believe in it and practice it.

Who are the "others?" Sometimes they are not of your class,—not of your family,—not of your nationality,—nor of your race. But they are your fellow-men, no matter how they look,—how they act,—or what they know. Read the story Jesus Christ told about the Good Samaritan. Read it slowly and think.

CO-OPERATION AND THE COLORED FARMER

The colored farmers of America are interested in the co-operative movement. The more they practice co-operation the more interested they become. Those who have joined the movement,—who have organized themselves into bands or "Units" and are reaping the rewards of co-operation,—are determined to stick and stand together. They have found a good thing and they know it.

Co-operation is the Negro farmer's salvation. It will save him from debt—slavery—from dependence,—from humiliation. It will come nearer making him a real man than anything else ever attempted. When the Negro farmer discovered co-operation he discovered the "pearl of great price" and woe be unto those who attempt to take it away from him!

The National Federation of Colored Farmers was organized to help the Negro Farmer make more money and save more money by practicing co-operation. This is its one big purpose. It is fought and opposed only by those who do not want Negro farmers to make and save more money. These are the Negro farmer's enemies. We brand them as such and we want them to know it.

The colored farmer is not a fool. He is tired of being treated like a fool. He is tired of paying 25 per cent interest on a borrowed dollar when he knows that the use of no man's dollar for six months is worth more than ten cents. He is tired of paying a merchant in Blank, Alabama fifteen cents for a lamp chimney when he knows he can purchase a much better lamp chimney in the city of Blank, Kentucky for eight cents. He is tired of having to pay $60 a ton for the same grade of fertilizer he can produce 300 miles away at $40 a ton. He is tired of being forced to sell a car of watermelons for $60 which brings the buyer and shipper $200 in Chicago.

The colored farmer who belongs to his organization,—the National Federation of Colored Farmers,—knows what he should pay for what he buys and what he should get for what he sells. He is not misinformed or fooled. The information costs him little. It helps him much. The colored farmer who belongs to a Unit of the N. F. C. F. is a wise one. "Happy is the man that findeth wisdom—that getteth understanding!" So says the Bible!

"TRYING" TO CUT COTTON PICKING PRICES

Fifty leading plants of Caddo and Bossier Parishes, Louisiana, met in Shreveport the other day and set a standard price of fifty cents per hundred for picking cotton in their parishes this fall. They were called together by the Shreveport Chamber of Commerce. This figure was settled upon, they say, because of the extremely low price of cotton and the damage suffered by flood and drouth, which will make it necessary for the crop to be harvested at the lowest possible cost.

Cotton pickers will be compelled to accept lower wages this year but fifty cents a hundred is too low a wage to pay anybody for picking cotton. This action of these Louisiana planters looks to us like an organized scheme to try to make the cotton pickers bear more than their share of the cost of producing the low-priced and damaged crop.

If the colored farmers of Louisiana were organized they would be able to have something to say about cotton picking prices and what they said would be heard. They are organizing slowly. But organized or not, we do not believe these good and leading planters will get much of their cotton picked at fifty cents per hundred.

GO BACK TO THE FARM

Glenn Wilson, of Olney, a town in southern Illinois, wrote the following letter to the Chicago Tribune. It is more than a letter. It is a classic. He pictures an ideal farm and country home,—happy farm life and contented farm living. Here is the letter:

Machinery put the farmer off the land and into the industries. Today machinery is putting the laborer out of the city back to the soil.

You can say truthfully that the world can't consume what the country now produces without any more people going into the production end. That's proven and admitted. However, the man and his wife with children, living in a tenement building and out of work in an industrial center with thousands of others in a similar situation, is not influenced by that argument.

In the state of Illinois, in the southern part of which I live, I can today set a table of the finest eating in the world and the only thing bought is the flour. Last week I cooked and fed to my chickens the last of the 1929 potato crop. In three years I have bought four pounds of potatoes. Today I can give you from my garden beets, cabbage, cauliflower, beans (string or butter), okra, tomatoes, kohlrabis, and potatoes. One plum tree will produce more plum jelly than any family will consume in a year. Strawberries, raspberries, dew-berries, and blackberries grow wild or can be cultivated. Peaches, apples, and pears are at hand. Chickens lay eggs the year around and are tolerably good to eat any old time and largely make their own living.

One milk cow gives you milk, cream, and butter. One horse cultivates your truck farm. You can't pick 20 acres where a school is not close, where pure water is not easily reached, where telephone and, even now, electric power is not at your door, where the doctor or preacher is not available, or where the old pioneer hospitality and kindness is not still the paramount rule.

In the country your child is healthy, learns industry, the love of animals, the habit of kindness and is not in communication with elders of undesirable habits. He is running no risks in daytime or at night. The air is pure, clean, and healthy. The world will be a better place to live when the soil once more receives its own. Your racketeer, gangster, criminal, and murderer is not produced on the farm; independence and manhood, rather, in the boys and health and virtue in the girls.

So come on back to the soil.

Colored people in America would be so much better off if more of us were living as Glenn Wilson and his family lives. It is true that all of us cannot be truck farmers. All of us cannot live so close to the church and school and electric power. But we can certainly raise more vegetables and fruits and have our cow and chickens. We can make the farm feed us,—supply our table the year round, if we have enough common sense and "get up" in us to work and plan to that end. We can have peaceful and happy farm houses and communities if we want to have them.

The colored farmer can be the happiest colored person in the Nation if he wants to be. Let's organize and cooperate. Life is too short to spend it in drudgery and squalor.

TAKING THE EAT OUT OF WHEAT

Considerable investigation has been made lately into alleged profiteering by dealers in fruits and vegetables but we hear of nothing being said or done about investigating the high price of bread.

In 1915 when wheat was selling at $1.27 per bushel and lard was several cents higher than at present, bread was selling at a nickle a loaf. This year wheat is selling at from 65 to 85 cents per bushel, lard has also reached the low point, yet we are forced to pay ten cents for the same loaf of bread. There are sixty-two loaves of bread in a bushel of wheat. Figure it out for yourself.

If the price of bread was reduced to five cents it would mean more consumption and much of this surplus wheat which is now such a problem would be consumed.

BISHOP KYLES' ADVICE TO FARMERS

1. "Strive for the ownership of land and thus reduce the large number of colored tenant croppers."

2. "Strive for economic independence by continual reduction of indebtedness and cultivating the habit of living within your means."

3. "Adopt the "Live At Home" policy. By this is meant the idea of varying the products of the farm and raising on the farm everything needed for consumption in the home."

4. "As soon as conditions will allow, build good homes and strive to make the surroundings beautiful and attractive for your children."

This advice, sent by Bishop Kyles, of the A. M. E. Z. church, to the farmers of Mississippi, is good advice for colored farmers who live any where in the South. We thank the Bishop for his message and appreciate his friendship. When the leaders of our group begin to talk good "dollar-and-cents" farm talk we will be surprised how rapidly many of our economic troubles will vanish. We need a dozen more Bishop Kyles, one for every Southern state.

COFFEE, UNION—AND COMMON SENSE

The Farmers Union, one of the largest of the white farm co-operative organizations, sold to its members through its Farmers Union Exchange, 5,637 pounds of coffee during the month of March. Counting twenty-six days to the month, their sales per day totaled 216 pounds. According to the Farmers Union Herald, the official organ of the Union, the goal set is 500 pounds per day. As soon as sales reach this figure,—which they expect by the first of next year,—they promise to install a roaster and import their own coffee. By doing this, they will be able to cut down the cost of their members' coffee bill several cents a pound.

Here is a lesson for the Negro farmers of America. It is also a "punch in the nose" for all who are opposed to Negro farmers buying their groceries and supplies co-operatively. These white farmers who are members of the Farmers Union, buy their coffee co-operatively,—they buy it from their own Exchange. They get a much better coffee at a much cheaper price than they have to pay to retail merchants. They save on this one item alone several times the amount of their membership fees and dues. They also save much on sugar, flour, feed, and the other supplies they need. They are better off because they are saving money.

The Farmers Union Herald tells us that an average of five new locals per day are being organized in the states of Montana, North Dakota, Minnesota and Wisconsin,—in just these four states. Two thousand new members are joining the Union every month in these four states alone. Why are these white farmers falling head over heels into this organization? Because they now realize that only union and co-operation will save them. They realize that they have GOT to get together. They have got to get the benefits of organization or go on the rocks.

Negro Farmers,—you have got to do the same thing. You have got to organize. There are no ifs-and-ands about it. The National Federation of Colored Farmers can do as much for you as the Farmers Union and other co-operative organizations are doing for the white farmers. The members of these white organizations stuck to them and built them up, until today they are so strong that nothing can destroy them. If you will stick to YOUR FEDERATION it will also become great and strong.

The Farmers Union has established "Exchanges" in several American cities through which the members can purchase their needed supplies and also market their surplus. The Constitution of the National Federation of Colored Farmers say: "It is the purpose of the N. F. C. F. to establish branches in conveniently located cities where shipment of farm produce may be received and marketed at the highest prices for the members of the Federation. Farmer members will also be able to obtain supplies through these branches." You see YOUR ORGANIZATION aims to do for you just what the Farmers Union is doing for its members.

The cotton farmers of the South are in a peck of trouble this fall. The

(Continued on Page 8)

ATTENTION COLORED FARMERS

The National Federation of Colored Farmers is receiving hundreds of letters from Colored farmers requesting all kinds of aid and information. We are willing to do everything we can for all the Colored farmers of America. It costs money, however, to maintain offices and our expenses are becoming so heavy that we are compelled to discontinue supplying information to those who request it who are not members of the Federation. If you have faith enough in the organization to believe that it can aid you, then you should be willing to join it and help support it. Isn't that so?

Several County units have organized and elected officers but have not sent in their membership dues. These units are eligible to membership in the Federation until dues are paid. Be helpful. Co-operate. Pay up. "All for each and each for all."

What They Think of our Organization

Prominent Citizens Commend National Federation of Colored Farmers

PROGRAM AND ACCOMPLISHMENTS AROUSE INTEREST

The following are excerpts from letters received by the president, secretary or publishers of the MODERN FARMER. They indicate the interest public spirited citizens have shown in the program and accomplishments of the National Federation of Colored Farmers. The officers of the N. F. C. F. appreciate these compliments and commendations and are encouraged to work harder than ever to build up an organization of Negro farmers for Negro farmers.

From Hon. Arthur Capper, United States Senator, Kansas.

"I understand the National Federation of Colored Farmers will hold their first annual convention of the Mississippi units at Howard.

Please convey my very best wishes to the members of this Convention. Notwithstanding the unfavorable conditions that prevail in the agricultural industry throughout the entire United States, I think there is a bright future for the members of your race who will take up farming. There is no business of any kind today that offers better opportunities for the colored man than agriculture."

From Hon. James C. Stone, Vice-Chairman Federal Farm Board, Washington, D. C.

"Undoubtedly the efforts and aims of your organization, if carried to a successful conclusion, will be of great benefit to the colored farmers of the country."

From Rt. Rev. L. W. Kyles, Bishop A. M. E. Z. Church, Winston-Salem, N. C.

"I rejoice with you in the definite achievement for the farmers of our group in Mississippi, through the National Federation of Colored Farmers, and in the hope which your organization inspires for the colored farmers throughout the south. The Negro farmers of the south are faeing the most crucial period in their history and it appears from present indications that your movement was inspired for just such a time as this.

More than three-fourths of our group in the south live on the farms and are dependent either directly or indirectly upon farm labor and farm products for support. Any movement which has for its objective the organizing of Negro farmers for mutual helpfulness and protection and creating more favorable economic and social conditions for them to live under, enters at once upon a field of service, the possibilities of which are unlimited. I cannot escape the conviction that this field offers one of the finest opportunities for effective leadership among our people.

Your organization is a fine indication of the awakening of the colored farmers to the opportunities which challenge them, and one of the most inspiring prophecies concerning the possibilities of their future. While the colored farmers have made progress in the past, their progress has represented the achievements of individuals, operating disconnectedly. They have not felt the throbbing impulse of the tidal wave of hopefulness and enthusiasm which springs from co-operative effort in this field of endeavor. They have not profited from the produets of the farm to any large extent even when the prices were highest and when the times were most prosperous. They have been the victims of the schemes of exploitation of those who have pretended to help them under the guise of friendship. They have struggled against great odds to maintain their farms and eke out a miserable existence in many cases.

It is quite clear to all who have given this question, even casual consideration, that if the Negro farmers of the South can be organized into county-state and inter-state organizations a new day will dawn for our group in the field of agriculture. It is interesting to contemplate what this will mean, not only from the farmers themselves from a social, economic and educational viewpoint, but for the struggling colored merchants and professional leaders in urban centers.

You called attention to some of the things the Mississippi farmers are attempting to do for themselves through organization:

First, that they are buying their supplies co-operatively, and that an example of this is seen in the fact that during the first week in July of this year they bought a solid car of groceries at a saving of forty per cent.

Second, that they are shipping their products co-operatively. This implies, of course, that through this method provisions are made for them to hold their products until they can sell to good advantage.

Let me say in this connection that if such a movement had accomplished nothing more for the Mississippi farmers it would have justified its existence. If the National Federation of Colored Farmers possesses the means and the facilities for organizing the colored farmers throughout the south, they could extend the same benefits to the farmers of all the states. It is my earnest hope that the National Federation of Colored Farmers may find some way to promote effective organizations among colored farmers in other states.

I hope that you may have great success in your work."

From Hon. Benjamin A. Green, Mayor, Mound Bayou, Miss., Member Bolivar County Unit.

"We certainly had a wonderful meeting at Howard. I think the possibilities are great."

From Hon. Emmett J. Scott, Secretary-Treasurer Howard University, Washington, D. C.

"I have read with very great interest of the first annual convention of the Mississippi Unit of the National Federation of Colored Farmers. It is gratifying to learn that at last the Negro farmers is becoming effectively organized. This forward looking movement, whereby they are to buy their supplies and ship their products co-operatively, is a movement in the direction of far reaching importance.

I remember your discussion of this organization when I was living at Tuskegee some twelve years ago. You have kept your ideal and are now able to see that your dream is about to come true."

From Dr. J. E. Shepard, President, North Carolina College for Negroes, Durham, N. C.

"I have observed with sympathetic interest the first real achivement to organize the Negro Farmers in a state organization. It is a great and worthy undertaking. If the Negro Farmers of America are to participate in any of the benefits from Federal aid, they have got to organize and put themselves in the position to secure the same. The Negro Farmers have slept on their rights and neglected their opportunity.

This is the first concrete example of the new awakening, and a determination on the part of the Negro Farmers as a group to be a real potential factor in his own development and that of our great country. Please convey my hearty congratulations to the farmers of Mississippi and tell them that since they have blazoned the way the people of the whole country are watching their organization with a kind of holy expectancy."

From R. H. Rutherford, President-Treasurer, National Benefit Life Insurance Co., Washington, D. C.

"It is a most helpful sign to note that this is the first time in the history of the Negro Farmers to organize along such lines for the purpose of helping himself. I congratulate you upon the fact that you have more than 600 members in Holmes County, Mississippi, which is the largest farm organization in any county in Mississippi, white or colored."

From Dr. Henry A. Boyd, Nashville, Tenn.

"The National Federation of Colored Farmers emphasizes the old adage, 'In union there is strength,' and demonstrates the fact that self-help is the best lever to lift us out of the quagmire of slothfulness, ignorance and dependence."

From Mr. J. A. Jackson, Business-Specialist, Department of Commerce, Washington, D. C.

"I am convinced that your movement is probably one of the most worthwhile attempts to inculcate progressive farming methods and good merchandising into the minds of the Negro Farmers that has ever been made. I trust the organization continues and am pleased at the growing number of Negro farmers who have come to realize the necessity for more efficient operation of their property. After all, much of the basic wealth of our group depends upon successfully continuing agricultural pursuits. Success in this primary field coupled up with a similar development of the mercantile phase of life, is bound to create a higher general standard among the Negroes of America and do much toward contributing to inter-racial goodwill."

From Dr. J. W. Holley, President Georgia Normal and Agricultural College, Albany, Ga.

"Your service to the colored farmers of the country is of incalculable value and I am sure that with any kind of support, you will be able to render a very great service to those of our group who till the soil. I am planning to do more for the organization this coming year than ever before and I hope you will make a point to visit in Georgia and let us get in line with your progressive plans."

From Albon L. Holsey, Secretary, National Negro Business League, Tuskegee Institute, Ala.

"As Secretary of the National Negro Business League, I am writing to convey to your members the greetings and good wishes of the League and our assurances that we want to help you in any way we can.

During the past two years, the Business League has been carrying out a very intensive program among Negro retail grocers, striving in that way to help the race to successfully meet one of the most serious phases of our economic problems.

The National Federation of Colored Farmers is attempting to meet another phase of our economic problem. Both programs dove-tail: and we congratulate you upon the splendid record of achievement so far."

From Rt. Rev. Wm. D. Johnson, Bishop A. M. E. Church, Grenada, Miss.

"I highly commend the work you are doing for our people in this state. I have read with interest of the forward strides being made by the members of the National Federation of Colored Farmers. I hope the work will continue until our people are thoroughly aroused. Command me if I can do anything to help in the work."

From Hon. Oscar DePriest, Member Congress, Illinois

"I am glad to note that Negro farmers are complying with the provisions of the Farm Relief Bill and are building up a competent co-operative organization. Please accept my best wishes for the sueeess of the National Federation of Colored Farmers."

"CONVENTION SPOTLIGHTS"

More Interesting News About The Great Meeting

The sermon-lecture delivered by Rev. Chas. H. Kelly, Arkansas Unit, Twist, Ark., was one of the biggest features of the second day's session. Rev. Kelly writes: "It took me two days to get back home but the trip was worth while." Many have written to us praising Rev. Kelly's wise utterances.

Mr. N. J. Williamson's address on "Farm Ownership" made every farmer present who was not a land-owned resolve to become one. Mr. Williamson is a member of Tunica Unit, Dundee.

A. R. Payne of Jones Chapel Unit, Honey Island, practices what he talks about. He knows that "Co-operative Buying" pays. He was a great asset to the Convention."

The esteemed and highly efficient General Secretary of the Convention, Bro. W. Moore, was taken ill the second day of the session and has been unable to date to send us a full report. We trust that he will soon be able to get about again.

August 14, 1930! On that day Mississippi made history. For the first time a group of organized colored farmers got together and discussed their common problems. The spirit and enthuiasm of the meeting was "catching." No one will stay away from the meeting next year.

NEWS NOTES OF INTEREST TO OUR MEMBERS

The convention was held. It was a great success. They were there from 5 states. Mississippi sent representatives from 32 counties. This was some showing for the first convention.

A member from Humphrey County writes the head office that the convention was worth ten thousand dollars to the Colored Farmers of his county. He says we should have another convention in December.

The ladies who served the dinner deserve special praise for their part of the work. One member remarked that it was somewhat embarrassing for some of the visitors to grab and snatch the barbecue sandwiches, but after all could you blame them? It was the finest prepared barbecue ever served in Miss. Anybody would grab that fine cooked meat.

Not one man on the program shirked his duty. They were there early and late, and it certainly reflects loyalty on the part of those who were selected to make the convention a success.

The badges were said to be the prettiest ever worn by any organization. They were made up special order for the Federation, and most of the members on the different committees say they will keep the badges as a souvenir.

Hon. B. A. Green, Mayor and Attorney of Mound Bayou, and Hon. E. P. Booze, cotton factor of the same city, made two wonderful talks to our members. Both of these gentlemen are members of the Bolivar Unit of the National Federation of Colored Farmers.

Our National Secretary, L. R. Harris and his wife are simply "carried away" with Miss. They say Mississippi certainly knows the art of entertaining and are longing for more barbecue.

It comes from very reliable sources that Bro. Tom Stewart made a special trip to Greenwood to have his mustache curled and pomaded before attending the convention. Tom is our oldest Secretary and is at home when you put him on a set of books. He wields a wicked pen.

Stuart Harrison, Chairman of Good Hope, hurried back from Hot Springs where he attended the WOU and gave valuable assistance in shaping up the final touches for the convention.

No trouble to tell who is a member of the Federation now. The membership buttons are ready and our members are proud of them. They have a right to be proud. The units who have not ordered their supply should do so before they are all sold.

Col. Sol High, known as the sweet potato king of Miss., brought greetings from Madison County. He made a most interesting talk to the members. Col. High owns 660 aeres, and his unit will have about 20 acres of turnips ready for the market this fall.

Holaday Chapel unit had a very nice delegation, Miss Martha Chalmers, Special Representative for the Federation, simply charmed the entire audience. She is a very brilliant woman. Holaday has a very good unit, and the officers are efficient.

The Yazoo Mount Zion is another of the younger units that were well represented. This unit is steadily increasing in membership and the Chairman says one hundred members by Christmas or bust.

Marshall Irving reported that he did not have one complaint of drunkenness nor did he detect the odor of whiskey on the breath of any person during either of the two days the convention was in session. This speaks well, and shows that our members mean business.

The younger units, Spring Valley, Sunshine, St. Marys, Albury, Whitman, Holly Grove, Hyman, Lexington and Meeks sent large delegations and paid their assessments. The officers of these units are men of good sound judgment, and we predict under their guidance they will number among the best units in the entire Federation before very long.

That committee that had charge of the parking of the cars were certainly on the job. They knew their

(Continued on Page 8)

DAIRY COWS NEED ROUGHAGE

Dairymen should grow roughage so that their cows may have an abundance at all times, states C. A. Hutton, U. T. Extension Dairyman.

Now is a good time to sow rye and vetch in the corn and cotton fields. Rye, of course; is not the best hay, but vetch is will make a roughage far superior to hulls. It will make excellent fall and winter pastnre. Barley and vetch or oats and vetch, can be sown in September. It is a good time to start preparation for these crops now. Inoculate the vetch seed and nse 500 to 1,000 pounds of finely ground lime stone per acre to make sure your success. One acre of roughage for each cow is the minimum regardless of how good your land is, and where the land is thin, two acres.

COLLECTIVE FARMING HAS PROVEN UNWISE, SAYS MARKET HEAD

EXPORT OF SURPLUS AND DUTY FREE IMPORT OF PRODUCTS IN EXCHANGE URGED IN EMERGENCY BY W. A. MOODY

American farmers should be permitted in the emergency created by the drouth to export their surplus farm produces and be allowed to import, free of duty, the products received in exchang for their exports, William A. Moody, president of the St. Louis Live Stock Exchange, suggests in a statement issned yesterday. Moody also urges that repeal of the Farm Board act.

"If this drouth has not proven to Messrs. Hyde and Legge of the Farm Board that acreage is only one element, and a very uncertain element, in production, they are totally blinded by their Russian theory of collective farming.' Moody declares, in taking issne with a published statement of Secretary of Agriculture Hyde that the drouth had demonstrated the need of collective farming.

"Suppose the acreage of corn had been reduced 25 per cent last spring, conditions would be infinitely worse than they now are. A normal corn crop amounts to 2,800,000,000 bushels. This year we will say the crop by reason of drouth may be reduced 5 per cent or to 1,400,000,000 bushels, and had the farmers taken the advise of those advocating 25 per cent acreage reduction, the yield would be only 700,000,000 bushels.

Wheat Surplus

"Again suppose the plan advocated by Hyde and Legge had been in full force and we had no surplus wheat, what would be the condition of the country today? Mr. Hyde is telling us wheat is worth more per bushel as feed for stock than corn and advising its use as feed. After a year spent by himself and Mr. Legge attributing all the farmer's troubles to the 200,000,000 bushels of surplus wheat, we find him forced to admit that this hated and despised surplus wheat is badly needed at home. If this does not prove that the theory of limiting the acreage to the bar amount neccessary for home consumption is fallacious, then I am unable to reason from cause to effect.

"Instead of the dronth proving the necessity of collective farming with its acreage limitation, it has demonstrated the utter folly of such a plan. The hazards of farming the world over have ever been many, and have contributed to make farming unprofitable. Drouths, floods and pestilence have contributed to the shortages of other countries, and have made it possible to market our surplus corps at a fairly remunerative price Without a surplus we would be unable to supply a foreign demand, however attractive the price might be. This talk of reducing our production to home needs holds out no hope for the American farmer. The farmers of this country are not going to wait for a home market to grow up around them that is large enough to consume the large crops that can be produced in this country in normal years. It is relief for themselves years. It is relief for generations unborn, that they demand.

Temporary Plan

"I would suggest to the Farm Board the Advisability of recommending to Congress a temporary plan to meet the present emergency, a plan which would permit farmers to export their surplus farm products and that they be allowed to import free of duty the products received in exchange for their exported farm products.

"I see no reason why anyone who is honestly trying to improve the condition of the farmer should not indorse this plan. To tax the products received in exchange for exported products is equivalent to taxing domstic products when exported. ..

"Supposing we have a surplus of pork and lard, should not the farmer be allowed to exchange his lard and pork for the things received in exchange for them without paying an import duty. I would suggest to President Hoover the advisability of calling Congress together immediately to consider the proposition that will relieve them of unjust discrimination.

"We hope the Governors who will assemble in Washington will be able to suggest plans that will be helpful, but I think Congress could accomplish more, and in as much as the drouth covers many states, the remedy must come from the national Congress. Congress should repeal the Farm Board act as one relief measure.

"Congress very largely ignored the President's recommendations, but with the present urgent need for real farm relief, I believe they would forget political advantages and devote themselves to an honest effort to relieve the present national disaster. And while on this subject of relief to the farmer, don't forget that his most urgent of all needs is relief from excessive taxation.

NO MATERIAL IMPROVEMENT IN EGG AND POULTRY PRICES SEEN

No material improvement in egg prices, other than the seasonal rise this fall, is expected until after the first of next year and little improvement in poultry prices is anticipated during the remainder of this year, a statement issued recently by the U. S. Department of Agriculture says.

The entire poultry situation at present is similar to that of 1927. Prices for chicken had fallen in June of that year to below the 5 year June average prices as true this year. In 1927 prices of chicken improved slightly during the last half of the year. Egg prices in 1927 improved after June, but did not get back to seasonal average levels until the next spring. In 1927 the prices of feed for poultry were low during the first half of the year, as they have been this year, but rose to average in June and remained at about the average or above during the rest of the year, with a sharp rise in tho spring of 1928.

Receipts of dressed poultry at terminal markets have been very heavy this season, and while the excess over last year's holdings in cold storage has been reduced each succeeding month, stocks of frozen poultry are still considerably heavier than usual. Storage stocks of eggs are unusally heavy and the demand situation for both poultry and eggs is generally unfavorable.

Tennessee poultry raisers are advised by A. J. Chadwell, U. T. extension poultryman, to practice careful selection and to market low producing hens as soon as they stop laying. High producing hens and pullets that show promise of developing into good layers shonld be kept. Higher feed prices which will likely result from the drouth will increase the tendency to market a larger proportion of this year's hatch. This coupled with less intensive feeding methods will mean fewer hens on farms and a lower total production in the spring of 1931. Extreme reduction in number of hens on Tennessee farms does not appear to be justified.

Corn and wheat are the two principal grains in a poultry ration The present price of wheat would justify a more liberal use of this grain in the poultry ration, Mr. Chadwell states. Where possible the chicken lots should be sown to rye and crimson clover for winter and spring green feed. Barley sown on good land will mature in time for early summer feeding.

APPLES SPRAYED; DIES

Wildwood, N. J., August 19.—Eating apples which had been sprayed with insecticide caused the death of Miss Lois M. Mortimer.

WIFE LOOKS ON HELPLESS AS BULL KILLS FARMER

Urbana Ia., Aug. 18.—(Special).—While his wife looked on unable to help him, Edward Dripps, farmer, was gored to death by a bull he was leading to water.

MODERN FIXTURES BRING COMFORTS OF LIFE TO HOGS

Shower baths and drinking fountains for hogs are being recommended hy L. E. Hazen of the Oklahoma Agricultural and Mechanical college.

He reports that the hog has been the least able to resist the high temperatures prevalent the last few weeks after a study of all farm animals that have been suffering from the heat.

Comfort, adequate shade, and plenty of clean, fresh water are said to be indispensable to successful gain in weight during hot weather. Farmers have been advised to cool off their hogs by using a power sprayer such as those used in orchards and gardens, setting up the water spray in shade and giving the bath service for about two hours each afternoon.

The drinking fountains successfully combat a large proportion of disease among hogs, Mr. Hazen reports. Hog wallows and open troughts are subject to pollution and are unsuitable for drinking water for the animals.

Plant food taken from the land by crops can be restored in the form of fertilizers and soil-improving crops; but the material of fertility removed by erosion can not be restored, for the simple reason that this washing process takes the entire body of the soil, plant food and all.—H. H. Bennett, soil specialist, United States Department of Agriculture.

Methods for making concentrated sour skimmed milk developed in the research laboratories of the Bureau of Dairy Industry, United States Department of Agriculture, have been introduced in about 20 plants which are now making this product. In 1928 and 1929 these plants, located in various parts of the country, used more than 76,000,000 pounds of skimmed milk for this purpose.

CARELESSNESS ATTRACTS THE ENGLISH SPARROW

If English sparrows are overabundant it may be the result of carelessness. The sparrows are canny foragers and flock to a locality offering abundant feed. There they multiply at an alarming rate. Carelessness in feeding poultry a knothole in the granary floor, open doors and windows in farm buildings, or openings at the eaves create conditions that attract sparrows. Block the entries to their favored nesting places, and the birds are less likely to be troublesome.

The next step in sparrow control recommended by the Bureau of Bilogical Survey, United States Department of Agriculture, includes the destruction of sparrow nests. Because the birds are active breeders it is necessary to make the rounds and destroy the nests every 10 or 12 days throughout the breeding season. Nest destruction on a community-wide scale is more effective than on isolated farms.

Nestling sparrows help the farmer for a few days. Before the birds begin to fly the parents supply them with many worms and insects. But once they are well grown they fall into the habits of the adults and become vegetarians with keen appetites for grains and garden products as well as for weed seeds. If the grains are housed carefully the sparrows are likely to be less numerous and will eat more weed seeds, and in this way may even prove helpful to the farmer.

WARTS TRANSMISSIBLE EXPERIMENTER FINDS

At last the United States Department of Agriculture has stripped the inelegant wart of some of its mystery by proving that it can be transmitted from one animal to another.

Dr. Gilbert T. Creech, veterinarian who proved that warts are "catching," says they are probably caused by a filterable virns, which is the scientist's term for a form of life so small it can not be distinguished in any way except by its damage. Positive evidence that some form life causes the warts, however is yet lacking.

Warts from the hides of slaughtered cattle were finely ground with salt solution, and applied to the scratched skin surfaces of calves. In some cases the solutions were injected into the skin with a hypodermic needle. Nearly three out of four calves thus treated contracted warts.

One large slaughter house has estimated that 15 to 25 per cent of the cattle coming through its ahattoir at certain seasons have warty hides. Each wart means a hole in the leather. The yearly loss because of warty hides is of considerable importance to the leather industry. Large, pendulous warts on calves often sap their strength and interfere with their growth.

OLDEST BALE OF COTTON, RAISED IN OKTIBBEHA, IS NOW IN ST. LOUIS

Starkville Miss., Aug. 16.—The oldest bale of cotton raised in Oktibbeha County is in the possession of a cotton firm in St. Louis who have it encased in glass because it is the oldest bale of cotton in existence and was raised by a Oktibbeha County citizen with slave labor on his plantation.

The history of the bale is unique:

Just previous to the outbreak of the Civil War, John Peden, a rather eccentric farmer, resided in the northern part of the county. He owned a large body of slaves who cultivated the fields most of which was cotton. In 1860 Mr. Peden had a disagreeable experience as he termed it in lending money and as a result of the unpleasant transaction he declared his intention not to hoard any more of the filthy lucre and planned to have no money on hand when his pseudo friends came to borrow.

Following that declaration he sold only such of his crop of cotton as was necessary to buy his yearly supplies and to meet his incidental expenses, the balance of his crop was stored on his long and spacious front porch which, with the passing of years, was filled with the exception of a narrow entrance to the doorway.

The cotton was sold off by degrees, the last of it being disposed of in 1889 or 1890. The first National Bank came into possession of six bales of this same cotton which was placed on exhibition at Memphis in 1890.

In 1893 it was sent to the World's Fair at Chicago and in 1904 to the World's Fair at St. Louis. During the two last expositions four of the six bales were divided and packed into miniature bales and sold as souvenirs. The bale was then purchased from Mr. Dugan by St. Louis cotton firm. Not long ago it was observed by several people from Clay and Oktibbeha counties.

Doubtless many Starkville citizens remember seeing the cotton at the exhibitions and it is said that several of the miniature bales are still preserved in Starkville homes. —Memphis Appeal.

ONE GEORGIA FARMER WHO RAISES OWN FOOD—NOT IN DEBT.

Hiram, Ga., July 19.—When a farmer lives at home having never purchased in his whole career a pound of meat, a bushel of corn, a bushel of potatoes, or a gallon of syrup, it can well be understood that he is out of debt. Such a person is Josiah E. Stanley, who lives on a 600-acre farm eight miles southwest of Milam, Georgia.

At a Stanley reunion at his home, 150 persons being present, Mr. Stanley furnished a home-grown dinner-from soup to nuts—that would have delighted the appetite of any epicurean. J. Cecil Stanley, of East Point, Ga., was master of ceremonies at the reunion, which was informal and very enjoyable. Among those who were present from this section, in addition to J. Cecil Stanley and family, were Mr. and Mrs. H. P. Brotherton, Hal M. Stanley, Vivian L. Stanley and Stanley McCalman and family, of Buchanan.

Mr. Stanley, the host, is a son of James I. C. Stanley, of Laurens county; a grandson of James Stanley, who moved to Laurens county from North Carolina in 1810.

SCIENTISTS REVIVING VARIED USES OF HONEY

Ancient literature, telling of the adaptations of honey to suit the varying tastes and needs of past centuries, provides clues which scientists are now following to revive old uses and to develop the present possibilities of the product.

The early Romans in their writings often mentioned the honey-bee and honey. Among the products they mentioned frequently are water honey, salt-water honey, water mead, rose honey, honey foam, and honey vinegar.

The United States Department of Agriculture is studying the chemical properties from honey and methods of inducing chemical changes in it that will open the field for new honey products. Specialists are perfecting methods of making honey candy, and some manufacturers already have secret processes for making this confection. Many housekeepers now use honey to sweeten beverages, cereals, and cakes, and generally in cooking. It is also used as a sirup on waffles and hot cakes. Eminent physicians proclaim that honey contains the most beneficial of the sugars.

PECAN GROWERS COULD EXPAND THEIR MARKET

Although pecan growers produce annually about 12,000,000 pounds of improved varictics, a recent survey by the United States Department of Agriculture ,indicates possihilities for further expanding the market to take care of expected increases in production in the near futnre. In addition to the 12,000,000 pounds of improved varieties which are sold unshelled to the consumer, there are about 38,000,000 pounds of seedling varieties produced annually and shelled commercially.

Most of the improved varieties of pecans are produced in the Southern States east of the Mississippi River. Only a limited quantity of pecans are importeu from Mexico, and there are practically no exports.

The survey shows an average per capita consumption of pecans (unshelled basis) of less than one-third of a pound per year. Probahly less than 5 per cent of the nuts eaten in the United States are pecans, although the pecan is recognized for its high quality.

There are several reasons for this situation, the study showed. The pecan has been considered a luxury nut. Prices for unshelled pecans have heen higher than for other nuts. It is estimated that about one-half of the grocery stores in the area surveyed carried unshelled pecans. Practically no advertising effort has been made to introduce the marketing and distribution of pecans has not been highly centralized as in the case of certain other nuts. Dealers interviewed were of the opinion that better grading by growers and shippers would stimulate trade.

According to J. W. Park, economist of the Bureau of Agricultural Economics, the pecan is little known in many of the smaller towns and villages in the North and in the poorer sections of many cities. Many stores carry the pecan in stock only during the holiday season.

The price of improved varieties of pccans at shipping points in 1928 averaged about 31 cents a pound. The nuts retailed at 47 to 50 cents per pound on the average, but same seedling pecans were retailed for about 24 cents a pound and the superior Schley variety sold frequently for 79 cents a pound. Although crops of improved varieties of pecans have fluctuated more than 100 per cent in poundage from year to year, prices have fluctnated little.

NEGRO PROGRESS IN LITERATURE SEEN BY EDITOR

Dr. Brawley Traces Growth in America From Days of Jupiter Hammon.

Special to the Christian Science Monitor.

Atlanta, Ga.—The Negro's contribution to American literature is characterized as one of "progress in assured achievement" by Benjamin Brawley, Negro writer and editor of an educational monthly published in Raleigh, N. C.

Dr. Brawley sees the future of Negro literature as one full of hope. "Until recently," he said, "it was supposed that the first Negro writer in America was Phillis Wheatley, who published a volume of poems about the time of the Revolution. It now appears however, that her first published work was antedated some years by the poems of Jupiter Hammon, of Long Island. About 1830 came George Moses Horton, janitor at the University of North Carolina and author of a book of poems entitled "The Hope of Liberty.'

"A little later appeared James Madison Bell, who was associated with John Brown, and just after the war between the states Whitman attempted some ambitious poetical work and manifested real ability. It remained for Paul Laurence Dunbar, however, to win national recognition for the race by his poems, short stories, and novels. About the same time, Charles W. Chesnutt's novels began to appear, and were followed in 1903 by Dr. W. E. B. DuBois's remarkable book, 'The Souls of Black Folk.'

"Then came critical work of William Stanley Braithwaite, while today the center of interest is held by a number of authors who have done exceptional work. Notable among these are James Weldon Johnson, poet and magazine writer; Georgia Douglas Johnson, author of three volumes of poignant verse; Alain Locke, essayist and author of 'The New Negro'; Clande McKay and Countee Cullen, internationally known poets, and Walter White, novelist.

"Within the last decade, the Negro theme has also greatly influenced southern literature in general, as evidenced hy the work of Du Bose Heyward, Mrs. Julia Peterkin, Roark Bradford and others."

MISSISSIPPI FARMERS SAVE BY CO-OPERATIVE MARKETING.

(From The Chicago Defender)

The National Federation of Colored Farmers, with headquarters in the Vincennes hotel, reports that 500 farmers in Holmes county, Mississippi, have made the first purchase of a carload of groceries and supplies co-operatively through the federation. The farmers, by wholesale buying, saved 42 per cent on the cost. The order was filled by a large wholesale house and the contents of the railroad car invoiced $1,093. This is the first time that our farmers have bought supplies and household goods co-operatively.

Representatives from 50 units of the federation in Mississippi will attend the first annual state convention of the organization on Aug. 13 and 14 at Howard. Members of the organization will be present also from Arkansas, Alabama and Tennessee. The principal address will be delivered by B. A. Green, mayor of Mound Bayou. The latest agricultural impliments will be displayed and demonstrated. Motion pictures showing the latest methods of farming will be shown.

A report from the Dooley county unit in Georgia states that the farmers on July 14 began to co-operatively ship watermelons North. Several carloads will be shipped to Chicago buyers. The Colored Merchants association chain stores in New York City are negotiating to purchase several cars of melons.

A bulletin from Mt. Olive Church, Mississippi, says 20 farms, members of a unit, purchased 56 tons of nitrate of sodia co-operatively and saved $10 on a ton. Cornelius Richardson near Lexington, Miss., has 150 acres of fine cotton, which will yield him 120 hales this fall. Sol High of Madison county, owner of 600 acres has 200 of the acres in sweet potatoes.

A retired farmer in Alabama in a letter to headquarters states that a member of his family is a member of the federation and is being urged by a county farm demonstrator of his Race to become a member of the white farm bureau. The white organization maintains a "Jim Crow" branch for our farmers, who are not permitted to attend the meetings or benefit by the lectures.

"There demonstrators are saying things to harm the federation and its members. While farmers and merchants are being aroused by organization of our farmers for their advancement and thrift. These agents are telling the farmers that their only salvation is to get in with the white farm bureau and let the white county agents handle their affairs," the letter stated.

"The agents are offering a small life insurance policy issued by the bureau to our farmers who will join. The policies are written by a white company. My son-in-law will not join the "Jim Crow" organization since he is well pleased with the 48 per cent savings on his purchases through our federation," the retired farmer declared.

MISSISSIPPI FARMS SOLD TO CHICAGOANS

54,000 Acres Involved In Record Deal

In one of the season's largest land deals, 54,000 acres of rich farming iand in southern Mississippi was purchased last week by a Chicago syndicate headed by S. D. Boling, of Aurora, Ill.

The property is in the neighborhood of Hattiesburg, in Wayne Green, Perry and Jones counties, Miss. The transaction was a straight sale and the price was not disclosed, according to A. C Symmes, of New Orleans, who represented Mitchell Brothers of Chicago agents in the deal. There was no element of trade and the price paid, at market prices would easily exceed $2,500,000.

The acreage was purchased by the syndicate with the purpose of reselling at retail to farmers and investors throughout the middle west who are being attracted to the Delta in increasing numbers, according to Mr. Symmes. Oil development is also one of the factors.

Bousloy & Co., of Gulfport, assisted in handling the transaction.

Editor's Note —Brother Colored Farmer, the time for you to purchase Delta land is right now. Do not let an opportunity pass.

DELTA LANDS TO BE SOLD

Albert D. Moore & Company Prepare for Fall Sale.

Albert D. Moore & Company, which has been operating in Mississippi delta farm lands for the past 26 years, with offices here and at Cleveland, Miss., is preparing for an extensive sale campaign there this fall. The company will sub-divide six large plantations, totaling 10,000 acres.

The land located in Bolivar, Sunflower, Yazoo and Humphreys counties, will be divided into sections of 40, 80, 120 and 160 acres. Every plot has a house on it and most of it is nnder cultivation. The land will sell for approximately $70 an acre. It is limited to white buyers.

The property inclndes some of the finest lands in the delta. The cotton crop there is exceptionally good, considering the dronth, according to Mr. Moore. He thinks that it will produce about two-thirds of an average crop.
—Memphis Appeal, Aug 17.

Editor's Note— Negro farmers should buy every acre of Delta land they can. The price is not going to fall. It is going up. The time is coming when this land will be hard to get and you will be lucky if you are able to live on it, —much less own it. The tenant system is doomed. No progressive Negro should want to live and die a tenant farmer anyway.

SELF-SUPPORTING SOCKS LATEST IN THINGS FOR MEN

Male socks, after a state existence of centuries without improvement, have now been put in the class which the modern woman is trying to attain. Hereafter, socks will be self-supporting, according to word received by merchants.

The sock of the new era carries its own means of support, made right into the top edge. This is a band of new type of rubber, half an inch wide, with no seams. Once the sock is pulled on its holds itself up, come what may. A leading hosiery company, which offers mankind this boon, assures the public that the supporting device will stand washing, wearing, stretching and rubbing and still outlast the sock which it supports . Ten years of testing and developing is back of this assertion. To be sure of getting correct sizes, the company has been measuring thousands upon thousands of calves.

FARM INCOME VALUE HIGH, REALTORS TOLD

The average farm intelligently operated is a money making business today. This was the general consensus of opinion in an informal discussion on the part of the executive committee of the farm lands division, National Association of Real Estate Boards Harvey Rathbone, Lincoln, Nebraska, chairman of the division, who presided at the recent Chicago meeting, declared that farm lands in Iowa, Nebraska and Kansas can now be purchased for about 50 per cent of their value, if one bases the value of those lands on their potential earning power for the owner Mr. Rathbone expressed his conviction that the one panacea which may be with certainty regarded as a cure-all for farm ills is intelligent farming. He pointed to the many examples of farms, not previously showing satisfactory income returns, which, when put under the direction of a competent, professional farm manager, had become profitable enterprises, adding that such experiences clearly indicate the value of and need for this professional service whose employment he predicted is to broaden rapidly in the next few years.

VALUABLE OIL RECOVERED FROM WASTE CHERRY PITS

In their quest for waste farm products which may be utilized commercially, chemists of the United States Department of Agriculture have recently completed a study of the properties of cherry-kernel oil. Their findings justify the belief that this oil would find ready use if it were produced in large enough quantities.

In many respects cherry-kernel oil is similar to that from almond, apricot, and peach kernels, according to C. S. Jamieson and S. I. Gertler. The results of their investigations indicate that it should prove useful as a high-grade salad oil, and suitable for use in the manufacture of various cosmetics, and for some pharmaceutical preparations. Limited qualities have been used for such purposes and have given good results.

It is estimated that more than 100,000,000 pounds of sour cherries are canned every year in Michigan, New York, and Wisconsin. The pits, which amount to 12 to 15 per cent of the fruit, contain about 28 per cent kernel and 72 per cent shell. The oil content of the kernels ranges from about 32 to 40 per cent. If all the pits separated at the canning plants were utilized for oil, the annual production would amount to more than 4,000,000 pounds.

Studies hy the department in 1915 demonstrated the possibility of extracting oil from cherry pits, but no attempt was made to do this on a commercial scale until 1926. Last year the commercial production amounted to about 68,000 pounds.

FIND WHITE MAN GUILTY IN DEATH OF NEGRO IN DIXIE

Atlanta, Ga., July 28.—(Special.) T. L. Martin, first of seven white defendants to stand trial for the murder of Dennis Hubert, Negro college student, today was sentenced to 12 to 15 years for voluntary manslaughter.

The jury in Martin's case returned its sealed verdict before Judge R. Earley Camp of Dublin.

Declaring law and order is the fundamental principle of civilization, Judge Camp declared.

"As a native Georgian, I will insist upon full justice being done to members of both races," he said. "It is only the degenerate type of citizen that will promote race prejudice."

Atlanta Const.

EGYPTIAN ONIONS

Egypt imported into this country during the five year period from 1925 to 1929 inclusive over five hundred thousand bushels onions each year. This business, has steadily grown, for records show that in the five year period, 1909 to 1913 inclusive, the imports averaged but one hundred thousand bushels

The varieties that are most popnlar in this country are the "Saidi" and the "Beheiri." The former is grown almost exclusively in northern Egypt while the latter is grown in the southern half of that country. Onions are harvested in Egypt in March and April shipments begin to the United States during March, April, May, and June.

The "Saidi" onion is yellowish or reddish brown in color and is tough, pungent and strong. It will stand shipping, and is noted for its uniformity of size and color.

The "Beheri" is a poor keeper and is used principally for home consumption.

WESTERN FAMERS WORKING FARMS BY MOONLIGHT

During the hot wave in the states of Kansas and Nebraska farmers worked their farms at night and slept during the day.

During the first and last quarters of the moon they accomplished the same results as that of day work.

Working out in the sun during excessive heat periods causes profuce sweating. This, of course absorbs a great part of the salt content of the body, which often causes cramps. This can be overcome by adding a little salt to the drinking water.

PROPER MANAGEMENT PAYS PEACH GROWERS

Roane County peach growers who followed a strict plan of caring for and handling their trees and land, harvested a crop of extra fine fruit this season, states county agent H. H. Lawley.

These orchardmen followed strict clean-up work just after the harvest last summer, then gassed their trees for borers and followed with fall plowing. Pruning and the the burning of all prunings was carried ont on a rigid plan during the winter.

One of the finest demonstrations of propeer orchard handling and care was carried out by Stegall and Evans. James Newhouse owned and handled an adjoining orchard and did not follow clean-up work, gassing for borers, plowing and fertilizing nor proper pruning and spraying with the result that Stegall and Evans harvested approximately 6,000 bushels of preaches while Newhouse did not harvest more than 100 bushels.

GOOD CABBAGE CROP

Production of cabbage in 14 states will run about 165,000 tons, about 2 per cent more than last year.

The crop of domestic cabbage in 10 late states will run about 285 thonsand tons compared with 252,000 tons last season.

New York will produce this year nearly one hundred thousand tons while Wisconsin's crop will easily go 80,000 tons.

WHEN IN CHICAGO STOP AT AMERICA'S LARGEST NEGRO HOTEL—VINCENNES

VINCENNES HOTEL—Chicago, Illinois, located at 36th Street and Vincennes Ave. The most modern and up-to-date Hotel owned and operated by Negroes in America. Mrs. E. Barnett-Lewis, is Proprietress. Write for Prices and Rates.

COFFEE UNION AND COMMON SENSE

(Continued from Page 4)

drouth has injured the crop,—cotton prices are way down to the bottom,—they were already heavily in debt and now the banks are tightening up on them. The only way they can offset the low price of cotton is by buying their groceries and supplies as cheaply as they can. The white farmers of Mississippi are ordering their feed and hay in carlots. Yet some of them have nerve enough to kick because a few Negro farmers are ordering their groceries co-operatively.

The N. F. C. F. intends to keep right on helping its members save all they can on what they have to buy and helping them get all they can for what they have to sell. YOUR ORGANIZATION will do as much for you as the white organizations do for their members if you will support it. So get into it. Pay your dues as quickly as you can and help it live and grow. Get your neighbors into it. Meet your Units regularly. Write your National office for information and advice. Imitate the members of the white Farmers Union. Give the N. F. C. F. what you can and should give it and expect to get from it the assistance it offers.

Please do a little work for the MODERN FARMER this month. Show the paper to your friends. Send in a few subscriptions. Be a subscriber—not a parasite. It costs a lot of money to publish a farm paper. The MODERN FARMER IS YOUR PAPER. Help us bear the burden.

Agriculture is coming back! Our race would be better off if more of us would come back with it and to it.

Keep peace at home and vote for the best interests of your Unit. Elect your best members officers and back them up. Meet often so you will know what is going on. Half of co-operation is knowledge—knowing—keeping informed.

Get your neighbors and friends to join your Unit. More members mean more and better co-operation. Go after them like you would go after them to join the church. Co-operation is pretty good Christianity anyway.

Farming is your main business—not a side-line. Your Unit is your "business club." Meet and plan together how you may improve your business. All good business men do this. It pays.

The main thing today is to get colored farmers to organize. Organize! Get yourself in shape so others can work with you and help you. That's co-operation.

American farmers will soon have absolute control of the selling of their products. They will sell through cooperative organizations. Join your own organization—the National Federation of Colored Farmers.

WHAT THEY THINK OF OUR ORGANIZATION

(Continued from Page 5)

"onions," and we just must use them again next year. The cars were parked in a very systematic manner. There was absolutely no confusion.

The old but reliable Jones Chapel unit from Honey Island headed by A. R. B. Payne, Welton Jones, Rev. Johnson and Rev. Jackson and their efficient Secretary, Mrs. Joiner, was there in large numbers. Brother Mat Fields actually wore out two pencils writing members who subscribed for the Modern Farmer.

That Prince of good fellows, Simeon Coleman, to whom much credit is due for the selection of the meat, did more than his part. Simeon has always been loyal to the Federation, and is one of the first farmers in Miss. to become a member.

The Market Agents who handled the purchasing for the convention were certainly on the job and the conservative manner in which they made their purchases reflects great credit upon their ability as good business men. This is proof conclusive that we are capable of handling our own business.

Rev. C. H. Kelly was there from Arkansas and preached a most interesting sermon. Rev. Kelly is doing good work for the Federation in Arkansas.

Mr. J. A. Elom of Yazoo Mt. Zion Unit, was a Chicago visitor to the Baptist Convention in August. He and his younger son were guests of our President, James P. Davis at a dinner at the Vincennes Hotel.

The Postmaster of Mound Bayon attended the convention. We think he was a bit frightened at so many bald heads.

Messrs C. C. Richardson and W. Moore say handling a convention is more difficult than farming, but they did their part well and the blue ribbon goes to them without a kick. Trinity—Mt. Zion members stood squarely behind them to a man.

Mount Olive has taken on new life. The boys are all active and the meetings are well attended, and for the last four meetings new members have come forward and they will soon have a real big unit.

Boll Weevil Jackson, the champion cotton-picker of the United States, attended the convention the first day. Jackson says he never saw so many farmers at one place before. The reporter for the Modern Farmer told him "you ain't seen nuthin, just wait until our Convention next year."

The sermon preached by Rev. J. W. Hare, Presiding Elder of the Jackson District was appreciated by the large assemblage. Rev. Hare is one of the best preachers in Mississippi. He is a great leader and the A. M. E. church will be fortunate when he is elevated to the bishopric.

The Convention was glad to welcome Mrs. E. P. Booze of Mound Bayou. Mrs. Booze made an interesting talk. She was at home among the farmers.

Mrs. Leon R. Harris, wife of the National Secretary, was a Mississippi visitor for the first time. The blood of Mississippi flows through her veins however, for her mother was a native of Corinth. Mrs. Harris was so well pleased that she is already planning to attend next year's convention.

PRESIDENT HOOVER GETS LARGEST MELON

Mr. E. T. Clements of Sandersville, Georgia, has produced what is said to be the largest watermelon ever grown in the United States. The melon weighed exactly one hundred and twenty-eight pounds and was sent to President Hoover by Mr. Clements.

COUNTY AGENTS HELPING FARMERS SECURE FEED

CARLOT ORDERS BEING POOLED IN DROUTH AREAS FOR DELIVERY AT REDUCED FREIGHT RATES

County agricultural agents in the 41 counties of the state hit hardest by the drouth are rendering farmers a real service by assisting them in pooling carlot orders of feeds and hay.

By pooling their orders for carlot shipments farmers in the drouth stricken areas are able to buy necessary feeds such as cottonseed meal, hays, grain, etc., at the cheapest possible cost and secure delivery at a 50 per cent reduction in freight rates, states C. E. Brehm, assistant director of the U. T. Agricultural extension service.

All shipments of feed into the drouth areas must be approved by county agents to secure the reduced freight rate. The rate does not apply to the movement of hay and feed in the normal channels of trade but only to farmers direct. In counties without agents the director of extension work in each state has been authorized to appoint someone to approve certificates for reduced rates on feeds. The reduced rates also apply to movements of livestock to locations of feed and pasture but not to market.

Orders for feeds pooled by county agents are being placed with the Cooperative Supplies Association of the Tennessee Farm Bureau which will make purchases in large volume with the cooperation of the division of markets of ture. The divisions of markets is keeping in close touch with prices of various hays and feeds, placed where they can be bought the cheapest and cost of delivery in the state.

"One of the great purposes of the agricultural extension service of the University of Tennessee is to help farmers in just such emergencies," states Mr. Brehm. "Farmers in drouth stricken counties are thinking now about their needs in the way of feeds for their livestock for the coming winter and we are going to help them in every way we can with the cooperation of the Farm Bureau and the State Department of Agriculture to fill these needs at the lowest possible cost."

Farmers who need feeds and hay are advised to consult their county agents at once.

SOME IMPROVEMENT SEEN IN OUTLOOK FOR BEEF CATTLE

Economic conditions in the cattle industry are likely to improve in the next twelve months, according to the beef-cattle outlook report issued by the Bureau of Agricultural economics, U. S. Department of Agriculture.

"Market supplies of cattle in the next five or six months," says the bureau, "probably will be about the same as a year ago. But supplies of feed cattle during the first half of 1931 are expected to be smaller than in 1930. Demand for stockers and feeders this fall will not equal that of last year, and for that reason Slaughter is likely to be somewhat greater."

Consumer demand for beef probably will improve somewhat in the next six months with the advent of cooler weather, especially if there is an improvement in industrial activity. Cattle production has expanded moderately since the low point in numbers was reached in 1928. Reduced demand for beef owing to unfavorable business conditions, together with a declining price level for all commodities, has caused a marked decline in cattle prices in the year just past but prospects favor a material advance in prices in the next 12 months.

"Although feed crops have been reduced somewhat by drought, the areas affected and the numbers and distribution of livestock are such that, barring further material crop damage, there seems to be no justification for any extensive liquidation of livestock. In previous years of short corn crops and declining cattle prices there has been a pronounced tendency for cattle feeders to curtail feeding operations. This resulted in smaller supplies of fed cattle—particularly long-fed, well-finished cattle—coming on the market the following year, and this in turn caused a marked advance in the prices for such cattle. The movements of cattle prices after the harvesting of a short corn crop were especially favorable for well-finished cattle marketed in the late fall after the harvest and in the following summer, and for the lower grades marketed in the spring.

FARMERS ADVISED NOT TO SEEK JOBS IN CITIES

BUSINESS DEPRESSION HAS CREATED SURPLUS OF LABOR AND MUCH UNEMPLOYMENT IN BIG TOWNS

It has long been the custom for laborers, at the close of the growing season, to seek work in the cities. This year, as the result of the drouth, many small farm owners, men with families, will no doubt seek away from their farms, in the cities also. This will be a sad mistake, states Charles A Keffer, director of the U. T. Agricultural extension service.

There is a surplus of labor in the cities of Tennessee. The business depression of the past year has caused employers to lay off a good many workmen and to put their working forces on part time. Every city has thus a surplus of labor, a large number of jobless men who must be taken care of and the cities should first employ their own idle workers.

Men coming to town from the farms only add to the burden of unemployment. Small farm owners and tenants who have won the confidence of their landlords, can it least be assured of a living on their farms. In the cities many of them would find themselves objects of charity. Such workers, with a roof to shelter them on the farm and an occasional day's work in the neighborhood, will be much better off, and their families will be better provided for than could be possible in urban places with the unemployment problem already acute.

HOOKS CATFISH 6 1-2 FT. LONG; SHEDD AQUARIUM TO GET IT

Marque, La.,—(Special)—A catfish six and a half feet long was caught with hook and line in the Mississippi by Eldon Saeugling, manager of the United States bureau of fisheries station here. Saeugling got the fish into the skif from which he was fishing by forcing his arm down its throat. Arrangements have been made to ship the big fellow to Chicago to Shedd aquarium.

TRAIN LOAD OF CORN STALKS WERE SHIPPED

TURNED INTO INSULATING BOARD FOR CHICAGO

WORLD'S FAIR BUILDINGS TO CONTAIN WHAT FARMERS THOUGHT WERE WORTHLESS

A solid train load of corn stalks purchased from mid-west farmers in the corn belt has been purchased and will be used in the manufacture of roof insulation on the Administration and Travel buildings of the World's Fair.

The roof of the Travel and Transport building has a spread of five acres, which will be covered with an inch thick blanket of boards made from corn-stalks.

It is estimated that one hundred and fifty million tons of corn-stalks are produced in the United States every year.

If one hundred million tons are used for the manufacture of insulating boards the corn farmers would receive an additional income of several million dollars per year.

It is said that an acre of corn will produce one and one-half tons of stalks.

There is a board factory in Dubque Iowa, that is now in operation, turning out thousands of tons insultaing board daily. The board is 1 inch thick.

JUST WHAT WAS PREDICTED BY THE FARMER

For the past year or more we have been predicting that farmers would be forced to organize and then do business in direct dealing, in order to save themselves from further losses. We are giving herewith a statement that was issued by Hon. James C. Stone, Vice Chairman of The Federal Farm Board in Washington, D. C., a few days ago.

SEES BUYERS, PRODUCERS, IN DIRECT DEALING

WASHINGTON, Sept. 18,—The Federal Farm Board today made an indirect onslaught against the middle man as a function in the present marketing system of the nation, Vice Chairman Stone declaring that the present trend is toward an eventual direct dealing between co-operatives of buyers and producers.

The system would entail a close organization of producers on the one hand and a similar organization of the consuming public on the other, the producers selling direct to the consuming group and the latter distributing the wholesale purchases among themselves.

(Continued on Page 3)

COTTON GROWER OBTAINS ONE HUNDRED TWO BALES FROM ONE HUNDRED ACRES

VALDOSTA, Ga., Sept. 13,—J. P. Biles, Lowndes county's second master farmer. He has consistently continued to plant cotton, seldom employing poison in his work, but otherwise fighting the boll weevil, and his record as a cotton producer has not suffered.

Mr. Biles plants 100 acres in cotton annually, and always makes a good crop with a fine yield, and this year will average more than one bale to the acre.

Already 86 bales have been picked and ginned from the Biles farm, near Valdosta, and according to conservative estimates made by experienced farmers, there are yet as many as 16 bales of cotton to be gathered from the 100 acres. This will give Mr. Biles 102 bales for the season.

Mr. Biles has an average acreage in other farm crops, including peanuts, corn and grains and hogs. He makes more than enough meat and feedstuff to operate his farm, having a surplus to sell rather than having to buy.

His home is one of the most attractive in the country, having every convenience that a city home possesses, including electric lights,

SECRETARY HYDE URGES ORGANIZATION

NOV 12 1930

HEAD OF AGRICULTURE SUGGESTIONS TO ALL NATIONS

HIS ADDRESS AT OPENING OF FIRST INTER-AMERICAN CONFERENCE COMMENDED

Secretary of Agriculture, Hon. Arthur M. Hyde in an address at the opening of the first inter-American Congress on agriculture, forestry and animal urged the nations of the world to form a world-wide farmer's cooperative organization. Delegates from nearly all of the 21 North and South American republics were present at the conference. Secretary Hyde said the new objective of the farmers of all lands, is to reduce the costs of producion, and at the same time regulate its volume and adjust the total output to the needs of the market.

Secretary Hyde further said a technical revolution is taking place in agriculture, with the result that the increased crop yields is not so important as elimination of the twin evils of over-production and low prices.

Negro farmers who are not in organizations should get busy and form a unit of the National Federation of Colored Farmers, which is their monthpiece.

FRUIT TREES BEARING SIXTEEN DIFFERENT VARIETIES

California is the home state of the late Luther Burbank.

This year in Oakland, on the farm of Mr. M. W. McMillan is a plum tree that was budded with peach, prune, apricot and almond grafts. There are sixteen varieties of fruit on the tree this year and the tree bears fruit and has produced blooms the entire summer.

BIG GRAPE CROP THIS YEAR

The crop estimate bulletin issued by the Department of Agriculture Bureau of Economics shows that the grape crop this year will run about 2,334,762 tons. This is about 240,000 tons more than last year's yield.

There is nothing more appetizing and nutritious than grape juice. It requires but very little time to make it, and besides very inexpensive, yet costly when one is forced to buy it from a store. At soda founts it is ten cents for a

(Continued on Page 2)

THE 1930 COTTON CROP OF NEGRO FARMERS

They Will Have 5,700,000 Bales Valued at $325,000,000

Estimates that indicate cotton production for this year is 14,340,000 bales, the Agricultural department also states that the loss from boll weevil activity would be less than any year since 1925.

Without crediting the drought with the decrease in estimated production the Department said weevil activity had been checked in the last month by relatively hot and dry weather.

"The present prospect is that loss from weevil will be less than in any year since all the states in the cotton belt proper have been infested with weevil except 1925,'" the report stated.

"It is an interesting fact that Negro farmers to a much greater degree than white farmers, in proportion to their numbers and the acreage in their farms, are occupied in the culture of cotton."

In recent years statistics have proven that the Negro farmers of the South cultivate more than one-half of the cotton acreage, producting two-fifths of the yield, and one-third of the value of the cotton crop of the United States. Of the estimated 14,340,000 bales Negro farmers will report more than 5,700,000 bales at a valuation of more than $325,000,000.

The Census Office reports ginning for the year's crop prior to September 1 were 1,878,253 running bales including 3,309 round bales as against 1,568,434 and 36,912 bales last year.

HOW CAN WE SELL IDEA OF COOPERATIVE BUSINESS TO THE RACE?

From Houston Informer

(An address delivered by J. M. Burr, editor of the Houston Sentinel, before the Business Men's Luncheon Club.)

"The idea of cooperative business, that is buying and selling, had its origin in England. The peasant class in England, or rather the working class, consisting mostly of weavers (for that was the leading occupation of the people of that time and day), after many years of toil and suffering decided to make an experiment to better their own condition. The first step towards this betterment was that of self-sacrifice They agreed to lay aside from their weekly earnings about four cents a week each until they had $140. Then they rented a ground flour room and after getting the necessary fixtures there was $70 left to purchase stock.

"It was with this capital stock that they embarked upon the sea of commerce December 21, 1884. The agreement was that they should sell only to members of the association. The charge for membership was $5, payable weekly. The purchaser was given, with each purchase, a tag of recognition which entitled him to share in the profits according to his buying power and the amount spent in the business.

"One of the peculiar things about this pioneer association, was that those serving as clerks served without pay. Another thing was that they bought the best goods and fixed a living price on them.

"The first commodities handled were such as any household might need and no shelf goods were permitted. After they had operated a few months the stock of goods was increased by adding tea and tobacco. Beginning with a capital stock of practically $70, at the end of the year the stock on hand was worth $905, with a weekly sales of $150.

"Thus from this beginning the present system of chain stores and cooperatives stores had their beginning and cooperative movement of the western world owes its birth to these pioneers. As crude as their efforts were they have left a heritage to the entire civilized world and a system which is threatening to envelope the entire world.

"And now you assign me to a subject which is meant to tell how the idea can be sold to our group. It were better that I tell you how it can not be sold to our group. With your indulgence, I will here point out some of the things which keep from selling the idea. Those of us who are best able to foster such movements are not willing to place ourselves upon the altar of sacrifice. There are those among us who are fully able to establish factories and other industries which would in a short while employ most of the boys and girls who are coming out of our schools.

"There are those fraternal organizations among us who brag about the amount of cash which they have in the bank. These things are beginning to become as sounding brass and a tinkling cymbal to the thinking Negroes. What we want is a group of men and women who are willing to place their bits upon the altar of sacrifice and make places for our boys and girls—men who will not be satisfied to hoard large fortunes for themselves and live in luxury and plenty while the race suffers for sane leadership of a profitable kind.

"Another great hinderance to our group when it comes to cooperative action is the lack of sympathy for the other fellow. The fellow with money must be willing to confer with the fellow who has less money and some brains. Put this money and brains together and make the conditions so that the two can work for the good of the race. I do not mean by this that you are to throw your money to the winds. I do not mean that you are to make unscrupulus investments. There are those among us who sit at this table with us now able to make contracts and agreements so binding that there need be no uneasiness. Brains and money, properly supervised can and will produce results. The field is ripe but the reapers are few.

"It is my hope that this organization back in England, be the beginning of a new day for our group. We hope that the day will come and that not far off when there will be cooperative action among our group for every activity. Gentlemen, it can be done."

HUGE TRACT CONVERTED INTO LIVE STOCK FARM

Bainbridge, Ga. — One of the old tracts of land here when bought in 1916 had only about a half dozen acres of its seven or eight thousand acres cleared and an old rock mill for grinding meal and hominy its main source of revenue, and that in the gradual improvements became a "public convenience at a private expense," according to its owner, Dr. A. E. B. Alford. o Dr. Alford has decided to convert it into a livestock farm of pedigreed stock.

The plantation, situated in the southwestern part of Decatur county and the northwestern part of Florida, has numerous springs and is traversed by streams of water that never go dry, making it a natural pasturage and ideal for a livestock farm. Already there are 250 acres free of stumps, in oats, that hundred of fine hogs and cows are roaming every day. And there are numerous imported sheep and goats, the latter of the Cashmere species, whose wools are a nice source of money every year at the Baltimore markets. All sorts of ducks and geese swim the streams, and a fishing pond is stocked with all kinds of fish. Fine turkeys, chickens, guineas and peacock's add a charming air to the background of windmills, silos and little white frame cottages of the tenants on this— Magnolia farm.

Swimming Pool

For pleasure there is a half-acre swimming pool, walled in and surrounded by magnificient trees and flowers. In the setting are enclosed 15 acres planted to all kinds of bulbs and plants adaptable to

(Continued on Page 3)

THE ONION

The most despised, yet loved, humbled yet proud vegetable is the onion.

Very few people enjoy raw onions. The Swedes are very fond of them. It is said that this is largely responsible for the beautiful complexion of the Swede.

The raw onion is very heavy in vitamins B and C.. These two vitamins are very necessary in the diet at all seasons of the year.

Cooking in a steam pressure cooker retains the maximum amount of the strong flavor. Onions are very appetizing when cooked in a rather large volume of rapidly boiling water in an open kettle.

A NEW GRAIN

Mr. Fred Groff of Britton Oklahoma a farmer has produced a new grain by crossing kaffir corn and ribbon cane. It has been named "grohoma." The new grain keeps green and will resist a drouth. The Department of Agriculture at Washington is now making an official study of grohoma.

SNAKE WITH 21 RATTLES KILLED IN GEORGIA

Mr. Henry White colored farmer near Juliette, Ga., killed a rattle snake with 21 rattles. Mr. White after killing the snake has skinned and stuffed the skin with bran.

GOING IN FOR "GREENS."

As the old American diet of salt pork, boiled potatoes and cornmeal (or bread) recedes into history, it seems that the nation is not, as one man, turning to pastry, lettuce sandwiches and soft drinks in its place. Despite the diatribes that have appeared against substitutes for the "filling" food of the America that is passing, there are signs of sanity expressed in terms of more fresh vegetables and milk, more vitamins and fewer calories. To be sure, dietitians are not agreed about the best normal diet but the tendency to eat more vegetables and fruits is healthy, says the New York Times.

The change has economic implications of such importance as to cause the Department of Agriculture to detail one of its experts to inquire into the extent to which the new diet is affecting farming. Dr. O. E. Baker, an authority on land utilization, reports that the World War marked the beginning of the new dietary — at least on a large scale— and that, since, the shipments of vegetables have increased about 140 per cent, whereas population has increased only 15 per cent. This does not include local marketing (mostly by trucks) or private kitchen gardens. But it does show that we now demand vegetables in a much larger proportion than before, and that, thanks to the developments in railroad refrigeration, we are obtaining them throughout the entire year in ever-increasing quantities.

It is not so long since lettuce was looked down upon by "red-blooded hemen" as fit only for finicky city folks. There was something a little unmanly in eating mayonnaise dressing. As for sandwiches, so long as the bread was cut about an inch thick and the "filling" was a good big slab of meat, they were socially admissible. Not so, however, the little fancy doo-dabs made out of thin slices of colored bread, cemented with a lettuce leaf and a hint of salad dressing.

Now, however, we are out-rabbating the rabbits. Where only 4,700 cars of lettuce were moved on the railways in 1916, no less than 51,504 cars were reported in 1928. Throughout the country truck farming is spreading—not only to produce the lettuce, but also spinach, peas, beans, lima bean, carrots, beets, corn and other vegetables, of which we are eating more and more, while consumption of the lowly "squd" remains about the same. Apparently, as the quantity of vegetables goes up, the proportion of cereals declines and the relative amount of meat eaten is somewhat smaller. Probably never before has the diet of a nation been thus changed in a decade, largely owing to the spread of information about what to eat and how to prepare it. The Dept. of Agriculture regards the change with paternal satisfaction, and predicts better health for the years to come.

CHICKENS-RICE PAY

DeValls, Bluff Ark. — Jimmie Hansen, a rice farmer, finds chickens a profitable sideline to rice growing as it furnishes a profitable means of disposal of the rice by-products. He recently sold 467 White Wyandotte cockerels far $334.7. The average weight was less than two pounds and the price was 37 cents making the average price per bird 75 cents. Forty cents of this was net profit. Mr. Hansen raised 892 baby chick out of 1000 hatched. A modern laying house and brooder house have recently been added to the poultry equipment on the Hansen farm for Mr. Hansen believes that profits in chickens are dependent on care given the flock.

FARMER DIES FROM WASP STING

Phillipio Bevilaggia while eating at his home in Saisan, California was stung on his tongue by a wasp, and in less than an hour he strangled to death because of his swollen tongue.

FRUIT FREEZING PLANT OPENS

New $100,000 Building of Tom Huston, Inc., Started Functioning on Thursday.

Montezuma, Ga.,—In the opening on July 10 in Montezuma of the Tom Huston Inc., a $100,000 plant, 60x200 feet for the preserving of fresh fruit and vegetables by a freezing process a record was made here for speed in construction work. The site was purchased for the plant on May 21; the work of removing a seven-room house began the following morning, and then the race with time was on.

When Tom Huston was convinced that he had found a process by which fresh fruits and vegetables could be made available for the American home throughout the entire year, and realizing the vast amount of these productes going to waste in the orchards and on the farms of Georgia, began to look about for a location for this plant, his eyes fell on Montezuma and Macon County, in the heart of the peach and asparagus belt of the South. Here was the ideal site, he said. And, as was stated by Fred A. Woleben, Manager of the research department of the Tom Huston Peanut Co., "As Huston had glorified the peanut, he could also glorify the peach and the fig and other southern fruits;" but it was here that the element of time loomed large on the horizon.

With the completion of this plant tree-ripened Georgia peaches will be prepared under what is known as the Tucker process -- a system of cooling introduced by W. R. Tucker, general agricultural agent of the Atlantic, Birmingham & Coast Railroad.

While it was established primarily for the handling of peaches, the Tom Huston, Inc. announces that in the plant experiments will be made in connection with other perishable crops grown in this section of which it is believed can be kept fresh indefinitely by the use of the dry ice process, and it is its purpose to utilize this plant to help solve the problem the farmers in this section. "Conservation" is the word most emphasized, however, for it is not purposed to encourage a larger and increased planting of peaches, but rather to find a stable and regular market for that surplus of the leading varieties grown in this section which sometimes fail to find profitable markets through the regular channels.

The establishing of this unique plant in Montezuma is destined to attract the attention of the whole produce marketing world. It is the result of a year's careful thought and co-operation between officials of the A., B. and C. Railroad and the business men of Montezuma, whose support has made possible the establishment of this new industry here and it is felt, on account of the unlimited possibilities with all kinds of fruits and vegetables, it will be the means of a renewal of hope and faith in farming and fruit growing.

TOMATOES FIT FOR A PRESIDENT

From The Rock Island Magazine

West Branch, Iowa, already famous as President Hoover's home town, is now gaining prestige as the center of a large tomato-growing section. The people of West Branch recently forwarded to the White House two baskets of choice tomatoes picked on the farm where Hoover lived as a boy forty-five years ago.

Following President Hoover's return to Washington from his Rapidan fishing camp where he spent his fifty-sixth birthday on August 10 last, and the announcement that he had abandoned his proposed vacation trip to the Rocky Moutains, there arrived at the White House two baskets of tomatoes from West Branch, Iowa, picked on the Minthorn farm, where Hoover lived as a boy forty-five years ago.

The task of picking these tomatoes was made an event in Hoover's home town on August 12, where the opening of the first tomato season there was celebrated in the presence of the towns-people and visitors from that section, including Congressman Letts. Under the direction of the West Branch Community Club, headed by W. B. Anderson a "Tomato Queen" in the person of Miss Callie Mae Bumgardner, was chosen, together with a retinue of twenty-one girls of that commuity, where one of the few remaining Quaker schools of the nation is still maintained.

"Queen" Picks Hoover Tomatoes

Dressed in overalls, the 'Queen" and her court marched to the farm for the picking, led by the West Branch band. Then the tomatoes were inspected by Mrs. Mollie Brown Carran, Hoover's former school teacher, and placed aboard a Rock Island train for shipment to Washington followed by a letter from the "Queen" to the President. The event attracted nation-wide attention through the press and the moving picture news weeklies.

The affair was in the nature of a public announcement that Hoover's boyhood farmer friends had launched into the business of raising tomatoes on a large scale, "out where the tall corn grows." In fact, West Branch tomatoes promise to add materially to the fame of Hoover's birthplace. Approximately 120 cars are being shipped from West Branch this season to the Heinz factories at Muscatine, where they are made into ketchup and chili sauce.. Overalls for the "Queen" and her retinue for the August festival were provided through the courtesy of the H. D. Lee Mercantile Company of Kansas City, Mo.

The pictures illustrate some of the scenes incident to West Branch's first Tomato Festival. The attendants shown in the picture with Miss Baumgardner, the "Tomato Queen," are: Helen Hutcheson, Helen Jensen Violet Stratton, Valborg Christensen, Dagne Jensen, Isabel Sayles, Margaret Clarke, Lillian Pemberton, Beulah Pemberton Evalyn Morris, Ruth Stratton, Emilie Corbin Kathryn Morris, Edna Pedersen Alice Gill, Amber Fairall, Hazel Stuart, Susette Browning, Opal Smith, Erma Jacobs and Bernadette Dean.

A New Industry

Back of the West Branch tomato festival is an interesting story of a new agricultural development in Iowa. Tests having shown that the soil around West Branch is suitable for tomato raising, a representative of the H. J. Heinz Company visited the farms in that section last winter and signed contracts guaranteeing the farmers $13.00 a ton for their ripe tomatoes delivered at the Rock Island team tracks at West Branch. To insure a uniform red variety of tomatoes suitable for ketchup and chili sauce, the Heinz Company donated the necessary seed from which the tomato plants were raised and set out on the farms.

The average tomato acreage per farm in this section is around seven acres. The average yield is better than 8 tons per acre, bringing an average revenue of over $700 a season to each farmer. About 200 acres were planted this year in the vicinity of West Branch.

Virtually all the revenue from the crop is net to the farmer, inas much as he performs his own labor. It is explained that if the farmer had to hire all his work done from the planting season through the harvest season his expense would average around $65 per acre. It further is explained that because of inability to secure the necessary outside labor during the harvest season the farmers of West Branch are compelled to limit their tomato acrage. An average of 5 cets per basket of 3 pounds usually is paid for picking where large acreages are planted.

In addition to West Branch, farmers in other localities in southeastern Iowa also have engaged in tomato raising. In fact a tomato field is almost as common a sight in that part of Iowa as is a corn field, and Iowa ketchup is now sold the world over.

Railways and Agriculture

The railway companies in the middle west have been prompt in going to the rescue of stock raisers in the drought-stricken districts. They responded without delay or quibble to the request that a low freight rate be granted temporarily and as an emergency measure to get hay to those areas where fodder is lacking and the stockmen must sell their cattle for beef if feed is not available at once.

The railways of the country are dependent upon agriculture, as one of our foremost industries, for much of their prosperity. They recognized the logic of granting special rates on wheat shipments a few months ago. The prosperity of the farmer is a business asset of first importance to them. The reverse is also true. Successful agriculture depends, along with other industries on adequate transportation service, such as can be expected from roads that are prospering. — (Chicago Evening Post.)

The real character of a man is found out by his amusements.—Sir Joshua Reynolds.

SERVES HALF A CITY

More than one-half of all the families in Helsingfors, the capital of Finland belong to the co-operatives society, Elanto, according to an American consular report. The description of this society's operations shows how working men may profit by organizing as consumers, as well as by organizing as producers in trade unions. With every fifth person within the area of its field of operation a number of this society, it is able to supply nearly all their needs. It his a membership of 40,000 and a business turnover of nearly $6,000,000 a year.

The Elanto Society owns and operates 230 stores carrying nearly every line of commodities, and its activities include restaurants and cafes, drapery, milk, groceries and butcher shops drug stores and savings funds. It also owns and operates two farms a mill, a large dairy, sausage factory, a brewery for non-alcoholic beer, mineral-water factory, a packing house and various other productive establishments. All this business has been built up by the Finnish co-operators within the last few years, for the society was only founded in 1905, commencing business with a bakery establishment and a membership of 19.

In its first year of operation, ending October 31, 1928, the Kanabec County Cooperative Oil Association, Mora, Minn., made sales to the amount of $5,134, with gross earnings of $14,542. Expenses amounted to $8,329, and various items on both sides of the account brought the net earnings to $5,135.

AFRICANS PRACTICE CO-OPERATION

The largest co-operative concern in the world is the Co-operative wholesale Society, Ltd., of Manchester, Eng. It has a membership of 3,750,000. It is the oldest co-operative in the world and maintains branches in nearly every country. A very successful branch of this society is operated at Freetown Sierra Leon, West Africa. This branch is manned solely by Negroes. The colored people of Africa are learning the principles of cooperation much faster than are their brethren of the United States and the West Indies.

FRUIT TREES BEARING

(Continued from Page 1)

very small glass and in stores it sells from 30 to 50 cents for an ordinary sized bottle. A four quart basket of grapes is now retailing for about 18 to 20 cents, and four quarts of grapes will easily turn out 8 pint bottles grape juce. Two pounds of sugar is all that is necessary to make 8 pint bottles.

There is also a heavy crop of wild grapes this year, and they make excellent jelly if directions for making regular jelly are followed out; using equal amounts of the juice and sugar. A cup of diced apples added to each quart of grapes will improve the texture of the jelly.

Gather these wild grapes and make them into jelly.

COTTON GROWERS

(Continued from Page 1.)

hot and cold water, and is located on one of the most desirable sites in the county. Recently Mr. Biles was nominated as a candidate for master farmer, and the results of the season's work on his farm will give him the official title with ample units to spare. Mr. Biles keeps well infomed on all new farm methods, experiments when he thinks a plan is worth trying, and by industry and intelligent efforts he makes farming a most profitable business.—Exchange.

WHAT IS COOPERATION?

By Wm. P. Hapgood in The Columbia Cauldron

There are two great commodity distributive movements in the United States of giant proportions, today —one just beginning but already of giant proportions, and growing with starling rapidity; the other much older, and of much slower growth, but giving increasing promise of great developments soon. I refer to Mergers and Cooperatives.

It is fascinating to study these two movements at present so radically different in their philosophies of life if I may be pardoned for saying that a movement has a "philosophy."

The chief idea of a Merger is concentration of power, the union of a number of smaller unites into a super-unit, and the direction of this tremendous combination by a comparatively few men almost infinitely removed from sympathetic and understanding contact with the hosts of workers under them. The social situation in such organizations is not different from that in political life under an autocratic government. The fact that the worker in such Mergers, and the public may own most of the stock does not make them any more democratic in reality than if the entire stock were held by the few who govern. Can any one seriously contend that the labor policies of General Motors or of Standard Brands will be in the slightest degree affected or ameliorated by their small stockholders regardless of their number?

As our industrial civilization grows what must become its chief objective if our democratic form of government is to endure? Is it not liberty and protection for the average worker and the smaller business enterprise? Is the right to vote for our political representatives of any real value if we cannot have a voice in making the rules of our factories and of our shops?

"If you own the things men must have you own the men who must have them."

Mergers represent the autocratic theory of life. They aim at inequality. What on the other hand is the cooperative ideal? It is exactly the opposite. Its fundamental aim is decentralization of power, the control by all its members of all its policies. It aims at equality.

The cooperative ideal has enthralled the minds of men for thousands of years. It has grown and waned from time to time, and from country to country. Its great difficulty has been caused by the inability of men to understand its significance, and to live according to its rules. Many use the word "cooperate" glibly, but without understanding its tremendous dynamic meaning. They think it means that if others cooperate with them, and go a little farther in generosity than they are prepared to go, it is sufficient if they reciprocate to a considerable extent. They do not understand that cooperation means to go as far as you have the strength to go, and to go first. The best definition of cooperation I know is the one Jesus spoke: "Do unto others as ye would have others do unto you." He did not suggest that we wait for others to lead the way. He told us to take the first step, and he implied that we should go on indefinitely.

Why has the world, and especially America been so doubtful of the power of cooperation? Because it has not understood it, and therefore has not followed its rules. Today interest in it has been revived. It is very significant that this revival of interest has been caused mainly by the tremendous development of the opposite theory of life— the concentration of power in large organizations and Mergers. This development is crushing hundreds of thousands of workers and small businesses. Until recently we have been very complaisant about it, but at last we have become aroused, or at least millions have I mean the farmers. They have become so aroused that they have forced a reluctant government to assist them, and there has followed the result most startling in a country where business philosophy to date has been competitive to the last degree, of a 500 million dollar government fund to help farmers' cooperatives.

Perhaps some day we may see the same assistance given other workers, and small businesses, but in the meantime such workers and small business enterprises must learn how to protect themselves.

One such movement among smaller enterprises has already been launched and it is now about to include in its cooperative undertaking wholesale grocers, retail grocers, manufacturers and canners — thousands altogether. This movement is called Red & White. Red & White under its old form of rather limited cooperation has had a steady growth, but I believe there has developed recently among its capable leaders a new vision of its tremendous possibilities, and a keen desire on their part to devote their lives to the cooperative ideal.

Red & White will become a tremendous influence upon American business life if its members understand that cooperation is not a business, it is a manner of living. Its emphasis is on giving and not on getting. Those who are in it only for material profit will retard it, and if they are numerous enough they will destroy it. Those whose chief interest in it is social will nourish it and develop it. A safer and better material life will come to all its members through it, but such material profit must goal.

NATIONAL FEDERATION TO AWARD VALUABLE PRIZES

(Special)

The National Federation of Colored Farmers and the Modern Farmer announce that valuable prizes will be given this year to members and subscribers for diligent efforts made to increase and improve the yield of various farm products and livestock. These prizes have been contributed by public-spirited corporations, manufacturers and individuals and will be distributed to the deserving next fall. Complete information will be given in our next issue. Join, subscribe and get in line for these prizes.

JUST WHAT WAS PREDICTED

(Continued from Page 1)

This is another warning to our farmers. Organize and buy your supplies togather. That is co-operative buying. Sell what you produce on the farm together. This is co-opeative selling.

OBJECTION TO SPINACH CAUSED BY BAD COOKING

The objection to eating spinach is taking serious form. The professional jokesmiths are flinging fun at it and that may drive this spledid vegetable from our tables. Small boys may rejoice at this result, but small boys have been known to rejoice when the school house has been destroyed by fire says the Boston Transcript.

Why spinach should fail to raise enthusiasm among gustatory critics is not difficult to understand. Perhaps if a modicum of trouble were taken in its preparation, spinach would find itself highly esteemed. To plunge it into a saucepan of water and to let it boil until it is soft renders it palatable enough to those who are in the habit of eating it plain, but for those whose palates have to be tickled, it is better to have it prepared with fried onions and— and not or —hard-boiled eggs. And the spinach should be thoroughly minced before being dished up and should be brought to the consistency of smashed potatoes. Then spinach is a delicious vegetable, agreeable to all, even to the small boy.

It shall be admitted here that there is sand in spinach. But the careful housewife and experienced cook easily removes it. It needs only three or four immersions in cold water. The ancients ate spinach, which is a native of Asia, and, so far as we know, the old Greek and Latin poets and prose writers gave off no splenetic remarks on its flavor. Indeed, all the cooks that have gone before have lauded it for its excellence— for its taste, appetizing character and its healthfulness. That spinach has tonic qualities, good for blood and bones, has long been admitted by physicians and perhaps that may account for the small boy's opposition to its presence at table.

HUGE TRACT CONVERTED INTO LIVE STOCK FARM

(Continued from Page 1)

wild growth. Two thousand mahogany trees were imported and planted there, but they, as well as some other imported things, did not thrive. But the imported grapes are proving very satisfactory, arbors of white malaga showing promise of plenty of fruit this year.

In reclaiming the mill that had served a large section of farmers for a century or more, Dr. Alford built in an ice plant and a little sawmill the two projects making possible refrigeration for his meats and ice for his hospital, as well as furnishing the countryside the same convenience at a minimum cost, and the mill cut the lumber from the forests for the houses and barns on the place, as well as giving neighbors likewise a convenience. With the four springs right by ample water power keeps this little industry within itself working like a charm throughout the months of every year. Fish at a moment's notice can be had at any time and from a trap in the middle of the fish pond soft-shall turtles afford the delicacy of turtle soup.

."Magnolia Garden."

This place, a shrine for every kind of bird and squirrel is, a "magnolia garden" in its natural setting of century-old magnolia trees and quantities of wild azaleas and mountain laurel in gorgeous bloom all along the winding stream that empties into the Chattahoochee river a few miles beyond. Dr. Alford is caring for the superb natural growth of all lands of hardwood trees with an intermingling of long-leaf pine, the honeysuckle, azaleas and mountain laurel, with a view to making it as attractive as possible. At a spring right by this path of delicate and inspiring beauty delicious water is drunk from nice old-fashioned gourds.

Altogether it is one of the most interesting and beautiful places in this section, and that Dr. Alford is going to make it a big livestock farm along with its cultural and esthetic beauty is of appreciative concern here, where the demand for meats is not nearly being met, and where flowers, as well, are fast becoming one of the chief projects of any farm or plantation.

—From Atlanta Constitution.

In two states alone, California and New Jersey, sixty thousand acres have been added for the raising of asparagus.

The consumption of lettuce has increased two hundred and fifty per cent since 1920. In the big cities where lettuce can be had the year round the consumption has increased two thousand five hundred per cent.

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT!

THE LAW

"It is hereby declared to be the policy of Congress to promote the effective merchandising of agricultural commodities by encouraging the organization of producers into effective association under their own control.

The Board is authorized and directed—to promote education in the principles and practices of cooperative marketing—to encourage the organization, improvement in methods, and development of effective cooperative associations." (Public—No. 10—71st Congress. Sec. 1-5.)

THE GOSPEL

"This law is predicated upon the ability of the farmer to manage his own business, once he is organized to do so. Cooperation is the key to it and only in exceptional cases can the Federal Farm Board have any dealings with a farmer who is not a member of a producer-owned and producer-controlled marketing unit." Hon. Saml R. McKelvie, Member, Federal Farm Board.

The National Federation of Colored Farmers believes that the Colored Farmers of America should own and control their own co-operative associations.

"Co-operation With All—Affiliation With None."

EDITORIALS

DIRECTED FARM COLONIES

We are in favor of a plan for directed colonies of colored farm owners in the South and we call upon all the great "leaders" who profess to be trying to do something for our racial group to get behind this proposition with us and let's put it over. The plan is to have the government purchase a large area of land, divide it, and sell it to industrious young colored farmers on long time payments. The government would assist farmers with log-term loans and would employ a director to supervise all farming activities

A similar plan has proven successful in Denmark, New Zealand and Australia. The best farmers in the country are those who own the land they cultivate and cultivate the land they own. The plan is based on this fact. Directed colonies of colored farmers would be successful. The plan would be a boon to many ambitious colored farmers who desire to own farms of their own and are willing to almost work their heads off to realize their ambition.

The southern tenant system is doomed. It is a rotten system anyway. It benefits neither planters, tenants nor the South. But we can't get rid of it until we find something to take its place. We believe the "directed colony plan" is the substitute we have been looking for.

The government owes the Negro of the South a heavy debt. The debt should be paid. It has done very well by the Indian but poorly by the Negro. No national administration or political party has fulfilled any promise made to the Negro during the past forty years. We recommend this plan to the present auministration, to our statesmen and politicians. If they want to do something for the race let them make this plan effective. We'll be willing to cancel part of the debt they owe us if they will just do this.

WE CAN'T AGREE WITH HIM

Writing to the Memphis Commercial-Appeal, former Gov. Patterson of Tennessee argues against a reduction in cotton acreage and asserts that most of our cotton is grown by Negro tenant labor and that this labor knows how to grow nothing else.

We can't agree with Gov. Patterson. In this year, 1930, Negro tenants are not such dumb-heads. The only Negro tenants who don't know how to grow anything but cotton are those who have lived all their lives on big plantations, the owners of which deny them the privilege of growing anything else. These tenants could be taught the work of planting and cultivating other crops in one season. We only wish something would happen that would enable them to obtain this knowledge.

There are thousands of Negro farm owners and tenants in the southern cotton belt who have made good practicing crop diversification. The idea that the Negro can grow nothing but cotton and cannot be taught to grow anything else is the old bunk idea that has kept the South and southern agriculture in bad the past fifty years. It is a twin brother to that other old bunk idea we hear expressed so often that the Negro is naturally lazy and shiftless. The only Negro tenants we know of who are dumb, lazy and shiftless are those who have been kept in ignorance and debt-slavery all their lives by those who do not want them to know or have anything and who have the power to prevent them from knowing or having anything. Some of these "Masters" are still in existence. We regret that they and their ante-bellum ideas are championed by intelligent men like Gov. Patterson. ....

THE T. P. AND W.—"TAKE PAINS AND WALK"

A poor Negro and a poor car is about the poorest combination we know anything about. We will admit that every family in the United States, colored or white, needs a car and should have one. But it is foolish for a man to go hungry and raggedy and keep his family in want just to feed and run an old second-hand car.

Better let the old cars go and put your hard-earned dollars into something that will do you some good for a longer time. Many of us have wasted enough money on an old no-good car to have paid for ten acres of land. Most of our fathers and mothers travelled on the T. P. and W. It might have been a slow road but they didn't have to spend very cent they made for their ticket. It will pay many of us to stay on that road too until we are able to do better.

THE SECOND HALF OF "OUR SLOGAN"

There are thousands of colored men out of work in cities and towns today who would be glad to get a start in the country. A return to the land is now in order. A back-to-the-farm movement should be started.

We are going to advise these farm-hungry prodigals to go back to the farms they left unless they have a good reason for doing so. None of them should go back to farms where they have been cheated out of their products and labor. None of them should make any kind of an agreement with a landlord who has a reputation of being a cheat and a hog.

Our advice to those who want to settle in the North or West is to work as a hired hand for a year or two and learn as much as possible. Hire out to a good dairyman, stockraiser or truck farmer and learn the game from the bottom. These farmers know how to manage a few acres well and many of them have become wealthy.

Many of us who have left the farms realize today that we made a mistake. It is no disgrace to acknowledge you are beaten. Go back to the farm and start all over again. Your experience has done you some good and if you will use your head and hands diligently you will make a successful farmer yet.

YOUTH AND THE CHURCH

Our young people feel that there is something missing in present day religion. That is the reason why so many of them stay away from the church. No longer can they be scared into being good. They demand a reason for being good. They are also determined to spend their entire time preparing for a promised life beyond the grave.

Some preachers seem to think that they can draw young people into the church by furnishing ice cream or cake with the services; by giving them a sermonette with a movie show, or by putting a little "whoopee" into their semons. They can't do it Young people are fed upon such stuff already. They can find all the sure enough "whoopee" they want outside the church.

Our preachers are more responsible today for the interest of youth in religion than they have ever been before. Youth judges the man who stands before them. They search for the goodness in him They want to find that spark that makes him different—that makes him happy. If they can find this they are willing to have faith in the Christ he preaches about and try out the Christ-way of living.

Preachers who influence youth today are those who lead blameless lives—who show a Christ-like spirit of unselfishness and service. They are successfud because young people can see in them the Christ they preach about. Our race has oodles of preachers who preach religion of all kinds, forms and fashions. What we need are more who can preach simple, common-sense Christianity.

THE FARGO DECLARATIONS

The " Declarations" of the Third Annual Negro Farmers Conference held at the Fargo Agriculture School, Fargo, Ark., claim our interest because they are timely. sensible and understandable. They sound like they were made by a group of farmers who really know what they, themselves, should do to improve their environment and condition. We comment upon these declarations because we believe they were made by the plain men of the fields who attended the Conference. Most of the declarations of our bigger conferences,—those held at our larger and more advertised schools—sound like they were prepared in advance for the farmers by professors or county agents. They don't have the dirt farmer ring to them. These are different. Said these farmers of Fargo:

"It is our purpose to grow more food and have less credit, to buy more land and make life on the farm as comfortable as possible.

"Booker T. Washington's ideas were right. He said to conserve carefully; become a dependable citizen; realize your responsibilities to yourself and to your children.

"It is not enough to buy land and build homes as individuals. We must work to inspire our neighbors to do likewise.

"The Negro farmer must establish himself as a landowner that he may have a broader chance to co-operate with other farmers.

"We should endeavor to improve our homes; in appearance; in furnishings; in conveniences; in sanitary provisions.

"Colored farmers should co-operate and work for the benefit of all who follow the vocation.

These are the "Declarations" of the farmers of Fargo. Buy land! Conserve carefully! Improve homes Co-operate! Stay out of debt! Help the other fellow! These declarations embody the heart of the program of the National Federation of Colored Farmers.

Prof. Floyd Brown, who started the school ten years ago, and his assistants deserve much credit for organizing the Conference and for arranging a program so helpful to all who attended. These small southern agricultural schools like Fargo do not get half encouragement and support they should get. They are sticking close to the people they aim to serve. They are thinking more about getting better than getting bigger. They are engaged in doing their duty when they are and are not trying to settle all the problems of the race in the United States and elsewhere. Their graduates may not be the smartest in the world but we bet they'll become successful southern farmers. They will not be trying to "farm" in Harlem or on State Street.

GEORGIA AND HER FOOD

Georgia buys from producers in other states 1000 car lots of eggs and 400 car lots of butter every year. The value of the meat and pork products shipped into the state every year and consumed by the people of Georgia is one hundred and fifty million dollars. This despite the fact that the state has the climate soil and labor to produce nearly every item of this food products she imports.

The thrifty farmers of Minnesota, Iowa, Wisconsin, Nebraska, and other states are getting rich off the people of Georgia and of the South. They are getting theirs simply because they let them get it. Southern farmers sit around and whine because they have it hard when, if they would only look about them they could see that a good Providence has given them every opportunity to have it easy. If they would stand up like men and think a little harder and move a little faster they could produce enough to feed themselves and have some left to sell besides.

Because the big white farmers of Georgia are "cotton-blind" and apparently want to stay that way, is no reason why the small Negro farmers should stay in the same condition. We can organize co-operative units,—agree to produce certain food products,—and sell the surplus to our own people in the

SATEMENT OF OWNERSHIP

The Modern Farmer as required by the Act of Congress, August 24, 1912.

State of Tennessee,

County of Davidson.

Personally appeared before me, a Notary Public in and for the State of Tennessee, County of Davidson, S. B. Wilson, who having been duly sworn according to law deposes and says that she is the Business Manager of the Modern Farmer, and the following is to her knowledge and belief, a true statement of the Ownership, Management, etc., of the said publication for the date sworn above caption requested by the Act of Congress, August 24, 1912, embodied in section 443 Post Office laws and regulations.

1. That the name and address of the publisher and business manager of the Modern Farmer, Nashville, Tenn., and Chicago, Ill., S. B. Wilson, Business Manager.

2. That the owners are Henry Allen Boyd and S. B. Wilson, both of Nashville, Tennessee.

3. That there are no known bonds, mortgages or other security holders or owners holding one per cent or more and that there are no bonds, mortgages or other securities on the corporation.

(Signed) M. G. FERGUSON, N. P.

Sworn before me the 15th day of October, 1930.

My commission expires January 10, 1939.

ATTENTION COLORED FARMERS

The National Federation of Colored Farmers is receiving hundreds of letters from Colored farmers requesting all kinds of aid and information. We are willing to do everything we can for all the Colored farmers of America. It costs money, however, to maintain offices and our expenses are becoming so heavy that we are compelled to discontinue supplying information to those who request it who are not members of the Federation. If you have faith enough in the organization to believe that it can aid you, then you should be willing to join it and help support it. Isn't that so?

Several County units have organized and elected officers but have not sent in their membership dues. These units are eligible to membership in the Federation until dues are paid. Be helpful. Co-operate. Pay up. "All for each and each for all."

industrial centers. We are confident we would find a ready market and would get a good price.

We know of a group of white farmers in Illinois who agreed to plant and cultivate 350 acres of English peas this year. The crop was good. They sold peas on every market within a radius of one hundred miles and canned the rest of them. Their sons and daughters earned enough money working in the canning factory to buy their school books and clothes this fall and each farmer has gotten a fifty per cent larger net profit off an acre of peas than he will get off an acre of wheat or corn.

We are looking for a group of colored farmers who will agree to prodnce co-operatively 350 acres of edible cow-peas next year. Get busy. Get in your organization and learn how to live at home and board at the same place.

"If southern farmers would raise their own food and feed and, in addition to that, would raise the food that Southern city people eat so far as the climate and soil would let them, there would be small danger of any cotton surplus or of an unprofitable price." From Federal Farm Board Report.

Cooperatives in New Zealand are so well managed that the overhead costs dairymen only one-half cent per pound on butter sold.

A farm must bring its owner more money—more profit—before the owner can improve his living standards. Realizing this fact, the National Federation of Colored Farmers is helping its members make and save more money. There are many agencies attempting to help the colored farmer improve his condition. The N. F. C. F. is helping him get something to improve it with.

Subscribe for the MODERN FARMER

NEW SORT OF BERRIES IS TABLE DELICACY

Hattiesburg. — A new delicacy has been introduced to breakfast tables in this territory by M. C. Wilson, Perry county farmer, who is raising Young berries for market.

This berry is a cross between the dewberry and Loganberry. It is of unusual large size dark purple in color and very luscious.

Mr. Wilson has two acres planted to the berries. He expects to gather about 150 crates from each acre after the vines are mature.

A brisk demand for the crop was reported by Mr. Wilson. He has sold 30 crates already at $4.80 per crate, each crate containing 24 quarts.

Some of the berries have been handled by the Sanitary Market here while most of them were sold to stores at Laurel.

Mr. Wilson came to South Mississippi from Kansas City about two years ago. He procured some cut-over land upon which he said there was not a cleared spot sufficiently large to construet a house.

With 140 acres now in cultivation Mr. Wilson is continually clearing more land and eventually hopes to have one of the most productive farms in this section.

He is heartily in favor of some kind of a co-operation marketing association.

—Jackson Daily News.

BOLEY, OKLAHOMA

Boley is an all Negro town. It is incorporated. The Mayor is Hon. J. D. Turner. Up until a few years ago practically every acre of farm land in the vicinity of Boley was planted in cotton, and from Christmas until September of the following year the farmers were in debt and at the complete mercy of the little merchants who charged double prices and high interest. The merchant prospered of course, but the farmer was always behind. These farmers saw no relief in sight. They saw debt, slavery staring them in the face for the rest of their lives. They got together, discussed their affairs with one another decided to rotate their crops, raise more hogs and chickens, potatoes and vegetables. The housewives also met and agreed upon a plan of canning sufficient fruits and vegetables to run them through the winter and cut the grocery bills. The first year was very hard but they managed to make it through until harvest period without any long charge account and high interest. With the beginning of fall they had several cars of potatoes and vegetables ready for the market. This gave them some ready cash to aid in the handling of the cotton.

Today these farmers have nice bank accounts. Some who were tenants are now land owners. The merchants who had been getting all they were able to make are having trouble to keep their doors open. Farmers who owned one farm now own two farms.

Just what these Oklahoma farmers have done, our farmers in other states can and will do.

NOTED COTTON MAN DIES

Mr. Daniel Sully one of the biggest dealers in cotton the world has ever had, died in California recently. About 20 years ago Mr. Sully startled the world when he cornered the cotton market. He won and lost millions in a single day's trading.

In 1903 after ruling the cotton market he had purchased something over 300 thousand bales on the speculative market, he cashed in and went a broad. In a few months he returned, the market declined and continued to fall and in one day cotton broke ever thirteen dollars per bale. Mr. Sully went down and lost everything he had.

ILLINOIS WATERMELONS

Illinois is getting some reputation as a producer of watermelons. This year there were more than four thousand acres planted in watermelons, and the quality was more than fine. These melons can be permitted to grow until they have reached full maturity and then reach the consuming market in short order.

The principal melon growing section in the state is along the Wabash river. Another section is along the Illinois river.

The principal varieties grown in this state are Kleckley Sweet, Ribault, Stone Mountain and John Brown.

MEALS LACKING IN CALCIUM LEADS TO ILL HEALTH

The bread and meat and potato eater satisfies his hunger, but it is not a balanced diet, and persons who go from year to year on this diet will eventually decline in health.

A food specialist has recently stated that one seventieth of the body weight in a human body is calcium. Calcium is found in the bones, teeth and blood. If you cut a finger and the blood does not clot readily, then your system needs calcium. A child needs more calcium than an adult. A mother with a young baby also needs lots of calcium. Milk is one of the best sources of calcium that we have. Buttermilk, butterbeans spinach, turnips, califlower and cabbage will furnish calicum. Persons whose diet is lacking in calcium have decayed teeth. Rickets in children is invariably due to lack of calicum.

FISK LIBRARY WILL BE FORMALLY DEDICATED NOV. 20

The new $400,000 Fisk Library, which semi-officially opened its doors to faculty and students last Friday, will be formally dedicated Thursday afternoon, November 20, when a week of education and library conferences on the University campus will reach its highest point of activity. Educators and librarians from all over the country will be present to extend greetings and best wishes and visitors will come to inspect what is now probably the foremost Negro library in the world.

The Negro Library Conference which is scheduled to extend from November 20 to 23, is being sponsored by a committee of librarians composed of Tommie Dora Barker, Regional Field Agent for the South, American Library Association; Thomas F. Blue, Head of the Colored Division Louisville Public Library; Florence F. Curtis, Director of the Hampton Library School; Ernestine Rose, Librarian of the Harlem Branch of the New York Public Library; Charlotte Templeton, President of the Southeastern Library Association and Louis Shores, Fisk librarian who is acting as chairman. In addition, a number of prominent librarians will contribute to the program. Adam Strohm, President of the American Library Association, will deliver the Dedication address, and greetings from Southern University libraries will be brought to Fisk by Dr. Louis R. Wilson, librarian of the University of North Carolina.

In the evening the professional conference will be formerly opened with a welcoming address to the delegates by President Jones. Then Dr. C. C. Williamson, Director of libraries at Columbia University, will pay a tribute to Edward C. Williams of Howard University, the foremost Negro librarian until his death last December. Addresses by Carl H. Milam, Secretary of the American Library Association, Robert M. Lester of the Carnegie Corporation, Clark Foreman of the Julius Rosenwald Fund and Tommie Dora Barker will close the program.

The succeeding two days will be devoted to round table discussions of technical subjects. Arthus A Schomburg and Monroe N. Work, two of the leading Negro bibliographers will deliver papers Friday evening. In addition there will be talks by authorities on various phases of librarianship Finally, a dozen library firms will place on exhibition in Livingston chapel the latest types of standard equipment for libraries, and publishers will display books in popular editions.

One of the features of the three day program will be open house hour in the new library, Thursday afternoon. Visitors who have already inspected the new building are unanimous in pronouncing it one of the most impressive library structures anywhere. Nearly eighteen months were spent by the architect, Henry C. Hibbs of Nashville, and the Fisk librarian, Louis Shores, planning the building. A gift of $400,000 by the General Education Board made the materialization of the plans possible. In January ground was broken and work has been carried on day and night in an effort to complete the structure in time for the opening of school.

Today, it stands nearly complete, a mighty collegiate gothic structure with a tower that rises 100 feet. The interior is planned for beauty as well as for service. On the first floor is an impressive lobby, a public library branch, library science classrooms and men's and women's locker rooms. The second floor has the two large general reading rooms with the pageant of Negro history told by Aaron Douglass famous murals. There is a seating capacity for 224 readers in these rooms, and the solid oak tables and magnificent chandeliers add a majesty to the scholarly atmosphere. The rooms are separated by a public catalog lobby containing 720 built-in catalog drawers with a capacity of 1,000,000 catalog cards. Four murals that challenge description represent philosophy, science, music, and drama. Work and circulation space and a double tier of stacks are also included on this floor.

The third floor contains all of the special rooms. There is one for the Negro Collection which is rapidly becoming a library of source material for the study of the Negro's history. A periodical room is equipped to care for magazines and newspapers. The Browsing Room facing Memorial Chapel is expected to make history. Here the idea of a students' recreational reading room has been worked out with two fireplaces, upholstered settees and windsor chairs, floor lamps, curtains, and a good popular collection of books. Here it is hoped that on wintry nights students will cluster around the log fire to read for pleasure. Voluntary reading among students has grown steadily in the last few years until it is fairly safe to say that the library is used more at Fisk than at almost any other college of the same size.

Other special reading rooms include one for the debaters another for Fiskiana, or all material relating the history of Fisk, and two for gradnate seminar classes. Above the third floor rises the tower with its six levels of steel stacks built to accommodate 150,000 volumes. Communication with the delivery desk on the second floor is effected by means of a teletype machine, or telegraphic typewriter, a gravity spiral chute and an elevator. These represent the latest in library equipment. Provisions in the stacks is made also for thirty-six individual carols for research professors and for six additional seminars.

Grants from the Julius Rosenwald Fund and from the Carnegie Corporation assure operating expenses for a period of seven years and the addition of several thousand volumes annually.

FLORIDA A. AND M. COLLEGE OF TALLAHASSEE INSTALL SOUND FILM

Florida Agricultural and Mechanics College of Tallahassee, is the first school managed by Negroes for colored students to install sound film equipment. Talking pictures were shown during the opening exercises September 27. President Lee plans to include educational talkies in the curricula, making selections from the film library of Electrical Research Products, Inc., distributors of Western Electric apparatus. As additional subjects in the various fields of education become available, the Florida A. and M. College will have the benefit of the school talkies as a teaching aid in its courses.

This school is to be congratulated on the far seeing, progressive spirit of its President and faculty in installing this latest educational aid which is also becoming a factor in religious education, in industrial sales, hospitals and hotels.

The marvel of the sound film in the class room is equalled perhaps by the wonderful way that talking pictures are made. From "sound to sound," that is from the voice of the speaker, carried through the recording and reproducing back to the loud speaker mounted behind the screen in the class room or assembly hall, fourteen changes of condition must be passed through.

Let us watch the talking of a picture. Before the speaker, but out of range of the camera's field of view, is a sensitive microphone, which performs the same function as the familiar telephone transmitter. The talk may be given in a studio, or even a school room but the subject may take the audience around the world.

As the first word is uttered the sound waves vibrate the transmitter diaphragm and a varying current results. This is amplified and carried to the recording equipment. Here the light of a lamp is focused on a narrow strip of film. Slight changes in this electric current, due to the voice waves of the speaker vary the volume of light by means of an electrically controlled shutter and as the film passes through the machine a record of the lamp light beam is made on the film on a path about one-eighth of an inch wide. This is called the sound track and consists of transverse lines or spaces of different widths and density. The picture itself is, of course, taken at the same time in the usual way, the sound track being printed along one edge of the film.

When the talking picture is shown in the class room, a regular motion picture projector is used including the sound projection equipment. In the projector is a lamp focused on the film sound track which moves steadily before the lens opening. On the other side of the film is the photo electric cell. This is exactly sensitive to light and the beam of light from the lamp, passing through the sound track on the film varies according to the density and spacing of the tiny lines or spaces. This light beam, constantly changing in intensity and volume, reaching the photo electric cell, causes the latter to send out a minute varying current that is directly proportional to the intensity of the light.

This current is sent through a vacuum tube amplifier similar to those used in every long distance telephone conversation. This greatly magnified or strengthened current goes to the receiver or loud speaker, mounted back of the special acoustic screen. The screen reflects light the same as the familiar movie screen but is "porous" to sound. The loud speaker operates on the principle of the telephone receiver. In this way the speakers voice comes to us as though he were telling the absorbingly interesting story from the school rostrum.

—Southern Christian Recorder

THE ANNUAL MEETING OF THE ASSOCIATION FOR THE STUDY OF NEGRO LIFE AND HISTORY

From the 26th to the 31st of October the Association will hold its annual meeting in Cleveland, O. The headquarters will be at Cleveland College. It is expected that there will be much interest aroused and that a considerable number of persons will attend inas much as this city is centrally located with respect to the persons who have manifested interest in this work. The meeting will be followed by a sight-seeing tour which will include a visit to Oberlin and other historic places in the Western Reserve.

Prominent persons of both races are very much interested in this meeting. Upon the request of Miss Jane E. Hunter of the Phillis Wheatley Association, and Mr. Alonzo G. Grace, of the Adult Education Association of Cleveland, the Association decided to meet in Cleveland this year. These persons have, therefore, been active in keeping the matter before the thinking elements of the city that a warm welcome and a profitable stay may be assured.

Working to this end, the citizens thus interested have organized a Committee of the Association for the Study of Negro Life and History with the Honorable Harry E Davis as chairman. Other persons on this committee are Dr. Ferdinand Q. Blanchard, Mr. Henry M Busch, Dr. Charles H. Gavin, Honorable John D. Marshall, Dr. Arthur S. Scott, Mr. Russell W. Jelliffe, Miss Jane E. Hunter, Miss Mildred Chadsey, Mr. Harold T Clark, Mr. J. E. Cutler, and Attorney Alexander H. Martin This committee, however, will enlarged so as to include about seventy other citizens whose names cannot now be given.

The topics to be considered at this meeting will be determined by the procedure of discussing not what peculiarly concerns the Negro but things of significance which will be helpful to both races. The discussions will deal with the importance of local history, the changing economic life, the problem of rapid urbanization, and methods for amelioration. Addresses will be delivered on primitive religious life of the Negro in its present bearing, the art of the Negro as influenced by African beginnings, the Haitian situation, the mental capacities of the races, the influence of the Negro in the world history, and the present status of the Negroes in the United States.

These features will be made still more enjoyable by numerous social functions now being arranged by the committee in charge in Cleveland. The earlier sessions will be so arranged as to allow time to get acquainted and to exchange views at short range that in the later sessions these associations may be productive of greater good than can be expected from hearing one or two persons at each session when ample time cannot be allowed for numerous questions which have arisen here and there in the work of those who will attend the conference.

—Southern Christian Recorder.

NEGRO TEACHER, RETIRED, PICKED UP EDUCATION AS SCHOOL JANITOR

(From Nashville Daily Banner)

Prof. S. B. Neal, colored, principal of the Lawrence School for the past sixteen years, who was retired at his own request from teaching work by the City Board of Education at Monday night's meeting after a service of fifty years with the public schools of Nashville, started his career as assistant janitor.

Professor Neal had been a teacher for twenty-eight years and the remainder of the half a century of his connection with the schools he was serving as janitor. He started his career as assistant janitor at the Howard school in 1876 and recalled that the late Prof. S. S. Woolwine was the principal of the school at that time.

On the recommendation of the principal and some of the teachers of the Howard school, Professor Neal was promoted to chief janitor and sent to a school located on the corer of Summer and Line Street, now Fifth Avenue and Jo Johnson Avenue, the school being known then as the Hines school. The building was torn down many years ago. He was also janitor at the Trimble school, being there during the Centennial Exposition. He also recalls the names of the various principals at the schools at which he was janitor.

He began teaching in the fall of 1902 at the Belleview school on Fifth Avenue, North, and from there was transferred to the Pearl High School. In 1906 he was sent to the Nelson Merry School and at the completion of a new building he was appointed principal. He also taught in the Carter School on Kayne Avenue before going to the Lawrence School, where he remained up to the present time.

Professor Neal said he was born in Marshall County, near Chapel Hill in 1857, but came to Nashville in 1866.

When asked how he secured his education he replied that he "got his start in the city schools but picked up all he could while he was janitor." He also attended night school, he said.

THE CLOCK WORKERS

The man who works with his eyes
on the clock,
Just gets to the end of the day—
But he doesn't get far on the Road
to success.
For he isn't headed that way.
He hasn't an ounce of genuine
"push"—
Except to "push the clock"—
And then when other folks get
ahead
He loves to sneer and "knock."
He gives just so many hours a
day,
And he draws no joy from his
work;
The only thing he draws is his
pay,
And it's all that he doesn't
shirk,
It's the chap who renders service-
plus,
Not just by the hour or the
day,
But by all that's in him and gives
his best,
For love of his work—not for
pay;
Who's going to sit in the leader's
chair,
And get to the very top;
For he's headed straight to be
truly great,
And nothing can make him
stop!

—Sidney J. Burgoyne and Evelyn Gage Brown, Forbes Magazine.

WHAT EVERY NEGRO KNOWS

That he must seal his lips tight
like a clam,
Let others smear it on, and rub it
in.
Then fool himself, wearing the
cloak of sham
And veiled hypocrisy behind a
grin.

That he must understand all Jim
Crow Laws
And customs of the problems of
his Race,
Better than sages of the Ancient
Cause
Of Knowledge comprehended
Time and Space.

That he must do such chores as
come along
The clear-cut Negro path to high-
er life;
That he must hold to Laughter
and a songs
Of Cheerfulness through all the
storms of strife.

That he must bear the burdens of
a man
Of steadfast faith yoked with a
Stonewall will
To play a part of an Etenal Plan,
Ordained that he alone should
dare fulfill.

That he must learn to share each
common task
Of Manhood with a plenty "guts"
and legs
To walk away with Fate, and only
ask
To drink the cup of Service to its
dregs.

That he must have a chosen pat-
tern of desire
And shrine of visions deep down
in his Soul,
Where he must seek adjustment
till the fire
Of Faith leads him to his ap-
pointed Goal.

MEN OF NATIONAL REPUTATION AND INTERNATIONAL FAME COMING HERE

Interracial Commission With Special Sleeping Car Will Tour South

Nashville is on the itinerary of the Interracial Commission which is to start from Washington, D. C. during next month to make a tour of the south in studying race relations and conditions. This Commission it is understood, will be made up not only of men of national but international reputation. In placing Nashville on the list to be visited it is regarded here as a recognition and a confession by the powers that be, that this is still the educational center of the south, the hub of Dixie, the most important municipality, specializing in intellectual training.

From the time the announcement was made that the Commission had been authorized or selected, it was expected that Nashville would be visited, because from time to time men of both races, whether they live north or south, have looked upon Nashville as a splendid place to make observation, an excellent town to get their balance, and to view things that have to do with both groups. The definite date of the arrival of the Commission has not yet been announced, but it is expected that President W. J. Hale of A. and I. State College, who is the chairman of the Interracial Commission's executive committee, and Mr. R. E. Clay, the executive secretary, who are working with Mr. Button, the general secretary, will get the information and will release the announcement as to the date of the arrival.

The Tennessee Interracial Commission is understood to be in hearty sympathy with the proposed trip, so it is said, but no announcement has come from them as to just what Nashville would be expected to do or what part they will play, nor the length of days the Commission will remain here in their study in making this survey.

—Nashville Globe

LELAND COLEMAN'S LETTER

Cruger, Miss.— (To the Modern Farmer.)— We are doing a great work in our Unit, being young. We have some of the best people of our community as leaders, and we are expecting to send representatives to the Convention at Washington County next Augnst.

We have had only three meetings since being organized. We organized with 11 and have added 16 members. We expect to go over the top in our Unit, and to do all we can to help support The Modern Farmer paper.

Yours truly,
James Payton, President.
Johnny Middleton Secretary.
C. S. Shields, Assistant Secretary.
P. W. Walls, Market Agent.
Luke Ford, Treasurer.
Mrs. M. J. Walls Subscription Committee.

SUDDEN DEATH COMES TO DR. GEORGE P. PHENIX, PRESIDENT OF HAMPTON INSTITUTE

Hampton, Va., Oct.—Dr. George Perley Phenix president of Hampton Institute, died suddenly late in the afternoon of Oct. 1, while bathing alone at a nearby beach. His death was due to heart attack according to Dr. George K. Vanderslice. His body was soon recovered and brought to his home on the Institute grounds.

Dr. Phenix is survived by his widow, Mrs. Maria Stevens Phenix, and one son, George Spencer Phenix of Brooklyn, N. Y.

Dr. Phenix was the fourth principal of Hampton Institute. Following the resignation of Dr. James E. Gregg, he was immediately elected acting principal. At the meeting of the trustees in January, 1930, he was elected principal, and at the April meeting of the trustees his title was changed to that of "President."

He was born in Portland Me., in September 1884; and was graduated from Colby College in 1886. After further study and active work in the field of education he became principal of the State Normal school at Willimantic, Conn. At this place his work with and for rural schools of that State was so noteworthy that Hampton's principal, the late Dr. Hollis Burke Frissell, urged him to come to service at Hampton—a service which had covered twenty-six years. Appointed head of the Hampton Institute Academy in 1904, he organized its work in teacher-training. In 1908 he was made vice principal of Hampton. Up to the time of his election as acting principal, he had been best known by his able administration of the Hampton Summer School in which hundreds of teachers have been given professional training of the first rank.

Dr. Phenix had been called twice by the board of trustees to serve as acting principal of Hampton. The faithfulness with which he had carried on the work in each case is a part of the record of Hampton Institute. He had proved his right to be called an able administrator.

The board of trustees had not called an untired experimenter to a task which required accurate knowledge, understanding of problems and a statemen's vision, but withal had called a man who was a worthy follower of General Armstrong.

Finally, he believed in Hampton and its ideals and could be trusted to uphold them without apology. His ideals were formed under Dr. Frissell. Speaking of the latter, he used to say: "I knew him very well, and with the exception, perhaps, of my father, I know of no man who has done more to shape my ideals." When he stood up to acknowledge before teachers and students the honor and responsibility which had come to him, he declared his devotion to Hampton in these words.

"I do not ask your loyalty to me in these years that are before us, but I do ask your loyalty to the great ideals for which this school has stood and must stand. I shall try to be loyal to those ideals myself, and if you are loyal to them and I am loyal to them, all lesser loyalties will take care of themselves."

The sudden death of Dr. Phenix brought a stunning blow, not only to the students and workers of Hampton Institute, but also to all those who are interested in the advancement of modern education such as Hampton has represented since its founding in 1868 by General Samuel Chapman Armstrong.

The plans for the funeral have not yet been announced, but it is very probable that Dr. Phenix's body will come to rest in the Institute cemetery, where General Armstrong and his worthy successor, Doctor Frissell, lie buried.

Rosenwald Party In Nashville

CHAIRMAN EMERY, T. STEARNS AND DIRECTOR S. L. SMITH, SPEND BUSY DAY HERE

Representatives of Julius Rosenwald Worship at Two Services Before Visiting Fisk and State Normal

Mr. Emery, the chairman of the Rosenwald Fund, and Mr. Stearns, a son-in-law of Julius Rosenwald, spent a busy day here last Sunday. They were being piloted over the city by Mr. S. L. Smith, the southern director of the Julius Rosenwald Fund. On Sunday morning at eleven o'clock they appeared in the Fisk Memorial Chapel and were presented by Dr. Thomas Elsa Jones, the president of the school. At twelve thirty they were presented to an over-flow audience at St. John A. M. E. Church. At two o'clock they were the guests of the president of Fisk University at the president's home, where they were joined by Prof. and Mrs. W. J. Hale of State College, and Mr. Dudley Tanner a member of the State Board, and a member of the Jean Slater Fund. At four o'clock they were piloted through and shown the new Fisk Library that is nearing completion, and which is to be dedicated at an early date. The two out of town visitors hailed from Chicago.

It was one of the busiest days, according to statements when they left on the Dixie at 5:40, that they had put in at any southern city. Dr. Mullowney, the president of Meharry Medical College, was with the party throughout the day, beginning with the morning services. While they were inspecting Fisk University and being entertained by the president and faculty, the student body of A. and I. State College assembled themselves in the auditorium where they were gathered to meet Mr. S. L. Smith and Mr. Emery, the chairman of the Rosenwald Fund Board. The State College students sang quite a few selections. Dean Gore presented Henry Allen Boyd, who delivered an address, and then he presented Mr. Dudley Tanner, who gave a spicy talk on the opportunities of the present-day education; then chairman Emery arrived and was presented by Mr. S. L. Smith.

It is not known for what particular purpose the Rosenwald Party made the visit to this city, but many are of the opinion that it was for some additional information that in all probability the philanthropist was seeking from his representatives, that he might consummate his plans for future consideration of Nashville's needs.

—Nashville Globe

WEST TENNESSEE DISTRICT INTERRACIAL CONFERENCE Y. M. C. A. BUILDING, JACKSON, THURSDAY, NOV. 6, 1930 2:00 P. M.

The State Interracial Commission will hold a District Conference on Race Relations in the Y. M. C. A. Building, Jackson, Tenn., Thursday, November 6th, beginning at 2:00 P. M. Prof. J. L. Harris, of Jackson will preside.

Representatives of the two races from West Tennessee are expected to attend this meeting, among whom are judges, ministers, college presidents mayors, editors, bankers, farmers, agricultural agents and business leaders. The following topics are to be considered:

"Law and Order," including crime prevention, mob violence, jails courts and public opinion.

"Public Health," including community health programs, health centers, sanitation clean-up campaigns, family and individual health, food, and recreation.

" Education," including school buildings, grounds, appropriations, school boards, teachers, standards, and salaries.

State leaders will participate in the discussions. The purpose of the meeting is cooperation, good will, and community improvements. This Movement has functioned for eleven years in Tennessee, and has the confidence and support of leading citizens everywhere. District meetings are held to review the work, consider problems growing out of same, and to make plans for future programs through local interracial committees.

Findings have been placed and cooperation given to State, county, and city authorities in improving conditions and promoting amicable relations.

Correspondence regarding the meeting may be addressed to James D. Burton, Interstate Secretary for Alabama and Tennessee, Oakdale, Tenn. or to Prof. J. L. Harris Jackson, Tenn.

James D. Burton.

—Nashville Globe

GOODBY COTTON PICKERS

It is reported from New York that the Moon Motor Car Co., has completed negotiations with the American Cotton Picker Corp. for the manufacture of cotton picking machines. 5,000 machines will be produced at an estimate profit of about $30 each.

Some day or other a cotton picker that will pick cotton will be invented. Colored farmers had better learn to raise and pick something else besides cotton.

Farmer Working on his new house Montgomery County, Alabama

THREE NEGRO LEADERS TALK OF ASPIRATIONS

NO VOLUNTARY DESIRE FOR SOCIAL ASSOCIATIONS WITH WHITES, SAYS THE REV. NOAH WILLIAMS

Three Negro leaders of St. Louis discussed the aspirations and life of the 100,000 Negroes in the metropolitan district here in the Community Forum period on Radio Station KMOX yesterday afternoon. The speakers were the Rev. Noah W. Williams, pastor of St. Paul's A. M. E. Church; Mrs. Julia Curtis, a member of the board of Lincoln University, Jefferson City, and John T Clark, executive secretary of the Urban League.

The Rev. Mr. Williams said that in 30 years' observation, North and South, he had not found the Negro giving serious thought to the ordinary conception of social equality with whites, and that in the sporadic cases of commingling whites usually took the initiative. He continued:

"The Negro has no desire for voluntary association with white people. He has in his own race all that his desires and tastes call for in this ordinary social sense. The fact is, he feels he has the advantages along this line within his own race. He wants absolute security of life and property. He wants equal political rights. He wants equal justice before the law. He wants equal economic opportunities. He wants an equal chance to develop his talents and satisfy his tastes. He wants that he shall not be humiliated and treated as something different from other human beings when he enters public places, property attired and with proper manners. This is what he wants and all he wants."

"They Buy Everything."

The speaker added that the Negro population here furnished an excellent market for all sorts of things made and purveyed by whites. Negroes, he declared, "are good buyers; they buy anything; they buy everything." He added: "When you shut the door of employment in the face of the Negro you are paralyzing one of the best markets for goods."

Mrs. Curtis noted that Negro population here increased heavily during the last decade because of migration from the South. She said that opening of Stowe Teachers' College as a general junior college for Negroes and the recent provision of State funds for Negroes to go out of Missouri for courses not offered at Lincoln University strengthened educational opportunities, but she deplored the lack of recreational and amusement facilities.

The Negro mortality rate, though lower than 10 years ago, is too high still and hospital facilities are inadequate, she insisted. Negroes here spend about $1,000,000 a estimated, and they own millions of dollars worth of property, mostly in homes, business places and churches. There are some Negro enterprises employing a considerable number of their own race, Mrs. Curtis related, but most of the men are employed at semi-skilled and common labor in large industries owned by white capital, while the major opportunity of employment for Negro women is in bag, nut and tobacco factories and laundries.

Their Political Power

Politically, she said, the Negro holds the balance of power in St. Louis, but his lack of organization is shown by the fact that Negroes occupy only 10 minor elective offices. The greatest Negro businesses are drug stores and undertaking establishments, she said, the latter being the only field where there is not white competition. The professional group she added, consists chiefly of 90 physicians, 40 dentists, 27 druggists, 40 nurses, 100 ministers, 301 teachers, 34 social workers and 38 lawyers.

Clark said Negro church property here is worth $1,000,000 and that half of the colored population belongs to the churches, mostly Baptist and Methodist. Fraternal organizations are an important social force, he went on, but "With a growth of life insurance organizations, the influence of fraternal organizations is not nearly as powerful as it used to be. There are noticeably fewer parades and other evidences of their former strength. On the other hand, Negro insurance companies have begun to enter the field with strong organizations to meet the competition offered by white insurance companies seeking Negro business. All of the six strictly Negro national insurance companies have branches here in St. Louis and give employment to more than 100 persons here. The last certified report shows that these companies carry a total of nearly $200,000,000 of insurance among Negroes throughout the country."

—St. Louis Post Dispatch.

SEED LOAN OFFICE GRANTS FUNDS FOR FALL AND WINTER PASTURES

Five hundred and fifty thousand dollars of the unexpended balance of the $6,000,000 appropriated by Congress last March for loans through the farmers' seed loan office of the U. S. Department of Agriculture to relieve distress in 15 States from storms, floods, and drought in 1930, has been allotted to farmers seriously affected by the summer's drought in Alabama, Oklahoma, Virginia, and Missouri, for the purchase of seed and fertilizer for fall and winter pastures.

Applications for these loans must be backed by the farmer's promissory note and a mortgage on his crops, and must be approved by a county committee before they can be accepted in Washington, acording to G. L. Hoffman, who is in charge of the Federal Seed Loan Office. Loans can not be made for crops to be harvested in 1931, he says.

Approximately 2,000 applications for loans have been received to date, and Mr. Hoffman expects as many more by October 15, the final day for accepting applications. Of these 1,732 have been approved as follows: Alabama $8,548.00 on 180 loans; Oklahoma, $27,853.15 on 859 loans; Virginia, $24,990.00 on 368 loans; and Missouri, $16,469.25 on 325 loans.

—Union-Review

O. T. JACKSON SAYS HOPE OF NEGRO IS IN SOUTH

(By Alva A. Swain)

Cameron, Feb. 5, 1930. — Mr. O T. Jackson messenger of Governor Adams and for that matter to every democratic governor since the time of Shafroth, is of the opinion that the south really holds the future of the Negro in this country. He thinks that the southern Negro will go forward faster than the northern Negro because in the south they can get better cooperation that really counts for the better ment of the race.

"The south will be the Negro's paradise within the next twenty-five years," said Jackson the other day. Continuing, he said, "We have learned from our experience that the northern Negro is not cooperative in Negro movements that carry with them the slightest tinge of segregation. Yet the northern Negro is a self-segregator to be with the crowd and for imitative showing but when it comes to segregation for material interests to support that show-off he would rather hold a menial job than to be self-supporting from the soil in a prosperous community of colored people."

"If the statistical statements of farm activities in Texas, Mississippi and other southern localities are true, back to the land in the south is the opportunity for the young Negro who is ready to organize and cooperate."

URGE LATE FEED CROPS

Greene County Agents Advise Farmers at Drouth Ends

Paragould, Ark., July 26.—With the drouth practically broken in Greene County, County Agent Ben A. Lincoln and Mrs. R. B. Rogers, home demonstration agent, are devoting their efforts to encouraging late crops and gardens. Rains Thursday and Friday have benefited many sections of the country. The extension service agents issued the following statement Friday following the showers:

"The long drouth has cut feed production so severely that farmers are looking for emergency crops for extremely late planting which may be relied upon to help meet the feed shortage. The crops best adapted for this purpose are early cowpeas, amber sorghum and German millet. These crops may be planted immediately after it rains, if rains come by the end of the first week in August, and possibly a little later.

"Fall gardens will be very necessary to make our winter living. Gardens grown in most sections now are supplemented with fall garden crops to carry the farm family through the late fall and winter.

"The greatest need is for quick growing crops that will do for immediate use. Suitable crops for greens are spinach kale ad rape. Root crops are carrots, beets and turnips. Lettuce, peas, beans, cabbage and fall potatoes are other good crops for the fall garden.

"Some additional crops may possibly be grown, such as sweet corn. A late fall will allow the crop to mature, and if not it can be utilized as livestock feed. Rhubarb should be planted for future year's needs as a source of sauce and pie material.

"Fall potatoes as a cash crop demand particular attention at this time. Good dormant seed that has been kept in a cool place for at least three weeks is recommended for planting. Lookout Mountain, Irish Cobbler and Bliss Triumph are the most suited varieties for.

—Memphis Appeal.

NO DEMAND FOR HARNESS

With the advent of the automobile and tractor the harness business has so completely declined that a harness making firm in St. Louis, Mo., that has been in business since 1824, has been forced out of the industrial field. At one time that city was the starting point for a great number of western pioneers and the outfitting was done in St. Louis. In addition to that, sets of harness were made and shipped to various parts of the country so that this firm was one of the largest industries establishments in the country. The demand for harness at this time is almost nil.

SOUTH GEORGIA MELON WEIGHS 77 POUNDS

Waycross, Ga., July 21.— A 77-pound watermelon exhibited here Monday, believed to be the largest shown in Waycross this year, was grown by E. D. Taylor of Alma.

"It's a pretty good melon, but we picked it after dark and there might have been some bigger ones in the field," Mr. Taylor said. "Another thing," he said, "the dry weather has stunted the melons in our section, and they haven't grown as large as they really should have."

Mr. Taylor is a brother-in-law of J. C. Parker who was among the first farmers in south Georgia to exhibit cotton blooms this season.

ROADSIDE MARKETS

There are over 4,000 farmers in the vicinity of Chicago who grow vegetables for Chicago market. There are several hundred of them who maintain and operate roadside stands selling freshly picked vegetables every day. Some of these stands sell as high as 25 thousand dollars worth of fruits and vegetables during the season, and in most instances any stand will go over five thousand dollars in gross sales. These stands usually open in April and close around November— all depending upon the weather. These farmers are organized of course and known as the Truck Gardeners Association.

They usually have uniform prices.

TROUSER-CLIMBING RAT IS KILLED BY FRANTIC FARMER

Wapelo, Iowa, Sept. 10.— Dennis Murphy and a rat have met in mortal combat and settled a long feud. The rat is dead, and Murphy somewhat damaged.

They met in the corn crib on Murphy's farm, where the rodent had been making free with Murphy's crop. The rat raced up a trouser leg and kept on climing. At the collar level, while Murphy frantically beat it, the animal bit and clawed his neck and chest. The farmer was severely lacerated before he crushed the rat.

THE SUNFLOWER

The value of the sunflower as a field crop is unknown in this country, and yet there are few plants which, in proportion to the the attention required, make larger returns. Almost every portion is useful. The seeds are valued as a food for cattle and poultry; and from them may be obtained an oil not inferior to that of the olive. They have also their uses in medicine, making soothing emulsions like flaxseed; in Russia they are eaten like nuts and in many parts of South America are ground to meal, of which bread is made. The leaves are equal in nourishing qualities to corn fodder, and the stalks are an excellent fuel. In Italy and Spain, these plants are extensively cultivated as a field crop for the sake of the oil expressed from their seeds. An acre will produce fifty bushels, each yielding a gallon of oil.

CURIOUS VEGETABLES

Ornamental Mice— The vegetable curiosity which has attracted much attention. It is a native of Central Africa, having a small, neat-growing vine and bears numerous oval fruits, clear green in color two and a half or three inches long, which are always completely covered with long, light-green spines or hairs. It will be found useful for covering a sloping bank or rockery, and will produce great numbers of curious fruit.

Caterpillars— Prostrate creeping plants with small yellow flowers, changing into vegetable caterpillars. They are grown as curiosities, and sometimes as a harmless practical joke, are put into the salads for the purpose of startling those who are unacquainted with them.

Snails—Another singular variety having most oddly twisted seed pods resembling snails. Children are most amused with these curious vegetables and they are quite attractive and can be grown in any garden. Seeds can be had of nearly all seedmen at 5 cents per package.

FINDS VEGETABLE RATES UNREASONABLE

Carload rates on fresh vegetables from producing points in Mississippi and Tennessee to New England and southwestern destinations were declared unreasonable and new rates not to exceed 35 to 40 per cent of the present first class rates were recommended in a report to the interstate commerce commission by Examiner S. R. Diamondson. Several commodities were given definite percentages of first class for computation of carload rates in the western class rate case, and it was predicted that this form of classification would be increasingly used.

The commission has ordered an investigation into the reasonableness of intrastate rates on petroleum in Montana, which became effective upon the order of the state board of railroad commissioners. The railroads serving Montana, contend that the dates unduly prefer intrastate commerce and prejudice interstate commerce, therefore are a violation of the thirteenth and third sections of the interstate commerce act. The case has been set for hearing on September 20, before Commissioner Porter and Examiner Koch, at Helena, Mont.

THREE SOUTHERN STATE'S REPORT GAIN IN FARMS

Three contiguous states, Mississippi, Arkansas and Oklahoma, have set a new record in numerical increase of farms in the last decade, as reported by the census bureau.

Mississippi, with an increase of 40,352 farms, far surpassed any state thus far reporting, Oklahoma, with an increase of 12,280 farms, being her nearest competitor. Arkansas gained by 10,612 farms.

However, Mississippi was surpassed in per centage of increase by Arizona, which gained by 32.9 per cent, as against 14.8 per cent. in Mississippi. Texas and California are among the states unreported.

Figures announced for the three states were: Mississippi, total 312,453, as against 272,101 in 1920, increase 40,352 or 14.8 per cent. Oklahoma, total 204,268, as against 191,988 in 1920, increase 12,280 or 6.4 per cent. Arkansas, total 243,216, as against 232,604 increase 10,612 or 8.6 per cent.

THE MASTER HAND

Just as a harp with muted strings,
Thought long untouched, and covered with the dust of years,
Answered at last the Master hand that brings
Forth all the sweeping chords of long pent harmony
To melt the listening heart to tears—
So with the soul; deep hidden in its shrine
Are secret strings that mutely wait
Until a Master hand divine
The low, sweet music sleeping there,
And then, with touch of tenderness ineffable,
He bids the angels hear!

Grace H. Poffenberger, in Ref. Ch. Messenger.

THE MODERN FARMER

Vol. II. Nashville, Tenn., and Chicago, Illinois, December 15, 1930. No. 10.

FEB 5 - 1931

ONE HUNDRED FORTY DOLLARS SAVED ON NINE BALES

FARMER ACTS ON ADVICE FROM PRESIDENT OF NATIONAL FEDERATION

Nov. 22nd, 1922

National Federation Colored Farmers

Dear Sirs:

I sent 9 bales of cotton on October 25th to the place you instructed me to ship to, and have my returns for the sale of it November 17th The attached sales' slip will show you what I got for my cotton.

Other farmers in this section received 9 1-2 and 10 2.4 and a few 11 cents for their cotton I certainly thank you for the effort you have put forth in my behalf. I just wanted you to see for your own information and encouragement what I got for my cotton.

We do not give the name of the member but have this letter on file.

We give below what this member received for his cotton:

1 bale 498 pounds	12.38	61.65
2 bales 965 pounds	14.18	136.84
1 bale 503 pounds	12.13	61.01
3 bales 1454 pounds	12 38	180.00
1 bale 521 pounds	12.78	66.58
1 bale 430 pounds	13.18	56.67
9 4371		562.75

This member saved over one hundred and forty dollars on 9 bales of cotton in comparison with the other farmers in his settlement who margketed their cotton thru other channels.

Does it pay to be a member of the National Federal of Colored Farmers?

NEBRASKA FARMER OWNS TWO THOUSAND ACRES

ALTHOUGH EIGHTY-SEVEN YEARS OF AGE HE IS AS ACTIVE AS EVER

Mr. Robert Anderson who fought in the Union Army to aid in freeing his race, and who was wounded in a battle, is the owner of a 2,000-acre potato farm in Nebraska near the city of Alliance. He is now 87 years of age but as active as man of 25. He lives in a very fine 15 room house and has 1,700 acres in active cultivation. Mr. Anderson was once in poverty, but by continued hard work and saving he was able to finally own this large farm. He has several tractors and employs a little army of men.

His principal crop is potatoes and this fall he is housing nine thousand bushels in a well built cellar awaiting higher prices.

From a slave in a log cabin about 65 years ago, without a penny, Mr. Anderson is today worth two hundred thousand dollars.

TWENTY-ONE THOUSAND EIGHT HUNDRED SIXTY-TWO

STATISTICAL REPORT FROM ARKANSAS AND JEFFERSON COUNTY BY COMPARISON

We have an inquiry asking for statistics on Jefferson County, Arkansas.

From the last figures we have received from the Census of Agriculture we have the following:

Number of white farmers in the conty 982, number of colored farmers 5,631. Total white farm population in the State 4,541. Total colored farm population the state 21,-862. Average annual cotton production, fifty thousand bales. Jefferson county also produces over 40 thousand bushels sweet potatoes and about twenty thousand bushels Irish potatoes annually.

The records also show that five hundred and eighty Negro farmers own their farms and four hundred and forty-five white farmers own their farms. The Negro farmers in Jefferson county are not organized.

COLORED FARMER'S NEWS BULLETIN FOR NOVEMBER

PRESIDENT OF NATIONAL FEDERATION SUMS UP STAPLE AND OTHER PRODUCTS

Chicago, Ill., Nov. 22, 1930—We are pleased to announce that your Federation is now incorporated and we have been given our Charter, and all costs have been fully paid. In a few weeks each Unit will receive from—the head offices in Chicago, a Charter carryining the names of the Officers of their Unit. Don't be misled by any statment that we are not incorporated. THE NATIONAL FEDERATION OF COLORED FARMERS IS INCORPORATED just the same as the other Farm Organizations.

IMPORTANT MEETING AT MOUND BAYOU, DEC. 4th

On Thusrday December 4th the Officers of the Mississippi Units

(Continued on Page 6)

SUNFLOWER UNIT MAKING PROGRESS IN MISSISSIPPI

OFFICERS AND MEMBERS TAKING ADVANTAGE OF INFORMATION FURNISHED

Sunflower, Miss.—(Special to Modern Farmer)—Continued growth is evidenced here on all sides by the Sunflower Unit of the National Federation of Colored Farmers. In the beginning only five men participated in forming the Unit but their influence has been so pronounced and the cause so recognized that it has grown gradually in numerical strength every week since its organization. The officials are among the most enterprising and progressive farmers of this section. Mr. C. A. Ashley, a well known farmer is filling out his first term as president of the Unit. Mr. S. B. Bucker is the Secretary, Mr. J. S. Gibson is the Market Agent and is to keep the members of the Unit informed on market quotations and prices. Mr. J. H. Maviece is the treasurer. Through the efforts of the officers and leaders of the Unit they are making continued and rapid progress. They are cooperating not only with their individual members but are planning many future activities for the farmers of this section. Nearly all of them are supporters of the Modern Farmer, the monthly publication which is the official organ of the National Federation. Their monthly meetings will be held in various sections of the county.

MISSISSIPPI BEHIND IN 1929 GINNING FIGURE

1,126,640 Bales Up to Nov. 1—Bolivar Leads

The Department of Commerce announces the preliminary report on cotton ginned prior to Nov. 1, in Mississippi, for the crops of 1930 and 1929. The total, by counties follows:

	1930	1929
Adams	6,287	5,246
Alcorn	9,349	12,174
Amite	12,783	10,938
Attala	10,611	14,240
Benton	4,462	5,185
Bolivar	72,164	131.699
Calhoun	6,166	9,103
Carroll	5,720	9,402

GOOD CITIZENS

"In the matter of drought relief, as in everything else, the railroads are showing themselves to be good citizens," says the Natchez, Miss. Democrat.

In 1927, when the great flood devastated the Mississippi Valley, it was the railroads that worked unceasingly, and without profit to themselves, saving lives and property. Today, with many agricultural states facing a crisis due to the drought, it is again the railroads that are doing everything within their power to improve conditions.

In all parts of the United States the railroads have shown themselves to be good citizens. They are one of the largest employers and taxpayers. They encourage industrial development in cities and more scientific and profitable production of farm crops in agricultural areas. They are always at the forefront in assisting any worthwhile program to bring new payrolls, home owners, industries and workers into the territories they serve.

In contrast to this is the attitude of the states and national governments toward the railroads. During the first eight months of this year, in spite of the greatest possible efficiency and economy in operation, the lines were able to earn a net return of but 3.59 per cent. Their taxes are steadily rising, their revenues on the down grade. In not a single year since the war have they earned the fair return stipulated by the Transportation Act.

The American railroads face a financial crisis. Yet they never waver in their efforts to provide the United States with the best and most efficient transportation service we have ever had. They are, in short, remarkably good citizens.

The National Federation of Colored Farmers wishes its Members

A MERRY CHRISTMAS

JAS. P. DAVIS, Pres. MAJ. R. A. BYRD, Vice Pres.

LEON R. HARRIS, Sec'y S. B. WILSON, Treas.

C. R. RICHARDSON, Chairman Board of Directors

BIG FARM LEFT COLORED SERVANTS

High Point, North Carolina.—About 50 years ago Mr. and Mrs. Ned Brooks were tenants on a 200 acre farm of Mr. J. T. Chilcutt prominent white farmer in Guilford, North Carolina. According to his will, this farm is left to Mr. Brooks.

Latest statistics from Bureau of Census of the Department of Commerce give Mississippi 312,453 farm. In 1925 Mississppi had only 257,228 farm. This is an increase of 55,196 farms in 5 years.

It is interesting to note that the counties which show the largest increase are heavily populated with Negro farmers, or in other words the Negro farmer is more than holding his own in the state.

The counties which show 40 per cent increase are Humphrey, LeFlore, Scott, Sunflower and Tallahatchie, while Attala, Bolivar, Carroll, Madison and Quitman show gain of 25 per cent, and Copiah, Lee, Monroe and Yazoo counties increased 20 per cent.

Th few counties which showed a decrease are Harrison, Isaquena, Jackson, Warren and Forrest. In these counties the Negro farm population is practically neglible. These figures reflect that the whites are quitting the farms, and the Negro has stepped on the gas.

Released for Use on September 20, 1930

PRESS RELEASE, NUMBER OF FARMS IN MISSISSIPPI

DEPARTMENT OF COMMERCE, BUREAU OF THE CENSUS

WASHINGTON

Number of Farms, by Counties, Mississippi: 1930, 1925, and 1920

Washington, D C., Seeptember 20, 1930—The Director of the Census announced today the number of farms in Mississippi.

A farm, for census purposes, includes all the land which is directly farmed by one person, either by his own labor alone or with the assistance of members of his household, or hired employees. When a landowner has one or more tenants, renters, croppers, or managers, the land operated by each is considered a "farm." Any tract of land of less than 3 acres used for agricultural purposes, which produced products to the value of $250 in the preceding calendar year, is classed a "farm."

The figures for 1930 are preliminary and subject to correction.

A NEIGHBORHOOD

There are now twenty cities in the United States which have more than a hundred thousand telephones in use—twice as many as there were ten years ago.

As the world develops, the telephone, as the fastest and most efficient means of communication, becomes of increasing value. Once it was a convenience. Now it is a necessity. The social and business relations of the twentieth century, whether between individuals, industries or governments, are dependent to a large degree on the telephone.

Fifty years ago it took months for a letter to reach Europe from certain parts of the United States. Now, within a few minutes, we can project our voices across oceans and continents. The telephone has made the world into a neighborhood.

IN HOME AND INDUSTRY

Gas, along with electricity and water, has become one of the services vital to modern home life.

Up to recent years, it was used almost solely for cooking. But now gas heating and cooling systems, as well as gas refrigerators, are giving the home-owner new standards of convenience, cleanliness, efficiency, economy and comfort.

Gas has long been the preeminent industrial fuel. Now it is taking a foremost place in the home.

NEGRO MILLIONAIRE COTTON TRADER DIES

Lagos, West Africa, November 8.—Michael Doherty, Negro merchant, died here, leaving a fortune of $3,000,000 to be divided among his 16 wives and 50 children. He amassed the fortune with a fleet of dugout canoes from which he sold Lancashire cotton goods to natives.

103-YEAR-OLD TREE BEARS APPLES AGAIN

Kalama, Wash.— The first apple tree to grow in the Pacific Northwest, planted in 1827 in the old barracks at Vancouver, Washington., by Captian Simpson of the Hudson's Bay company, bore a small crop of apples this year. Now past the century mark the aged tree is guarded and cared for regularly and has responded to the treatment by increased vigor and fruit.

COTTON PICKERS STRIKE

Almost a thousand cotton pickers both white and colored in Tennessee and Arkansas refused to pick cotton at fifty cents per hundred pounds. The plantation bosses lowered the price to fifty cents which is not sufficient to pay the cost of food for man or woman.

It is reported that the pickers were almost destitute and in a very pitiable condition, but they had the manhood and backbone to stick it out.

From Texas to Virginia there is very much unrest and dissatisfaction on account of the extreme low prices being offered to pick cotton.

OIL—THE "NUISANCE"

It is interesting to note that sudden demand for what was hitherto considered a nuisance—crude oil—led to the founding of the American petroleum industry. Many years later a similar demand for another nuisance—gasoline—was responsible for the industry's amazing expansion and development.

In 1859, crude oil was regarded as a valueless substance encountered by salt drillers. Then the world need for a satisfactory illuminant—kerosene—found a use for it. Years later, the discovery and application of electricity to lighting seemed to forecast the sudden death of the oil industry. Then the automobile came into existence and a tremendous demand was created for gasoline which, to the industry, had been a waste found in distilling crude oil.

The war accelerated the demand for petroleum. The birth of the machine age brought with it a need for lubricants of all kinds. The airplane came into being as an important consumer.

As a result, the oil industry, almost overnight, found that its facilities were entirely inadequate. New fields were discovered, new refineries built and old ones enlarged, transportation facilities extended. More efficient processes were developed and market outlets increased. No other industry has ever been called upon to make so great a capital outlay within so short a time, or to so enlarge its scope.

This cataclysmic progress was responsible for the industry's present problem—mainly that of overproduction. Once it was called upon to perform a necessary public service in producing more oil. Now it is giving every effort to achieving another and equally important public service—that of adjusting supply to demand and conserving our invaluable petroleum resources.

SENDS WRITEUP FOR MODERN FARMER

Cruger, Miss., Nov. 1st, 1930.
The Modern Farmer,
447 4th Ave., N.,
Nashville, Tenn.
Dear Editor:

Please allow me space in the paper for a few words from St. Mary's Unit. We organized August 17th with a small number of eleven. Times are tight and money is scarce, but I'm thankful to say we are now 37 members strong. We meet every Tuesday night and more or less have some joiners every night. We are doing our bit for the N. F. C. F. So we are pusing to the front though we have many throw backs, but we are going on just the same until we reach the top of the hill, and if the flag is taken we are going to bring the staff with God to help us for we are determined to reach the hill of success, so we are asking the prayers of all that we may succeed. Now may God bless the leaders of this grand organization. May they live long to carry on this great work With God to help us we all shall do our best and hold up the banner of the N. F. C. F.

Yours truly,
W. M. Frazier, Senior,
R. 2, Box 61.
Cruger, Miss.
J. P. Patton Payton, Pres.
Johnnie Middleton, Sec.
Luke Ford, Treasure.
W. M. Frazier, Vice Pres.

THE STORY OF FIRE PREVENTION

The study of fire control is said to be almost as old as the history of man, but in former centuries effort was chiefly given to working out ways and means of keeping fires from spreading.

Scientific work designed to prevent the occurrence of fire is of very recent origin and most of the progress has been made in the last three decades.

Organized fire prevention, according to an authority, first came into being in Ohio. In that state the nation's first fire prevention association was formed, the second fire marshal's law was passed, the first Safe and Sane Fourth of July authorized and the first state building code committee created. These Ohio organizers were called to other states to assist in starting similar movements. Fire prevention was given official governmental support when, in 1920, Woodrow Wilson proclaimed Fire Prevention Day, which has since become Fire Prevention Week.

Now, due mainly to the work of such organizations as the National Board of Fire Underwriters, intensive fire prevention activities—ranging in scope all the way from promotion of better building laws to the apprehension of arsonists—are carried on throughout the nation. Our fire waste is still gigantic—but it is the fault of citizens if they have neglected to learn the rules of fire prevention. It is to be hoped that some day we will fully realize the tragedy of the waste, and fight, as a nation, against it.

HAVE WE LEARNED THE LESSON?

No great industry was harder hit by the recent industrial depression than mining.

Prices of metals—principally copper—have been at the lowest point in many years. Demand, in spite of "bargain" prices, has been under normal. Supply has exceeded consumption. The result has been a falling off in mining payrolls, employment, purchasing power and dividends. An industry which is losing money cannot progress.

Modern America needs more copper, lead, zinc and other metals than it has ever needed before. The demand for mine products will return to normal. There is every reason for believing that the present depression is only temporary.

But we should have learned one lesson from it—that we must be careful in our legislative treatment of mining. Excessive taxes and a multitude of restrictive laws are discouraging to the industry even in prosperous times—and in times of depression they are ruinous. Those who have advocated higher taxes and more laws for mining, in order to "relieve" other industries, many of which are dependent on mining for much of their livelihood, had best turn their attention elsewhere.

175 RATTLESNAKES SLAIN IN THREE DAYS

Miles City, Mont., Nov. 15—Charles M. Dayhoff of Rock Springs claims to be the champion rattlesnake killer of the world with a record of 175 rattlers in three days.

According to Dayhoff's story, he came upon a snake den while herding cattle for shipment. He found and killed more than eighty reptiles that day.

The next day Dayhoff took several friends with him to another of the chain hills where he killed the snakes and killed ninety more.

The following day ninety-seven more was slain in still a different section.

"FARMING BY MOON"

Tradition Prevails in Devonshire, England

Some one wrote recently to a newspaper mentioning, as a curiosity, that in his village the farmers would not kill a pig during the wane of the moon, being convinced that if they did so the bacon would shrink.

Even in 1930 numbers of old-fashioned farmers work entirely by the moon, says Pearson's Weekly London.

In Devonshire and many other counties, seeds are sown at, or rather a little before, new moon, the idea being that they will germinate and grow as the moon waxes. To some this may seem an absurd tradition, for the moon's light is only one six-hundred thousandth part of that of the sun. Yet it may not be so silly as some superior folk suppose, for it has been definitely proved that green algae (a form of water weed) grow most rapidly at the time of full moon. Many a mushroom grower will tell you that mushrooms grow faster when the moon is waxing than when it is waning.

Farmers' wives have a similar belief in regard to the setting of hens on eggs, and choose the time of new moon to set their broody hens, believing that more eggs will be hatched by so doing.

Old foresters have the strongest opinion as to the influence of the moon on timber. In the royal ordinances of France for the conservation of forests it was laid down that timber, especially oaks, should be felled only during the wane of the moon, and the belief—superstition, if you like to call it so—still persists both in France and England. The idea is that timber felled at these times is less liable for rot than when felled during the wax. The belief dates right back to Roman times.

The above clipping was taken from the Chicago Post.

One of our most reliable members, Burrill Reeves of Marks, Miss., and a charter member of Belmon Unit has been successfully farming by the moon for over 25 years.

$1,875,000 SPENT IN A YEAR BY ROSENWALD FUND

Report Shows Gains Made By Negroes

The Negro problem can no longer be considered among the "unduly difficult" questions in the United States, Edwin R. Embree, president of the Julius Rosenwald fund, states in the annual report of the fund, made public yesterday.

During the fiscal year ended June 30 the fund expended a total of $1,875,655. This was divided among the following projects: Negro welfare, reducing the cost of medical care, general educational experiments, study of social problems, and public administration.

Reports $5,000,000 Pledged

Pledges for future work slightly exceed $5,000,000, the report states.

The fund expended $1,317,739 for Negro welfare, most of which went into schools. Five thousand of these schools have been built, the last being at Greenbrier, Va. In this typical case the Rosenwald fund gave $2,600, the Negroes of the community $1,000 and the public treasury the remaining $16,000. It is Mr. Rosenwald's policy to give only a small percentage of the total cost of each school.

For Negro health the fund expended $163,815, through which nursing services were endowed, health clinics established and Negro maladies studied. Payments of $157,572 were made for studies and experiments in low cost medical treatment, virtually all in Chicago, Philadelphia, Boston, and Keokuk, Ia., and irrespective of race.

A number of child study institutions and recreation centers received gifts and $129,556 was given to a campaign against adult illiteracy in the southern states. Rural libraries received $79,601.

"Race Issue Being Solved."

"Though hundreds of harrowing incidents seems to contradict us," said Mr. Embree, "we may say that 'all is quiet on the Negro front.' The race question in America is being solved. Negro progress is satisfactory."

The report pointed out that colored children are attending schools in nearly the same proportion as the rest of the population and that in higher education the Negro is holding his own with other races; Negroes are steadily making their way as workers, farmers, and business men. 700,000 owning their own homes, 232,000 owning farms, and 70,0000 owning or operating business enterprises.

MR. PAUL POTTER IN CHICAGO TRIBUNE FARM AND GARDEN

Girdling or ringing of apple tree limbs in order to induce early bearing of fruit has aspects not looked for in the first attempts at this type of orchard management. Experiments were concluded recently at Graham horticultural experiment station at Grand Rapids, Mich., showing how such ringing was evidently responsible for an increase of blight infection.

When the university horticulturists heard of the practice they studied results obtained in a commercial orchard company's three-year system. Two rings had been cut one-eighth inch apart without removing the bark on a third of the limbs of each tree that had not blossomed by their tenth or eleventh seasons in the orchard.

No blight occurred in 1927 or 1928, but when it was rampant in 1929 the orchard was heavily infected and this was laid to the ringing. Some of the intensive study on this subject was made by H. A. Cardinell, who went into cultural practices in general to find what led in the first place to adoption of a practice such as girdling.

What he found was that management of young orchards included practices that favored very vigorous growth. This condition resulted in large trees when they were of bearing age and with framework extensive enough to produce heavy crops, but at the same time lessening bearing tendency. With varieties naturally slow in coming into bearing this deferred production was considered serious, as it required greater investments before returns were received.

NEGRO CROWNED KING

Sunday, November 6 in Abyssinia at the Ethiopian Coptic Church, Rastafr, a black man thirty-nine years of age was crowned king of Ethiopia before an unprecedented number of distinguished visitors including the Italian Crown Prince, the Duke of Gloucester and the American Minister.

Simultaneously the royal consort Princess Waziru Menen, a woman of 40 was also crowned as Queen Etega Menen or the Queen of Ethiopia.

The coronation services were performed by the archbishop of Ethiopia and unparalleled in magnificence and splendor. The ceremony cost the Ethiopian government over three million dollars. The emperor's jeweled crown which was placed upon the head of this black man cost over one million of dollars.

Ras Tafari was for 14 years regent of Abyssinia and his new title is Emperor Haille Selassie 1. The King and Queen rode to the church in the imperial chariot which once belonged to the Kaiser of Germany. The chariot was drawn by six white horses. King Haille Selassie I is small of stature, thin, frail and dark complexion. The Queen is of dark complexion but very large in stature.

After the coronation services were over a dance was given in front of the church for the high priests, and the royal pair was driven to the palace.

The King is a direct descendant of King Solomon and the Queen of Sheba, the titles of Emperor and King of Kings of Ethiopia, conquering the lion of the tribe of Judah, the elect of God and the light of the world. Abyssinia is a vast treasure house of undisturbed natural wealth of gold, platinum, silver, oil, coffee, mahogany and rubber, a member of the League of Nations, a Christian monarchy.

"And Ethiopia shall stretch forth her hands unto God."

MR. DEMUS FRAZIER SECURES APPOINTMENT

Mr. Demus Frazier of Talladega, Ala., has been appointed County Agent by the U. S. Department of Agriculture under Hon. T. M. Campell.

Mr. Frazier for a number of years was connected with the Talladega College, having charge of the Dairying Department and under his guidance the dairying division advanced to one of the best of any school in the south.

Mr. Frazier will make good, more than good, for the reason he is well fitted by experience for the work that is assigned to him.

ORDER YOUR

SUNDAY SCHOOL AND B. Y. P. U. LITERATURE

FROM THE

NATIONAL BAPTIST PUBLISHING BOARD

We can supply you with all religious Helps needed for your church and auxiliaries. We specialize in Sunday School Literature for Front Line Schools, B. Y. P. U. Literature or Organized Class Publications and Ministerial Helps, such as Pastor's Guides, Hiscox Directories, Minister's License, Ordination Certificates, Prayer Meeting Hymnals and 23 different Song Books.

Send all orders to the National Baptist Publishing Board, founded by the late R. H. Boyd. H. A. Boyd, Secretary.

THE MODERN FARMER

Official organ of the National Federation of Colored Farmers

Leon R. Harris - - Editor

Published Monthly by the Modern Farmer at Nashville, Tennessee, and Chicago, Ill.

Nashville, Tenn., Office, 447 4th Avenue, North.

Chicago, Ill., Office: Vincennes Hotel, 36th and Vincennes Avenue.

Devoted to the interests of the Farmer, Truck Gardener, Livestock and Poultry Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer, 447 4th Avenue, North, Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT!

THE LAW

"It is hereby declared to be the policy of Congress to promote the effective merchandising of agricultural commodities by encouraging the organization of producers into effective association under their own control.

The Board is authorized and directed—to promote education in the principles and practices of cooperative marketing—to encourage the organization, improvement in methods, and development of effective cooperative associations." (Public—No. 10—71st Congress. Sec. 1-5.)

THE GOSPEL

"This law is predicated upon the ability of the farmer to manage his own business, once he is organized to do so. Cooperation is the key to it and only in exceptional cases can the Federal Farm Board have any dealings with a farmer who is not a member of a producer-owned and producer-controlled marketing unit." Hon. Sam'l R. McKelvie, Member, Federal Farm Board.

The National Federation of Colored Farmers believes that the Colored Farmers of America should own and control their own co-operative associations.

"Co-operation With All—Affiliation With None."

NORTH CARQLINA'S DISGRACE

North Carolina's tenant system is North Carolina's disgrace. There are Negro tenants in North Carolina who do not know their souls are their own—who have not had Fifty Dollars cash in hand during the past two years—who are so deep in debt they will never get out, who are so discouraged they are desperate. Whose fault is it? It is certainly not the tenants' fault. They are slaves to conditions others have made for them. Others will be responsible for the results.

North Carolina is cursed by "absentee lanlordism." She is, also, cursed by gougers and Shylocks. Hundreds of Negro tenants in the state are not permitted to cultivate enough food crops to support themselves and families. Landlords and overseers demand one-half of what little they do produce, even when the tenant furnishes the seed and fertilizer. Negro tenants in North Carolina and their families are dying by inches for something to eat. Negro farmers' babies are afflicted by the rickets and other diseases, simply because they must subsist on fat-back, bacon, coffee and cornbread. There is suffering and the victims have lost hope.

God save a land, the possessors of which can see nothing but cotton and tobacco. Warehouses in the state are spewing forth these products,—the prices for them are poor,—hardly enough to pay for the raising,—but the absent landlord collects his "pound of flesh" and winks. The tenant surely suffers. How can any Negro be a man and live under such conditions?

A dangerous disease requires a potent remedy. We suggest these. First, that public sentiment be so aroused that it will compel absent landlords to sell their land to the tenants who cultivate it. We believe that public or private capital could easily be found and provided. Second, that the Federal Government be authorized by Congress to purchase such land and resell same to Negro farmers,—the "Directed Colony" plan.

A remedy is required, Human beings are suffering. They are suffering a living death. No wonder the counties so cursed have the poorest schools, the poorest churches and the poorest people found in all the great state of North Carolina.

BUYING IN THE DARK

Not long ago while in Mississippi, we passed by a large crossroad store and saw posted on the door a sign which read "No questions answered." We were informed that 80 per cent of those who patronized the store were Negro tenants and farm hands. These customers sold eggs, chickens, butter and other farm products to the store and purchased from it their food supplies, but they were not informed as to the price of any commodity they either bought or sold. The enterprising merchant paid them what he pleased for their products and charged them what he pleased for what they purchased. No questions were answered.

Such a store could not exist in a civilized, Christian American community. The reason why it stands where it is, obvious. The Negroes who patronize it are slaves to their conditions and environment. The white customers, at their meetings, are informed of all market changes and prices. The Negroes are not organized— they know nothing—and they can get no information from those who do know.

The customers of this store should organize a Unit of the National Federation of Colored Farmers and buy their supplies co-operatively. The merchant should not kick against such a movement, for his "sign" tells his colored customers that he cares nothing for their trade anyhow. We certainly hope they will show sense enough and backbone enough to organize. In this enlightened day, only a slave or a lunatic would submit to such treatment. Even a dog will snap at the hand that tries to snatch the bone from his mouth. Are these Negro customers less than dogs? Evidently the enterprising merchant thinks they are.

THE CHINAMAN WINS AGAIN

In Greenville, Mississippi, there are over 30 grocery stores operated by Chinese merchants. Seventy-five per cent of their customers are Negroes. These merchants are able to rent or purchase property in favorable sections,— they thrive and prosper,— no one objects seriously to where they live or to what they do,—and they make money a plenty to send back to old China. That is what they do with their surplus.

On the other hand if a Negro merchant desires to locate in a favorable section he is either refused the privelege, outright or is charged two prices for the same. Then he is boycotted and insulted and slighted and everything possible is done to make his life miserable. If he succeeds in spite of his adversities he must keep a still tongue and a wise head, or he will be compelled to give up his business and move from the community. The Negro is an American —his surplus is kept in America but he is treated worse than the Chinaman.

We would like to see the time come when our people will learn the value of the dollar they spend. Every dollar spent with a Chinaman, a Greek or any other kind of foreigner, is a weapon aimed at our own breasts. Spend your dollars, wherever possible, with your own people. Then spend the rest of them with your friends. Its high time we were learning some "spending sense."

OUR FRIENDS THE— BIG PLANTERS

The National Federation of Colored Farmers desires to have and to hold the friendship of the large southern planters who employ so many Negro farm-hands, tenants, and share-croppers. We want their friendship because our farmers and our members need it. True friendship is worth more than money. One friendly planter in a community where most of our people till the soil, is worth more to them than all the money their labor produces.

Several large planters have recently written us requesting that we aid them in securing tenants. They desire tenants who are industrious and thirfty, and evidently prefer those who are members of the National Education of Colored Farmers, for as one planter has written,—"I realize that your organization can be of much assistance to Negro Tenants who are ambitious and want to get ahead. Such tenants are good, faithful workers and they are the kind I want."

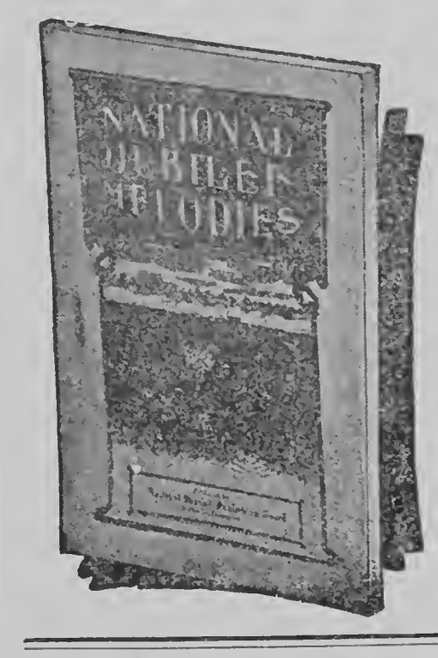
And we add right here that such planters as the one who wrote that statement are the kind of planters we will try our best to assist We will recommend to such planters those of our members who will treat them fair,— who will not keep them in a state of slavery, who will actually give them their half of the crops, and statements showing just what they are entitled to. Such friendly, honest, progressive planters deserve our thanks, our friendship, our honor and our prayers. They have always been the real leaders of the south and the best friends of our people. We want to hear from more of this kind for we know of hundreds of Negro tenants who

ATTENTION COLORED FARMERS

The National Federation of Colored Farmers is receiving hundreds of letters from Colored farmers requesting all kinds of aid and information. We are willing to do everything we can for all the Colored farmers of America. It costs money, however, to maintain offices and our expenses are becoming so heavy that we are compelled to discontinue supplying information to those who request it who are not members of the Federation. If you have faith enough in the organization to believe that it can aid you, then you should be willing to join it and help support it. Isn't that so?

Several County units have organized and elected officers but have not sent in their membership dues. These units are eligible to membership in the Federation until dues are paid. Be helpful. Co-operate. Pay up. "All for each and each for all."

National Jubilee Melody Song Book



America's original music. Songs from the Plantation and Slave Days. More than one hundred thousand sold in the year of 1921. More now going. Send your order.

PRICE 50c

Make all orders payable to

NATIONAL BAPTIST PUBLISHING BOARD

Henry A. Boyd, Secretary,

523 2nd Ave., N., Nashville, Tenn.

Use Sunday School Catechisms FOR THE LITTLE ONES

Select one of the three---First, Easy Lesson Primer 6c; Second Child's Bible Question Book 5c; Third Baptist Sunday School Catechism

After thirty-three years of actual Sunday School experience, after thirty-three years of developing a service for the Sunday School forces, we have been convinced that the Sunday School Catechisms, edited, published and printed by the National Baptist Publishing Board, will give help and instruct the children in a way far more advantageous than the Picture Lesson Cards. At the same time, they will save the Sunday Schools money, because there are thirty-two pages in each of these Catechisms, with illustrations, Bible questions and intensive study calculated to develop their minds. These Catechisms are described and priced on the order blanks.

In preparing your order for the next quarter, and from now on, give attention to the Sunday School Catechisms, substitute them for Picture Lesson Cards. We recommend them. We endorse them. We specialize in them.

NATIONAL BAPTIST PUBLISHING BOARD
HENRY ALLEN BOYD, Secretary
523-2nd Avenue, North, Nashville, Tenn.

have been persecuted and robbed for years, and we would like to be the Moses to lead them out of their dismal Egypts into the Canaans where such good planters hold sway.

TELL US ABOUT IT

We want to hear from every member of the N. F. C. F., who has been refused cropping privileges or employment because he belonged to a Unit, whether tenant or farm-hand. We have heard of only one planter who has threatened to dismiss tenant members. If there are others, let us know who you are.

Progressive and far-sighted land owners want tenants who are industrious, ambitious and thrifty. Such tenants are those who belong to the N. F. C. F. We know some of these planters. We want to know you, brother member, if you must move because you have seen the light.

COOPERATIVE PRODUCTION

The National Federation of Colored Farmers is spreading the gospel of cooperative production. Cooperative production cannot be practiced successfully in any community or by the members of any Unit until all necessary preparations are made to begin it.

First of all, the Unit must decide what food crop or crops shall be produced. Two kinds of crops are enough for any Unit to start with. Then let the members get together and decide what the Unit acreage shall be. It should not be more than can be well cultivated and successfully harvested. Then decide on the variety to plant. Pick a variety that markets well and one suited to your soil and climate. Consult your county agent and the National office.

Preparations should be made right now for next year's crops Get busy. We want to market many carlots of peas, sweet potatoes, collards, salad greens, and watermelons for our Units next year. Try out a few of these new "money crops." You'll be surprised.

POWER DETERMINES FARM INCOME

The income of the modern farmer is determined, to a large degree, by the amount of mechanical power employed in his work, according to a recent survey by the American Research Foundation of Chicago.

The survey analyzes the average farm income by states. In one state, with an average of only one horsepower per worker, the average crop value per worker is $475 a year. In another state, where each worker has the equivalent of 14.1 horsepower, the average income is $1,700. It is said that mechanical power will reduce labor about one-half, or double the speed of operation.

Electric power—the most efficient and economical form of mechanical power—is being extended to American farms throughout the nation as rapidly as is possible. In its widespread use is at least a partial solution to farm problems, and the key to agricultural prosperity. Animal power is generally wasteful, expensive and inefficient. The machine is doing for the farm what it has done for industry.

'MISSISSIPPI INDIANS HELD IN PEONAGE, SAYS SENATE COMMITTEE

Scripps-Howard Leased Wire

WASHINGTON, Nov.—29,—"Our findings indicate that the Indian bureau is the most completely mismanaged and incompetent bureau in our government," said Senator Burton K. Wheeler, just returned from an investigation by the Senate committee on Indian affairs in Oklahoma, Mississippi and Texas.

Senator Wheeter said that "the facts discosed warrants the overhauling of the Indian bureau from top to bottom."

Wheeler found an "army of employes giving most of their attention to supervising the estate of wealthy Indians, while neglecting numerous others living in dire poverty."

"We were unable to find," he said, "a single instance in which an Indian farmer had been given either assistance or advice by a so-called farm expert. We found, for instance, two families living in one miserable hut without decent clothes, almost without food, who had not seen an Indian bureau official for years.

"The field clerks, farm agents and other officials spend so much time at their offices or elsewhere far removed from the scenes of their supposed operations that most of the Indians do not know of their existence."

Senator Lynn Frazier of North Dakota chairman of the committee described the same sort of conditions.

"The Indians of the Choctaw communities live in a state of actual peonage," he said.

"They are kept constantly in debt to white planters in Mississippi under share-cropping contracts on their own land and are not allowed to leave the land until the debts are paid. We found evidence of a standard price that had been set for Indian families' transfer from one plantation to another One old Indian had worked 20 years for the same planter and still was in debt."—Memphis Press Scimitan.

LOUISIANA FARMERS ORGANIZING

For the past three months Colored farmers in Louisiana have been active in their efforts to form county unit o the National Federation of Colored Farmers, and under the direction of Mr. J. L. Chinn, assisted by several of the most prominent farmers in that section of the state a large and enthusiastic meeting was held and a permanent organization set up with the following officers:

J. L. Chinn, Chairman,
Mrs. G. Oconnor, Secretary,
Rev. A. D. Alexander, Market Agent.

Tho meeting was addressed by the following prominent citizens of the state:

J. L. Chinn, President of the Third Ward Colored Civic League Temple A. M. E. Church.

Rev. H. M. Madison, pastor Allen Chapel A. M. E. Church.

Dr. A. D. Alexander of the Afro Villa St. Francisville.

Hon. R. Jones of the Afro Americans Yazoo City, Miss.

Dr. J. Martin.

Dr. J. H. Huggins, Baton Rouge La.

Dr. J. F. Brown, Baton Rouge, La.

Mrs. H. F. Chinn, Prin. Chinn Training School.

These prominent characters urged co-operation and learning to handle their own business as farmers and business men.

Scotlandville is one of the best farming sections in the state, and we predict that it will not be long before these members will be shipping carlots of fruits and vegetables to the large terminal markets and buying their groceries and supplies at wholesale prices.

WANTS MEN TO FARM, BUT THEY MUST BE SINGERS

Atlanta, Ga. —J. J. Covington of Abbeville, Ga., sent the following want ad to the Georgian Stato Market Bulletin: "Wanted— By a singing farmer, men to both sing and farm, especially first and second tenors and first bass."

COLORED FARMER'S NEWS BULLETIN FOR NOVEMBER

(Continud from Page 1)

held a Special Meeting at Mound Bayou, Miss., with a view to organizing a Credit Corporation and be in a position to make application for loans through the Federal Intermediate Credit Bank.

Matters of vital importance to the future interests of the members will be up for discussion and action and every officer is urged to be present.

COTTON

The cotton market has improved some since last Bulletin and advances of around 1.50 per bale. Grade difference unchanged. Premium staple cotton is in much better better demand and especially the higher grades and longer lengths.

The approximate price of 15-16 inch white long staple on Memphis market is 10.15 and 1 inch 10.80; one and three sixteenth inch 14.10 and one and a quarter inch about 18.75 These prices are based on strict middling grades.

The State of Mississippi ginned up to November first, one million one hundred twenty-six thousand six hundred and forty bales, while for the same period last year, the ginnings were over one and a half million bales. Bolivar county has the largest ginning of any county in the state, being something over seventy-two thousand bales. Georgia ginned one million three hundred and seventy-four thousand bales, which is about a quarter of million bales more than last year.

COTTON SEED

Price on cotton seed gained about a dollar per ton; the present market being around $29.50 per ton. Throughout the state of Mississippi, mills have been active buyers and better prices.

POTATOES

The Irish Potato crop is about the same as last year, but below the 5 year average and the quality lowest since the drouth of 1901. The sweet potato crop is estimated to be short over 12 million bushels from last year. House cured Nancy Halls are bringing around $1.50 per bushel; and Yellows, $2.00 to $2.25 per bushel in Chicago. These are wholesale prices that are paid to the shippers. Shallots from Louisiana bringing 5 to 6 dollars per barrel.

GROCERIES AND SUPPLIES

Your grocery price list shows cabbage at about one cent per pound, Yellow globe onions 80 cents per bushel. This is cheaper than Southern farmers can grow these vegetables.

Good patent flour can be had at 70 cents per 24 pound sack and meal around 48 cents per 24 pound sack—when buying through your Unit.

White shorts, rice, lard, sugar and coffee still quoted at lowest prices in the past several years

OVERALLS

We have made arrangements with a large manufacturing concern in Ohio to ship our Units overalls in 2 dozens lots and upward at about eight dollars and thirty-nine cents per dozen or 70 cents per overall. These are the waist overalls. For the high back elastic suspender overalls, the price is $10.06 per dozen or about 84 cents per overall. The coats to match at the same prices or in other words the coat and overalls would cost about $1.68. The factory pays the cost of the express charges.

CLOTHES

We have an option on a round lot of men's grey and tan suits at 6 to 7 dollars per suit These suits are brand new and nicely made up. Silk and rayon socks for men at 11 cents per pair. Ladies' French broadcloth dresses (sleeveless) 50 cents each.

THE PRICES ARE LIKELY TO BE WITHDRAWN AT ANY TIME!

LADIES' HIGH TOP SHOES, FINEST QUALITY—90 cents per pair.

Hold your meetings regularly and permit the members to read the price lists and those members who cannot read, the Secretary should explain every detail, in order that they may fully understand.

Owing to the heavy rush of business, several communications from our members have not been answered promptly, but the mail is now receiving our best attention, and all letters will be answered.

MISSISSIPPI FARMERS SEEK FEDERAL AID

MOUND BAYOU, Miss., Dec. 12

—The Mississippi State Federation of Farmers, operating under the authority of the National Federation of Negro Farmers, held a meeting last week here to adopt means to secure funds from the federal government to carry on farming operations in 1931.

Race farmers of Mississippi, especially those of the Delta region have been hard hit by the drought and the low price of cotton and they realize that the regular channels through which they have heretofore been supplied have also been hard hit and will not be able to help them, so they are making and effort on thier own initiative to secure government relief.

A change from the one-crop system must be inaugurated, leaders at the meeting pointed out, and they declared that the state and federal governmental agency should respond to their practical needs under experienced and capable leadership.

They felt that in coming to Mound Bayou to hold their meeting they would receive the proper assistance from a group of leaders who demonstrated their ability to organize and work in harmony with the white farmers, bankers merchants all over the state and that they will continue to receive such co-operaion and advice.

The national federation, organized about two years by James P Davis, formerly of Atlanta, with headquarters in Chicago, has made considerable headway from an educational standpoint. The body was incorporated under the laws of Illinois last month.

There is now a county unit in nearly every county in the South and state organizations are being formed in states where there are a large number of non-white farmers.

B. W. Byram is chairman and Godfrey Wilson is secretary of the Bolivar county unit.

C. R. Richardson is chairman of the board of directors of the national body. Other members are J. D. Davis organizer and director: S. B. Wilson treasurer, and L. R Harris and R. A. Byrd, directors.

OUR MINISTERS

The ministers have contributed more to the uplift of the race than any of the professions. They are about the poorest paid of any of the professions. Their loyalty to their race has been more than marked, but in all cases there are exeeceptions, and we are gratified that throughout the UNITED STATES our ministers have rallied to the aid of the farmers in their efforts to organize, giving their time and money to further the cause.

We are surprised to be informed that one minister of our race in the state of Mississippi secreted himself under a church owned by Negroes, and heard the full discussions of a meeting that was held by one of the units of our federation and reported what he heard to a short-sighted white farmer in his neighborhood.

This minister is supported by the colored farmers in his section Every dime that he receives which is necessary for taking care of his family comes out of the pockets of the farmers of his own race.

We are wondering if there is a white minister anywhere in the United States who would get under a white church, listen to the discussions of a white farm meeting and report same to a colored farmer.

We are making an effort to secure a photo of this minister, and if successful, it will appear in our January edition.

This piece of humanity (for, he is by no means a man) should be unfrocked and driven from the state. He is a traitor to his own race and would make Judas look like a thin dime.

The intelligent white farmers are standing behind and encouraging colored farmers to do as they have already done.....organize and we have one among our group attempting to play a double role.

FARMERS MUST ORGANIZE

By Arthur M. Hyde, Secretary of Agriculture.

The only answer to over-production is less production. We must balance our crops against market demands, producing only such amount as we can sell at a price which covers cost of production plus a profit. More production merely means more problems, lower prices and greater disaster.

Despite its unhappy experience with surpluses American agriculture to a large extent is still unorganized. No industry on earth can match agriculture in the number and volubility of its advisors Their diversity is one of our weaknesses. There is lack of unified thought and action.

To write an effective answer to the problems of the farm we must have, first of all, organization. The first object is unity of action, collective thinking, planning and marketing.

An increased program of farm production would tend to build up a surplus which would have to compete in world markets against competition which no scheme of American farmer cannot and ought not to be compelled to meet the fierce competition of cheap lands and low standards in other countries.

A National NEWSPAPER For Churchgoers

Read the National Baptist Union-Review published every week, subscription price $2.00 a year. This newspaper is the oldest religious publication under the auspices of the National Baptist Convention of America. It is eight pages in size, eight columns to the page, and is brimful of denominational information every week. It contains a Woman's Page, spicy editorial matter, and circulates in practically every state in the Union.

360 ACRE FARM SELLS FOR TWENTY-SEVEN THOUSAND DOLLARS

Mr. J. J. Mackey of Memphis, Tenn., has purchased a 360 acre farm seven miles north or Starkeville, Miss., for twenty-seven thousand dollars.

Starkeville is in Oktibeha county and figures from the Census Bureau of the Department of Commerce says there are 789 white farmers and 1658 colored farmer in Okeibeha county.

We also find that there are 35 colored farmers in this county who own their farms.

Oktibeha is a great sweet potato and grain county.

Our colored farmers should organize in Oktibeha. They will need organization to promote their future interests.

THREE CENTS COTTON

To very quickly understand the pitiful plight of the poor farmers, the colored farmer especialy it is best to talk to the farmers rather than rely upon the reports of "Commissions" appointed by the plaints of Negro farmers from the sections rurrounding Vinita and Nowata, Okla. — who are here and find but little or nothing to call them back — we learn the fact that these men after planting cotton, laboring under the hot rays of the summer sun, plowing, hoeing, picking, hauling, etc., were actually forced to sell their cotton at 3 cents per pound or $15 for the average 500-pound bale.

In this drouth year when the yield fell far beneath the average — down to one-third and even one-fourth in some instances, it can be seen that raising cotton was but "labor lost" and not only that but heavy indebtedness to storekeepers and creditors and the forcing of even these sharks out of business. With nothing in the country, the farmer migrates to town seeking to fit in somewhere and somehow in the general industrial scheme. "Back to the farm" is a slogan containing some sound sense, but the farm and the farmer must be "backed" in some way if the two are to remain together. There is indeed privation and starvation staring men, women and children in the face where 3-cent cotton has been raised and sold.

The above was taken from the Hot Springs Echo of Nov. 29th. This is all true, and in some sections of the coton producing belt farmers are getting even less than 3c for their cotton, but it is mainly due to lack of organization.

Farmers in Oklahoma have been thinking and considering the idea of organizing for over a year, and until this day they are still this day they are still thinking. As long as they hesitate it will be to their detriment.

COTTON ESTIMATE FURTHER REDUCED

An estimated production of 14,243,000 bales of 500 pounds gross weight from the cotton crop of 1930 as shown as of Dec. 1, compared with 14,439,000 bales on Nov. 1, and a final crop in 1929 of 14,828,000 bales. The census bureau reports 12,834,907 running bales counting round bales as halves, and excluding linters, ginned from the crop of 1930 prior to Dec. 1, against 12,853,166 for the like 1929 period and 12,560,154 to Dec. 1, 1928.

December revised estimate of area of cotton for harvest in 1930 is 45,218,000 acres, against 45,793,000 acres harvested in 1929 and 45,341,000 in 1928.

From the above statement issued by the secretary of Agriculture Hon. Arthur M. Hyde, we are at a loss to understand just why our farmers in certain sections of the country will sit idly by, and think. Procrastination is our worst thief. Farmers in sections of Oklahoma and Georgia as well as North and South Carolina are badly in need of organization. The way is opened for Negro farmers to secure the privilege of farm relief, but they must first do as the white farmers have done, help themselves by organizing. The Federal Farm Board was created to help the farmer help himself, but we find that some of our group are waiting and they are sinking at the same time. Low prices, of farm products, high interest and double prices for groceries and clothing as the cancer that is gnawing the very life of the unorganize Negro farmer.

RECEIVES CERTIFICATE OF MERIT IN AGRICULTURE

Mr. Matt Gross of Castlebury Conecuh County Alabama received a certificate of Merit at the Tuskegee Farmers Conference held in Tuskegee Institute, Ala., the week of December 1st.

Mr. Gross is known as the "strawberry King" and produces some of the finest berries grown in the south.

Mr. Gross is a member of the National Federation of Colored Farmers.

SMALL FARMS URGED AS AID TO PROSPERITY

GEORGE RUSSELL, IRISH EXPERT, ADDRESSES COMMERCE ASSN; WANTS CITY FOLKS ON LAND

By Calvin C. Bowsfield.

George Russell, who for twenty-five years has been teaching the people of Ireland how to make little farms pay, brought his message to Illinois yesterday. He addressed the agriculture committee of the Chicago Association of Commerce at the Great Northern Hotel.

He believes in the small farm because when intensively cultivated it makes a good living for the ordinary family. It makes for thrift and contentment. His central idea is applicable to the United States, for he would check the trend of population from country to city and encourage small land holdings by city families, so located as to afford social and market advantages.

"There should be no conflict between city and country dwellers because they are fundamentally one," he said.

Successful organizations will make the farmers a better and more useful citizen in all the relations of life, Mr. Russell added.

—Chicago, Herald and Examiner.

FEDERATION OF FARMERS GRANTED CORPORATE CHARTER

Formed to devote itself to the problems of diversified production grading, packing, shipping and marketing of farm products, the National Federation of Colored Farmers last week completed another step in its march forward when it secure a charter from a state of Illinois, making the organization a corporation empowering it to do business under the law of the state as such.

Other purposes for which the corporation is formed that are not stated in the preceding paragraph are to purchase farm supplies through cooperative methods and otherwise and to won, manage and direct farms and assist farmers in every way consistent with the object and powers of the organization.

The formation of the National Federation of Colored Farmers marked another milestone in the progress of a group in an industry in which it has always lagged behind. The part the farmer plays in the life of a community needs no elaboration, yet the Race farmers have been slow to co-operate for his own betterment and for the betterment of those dependent upon him for service.

It is expected, said J. P. Davis one of the directors, that the farming indnstry among our people will take on a new fascination now that some concrete and concentrated efforts are being made to make farming profitable.

The new organization has members in 10 states. A drive is now on foot to secure membership all over the United States. Other Officers besides Mr. Davis are C. R Richardson, chairman of the board of directors; S. B. Wilson, treasurer, and L. R. Harris and R. A. Byrd directors.—Chicago Defender.

TUSKEGEE FARMERS CONFERENCE IN FORTIETH ANNUAL SESSION

CARL WILLIAMS, FEDERAL FARM BOARD MEMBER, DELIVERS PRINCIPAL ADDRESS

Notable Gathering of Farmers, Educators, Other Leaders

By Albon L. Holsey.

Fifty years after the founding of Tuskegee Institute and 40 years after the organization of the Tuskegee Negro Farmers Conference, the effectiveness of Tuskegee's program for the advancement of the Negro farmer met its severest test in the depression of 1930.

At the fortieth annual Farmers Conference which was held Dec. 1, 2, and 3, at Tuskegee, the test was met and the answer given when a Negro farmer was asked. "What credit arrangements have you made for next year?" and replied, "I won't need any for I have food and feed enough to carry me until the crop of 1931." This has been the forty-year doctrine of the Tuskegee Negro Farmers Conference.

"Growing food and food supplies for 1931, continues as the slogan of the Tuskegee Negro Conference and if followed will meet the emergency on southern farms during the next year.

Faced with the stern realities of the current year's depression the Negro farmers met at Tuskegee with a grim determination to carry on with a unified and effective program, and it was apparent that the influence of the Tuskegee Farmers Conference had been a strong fortress to these farmers during the present year. "We have learned," one farmer said, who has long attended the Farmers Conference, "that if we raise something to eat at home, we will be able to go through the winter."

Wednesday Morning Session.

The morning session opened with a free discussion among the farmers and closed with a stirring address by R. A. Stratford, white county demonstration agent of Colquitt County, Georgia.

Grant Moss of Macon County and his wife reported their success in meeting the present situation in the raising of chickens, hogs and cows and providing for themselves all the food and feed necessary; $136 was realized by Mrs. Moss from her cows and chickens.

M. D. Ely, of Clark County, Alabama, made an interesting comparison between the raising of cotton and the raising of pigs. Using his own experience as a basis he reported that something over a year ago he purchased a Duroc brood sow and that he had kept books both on his farm and the brood sow. On his farm he raised four bales of cotton which sold for $179. From his brood sow he realized $294.50. The upkeep cost of the sow was $64 and it cost him $57 to raise the cotton. "I wish now that I had put all of my money into brood sows instead of trying to raise cotton."

Supplementing his address that he delivered at the Workers Conference, Mr. Stratford of Moultrie, Georgia outlined the details of the "Prosperity Program" which had been so successful in his county. The general plan based upon one plough was 10 acres in corn with peanuts and velvet beans planted between the rows; five acres of cotton; five acres of tobacco, two brood sows, two milk or beef cows, and 50 pure breed hens.

"When we had gotton across to the farmers in our county the advantages of uniting their efforts behind this acreage program, we then set ourselves to the task of providing a market and our slogan was 'A cash market every day in the year for all food products raised on the farm.'

"Our banks also cooperated with us," said Mr. Stratford, "and they announced to the farmers in our county that they were willing to advance money on mixed crops rather than on warehouse receipts under boll weevil conditions. This attitude of the banks gave heart and soul to our men and women, both black and white, in our county and they went to work to keep prosperity in our count. I repeat what I said yesterday that there is not an idle farm in Colquitt County nor a vacant house in Moultrie." In the lively discussion which followed Mr Stratford's address, he stated that the farmers of the South must give more attention to counting the costs in producing cotton and he quoted the following figures based upon conditions in Colquitt County, Georgia.

To raise 1-3rd bale of cotton to the acre cost six cents a pound to produce; to raise one bale of cotton to the acre costs eight cents a pound to produce; to raise one-half bale of cotton to he acre costs acre costs 2 cents a pound to costs costs 25 cents a pound to 17 cents a pound to produce; to produce."

J. A. Evans of the United States Department of Agriculture closed the morning session with a note of warning to the farmers that "we are facing a long series of years of low priced cotton," which condiion can only be met by applying scientific methods of production in order to reduce the cost of producing cotton. He also warned the farmers that other countries are now producing cotton and thereby reducing the demand for American grown cotton

Afternoon Session.

The afternoon session opened with a stirring appeal from Dr. R. R. Moton, Principal of Tuskegee Institute, to bring optimism o he present situation. "Forty years ago," said Dr. Moton, "Booker T Washington, the Founder of this great institution called the farmers together to outline a plan for greater cooperation, more scientific agriculture and diversification in planting. Had Booker Washington's advice been heeled, there would now be less suffering and those farmers who have followed his advice and provided food and feed during he past year are not suffering."

Hon. Seth P. Storrs, commissioner of agriculture for Alabama was presented by Dr. Moton following his own annual address. Mr Storrs among other things said that "business is sick and it ought to be, for when business was prosperous agriculture was not, and business will not recover until agriculture has been properly reorganized and recognized so as to share in the general prosperity of the country."

Gambling in Cotton Condemned

"The South has failed eight times in the last 40 years because they have gambled with cotton, "said Dr. Bradford Knapp, president of Alabama Polytechnic Institute. Dr Knapp presented a three-fold program for the farmers of the South —soil improvement, food for the family and raising two other products along with cotton for sale.

Carl Williams Speaks.

The feature address of the afternoon was delivered by Carl F. Williams of Oklahoma, member of the Federal Farm Board. Mr. Williams at the opening of his address paid great tribute to the Negro farmers of his own state, Oklahoma, whom he said had done a little better farming job than had the white farmers. He also praised the Negro farmers of Oklahoma who proportionately according to their population owned more farms than the whites.

Turning his attention to the more general problem of the depressed conditions in the South, Mr. Williams reminded his audience that the South by following the one crop system was making the North rich. "You grow your cotton and when it is sold, you send your money up North to buy food which represents four commissions and a long freight haul. Looks as though you are ashamed to eat the food which you yourself produced." He closed his address with a detailed discussion of farm relief agencies, including the Farm Loan Board, the Federal Farm Board and the Intermediate Credit Bank, and assured his farmer audience that so far as the policies of these government agencies are concerned, no discrimination is intended and that Negro farmers have as much right to join and receive benefits from thte various cooperative which are being organized in each state as any other citizens. He strongly urged the Negro farmers to take advantage of thest benefits.

After Mr. Williams' remarks Dr. Moton presented to the Conference Mr. J. O. Thompson and Mr. George Foster Peabody who gave inspiration and encouragement to the farmers.

Negro Farmers Optimistic

The Institute Chapel was beautifully decorated with agricultural products which many of the farmers commented upon as they entered the Chapel, some of them saying that Tuskegee's agricultural department was setting a good example to the farmers. On the platfrm were radishes, greens, massive turnips, collards, lettuce, pumpkins, peas, potatoes, and other food products.

At the close of the morning session the Tuskegee Institute Band entertained the farmers while they partook of a delicious out-door dinner, which had been prepared by the dining hall department of the Institute. The rollicking good humor which could be overheard as the farmers partook of the meal indicated an heroic optimism in the face of present difficulties out of which will come "Prosperity Counties" all through the South, similar to the one in Colquitt County, Georgia As ono farmer during the dinner facetiously remarked, "I am going through this year without borrowing money. If the food that have grown does not carry me through, I have two dogs and I will go hunting and catch rabbits and birds to supplement my food supply to carry me through, if necessary." Such a spirit as this, which was manifested at the Tuskegee Conference, will mean a great force for strength and an influence for good in estabilizing conditions in Ala and adjoining states during the winter months.

Certificates of Merit In Agriculture.

A feature of the afternoon pro-

gram was the presentation of cerificates of merit in agriculture to the following persons::

Mrs. Mary Simpson Carliss of Macon County, Alabama.

O. C. Crowe of Montgomedry County, Alabama.

Matt Cross of Conecuh County, Alabama.

Mrs. Carliss' achievement during this year was in the development of a modern and a model farm home; a home beautifully, tastefully, and comfortably equipped. Mr. Crowe's achievements were based upon a splendid record in conducting a truck garden and dairy near Montgomery, Alabama. Mr. Cross is known throughout Conecuh County as "The Strawberry King."

Practically all of the 50 Alabama extension workers were present at the Conference, with a total enrollment of 205 4-H Club boys and girls. During the session these boys and girls were given courses in truck gardening, poultry, mule judging, dairy, swine, field crops, beautification of home and grounds, health, organization bread making, table setting and service, clothes judging and appropriateness of dress.

Prizes Awarded.

The following prizes were awarded to club boys and girls. To the boy in the state of Alabama receiving the highest score in a health contest went a prize of $12.50. This prize was won by Curtis Lipscomb, Route 2, Box 19, Opelika, Alabama, Savannah Johnson, Tuskegee, Alabama, received a similar prize for having the highest score of any girl in the contest. To the boy or girl rated as having done the best club worked in their communities, Mary E. Lewis of Lowndes County, Alabama, received first prize and Gussie Johnson of Lownde's County second prize and Claxton Welch, Conecuh, County, third place. These prizes were made available through The Birmingham News.

Executive Committee N. A. T. C. S. Holds Meeting.

On Monday and Tuesday the members of the Executive Committee of the National Association of Teachers in Colored Schools held their annual meeting in the assembly room of the new home economics building. The committee was called together to formulate plans for the program for the annual convention of the Teachers Association which opens in Washington, D. C., July 28, 1931.

A special committee appointed at a previous meeting of the Executive Committee reported progress on a study of the present status of the Negro in education. This study is being made in cooperation with the United States Bureau of Education and other agencies.

The members of the committee present included Miss Fannie C. Williams, New Orleans, president of the National Association of Teachers in Colored Schools; W. W. Saunders of Charleston, West Virginia secretary of the National Association of Teachers in Colored Schools; R. P. Sims, president of Bluefield Institute, Bluefield, West Virginia; R. S. Grossley, president of the State College for Negroes, Dover, Delaware; H. G. Trenholm, president of Alabama State Teachers College, Montgomery; Dudley Tanner, supervisor of Negro schools in the State of Tennessee; President H. A. Hunt, Fort Valley Normal and Industrial Institute, Fort Valley, Georgia; Mrs. A. M. P. Strong of the R. R. Moton High School, Mariana, Arkansas; Monroe N. Work, director of Records and Research, Tuskegee Institute; W. M. Cooper of Hampton, Virginia; W. T. B. Williams, dean of college department, Tuskegee Institute; W. A. Robinson, supervisor of Negro Schools, Knoxville, Tennessee; C. J. Hurston, agricultural and extension worker, Montgomery; N. B. Young, president, Lincoln University, Jefferson City, Missouri, and C. J. Calloway, Tuskegee Institute.

Movable School Gets New Truck

A new "Booker Washington Agricultural School on Wheels" was on display at the Farmers Conference. This truck equipped with agricultural implements for demonstrating farm practices, devices for teaching better home making, nurses' equipment for conducting health clinics, was purchased by the Negro farm and home demonstration agents of Alabama. The cost of the car was levied among them and the money was raised by the farmers and white friends of their respective counties. The truck is a decided improvement over the one just preceding it, and aside from being very well constructed, has many other modern and up-to date appointments.

Tuesday Evening Session.

The farmers, officials of the National Teachers Association, and visitors gathered at the Institute Chapel on Tuesday evening for the annual get-together meeting during the Farmers Conference. Addresses were delivered by prominent Negro educators and one address which Dr. Moton characterized as the best speech of the evening was delivered by a young girl, Mary E. Lewis from Lowndes County, Alabama. Miss Lewis is a 4-H Club girl who reported that she had a cow which she had raised from a calf, and which was now paying htr $5 per month. She also reported that she had sold peas grown on her project for $16.20, peanuts $10, in addition to which she had sold 32 dozen eggs, two hens, six turkeys, and had made nine dresses and 25 other garments for memers of her family, The money which was made is being used to defray her expenses in school.

Hampton's -New Principal Presented.

At the close of the eening session, Dr. Moton, principal, presented to the audience Dr. Arthur Howe, who resigned as a member of the faculty at Dartmouth College to accept the presidency of Hampton. Dr. Howe, who is a son-in-law of the lato General Armstrong, founder of Hampton, was given a great ovation by the teachers and students when he arose to speak. He brings to his new task at Hampton a broad experience as an educator and a traditional symathy for the Negro and the many complex inter-racial problems of Negro education.

Declarations of the Conference.

The declarations of the Farmers Conference said in part:

Forty years ago the Tuskegee Negro Farmers Conference was founded by Booker T. Washington. We record among some of the achievements of this Conference during this long and interesting period substantial contributions to community betterment in increased number of farms owned, more convenient, comfortable and attractive homes, better methods in farming and increased interest in community welfare as indicated by better churches, schools and other community interests. We are happy to convene here on the eve of the fiftieth anniversary of this great institution whose support, interest and influence have made the success of this Conference possible.

The time we are now experience ing have been referred to recently as a "critical moment." Since this Conference adjourned a year ago, the widespread financial depression has thrown industry greatly out of joint. Much of the brunt of the situation falls upon the farmer. But we need not be unduly disturbed over the present temporary conditions if we but apply the program advocated by our leaders in agriculture and rural life.

Today many groups and organizations are addressing themselves to the improvement of country life. In the light of their recommendations this Conference is reassured of the soundness of its program as set forth in its declarations from year to year.

The testimonies of individual farmers in attendance upon this Conference go to show that those who have not "carried all their eggs to market in one basket" are best weathering the present distressful conditions. They show that the surest way to have meat and bread is to grow those products on the farm. One feels rather comfortable just now with plenty of meat in the smoke-house and the crib full of corn.

STRIKING SAYINGS OF SPEAKERS AT TUSKEGEE NEGRO CONFERENCE

"Do not raise cotton until you have corn in the bin and meat in the smokehouse."—Carl Williams. Member Federal Farm Board.

"By gambling with cotton, the South has failed eight times in the last 40 years. That's bad system."—Dr. Bradford Knapp, President Alabam Polytechinic Institute.

"The farmers who have plenty of food laid aside for this year are not suffering."—Dr. R. R. Moton, Principal Tuskegee Institute.

"In the past our farmers have talked about diversification, but as soom as cotton went to 20 cents a pound, they forgot about diversification and planted all their land in cotton. This condition must be changed."—John H. Drake-ford, president of the Bank of Tuskegee.

"Seling grain in the hog brings larger yield than selling it direct."—R. A. Stratford, County Agent. Moultrie, Georgia.

"We are facing a long series of years of low-priced cotton."—T. A. Evans, United States Department of Agriculture.

"Sixty-three Negro 4-H Club boys in one North Carolina County, each own one registered Jersey Cow."—I. W. Hill, United States. Department of Agriculture.

"The cow, and hen will save the farmer from suffering this Winter."—Aggie Moore, Alabama Representative Duroc Jersey Association.

"I have all plans made for my next year's crop and will not have to borrow any money from the bank because my food and feed crops will carry me through."—J. H. Nunn, Negro farmer, Autauga County, Alabama.

APPROACHING A NEW ACCIDENT RECORD

From the standpoint of deaths due to automobiles, 1930 is the worst year in our history, according to the National Safety Council which reports fatalities for the first nine months were two per cent above 1929. The report is based on statistics covering areas containing about half the nation's population. Recklessness and carelessness are still rules of the road with thousands of motorists.

However, it is encouraging to note that there are a few rays of light in the accident gloom. Tremendous success has been attained in reducing the number of accidents to children by means of safety instruction in schools. Throughout the nation many organizations are working to prevent accidents, not only automobile, but those occurring in homes and industries. The National Safety Council announces that it will hold 25 regional safety conferences in various parts of the nation during the coming year and it is estimated that 1.000 delegates will attend each one.

Another helpful sign is the strong trend toward laws requiring drivers' examinations. Some of our states have such laws now and report exceedingly good results. When legislatures meet again it is almost certain that most of them will consider stricter licensing laws. Their value is demonstrated by Pennsylvania where 75,000 of 300,000 applicants were unable to pass the tests on the first try.

WHO WILL PAY?

In various states laws have been passed whose object is to make it "easier" for states, counties or municipalities to go into the electric business.

It is one thing to pass such a law and another to produce the money that will make it operative. The investments in privately-owned electric utilities are stupendous. To buy them, or to build competing plants, would require bond issues of unprecedented size.

Government operation may be a good political issue but politicians cannot change economic law. Only two things can build electric plants—private capital, as is the case at present, or tax money, as will be the case if our socialistic friends are successful.

All over the nation business men, newspapers and individuals are complaining bitterly of the waste and inefficiency caused by too much politics in government which has resulted in a tremendous rise in taxes since the war. In spite of this, it is seriously proposed that office holders who are largely responsible for the "high cost of government," be given control of an industry whose operation is extremely technical. The people are to have the privilege of paying the bills.

Hysterical charges against the "power trust" may have resulted in a gain of votes for the backers of nationalization. But perhaps they will be surprised when they ask the public to "put up the cash" for their projected experiments in the realm of private business.

SECOND ONLY TO AGRICULTURE

It is said that in the scope of its operations, the oil industry is second only to agriculture.

It employs more than 2,000,000 workers, has an invested capital of $12,000,000,000 and more than 2,250,000 stockholders. It pays in excess of $100,000,000 annually in taxes and its gasoline customers, through the gas tax, contribute over $500,000,000 more.

The industry produces a billion barrels of crude oil a year and has developed an export trade amounting to over $500,000,000 annually—one-tenth of the nation's entire foreign business.

In its relation to other industries, oil is likewise one of the major contributors to progress. It is one of the largest purchasers of steel, iron, motor vehicles, rope and the like. It is the second largest buyer of ships and the largest purchaser of tank cars. It moves by rail a greater tonnage of manufactured products than any other industry.

Yet oil is a young industry whose history began within the memory of living people. Its existence has been characterized by a series of problems each of which, up to the present, has been successfully solved. When more fields were needed, the industry found them and when better products were required the industry developed them. Now it is working toward the solution of the most important problem it has yet faced—that of conservation of our irreplaceable petroleum resources.

Transportation, employment, living standards, industrial development—oil has played an invaluable role in all of them.

NATIONAL FEDERATION TO AWARD VALUABLE PRIZES

(Special)

The National Federation of Colored Farmers and the Modern Farmer announce that valuable prizes will be given this year to members and subscribers for diligent efforts made to increase and improve the yield of various farm products and livestock. These prizes have been contributed by public-spirited corporations, manufacturers and individuals and will be distributed to the deserving next fall. Complete information will be given in our next issue. Join, subscribe and get in line for these prizes.

Application for Membership
NATIONAL FEDERATION OF COLORED FARMERS
Vincennes Hotel, Chicago

As a farmer, I believe the time has arrived when the Colored Farmers should form a National Organization devoted to diversified production, grading, packing, shipping and marketing of farm products and to the purchase of needed farm supplies through co-operative methods, to the end that a more prosperous financial condition may result from their efforts as producers.
I hereby subscribe $5.00 for membership in the National Federation of Colored Farmers for a period of 12 months from date. Also $1.00 for an Annual Subscription to the Modern Farmer.

America's Greatest Agricultural Forces Embarrassed by Three Obstacles

THREE REASONS GIVEN

CAUSES OF FAILURE OF SOME NEGRO FARMERS

Editor Says Farmers Pay Thirty-seven Per Cent Interest on Loans

President Hoover's Committee, appointed several months ago to discover the Economis Status of The Negro, has reported. The report verifies statements we have made time and again in the MODERN FARMER during the past two years. It is a good report and a true report. It is based on a careful survey of the situation and condition of Negroes in America made for the Committee by Dr. T. J. Woofter, of the University of North Carolina, who was assisted by a large force of trained white and Negro students and economists. We do not believe that a better or a more truthful report could have been written.

Dr. Woofter is a southern white man of the highest type. He has been interested in the Negro for years and believes that our workers and farmers should be given a square deal. All the members of the Committee, both white and colored, are recognized as outstanding leaders and thinkers. It is by far the best Committee or Commission President Hoover has appointed since he became President. The Committee's study was financed by the Rosenwald Fund. We Negroes have another blessing for which Mr. Rosenwald should receive our thanks.

Dr. Woofter's report says plainly that we are losing out as farmers in this country and it tells us why. Three chief causes are given. The first of these is the SINGLE CROP SYSTEM.

From now on we must class as an IGNORANT NUMBSKULL any Negro farmer who devotes all his time and attention to one so-called "money-crop." This is usually cotton or tobacco. No Negro farmer is able to support himself and his family by raising only cotton or tobacco and none ever will be able to do that thing again forever. So why attempt it? Raise food and feed, milk and meat, honey and molasses, fruits and vegetables. For the sake of yourself and your family, for the sake of your race,—get that old one-crop idea out of your head. Live at home and off your own farm, STOP BUYING EVERYTHING YOU EAT. Raise your standard of living. Learn how to eat and enjoy other foods besides fat-back, cornbread, coffee and molasses. Can vegetables and fruits and have good wholesome food the year round.

But suppose your landlord or overseer won't let raise food crops. Suppose he tells you plainly that you must devote all your time and labor to cotton or tobacco or peanuts. THEN YOU TELL HIM THAT YOU WON'T DO IT! Tell him that you can't make anything—that you can't live under such conditions. He knows you can't anyway. Demand from your landlord an opportunity to raise enough

PRESIDENT JAS. P. DAVIS
of the Federation of Colored Farmers receiving the Charter of the National Federation from Ass't State's Attorney N. K. McGill.

The Paper For The Farmer

Read It

North Carolina Forward And Backward

FEDERATION CHARTER

JAS. P. DAVIS, NATIONAL HEAD, REPORTS LIFE-LONG DREAM

Chicago, Ill., Dec. 30th, 1930.—Plans have been perfected for the Agricultural Credit Corporation for our Mississippi members. Every Unit in that state is hereby directed to begin their activity toward the raising of their part of the capital stock. One dollar from the yearly membership fee of every new member will be set aside to make up this capital stock, and said stock will be issued to the Unit in which said members subscribe.

During the period that is neeessary to secure the amount for the capital stock, the amount of the new membership fee alotted for this purpose will be placed on deposit in a bank selected by each Unit, and held until the amount has been raised.

This Credit Corporation is for the purpose of enabling our members to have an institution of their own, where they can apply for production loans to make and market their crops and put up livestock and give crop notes as security, with a rate of interest around six and one half per cent per year. Negro farmers have never had this before, and it is needless for us to say just what a great benefit this will be for their present and future condition.

(Continued on page 2)

FIRST HAND INFORMATION ON TAR HEEL STATE BY LEON R. HARRIS

The National Office asked me to go to North Carolina and present the N. F. C. F. program to our farmers there because I had at one time lived and farmed in the state myself—I was not a total stranger—They knew I had a sincere love for the state and our people there, and believed I would do an honest job. I went.

Most of our farmers in North Carolina live in three district regions or sections—in the Piedmont region—that slightly rolling, beautiful country that extends a hundred miles or so east of the Blue Ridge,—in the "Tenant Jungle,"—some sixty or eighty miles still further east— and along the coast in the "Vegetable and Food-Crop Region." For certain reasons, I have named the last two regions myself. Conditions effecting our farmers are vastly different in each of these sections. I will attempt to analyze them as I proceed.

THE PIEDMONT

The Negro farmers of the Piedmont are great imitators and those who are willing to work and read and think are getting along just as well as are their neighbor white farmers. There are numerous owners of small farms in this section, colored and white. A majority of the tenants are Negro tenants and are preferred because they are more industrious and are willing to "clean up" land during the winter season. Tobacco and

NO DISCRIMINATION ALLOWED

FAIR TREATMENT IN RED CROSS FUNDS PROMISED PRES. DAVIS

Washington, D. C., Jan. 12—(By special wire to The Modern Farmer)—"There will be no discrimination in the distribution of relief funds to the drouth-stricken section of Leflore County, Mississippi and other sections," declared Mr. DeWitt Smith, head of the American Red Cross Relief Fund, to James Perry Davis, the President of the National Federation of Colored Farmers, who held a conference with him at his office today. Mr. Davis was informed by the head of this organization that they were forwarding the funds from the national headquarters to all points in the drouth-stricken sections of Mississippi for the relief of these sufferers, and that no discrimination will be permitted. He further advised, Mr. Davis said, that all colored farmers who are in destitute circumstances in this particular section, apply to their local Red Cross Headquarters in their respective communities for aid and assistance, and that if they are refused upon application, then they are to apply in writing to the National Red Cross Office in Washington.

President Davis, after finishing his conference at the headquarters of the American Red Cross, appeared at the Department of Agriculture and the headquarters of the Farm Board in an effort to seek further relief, not only for the drouth-stricken farmers, but sufferers from high waters and who lost much of their valuables or whose crops were parched during the summer of 1930, and in the interest of securing aid in the Farm Loan Corporation for the large number of 900,000 Negro farmers scattered throughout the nation. While here in the capital he is expected to see Secretary Hyde, of the Agricultural Department, and to call upon Mr. Legge, the head of the Farm Board, and endeavor to get in touch with the Vice-President Curtis and Senator Capper, with whom he had worked long before they were elevated to their exalted positions. It is known in Washington that Mr. Davis, during the world war was employed under Mr. Hoover while he was in charge as National Food Administrator, and

(Continued on Page 8.)

ARTICLE CLIPPED FROM CHRISTMAS GLOBE

Interesting Matter From Recent Survey Pertaining To Farmer

Three major criticisms tersely pointed out, three disadvantages under which the Negro farmer has labored are held responsible for the adverse conditions effecting southern agriculture, and specially the Negro farmer, is the text of a survey and findings in the report submitted through a committee on the survey made by Dr. T. J. Woofer, Jr., of the Institute of Research and Social Science at the University of North Carolina.

It is reported that approximately $20,000.00 in a special fund was made possible by Mr. Julius Rosenwald of Chicago, Illinois, and that this survey was conducted under the auspices of the Department of Agriculture in Washington, D. C., of which Hon. A. M. Hyde is secretary. The first of these three is the Single Crop System; the next is pointed out as the Neglect to Raise Food on the farm for themselves; the third and most appalling is accredited to be the unfair Credit System as the biggest obstacle. These have not only been played up in the report, but before going into the report the Association Press some time ago quoted Vice Chairman Stone of the Federal Farm Board, as saying:

Discussing the agricultural situation in southern states, Stone said he believed the costs of credit were too high for farmers in that area. In some cases, he added the farmer must pay 40 per cent interest to obtain funds with which to produce his crop.

Stone saw a possible remedy to this situation in further development of cooperative marketing and the setting up of affiliated credit corporations. Stone said that it seemed likely that for next few years the trend of the world price for wheat would continue downward.

But in the survey and in the report of Dr. Woofer, Mr. James Perry Davis, the President of the National Federation of Colored Farmers, cites the Credit System as the greatest obstacle. He reiterates the statement and feels that it should be first and foremost. He

(Continued on Page 5)

THREE REASONS GIVEN

(Continued from Page 1.)

to live on or else find another landlord. MOVE! Shun a one-crop landlord like you'd shun the small-pox. He is just as dangeous. If you are in debt to him, that is another matter. Do this. Pay your debts if he will give you a chance. Ask him for a written contract that will give you the privilege of raising enough food and meat for yourself and family. If you can get most of your living off the farm instead of out of a store you will eventually get out of debt. If your landlord won't agree to this kind of a contract, then try and find some sensible landlord who will assume your debts and move anyway.

There are plenty of landlords in Dr. Woofter's own state and in all the other states, who will deny you the privilege of raising food crops. This, they will continue to do as long as they can find Negro tenants and share-croppers crazy enough to work for them. Don't be one of the crazy ones. Again we say,—shun such landlords as you would shun the small-pox!

Dr. Woofter's report says that the second chief cause why we are losing out is on account of TENANCY. There are too any Negro tenants and share-croppers — Not enough landowners. This is also true. Again we urge every Negro tenant who possibly can, to buy a farm of his own. Get it into your head that you are going to purchase a farm and strive to make your dream come true. Work harder and stop wasting so much money and time. Try to have something to sell every month in the year. You will be surprised how quickly a few dollars coming in weekly or monthly will grow into a hundred dollars. Use your head. We know a colored tenant who always killed three hogs for his family meat every year. Five years ago he said to himself, "Why can't I kill six hogs instead of three and sell three of them." "He tried it out one year—had to raise a little more corn than usual—but he sold three butchered hogs for a hundred and twenty dollars and put the money in the bank. This he did four years. Last year he took the money he had saved and purchased a fifty acre farm. It is half paid for now. Hogs and chickens are going to pay for that farm. A man can do most anything that he sets his head to do.

The Committee recommends "that efforts be made to widen land ownership by Negroes,—both individually and collectively,—and to strengthen communities of Negro land holders." We believe strongly in the Negro arm Community. That is why we advocate the "DIRECTED COLONY PLAN." We intend to strive hard to obtain Congressional action upon this plan. The government owes the American Negro more than it will ever pay. The establishment of DIRECTED COLONIES OF NEGRO FARMERS will do our race in America more good than all the political appointments "big" Negroes may get during the next hundred years.

Dr. Woofter's report says that the PRESENT CREDIT SYSTEM is the third chief hinderance to the Negro's agricultural prosperity. It truly is. Most of our farmers have to depend on credit and some of them pay as much as thirty-seven per cent interest. GOVERNMENT CREDIT FACILITIES ARE SHUNNED BECAUSE THEY DEAL WITH GROUPS. AND NEGROES ARE BARRED FROM WHITE ASSOCIATIONS AND ARE UNREADY TO FORM THEIR OWN!!!

The big thing Dr. Woofter's report tells us is that we are losing out because we are so slow to organize. WE MUST ORGANIZE SO WE CAN BUY TOGETHER, PRODUCE TOGETHER AND SELL TOGETHER!!! WE MUST ORGANIZE CREDIT CORPORATIONS AND GET THE BENEFIT OF GOVERNMENT LOANS. We are entitled to these just the same as are all American farmers. Why don't we get them? Simply because we are not organized.

You have an organization, Brother Farmer, — incorporated under the law,—working under the law,—an organization that can help you save money and make money. This organization is the National Federation of Colored Farmers. It is your organization. Yes, YOU ARE BARRED FROM THE WHITE FARM ORGANIZATIONS. If you get in any of them at all,—YOU ARE NOT IN THEM. You are simply and only tied onto the tail of them. You have no voice—you remain unknown. But you are not barred from the N. F. C. F. It can help you in buying your supplies reasonably,— it can help you in producing together,— it can help you market your products. It can assist you and give you the necessary information relative to government loans. Get into it. See that a Unit is organized in your county and community. There is little excuse for you losing out. But just as sure as Dr. Woofter's report is true—all of us are going to lose out unless we do the one big thing—THAT IS ORGANIZE!

FEDERATION CHARTER

(Continued from Page 1)

We are also preparing to get Credit Corporations for our membership in Alahama, Georgia, North Carolina, South Carolina, Arkansas and Tennessee.

The Corporation for Mississippi members will issue certificates showing the number of shares of stock owned by each Unit. If a Unit secures 250 new yearly members then they will own ten shares of stock in the corporation.

It is impossible to keep your head above the water line when you are forced to pay 25 to 40 cents interest on the dollar for money to run your farm.

We will expect the Chairman of each Unit to have the Secretary send in once each week a complete report of their activities. This is very important and we trust these instructions will he carried out. The Secretary of each Unit is hereby directed to send in at once the name and address of every minister of our race residing in his section, in order that we may request them to aid you in your campaign.

The white farmers of Mississippi have begun their campaign for a Credit Corporation, in order that they may be able to get money at a low rate of interest. If our farmers fail to stand behind this movement, it will mean a continuance of debt slavery.

The Headquarters of our Mississippi Corporation will be located at Mound Bayou, Miss., and Hon. B. A. Green , Mayor and Attorney, is legal counsel.

COTTON

Cotton market remains very quiet and little interest. We do not look for any advance in prices.

COTTONSEED

Tennessee points 25 to 28 dollars in carlots and about 21 dollars in less than carlots.

Arkensas 2650 carlots and 18, 29 and 23 dollars less than carlots. Georgia 25 to 27 dollars carlots and Alabama 24 dollars carlots.

GROCERIES AND SUPPLIES

Our Units report that they are saving all the way from 15 to 42 per cent on the dollar on their grocery buying through their Unit and 50 to 1.00 on their dry goods and clothing. This saving has been of considerable aid to them during the year of low prices and short crops. Wheat is now about the lowest price it has been since 1896 and while flour is very cheap when buying through the Unit. We believe it will sell still lower. Senator Patent flour at 4.50 barrel is a good buy. Wheat shorts around 1.35 per hundred is a good price and a good feed for your cows, calves and hogs. Corn meal 3.45 barrel and rice 3.10 per hundred and Salmon 89 dozen, tomatoes, 65c dozen — are very attractive prices. There will hardly be any advance in the price of sugar, coffee, rice, macaroni or meal. Meat and lard should sell a little lower than present values.

OVERALLS

The market Agent of every Unit has prices on overalls at around 65c each and we believe now is a good time to buy.

DRY GOODS AND SHOES.

There are very low prices on dry goods and shoes and we will be pleased to furnish prices on request.

There is a round lot of men's rubber boots that can be brought for 2.25 per pair plus the cost of mailing. This lot is apt to be sold in the next two weeks.

FARM LANDS

Members who are desirous of changing locations and have livestock and sufficient funds to finance their farming operations another year, may be interested in knowing that there is some government lands available in Mississippi and some of the other Southern states. There is also some possibility of securing a large tract of farm lands near Glen Allan, Mississippi. Full particulars on request of the Chairman of your Unit.

!!! SPECIAL MEETING !!!

We urge the Chairman of each Unit to call a Special Meeting and have the members discuss plans for 1931 . Decide on what they will plant and the amount of acreage. Get an idea of the amount of seed each Unit will need and advise this office just as quickly as possible.

GENERAL CONDITIONS

Financial conditions are none too good and we urge our members to live as cheap as they possibly can. Do not go into debt for anything that you can do without. Do not sign any note or contract unless you fully understand what you are signing.

Keep some vegetables growing in your garden, hens on the yard and hogs and pigs in the pen.

Market agents are expected to buy from the cheapest houses, quality considered.

Remember this is your organization and it is chartered under the laws of Illinois. Do not be misled by any statements to contrary. Our Bulletin Service will come to you more regularly beginning with the first of the year.

SPECIAL

The President of the Federation is execting to go to Washington, D. C. during the month of January and make a personal appeal to the Red Cross for aiding our members who are in dire need.

He also plans to see the Secretary of Agriculture with reference to the drouth relief fund.

Those whose memberships have expired are urged to renew. Those who owe balances on their membership, we ask that you pay up and help in the cause we are fighting for. If you cannot pay it all, a part at each meeting will soon wipe it out.

It takes considerable to maintain the organization and remember that we have no other source of securing funds to carry on the work than thru the membership dues.

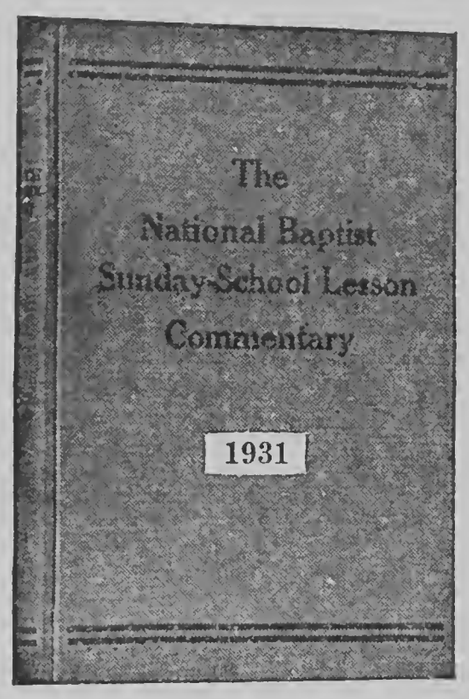
MODERN FARMER

The Modern Farmer has been a faithful visitor to your home, bringing to you each month news of interest to you. It is your only mouth piece — being the Agricultural Publication for the dirt farmer.

You are a slacker when you fail to pay up your subscription. The name of every member who has not paid their subscription or a part of same will be cut from the mailing list beginning with the first of the year.

The Chairman of every Unit is instructed to appoint an agent for the Modern Farmer at the next meeting and have the Secretary send in his name and address to this office.

OUR BEST WISHES FOR A BETTER YEAR IN 1931 AND WE ASK THE PRAYERS OF EVERY MEMBER THAT WE MAY LIVE AND CONTINUE OUR FIGHT FOR THE EMANCIPATION OF THE NEGRO FARMER.



SUNDAY SCHOOL LESSON Commentary

For 1931

Every Sunday School Teacher Should Have It

SIX REASONS WHY YOU SHOULD USE IT:

First: It is the production of your own National Baptist Publishing Board which gives employment to more of our people than any similar concern in the United States.

Second: It is purely baptistic and orthodox in every particular.

Third: Its doctrines are unquestioned, and the Biblical requirements are stressed in a manner to make it absolutely dependable.

Fourth: None of the modern theories leading to skepticism are admitted.

Fifth: It aims to be true to the teachings of Jesus and whatever there is presented which has not the "Thus saith the Lord" is discarded as unsafe and destructive of the best interests of mankind.

Sixth: Thoroughly adapted to the uses of our Sunday school constituency, it stands as a beacon light to all those who would like to rise in the scale of intelligence and demonstrate the qualification necessary for the accomplishment of the "Great Work" devolving upon us as a people.

Price $1.00 Per Copy.

523 Second Avenue, North, Nashville, Tennessee.

NEWS NOTES OF INTEREST TO OUR MEMBERS

We have received letters from four very prominent white American citizens,—one a United States Senator, — commending efforts to organize the Agricultural Credit Corporation for our Mississippi members. This makes us wonder why no prominent Negro leaders have written us— but they are so busy, you know.

Mr. O. N. Freeman, prominent citizen of Wilson, N. C., owns a very fine farm near this city. On another tract he owns near his home, he produced more than a bale of cotton to the acre in spite of the drouth. This is upland too.

John Smith of Halifax county is the "hog king" of his community. He says there is more money in hogs than tobacco. He has tried them both and should know.

The Florence Consolidated High School near Jamestown, N. C., is one of the finest in the state. It boasts of girls' and boys' basketball teams that can't he beaten. Its musical department is superb. Prof. W. L. McNair and his assistants are truly "finding a way out."

The Copeland Brothers, three prominent farmers near Enfield, are all officers in the new Delmar unit. They live in as fine a colored farm community as there is any where in the U. S.

C. W. Knotts, gardener-merchant of Cheraw, S. C., informs us that he has the best winter garden in the state. The vegetables he supplies his customers come from his own gardens. No wonder he is successful.

The editor of the MODERN FARMER would like to receive more letters from readers and members. You advice and opinions are always welcome.

BUSH STARVES MISTLETOE

The desert mistletoe, a parasitic plant which has a wide reputation for ability to rob its hosts of food, has met its match in the creosote bush, which commonly starves the parasite.

Botanists of the United States Department of Agriculture and associates in Arizona observed the absence of mistletoe on the creosote bush, which, on first consideration, seemed to be a likely prospect for mistletoe. Investigation indicated, however, that the ability of the creosote bush to withhold the food in its own stems is greater than the ability of the parasite to withdraw it, especially in the absence of plentiful water supply, and the parasite is thus prevented from getting sufficient nourishment to thrive.

CLEARING GRAIN NETS FARMERS HALF MILLION

Farmers in the spring-wheat States gained half a million dollars during the past season by cleaning wheat of dockage as part of the threshing operation, according to Robert H. Black, who is engaged in grain-cleaning research for the bureau of Agricultural Economics, United States Department of Agriculture.

Mr. Black says that more than 1,000 threshing machines in the spring-wheat area during the 1930 threshing season were equipped with special grain cleaners for the removal of dockage. The average quantity of wheat and rye cleaned by each of these machines was in excess of 10,000 bushels, so that somewhat more than 10,000,000 bushels were cleaned in the aggregate.

The type of cleaner used removed most of the dockage and generally increased the test weight of the grain. In many instances cleaning improved the grain by one or more grades. The net gain in the market value of the grain cleaned, Mr. Black says, was more than a quarter million dollars, and the value of the dockage or screenings removed was more than $300,000.

The development of special types of thresher recleaners is the result of nearly 10 years of experimentation by the Bnreau of Agricultural Economics in this field.

STORY OF THREE RINGS COMPLICATED BY DROUGHT

The time-honored method of telling the age of trees hy the annual rings has been upset to some extent this year by the peculiarity of the season, says the Forest Service of the United States Department of Agriculture. Trees in most sections got off to a good start in the spring but were halted by the parching summer drought. Almost everywhere the growth of trees this year has been slight, but in some areas where late summer rains soaked the earth, a second period of growth followed the drought, and so altered the ring records. This has been the case in Alabama, according to reports from the State forester.

When a tree puts on a year's growth it adds a new ring of wood, and the diameter increases by double the thickness of the last tree ring. The age of a tree can therefore usually be told by counting the rings on the stump. As a consequence of the halting and the new advance in growth this season, Alabama trees in many cases put on a second thin layer, known to foresters as a "false ring." So the foresters of future years will have to be on their guard in computing ages in the living calendars of Alabama tree stumps. Such false rings are not uncommon over long periods of years.

This year's regular ring in most parts of the country shows much less thickness than the average year's ring, and even in those regions where growth was renewed late in the season the second ring has not resulted in a larger total year's growth. Most regions, however, did not get rain early enought to start the second ring.

TEXAN FINDS NO FUTURE IN SNAKE-OIL BUSINESS

A man in Cleburne, Texas has nearly a quart of rattlesnake oil in his hands. At least he did on October 20, when E. C. Boudreaux, chief of the New Orleans station, Federal Food and Drug Administration, heard about it. Three decades ago snake oil was commonly mentioned on the label of patent medicines, but the food and drugs act changed all that, and today the man in Texas says that his snake oil is certainly a "white elephant."

Back in 1928 this man read in the papers that rattlesnake oil was worth $100 a gallon, Mr. Boudreaux says. The Texan went after the snakes. He killed 18 rattlers and got 1 quart of oil. The snakes average from 3 to 4 1-2 feet long, and the Texan figured it would take at least 80 to make a gallon of oil. So he made only 1 quart of oil, had never sold any of it, and had all of it on his hand except 1 ounce, which he gave to an old gentleman who was practically deaf. The old gentleman had heard that rattlesnake oil was good for deafness. Mr. Boudreaux is sure it is not.

It occurred to the Texan, Mr. Boudreaux says, that the oil might be of some use to suffering humanity. He said that if anyone wants it for experimental purposes he will gladly donate it.

In a letter to Mr. Boudreaux, the Texan asked if he knew anyone who buys rattlesnake oil. The letter was referred to Washington. Dr. F. J. Cullen, of the administration's drug-control office, said that he knew of no market for the stuff. "Twenty years ago," said Doctor Cullen, "there was plenty of quack medicines advertised as containing rattlesnake oil, but the enforcement of the food and drug act put the snake-oil doctors out of business. They used to claim," he said, "that this oil was good for bruises, sprains, rheumatism, gout, and other ailments, but careful analysis of the material for curative properties has proved that a man might as well rub water on his aching joints."

Although there still are rattlesnakes around Cleburne, the Texan has given up the snake-oil business, because he knows of "nothing the oil is good for except for oiling a typewriter."

There are 68,854 cattle in 3,583 herds in Louisiana under tuberculin testing supervision.

ORDER YOUR

SUNDAY SCHOOL AND B. Y. P. U. LITERATURE

FROM THE

NATIONAL BAPTIST PUBLISHING BOARD

We can supply you with all religious Helps needed for your church and auxiliaries. We specialize in Sunday School Literature for Front Line Schools, B. Y. P. U. Literature or Organized Class Publications and Ministerial Helps, such as Pastor's Guides, Hiscox Directories, Minister's License, Ordination Certificates, Prayer Meeting Hymnals and 23 different Song Books.

Send all orders to the National Baptist Publishing Board, founded by the late R. H. Boyd. H. A. Boyd, Secretary.

523 - 2nd Avenue North, Nashville, Tenn.

THE MODERN FARMER

Official organ of the National Federation of Colored Farmers

Leon R. Harris - - Editor

Published Monthly by the Modern Farmer at Nashville, Tennessee, and Chicago, Ill.

Nashville, Tenn., Office. 447 4th Avenue, North.

Chicago, Ill., Office: Vincennes Hotel, 36th and Vincennes Avenue

Devoted to the interests of the Farmer, Truck Gardener, Livestock and Poultry Breeder, the Home and the People.

Entered as Second Class Matter, April 10, 1929, at the Post Office at Nashville, Tenn., under act of March 3, 1879.

All contributions for publication in the Modern Farmer should be addressed to The Modern Farmer 447 4th Avenue, North, Nashville, Tenn.

No libelous matter will be published. Unsigned articles or letters, and those written on both sides of the paper will not be used.

Subscription price $1.00 per year, payable in advance. Personal checks must be certified. Make all checks or money orders payable to The Modern Farmer.

Advertising rates and sworn circulation figures presented upon application.

"OUR SLOGAN"

STAY ON THE FARM IF YOU'RE ON IT! GO BACK TO THE FARM IF YOU'RE OFF IT!

THE LAW

"It is hereby declared to be the policy of Congress to promote the effective merchandising of agricultural commodities by encouraging the organization of producers into effective association under their own control.

The Board is authorized and directed—to promote education in the principles and practices of co-operative marketing—to encourage the organization, improvement in methods, and development of effective cooperative associations." (Public—No. 10—71st Congress. Sec. 1-5.)

THE GOSPEL

"This law is predicated upon the ability of the farmer to manage his own business, once he is organized to do so. Cooperation is the key to it and only in exceptional cases can the Federal Farm Board have any dealings with a farmer who is not a member of a producer-owned and producer-controlled marketing unit." Hon. Sam'l R. McKelvie, Member, Federal Farm Board.

The National Federation of Colored Farmers believes that the Colored Farmers of America should own and control their own co-operative associations.

"Co-operation With All—Affiliation With None."

EDITORIAL

"Ring out false pride in place and blood,
The evil slander and the spite:
Ring in the love of truth and right,
Ring in the common love of good.

Ring in the valiant man and free,
The larger heart, the kindlier hand;
Ring out the darkness of the land
Ring in the Christ that is to be,"

—Tennyson.

SAY "I WILL" TO 1931

(Reprinted from last January's edition by request.)

I will be an industrious, thoughtful, progressive farmer this year. I will work hard for hard work keeps my body healthy, my mind free from worry and my conscience clear. I will plan my work, — I will save my time and energy,— I will accept advice from those qualified to teach me. I will join a co-operative organization of farmers in my neighborhood or attempt to build such an organization. I will imitate the work and methods of those who are succeeding around me. I will read more and will strive to originate something myself.

I will be a thrifty farmer this year. I will not borrow more than I can reasonably hope to earn. I will make a budget, — I will start a banking account,— I will spend wisely and not foolishly.

I will be a good American farmer this year. I will have faith in my country, — in her institutions, — in her opportunities. I will be proud of my citizenship, — I will pay my taxes, — I will vote and I will take an interest in public affairs so I can vote intelligently.

I will be a good Christian farmer this year. I will remember the faith of my fathers. I will be true to my family and to friends. I will speak the truth, — I will be honest, — I will be courageous. I will keep the Ten Commandments and the Greatest Comandment. I will he a good man for a good God has promised to bless only those who do right and serve.

A GREAT MISSISSIPPIAN

We have recently heard of Pym Wynne, a colored man seventy-five years old,—one of the greatest men in Mississippi. Pym Wynne is now a gardener. Until he was seventy-two years old he was a blacksmith. He had put by enough money to live comfortably the remainder of his life. But he just coundn't be idle. "Doing nothing," said he, "is the tiresomest job a man can do."

So Pym Wynne became a gardener. He specializes in raising tomatoes. He raises two crops each year. His vines often grow to the height of seventeen feet and he has to use a step ladder to gather his crop. Some of his tomatoes weigh as much as three and a half pounds and he sells them from fifteen to thirty cents a pound. He has sold tomatoes for fifty cents each. He cleared one year, from tomatoes alone planted on one-eighth of an acre, thirteen hundred dollars! He also realized several hundred dollars from other vegetables not raised on the same land.

Pym Wynne doesn't have to work. He works because he loves it. He loves to take pains with his plants, to cultivate, nourish and water them. What a reward he receives! The money return is larger than many a young farmer and his family make off ten acres of cotton or tobacco. But this is not the only reward in the least. His big reward is health, happiness, his neighbor's admiration, and, that greatest of all rewards — self respect.

What an example for every Negro farmer in the world! Love your farm. Love your labor. Specialize. Take pains. Hold up your head Produce something better than the other fellow can. Do this, and you will succeed as did Pym Wynne, of Columbus. A great Mississippian! A great Negro!

HARD TIMES TEACH GREAT LESSONS

The present business depression and hard times should teach colored farmers some good lessons. There have been good times only a few years ago. Money was plentiful— crops were selling well— and everybody was spending foolishly. Colored farmers shut their eyes and bought farms and promised to pay twice as much for them as they were worth. During the last two years, many of these farms have been returned to their original owners. The would or farm-owner is again a renter or he has moved to some city and is hungry.

We must learn to become hargain-hunters. A good hargain-hunter is shrewd and he seldom loses. We do not have to keep up with, or a head of the other fellow. It is foolish to make a show of being prosperous when we know we are not. Many a Negro farmer has gone broke trying to own a better auto than his neighbor. Many an one has purchased more land than he needed just to get the name of being a "big farmer."

Prosperity is coming again. When it comes we can well afford to do without some of the things we are compelled to do without now. Let us learn to spend wisely and ever remember that our precious dollars are our best friends.

DR. SOULE—A WISE MAN SPEAKS

Dr. Andrew M. Soule, president of the Georgia State College of Agriculture, addressed the white farmers and citizens of Colquitt county at Moultrie recently, and after giving them a lot of rich information and advice he told them this: 'Nature has always provided compensating conditions whereby the people of one state through intelligence and skill may place themselves on a satisfactory competitive basis with those of another. This does not mean that every state can grow certain crops with eqnal facility and skill, but it does mean that there is a way out of the most difficult and trying economic misfortunes."

We are asking our readers to change the word "state" in these two sentences to "group" and read them again. Nature is just as kind to people as she is to places. Every man is due a living— a comfortable, happy living — and it is possible to make such a living if we use intelligence and train ourselves to be skillful.

Too many Negro farmers are nearsighted. They can't see an inch beyond the nose. They are afraid of a change— of any new idea. They are too cowardly to pioneer. There is certainly a way out of the most difficult economic misfortune but only the thoughtful, nervy farmer will find it.

Negro farmers should learn to specialize more. They should be able to produce and market some products better than any other group in the nation. Take turnip greens for instance — what many of us call turnip salad. It is a good food. Our people are very fond of it. They want it in the north the year round and would buy it and pay for it if they could get it. It could be canned in the south and sold at a profit. It would soon become as popular as the noble spinach— which few Negroes have any use for at all. There is a good chance for some county in the south to become known as the "turnip greens county" if the people of the county had vision.

Turnip greens would pay off their debts and make them full and independent.

Not long ago a friend of ours wanted to purchase a can of dewberries. He couldn't find a can of the fruit in Chicago. Negro farmers of Tennessee and North Carolina have been fighting and cussing dewberry vines the past fifty years. Why not cultivate a few hundred acres of them? Anybody who has ever eaten a dish of fresh, lucious southern dewberries knows they are far superior to blackberries or loganberries. But many blackberry and loganberry producers are wealthy. There is no reason why a few Negro farmers couldn't get wealthy raising dewberries.

Dr. Soule also told the farmers this: "Providence is going to help the man who first develops the capacity to help himself." No group in the nation requests help from Providence as much as we do. We pray enough but we do not WATCH enough. We fail to watch for opportunities— for chances to get a head—for information — for knowledge. Providence wants us to watch as well as pray.

We thank Dr. Soule for his address and for the lessons we have gotten from it. Dr. Soule is a good friend of our people. He is a good friend of our organization. Our Georgia Units will find him every ready to hear them and help them.

THEN CLEAN YOUR OWN HOUSE

Yes, we have received numerous messages from North Carolina professors, leaders, preachers, farm agents and prominent citizens generally, lambasting us on account of the editorial published last month headed NORTH CAROLINA'S DISGRACE." One friend informs us that he has lived in the state all his life and has never heard of such conditions before. Well, may be he hasn't. He lives in a city. Another informs us that a North Carolina law compels the landlord to allow the tenant as much as a half-acre for garden products. What does a grasping, gouging landlord or overseer care about a law favoring his tenants, when he knows his tenant is poor, illiterate, and knows no more about law than a hog knows about a holiday? Another, a farm agent, writes and tells us that the average North Carolina tenant is lazy and shiftless and wouldn't stay out of debt if he could. He tells us it is the poor landlord who is really suffering. Most of the "money-crop" landlords we heard about and met were bankers, lawyers, doctors, merchants, manufacturers and supposed-to-be millionaires. They drove out to their farms occasionally in big cars and carried what little fruit and flowers there were back to the city with them. They didn't look like they were suffering.

We will not retract a single sentence we wrote. We didn't meet many of the North Carolina "big dogs," colored or white, because we stayed out in the country among the people whom God loves, and whom we love and whom we are trying to help. We saw their condition with our own eyes and heard their stories from their own lips. They are a great, fine, honest people and many of them are being persecuted.

If our city friends,—politicians, leaders, farm agents and etc., want to do the right thing let them stop camoflaging, —let them leave their Brussels rugs awhile, go on out on the farms where these people live,—find out what they really need and proffer their assistance. Let them stop knocking the National Federation of Colored Farmers, which is offering these farmers and tenants the first real opportunity they have ever had to save their scarce dollars, and to get something for their products. Let them join in with our organization and together we will be able to abolish some of the evils that now exist.

The North Carolina state government is the peer of all southern state governments. North Carolina has a wise, progressive governor. He has adopted a live-at-home program for the state and the N. F. C. F. wants to help him carry his program through. It can't be done unless he gets the support of all, big and little, landlord and tenant. If these landlords wanted to do right by their governor and state they would compel their tenants to raise enough to eat. They certainly would not compel them to devote all their efforts and time to a money-crop.

Again we say,—if you don't believe we told the truth, get on out where we were and see for yourselves. Then write us again. If you don't want us to clean your house for you, clean it yourself. If we must clean it, you may expect some dust will be raised.

One resolution you should make and keep. "I WILL SUBSCRIBE FOR THE MODERN FARMER. I WILL SUPPORT THE ONLY NEGRO FARM PAPER IN THE U. S."

We wonder what the good Presiding Elder thinks who told us two years ago that the N. F. C. F. wouldn't last six months.

What about cooperative production this year, Units? Have you decided on the crops and the Unit acreage? Have you found out about your seed? Remember, Spring is coming.

"Buy together — produce together — sell together". This is the gospel of the N. F. C. F. Are you a member? If not, why not?

ATTENTION COLORED FARMERS

The National Federation of Colored Farmers is receiving hundreds of letters from Colored farmers requesting all kinds of aid and information. We are willing to do everything we can for all the Colored farmers of America. It costs money, however, to maintain offices and our expenses are becoming so heavy that we are compelled to discontinue supplying information to those who request it who are not members of the Federation. If you have faith enough in the organization to believe that it can aid you, then you should be willing to join it and help support it. Isn't that so?

Several County units have organized and elected officers but have not sent in their membership dues. These units are eligible to membership in the Federation until dues are paid. Be helpful. Co-operate. Pay up. "All for each and each for all."

URGE FARMERS TO SEEK FEDERAL AID

Loans Available In Stricken Areas

Washington, D. C., Jan. 8—(CNS)—Field officers for handling loans to farmers in drought and storm areas for the purchase of seed, fertilizer, feed for work stock, and fuel and oil for tractors used in crop production, will be established by the Department of Agriculture in **St. Louis, Mo., and Memphis, Tenn., in addition to the offices** already in operation at Grand Forks, N. Dak., and at Washington, D. C., C. W. Warburton, Director of Extension Work and secretary of the National Drought Relief Committee, announced Wednesday. The office at the Departmetn of Agriculture in Washington will make loans to farmers in Virginia, Maryland, West Virginia, Ohio, Southern Pennsylvania, south central Michigan, northwestern North Carolina, and northwestern Georgia. This office will be in charge of George L. Hoffman, who will also have general supervision of all the seed loan operations.

The office at Memphis, Tenn., will make loans in the States of Arkansas, Tennessee, Louisiana, Mississippi, and Alabama. This office will be supervised by J. H. Lynch.

The office at St. Louis, Mo., will be supervised by T. Weed Harvey and will make loans in Kentucky, southern Indiana, southern Illinois and in those areas of Missouri, Kansas, Oklahoma and Texas where drought damage was serious in 1930.

Loans will be available to farmers in drought and storm areas who have no other means of financing their crop production in 1931 and who make application to one of these field offices for assistance. Application blanks and other necessary forms are now being prepared by the department and will be available for distribution soon.

To secure the repayment of his loan, each borrower will be required to give a first lein on his 1931 crops. The maximum amount which will be loaned to an individual farmer and the maximum rates per acre will be specified in regulations to be issued by the secretary of Agriculture. The interest rate on all loans will be 5 per cent. Notes given by borrowers will be payable next fall when the 1931 crops mature and are marketed, the date of payment varying according to the marketing season in the different sections.

CONGRESSMAN DEPRIEST AT WORK

Illinois Representative Doing His Bit To Assist Negro and Negro Drought Sufferers

Congressman Oscar DePriest, to the First Illinois District, who is Republican and who is being returned for his second term, has taken up with the United States Department of Agriculture Director of Extension Work the matter of seeing to it that the Negro farmers and Negro drought sufferers get the benefit of the Government Relief not only in money but in other assistance such as seeds and funds from the recently approved Drought Funds arranged by the United States Congress. He took the matter up with the Secretary of Agriculture personally and through communications and sent to the Modern Farmer the following letter written to him by Mr. C. W. Warburton, the Secretary of the Federal Drought Relief Committee. (letter)

United States Department of Agriculture, Director of Extension Work, Washington, D. C., January 15, 1931—Hon. Oscar De Priest, House of Representatives. Dear Mr. De Priest: The Secretary has asked me to acknowledge your letter of January 13 suggesting the desirability of employing one or more Negroes in the administration of the seed loan funds. As you perhaps know the Department of Agriculture already has on its staff in cooperation with the State Colleges of Agriculture, in the southern states, some two hundred Negro agriculture extension workers, who are working in the states and counties where the Negro population is greatest. These people can be of much assistance to the Department in making certain that Negro farmers have opportunity to apply for loans wherever there may be need of assistance. We are sending our application blanks and other forms to these counties within the next few days and are calling the attention of the Negro agents to the availability of these loans. In addition, they are being sent copies of all information which is available on just how the loans may be obtained.

Your suggestion that we appoint one or more Negroes to look after this work for us does not seem to be necessary or practicable. The Negro extension agents we already have can do the work you have in mind and even though it may seem desirable to make such appointment as you suggest, it would be difficult to make them because of the requirement that our appointments be made entirely from Civil Service lists of eligibles. I am sure you will have no reason to complain about the way in which these loans are made available to Negro farmers in the southern states.

Yours very truly,
Signed—
C. W. Warburton, Secretary,
Federal Drought Relief Committee.

WOMEN LONGEST LIVERS, BLACKS BEAT WHITES

3,679 Colored, 880 Nordics in U. S. over 100 Years Old

GEORGIA LEADS

Miss. 2d, Alabama 3d in Number of Aged

(From Baltimore Afro-American)

Washington—Colored people one hundred years old in the U. S. outnumber the whites 4 to 1.

The actual figures of the 1915 health and longevity census show 3,679 Negroes and 880 whites over 100 years old, a total of 4,554.

Between the ages of 90 and 99 years, the census figures show 4,880 colored females and 3,411 colored males, making a total of 8,291 nonagenarians.

Georgia First

The state of Georgia ranked first with the largest number of centenarians, both male and female; Mississippi ranked second with the largest number of females, while Alabama ranked second with the largest number of males.

In the thirty-five states including the District of Columbia reporting Negro centenarians, there were 1,004 males and 2,675 females.

Negro centenarians reported by the census of the United States, 1915; number in each state:

	Male	Female
Alabama	129	183
Arizona	..	1
Arkansas	59	85
California	1	1
Connecticut	1	1
Delaware	2	1
District of Columbia	6	14
Florida	33	48
Georgia	137	206
Illinois	13	20
Indiana	4	10
Iowa	..	3
Kansas	14	20
Kentucky	20	47
Louisiana	76	131
Maryland	8	27
Michigan	2	1
Mississippi	120	201
Missouri	18	43
Nebraska	..	1
New Jersey	3	11
New York	4	12
North Carolina	59	108
Ohio	10	14
Oklahoma	23	32
Pennsylvania	3	16
Rhode Island	..	1
South Carolina	59	108
Tennessee	52	88
Texas	98	140
Virginia	45	84
Washington	..	2
West Virginia	4	9
Wisconsin	1	1
Wyoming	..	1

AMERICA'S GREAT

(Continued from Page 1)

quotes Dr. Wooier on the Credit system as saying:

"The decline of the renting class is shown to be offset by an increase in the share croppers. The proportion of dependent Negro croppers to the total number of Negro farmers in the extreme southeastern states rose from 39 per cent in 1920 to 46 per cent in 1925, not because of any gain in the actual number of croppers, but as a result of losses in the higher classes of tenants. This indicates a serious decrease in agricultural productivity.

The present credit systtm is shown by Dr. Woofer's survey to be the third great obstacle to the Negro's agricultural prosperity. Most Negro farmers are compelled to depend upon credit, and they have been known to pay as much as 37 per cent.

Federal Farm Loan Banks are shunned because they deal with groups, and Negroes are usually barred from white associations and unready to form their own.

The report that was dated from Atlanta, and which appeared recently says:

ATLANTA, Ga.—Adverse conditions affecting southern agriculture and especially the Negro were revealed recently here by the finding of the Committee on the Economic Status of the Negro appointed by the United States Secretary of Commerce.

The report of his committee is based on a careful survey of the situation made for them by Dr. T. J. Woofer, Jr., of the Institute for Research in Cocial Science at the University of North Carolina. This report developed up-to-date information, both as to the Negro in agriculture and in industry and preliminary recommendations for constructive steps to improve conditions were suggested by conftrences of government experts. The study was financed by the Rosenwald Fund.

The survey shows that in agriculture the Negro has, in the most literal sense, lost ground.

Blames Single Crop System

Dr. Woofer's findings trace this situation to three chief causes, the first of which is the one-crop system. Under this system the farmer devotes his attention almost entirely to cotton or tobacco. Depression in the cotton and tobacco markets, therefore, is disastrous to him. And depression is shown to be frequent.

Incomes in the old cotton belt have suffered doubly. There the boll weevil has been on the rampage, to cut short the normal crops, and at the same time there has sprung up in the southwest a cotton culture (to a considerable extent by Mexican labor) that has caused over-production and a consequent drop in prices

Neglect to Raise Food

The farmer who concentrates upon one crop, the survey shows, usually neglects to raise enough food and feed stuff for his own needs. Instead he patronizes local retailers and bears freight charges merchant profits, and the high cost of credit Recently food and feed production have increased in proportion to the tobacco and cotton output, but this has been due more to a reduction in the cash crop than to increase in truck farming.

Diversification, it is shown, is practiced less by tenant farmers than by other operators. Tenancy is the second greatest offender against the Negro farmer. The progress made by Negro farmers in climbing the tenant ladder up to 1910 has been reversed by the desertion of the farm for the city increasing the amount of idle lands tremendously, especially in the four extreme southwestern states, Georgia, Alabama, South Carolina and Mississippi.

FAMOUS NEGRO TENOR WAS ONCE A HUMBLE FARM HAND

Americans love to feel that this is still a land of unbounded opportunity, a land where it is possible to rise from tenement or farm to a position of highest fame. Roland Hayes, the famous Negro tenor who is to sing here at the City Auditorium Wednesday evening, Nov. 19th, has had a career that justifies this belief.

Kings command him to sing for them; concert halls, here and abroad are crowded to the doors when his name is on the program; musical critics declare him one of the greatest singers today.

But not long ago he was a boy working on a small farm in the mountains of North Georgia. He was born the son of ex-slaves. His father died when he was a boy. The farm had to be cultivated by his mother and two brothers. There was no school for colored children.

When Roland was fifteen his mother decided that her sons must have an education, so she courageously started with her family to walk to Chattanooga, some one hundred and fifty miles distant. As they trudged along she told of the future before them; one of the three must be at work all the time, but it would not be the same one. They would have to alternate, working a term and studying another. The struggle for an education finally got Roland to Fisk University, where he entered with the children of the sixth grade. It was at Fisk that he first took music seriously. He stood in first rank in music and was a member of the celebrated Fisk Jubilee Singers. While appearing with these artists in Boston he was heard by Arthur Hubbard, one of America's foremost vocal teachers, who realized the possibilities of Hayes' voice and offered to give him a musical training. For nine years he trained with Mr. Hubbard, and those who have listened to this tenor's beautifully cultivated voice cannot be too thankful that he fell into such hands.

It was in England that he got his start. London critics praised him as an unapproached master of song. He was commanded twice to sing before the King at Buckingham Palace. Soon Paris, Berlin, Vienna, Prague, acclaimed him an artist worthy to sing not only his own spirituals, but the German "lieder" and the lyrics of Italy, France and England.

Upon his return to America, his triumphs were even greater than peared as soloist with all of the foremost orchestras. His art was described in the press, special magazine articles, editorials and books.

Roland Hayes has purchased the old family farm in Georgia and is now building a school there in memory of his mother. In the center of the school, as he imagines it, there will be a core of light, a something to typify in outward form the light that is within each soul.

SNAKE-BITE DOCTOR POPULAR IN CAROLINAS

Jack Liverman Cured First Patient When He Was Only Twelve

The Eden that stretches along the Carolina coast has its serpents. But fortunately for many people in eastern North Carolina and Virginia, the old fashioned snake-bite doctor still works his ancient magic with herbs from the nearby swamps. This is the time of the year when Sheriff Jack Liverman begins making his annual pilgrimage to the lowlands in search of a secret snake weed which he uses in his summer's practice. It was exactly fifty years ago that Sheriff Jack took up snake-bite doctoring. During the half century that has intervened he has won the gratitude and respect of hundreds of people by his successful ministration to the suffering and afflicted, says the Raleigh News and Observer.

"I have had more snake cases than I can ever count," says Sheriff Jack. "I have traveled all over this country to look after my patients I even went a hundred miles to doctor one man. But somehow there ain't as many snakes now as there used to be. New concrete highways and automobiles have brought lots of people into this section and the snakes have hit for the swamps where there is not so many people and noises. And these snakes that still hang around are naturally bad and dangerous. I tell you these are bad snakes we have to deal with nowadays and they don't fail to peck the kids when careless boys are turned loose with careless snakes, and this town's got both."

In spite of the fact that snakes are fast disappearing, Sheriff Jack's reputation as a snake-bite doctor has been steadily on the increase, since at the age of twelve he cured his first patient. He learned the secret formula from Frank McGuire, a Confederate soldier who visited his home after the Civil War. The following summer he had a half dozen cases, and three years later, at the age of sixteen, he took a dozen patients and cured them all.

Although he has served the public as a blacksmith, as buggy maker, and more recently as auto mechanic and deputy sheriff, he has let nothing interfere with his snake-bite practice. Doctoring snake bites, he says, gives him more pleasure than anything he has ever done. "It gives a man a great satisfaction to know he can be a help to the people of his State. I've enjoyed every minute I've spent helping my friends and the medical doctors."

CORN CLUB YIELD IS 50 BUSHELS TO ACRE

4-H Clubs In Alamance County Record 100 Per Cent Increase Over Production In County

Graham, N. C.—The average yield of all 4-H corn club members was over 50 bushels per acre which is more than 100 per cent increase over the average for the county in corn production.

The corn club which is located in the Union Ridge and Pleasant Grove communities is composed of 36 farm boys. Twenty of these boys had corn projects. They selected an acre of ground each and fertilized this acre according to state extension recommendations.

The boys have just harvested their crop and some were surprised at their yield. They have decided that it pays to fertilize a few acres properly, and of course cultivate properly, rather than plant several acres using any grade of fertilizer and cultivating any way, as is the old custom practiced by lots of farmers.

For a dry year 80.2 bushels and 77.3 bushels per acre were not bad yields. The two yields just mentioned were made by James Rascoe and Robert Rascoe, two of the corn club members.

The club boys selected their seed corn in the field for next year and plan to have another good year with the 4-H corn club work.

FARMERS OF PAMLICO COUNTY, N. C., SHIP 20 CARLOADS OF HOGS

New York—Pamlico county farmers shipped out about 20 carloads of hogs during the year, it is reported here. Most of them went by truck to Richmond. Poultry has been a chief cash producer during the year for the Pamlico farmers and farm women, who have followed the precepts of the live-at-home movement to a large extent than in the past. The Irish potato season was reported as good for the raisers.

Richard Sampey of Pine City, Wash., owns a cow that calved four times in 11 months, producing twins twice.

MUSHROOMS INSPECTOR DIES UPON EATING DISH

Official Tester Stricken Hour and Half After Meal in French City

A certain amount of public interest is attached to the death at Fougeres, in the Ille-et-Vilaine Department, of M. Victor Cottin, writes the Paris correspondent of the London Daily Telegraph. Five years ago a law was passed providing that in every market town there shall be an inspector of mushrooms, and none of these may be offered for sale until they have been passed by the expert as fit for human consumption.

M. Cottin was the expert attached to the Fougeres market. He has died as the result of having eaten a dish of mushrooms. His death occurred exactly an hour and a half after the meal, which he declared he had thoroughly enjoyed.

The event, which may lead to a slump in the mushrooms market, is of more importance here than it would be in England, where only a very few varieties of mushrooms are considered edible.

The Frenchman has a much more catholic taste in fungi, and eats growths which would make any British gourmet shudder. Even varieties of dried toadstools and evil-smelling fungi which grow in tree trunks figure on his menu.

CATCHES EAGLE IN HER OWN BACKYARD

Forest City, N. C.—Mrs. J. W. Carpenter, of near Bostic, Rutherford county, caught a young bald eagle recently in her chicken yard. She heard a commotion in the yard and upon investigation, found the young eagle eating a chicken. When she approached the eagle started to fly but in some manner became entangled in the wire fence surrounding the chicken yard. Mrs. Carpenter picked up a stick and knocked the bird to the ground where she held it until help came. G. C. Martin, of Spindale, now has the eagle.

NEGRO EXHIBITS AT HANCOCK COUNTY FAIR

Sparta, Ga.—The Negro farmers of Hancock county, Georgia, sent a fine exhibit to the Southeastern Fair in Atlanta. The exhibits of corn and cured meat were especially attracting and many prizes and blue ribbons were won by the exhibitors.

These farmers have only been given the privilege of showing their agricultural products for a few years and their progress has been almost unbelievable.

BULL PULLS CART, PAYS BOARD, AND KEEPS FIT

U. S. Department's "Power Plant" at Dairy Farm Is Aristocratic "Ox"

A bull pays for his board and lodging, and at the same time keeps physically fit by pulling an ox cart at the United States Department of Agriculture's dairy experiment farm at Beltsville, Md.

Oxford May's Int. Owl, a Jersey bull, was broken to harness as a youngster and now is used daily for general hauling from the farm. By working off his surplus energy, "Ox" is kept gentle, not only when between the shafts but also when handled at breeding time. The chief advantage of working this blue-blooded aristocrat, however, is that the exercise maintains his virility and makes him a certain breeder the year round.

"Ox" earned his nickname, not only from the name appearing on his registration papers, but because of his patient performance at his daily task of carting loads. He obeys orders, recognizing "gee," "haw," and "whoa back" as well as any ox.

'CRUSTS' FROM DINNER FED 130 FAMILIES

New York.—The good old parable of the seven loaves and five fishes almost had a parallel when the Brotherhood of Dining Car Employees, Local No. 1, after dispensing Christmas cheer to 400 needy persons and 30 families which could not attend, still found when they gathered up the fragments that they had enough for 130 other families.

The dinner, served at the rooms of the New York Urban League, was financed by the local through a committee headed by George N. Spencer. He and his associated chefs, including the famous Cody from the operating vice-president's special car, trimmed, prepared and cooked to perfection the 32 big turkeys and other dishes which were served.

Gather Fragments.

Following the dinner to the 400 families which included a musical program directed by Mrs. Helen B. Williams, white ladies connected with the Bahai movement here distributed presents to the children. The next day when it was found that much had been left it was gathered and given to the 130 families which sent children with containers to receive it.

The Brotherhood of Dining Car Employees which is not to be confused with the Randolph organization had the co-operation of officials of the company in making it possible to arrange the dinner. Several of the crack waiters in the Pennsylvania system helped to serve and with them was the white coated national head of the organization, Rienzi B. Lemus, who was last in active service on the New York, New Haven and Hartford Merchants' Limited.

Alfred N. Burras is president and Justin A. Bell, financial secretary of the brotherhood.

BROWN SKINNED DOLLS ARE BEST XMAS SELLERS

Charleston, W. Va.—That brown skinned dolls are pushing their more pink-faced associates off the counters and have become the "best sellers" was revealed by one merchant here last week.

Seeing a profusion of the brown complexioned toys displayed in the most prominent place in a local store, a Southern white woman registered a complaint to the manager.

"Business is business," the manager replied, "we have to sell what the public is demanding." He explained that since the "sun tan" craze in this section a large number of the prominent white people were buying these dolls for their children who seemed to prize and enjoy them more than they did the white dolls. In fact, it was found that many of the children had made the special request that Santa Claus bring them one of the beautiful brown-skinned dolls, and some of them had been rolling them proudly in their baby carriages.

When told who had been buying these brown dolls, the Southern white lady left a $11.50 order for one of the best ones in the lot.

Many on Display

A survey of the shopping district here shows that more pretty colored dolls were on display for the Christmas buying than ever before in the history of the city. Not only were they sought by white children, but almost every colored home where there was a little girl had one of the "sun tanned" variety.

So important a part of the Christmas buying are the dolls becoming, that manufacturers are studying how to further perfect the brown doll. A white admirer has suggested that while the brown skin had been copied with telling effect, the makers of the dolls have so far failed to get the true spirit of the radiance which is shown in the Negro child's face.

Has Namesake

One prominent white family in this city has a colored doll 56 years of age, which has been so well preserved that it seems now almost new. This doll is 30 inches tall and has long, black curls. It is a keepsake in memory of a little colored girl who lived in this family and died just after Christmas. It occupies a prominent place in the parlor of the home.

POOR HOUSING GETS HIGH RENT IN TEXAS TOWN

Many Employees of Refinery unable to Read Danger Signs.

BUSINESS SUFFERS

87 Per Cent Fail in Twenty Years

Port Arthur, Texas.—Housing facilities for the 12,000 colored inhabitants here are poor but rents are high, and the local businesses are unorganized, according to a survey made by J. M. Pollard of the National Recreational Association of New York City, who was employed by the city commissioners to investigate conditions.

Regarding employment conditions, the survey, which is now in the hands of the printers, states that 1,200 men are employed at the gulf refinery with satisfactory wages. Many of the workers are found to be illiterate and unable to read danger signs posted around the plant, and a night school for their benefit is recommended.

A National NEWSPAPER For Churchgoers

Read the National Baptist Union-Review published every week, subscription price $2.00 a year. This newspaper is the oldest religious publication under the auspices of the National Baptist Convention of America. It is eight pages in size, eight columns to the page, and is brimful of denominational information every week. It contains a Woman's Page, spicy editorial matter, and circulates in practically every state in the Union.

Send your Subscription to the

NATIONAL BAPTIST PUBLISHING BOARD

523 Second Avenue, North Nashville, Tenn.

Play Facilities Poor.

The 1,900 pupils of the Lincoln School, though having a good faculty, had no trained direction during the recess or after school hours. Upon recommendation of Mr. Pollard, a trained director of recreation will be employed beginning, January 1.

Only 3 Authors in Library.

Only three books about colored people, excluding colored authors of the class of Dumas, Pushkin, etc., who are not classed as Negroes, were found in the library. A branch library will be at the Lincoln School on the first of the year and will include works of at least fifty colored authors.

No interpretation of the crime statistics was found possible, as the colored offenders without friends are found to be easily convicted, while those with powerful friends escape easily.

87 of 100 Businesses Fail.

Negro business failures have been appalling according to the survey, 87 percent having failed within the past twenty years. A branch of the National Negro Business League has been recently re-organized here with Robert Hynes as president.

The lack of municipal recreation for the children of the 12,000 inhabitants brought forth the recommendation that the city purchase five acres of available land in the heart of the colored district and employ year round, trained recreational leaders. The Negro Recreation Council, the Rev. J. Henry Hardeman, president, has been formed as a result of the survey. Mr. Pollard will next study the city of Beaumont, Texas.

EDITORIAL

(Continued from Page 4)

Did you read about the Tuskegee Negro Farmers' Conference in last month's paper? You should read and keep informed. Unless you read nowadays you just can't know. That is all there is about it. We can read our way out of misfortune and poverty. Read, Man READ!

What did you have for dinner New Year's Day? We had I. potatoes, duck, string beans slaw, baked parsnips, pumpkin pie, onions in the dressing, canned grapes and raspberries, — all these except the duck preserved from our own garden last year. Who says it does not pay to raise something to eat? (We forgot Golden Bantam roasting ears, canned on the cob.)

It appears that Mississippi is going to be the first state to perfect a Farm Credit Corporation for the benefit of Negro farmers. FIRST in the number of Units of the N. F. C. F.,—FIRST in the number of counties organized,—FIRST to hold a state convention of organized farmers,—and now FIRST again. Some record, Mississippi. You are finding the way out while the others are sleeping. Our Mississippi farmers don't talk so much but they are certainly supreme when it comes to doing things.

GROWERS WILL BE PAID SHOULD RULING STAND

CO-OPERATIVES' FUNDS ARE HELD AWAITING LAWYERS' INTENTION AS TO APPEAL

Greensboro, N. C.—Provided former association attorneys do not carry their fight for higher fees to a higher court, members of the defunct Tobacco Growers Co-Operative Association will receive checks before Christmas for their equity in the distribution of $500-000.

This statement was made here yesteday by Merton L. Corey, one of the association's three receivers following the decision handed down in Raleigh Wednesday by United States District Judge Isaac M. Meekins, denying the petition of E. P. Buford, Lawreneeville, Va.; P. W. Gildewell, Reidsville, N. C., and the late Willie M. Person, Louisburg, Va. for additional compensation of $25,000 each. The court allowed the attorneys $5,000 each.

Between 35,000 and 40,000 tobacco growers in Virginia, North Carolina and South Carolina will share in the final distribution, and the checks to be sent from the Richmond office will range in amounts from one cent to $300.

Receivers have collected and paid on various association obligations more than $12,000,000, as well as proceeding with an orderly merchandising of a huge tobacco surplus. The final lot of tobacco was sold several months ago.

An appeal by the attorneys would cause delay in distribution of the $500,000, Mr. Corey declared. Payment will help colored farmers, many of whom have lost money through this association.

UP TO FARMER

Farmers who consider forming a co-operative through which they hope to get relief from the low prices offered by buyers for tobacco will not get far this season with their organization. There is little or no hope of getting fair prices for their year's labor. At least that has been the case with farmers in the eastern part of N. C., South Carolina and Georgia.

The co-op sounds good and so does the agreement to cut down acreage next year, but this is talk and plans. What the farmers need is something other than just remedies, but in one sense the farmer is to blame for his condition because he was told to reduce his tobacco acreage and spend more time in producing better grade of weed and he has not done so.

Unless the farmer does something to get relief it is well know that no one else is going to lift his burden, however, he can get help but he must also help himself. The department of agriculture is ready to help him, but this department is worthless unless the grower does his part.

The farm board is not going to bring about better times as Mr. Hoover predicted when it was formed. The farm board can do a great deal in helping the farmer, but the farmer must do his part or nothin helpful will come about.

When North Carolina farmers come together and form a co-op and make plans to control their acreage and adopt Governor Gardner's live at home policy then they will be able to get relief. The farmers would belong to an association similar to the merchants various industrial and other organizations which would bring about better living and farming conditions.

Through an association they would be able to study the market conditions and grow stuff to supply the demand. This over-supplying the demand and ignorance of the market conditions and cutting each other's throat will not get the average farmer anywhere.

The average farmer today will say ho is going to cut his acreage and when planting time comes around he increases hoping his neighbors will decrease, but his neighbor has the same idea and there is where the oversupply comes. The association will be a waste of time if farmers do not live up to their promises aand cut acreage and mean it.

The farmers can form an organization and hire experts to do the studying for them, but the chances are they would not believe them and continue to live in the rut they now do. Summing the whole situation up—the farmer must do his part in getting justice or equality with other industries or he will continue to be the "underdog."

JOINT STOCK LAND BANK LOANS STEADY

Outstanding farm mortgage loans of all the federal and joiut stock land banks on June 30 totaled $1,801,144,355, while the twelve intermediate credit banks, which deal largely with cooperative marketing organizations, on the same date had $91,665,342 out standing in loans aand discounts.

Federal farm loan board officials said these figures, carried in the board's quarterly report, showed little material change from the same date last year, and did not reflect any conditions brought about by the drought.

Assets and liabilities of the entire farm loans system were reported as $2,118,775,187.

Of the mortgage loans of the land banks, $1,192,719,717 were held by the federal land banks and the remainder by the twelve joint stock land banks.
